During the first quarter of 1957 Elgin had a loss of $121,000. This is the first time that Elgin has had a loss in any quarter of any year since the depression. In the first quarter of 1957 Hamilton earned 10 cents a share as compared with 76 cents a share in the first quarter of 1956. Hamilton expects to recoup some of this loss in position during the remaining part of the year but its profits for 1957 will be in the order of 50 percent below profits for 1956.

It is very clear to the management of Hamilton and Elgin that something must be done to improve the condition of these companies. If it is to be done by the companies independently of any Government action, the economics of the situation dictate that they must turn to importation to a much greater degree. Last year Hamilton's return on imported watches was 57 percent greater than its return on domestic watches. During the first quarter of 1957 Hamilton earned $120,000 before taxes on $3 million in sales of domestic watches. At the same time it earned a profit of $125,000 on only $1 million of sales of imported watches. Elgin's rate of return on imported versus domestic watches is comparable.

The companies have no choice. They must supplant all unprofitable domestic production by imports and must do so very promptly unless decisive action is taken by the Government to establish conditions which will provide a sufficient volume of domestic production to reduce unit costs and increase profits on domestic watches. At the present time the companies are producing at around 40 percent of capacity.

As we have indicated the question is not just one of early action but of decisive steps to settle this problem in a manner certain to improve the position of the American producers in competition with the low-cost Swiss imports. Action which temporizes or attempts to compromise the problem will not aid the Government and will not be of assistance to the domestic watch manufacturers. It is our sincere view that unless the Government feels that the United States should have a jeweled watch industry and is prepared to meet the problem of effective action squarely no action should be taken at all. Half measures will only call forth the usual criticism from the Swiss watch cartel without benefiting the United States.

As we indicated to the Office of Defense Mobilization when our application was filed, the volume of production necessary to put American manufacturers on a paying basis is about 85 percent of capacity and this is approximately one-third of the American market. Average apparent consumption of jeweled watches for the last three years has been 8,822,000. Apparently consumption in 1956 was $9,128,000.

In the 1954 report on the essentiality of the jeweled watch industry the Office of Defense Mobilization stated that 2 million units was the absolute minimum necessary to keep employed an adequate number of skilled workers for defense purposes. The report specifically stated that the ODM was not passing upon the question of whether or not this was an economic level for operations of the domestic companies. The industry has always cautioned that it was not a permissible level. Nevertheless, the 2 million figure has been spoken of in some quarters as the level at which the industry should be maintained. We must therefore say specifically that any consideration of a 2 million level as one at which the industry should operate is totally out of the question from the standpoint of economics. This is not a matter of theory; the companies have been operating in this area for the past 2 years and it has proved completely uneconomical. Emphasis must be placed upon the true approach of ODM when it said that "the present downward trend in watch production must be halted and reversed." Only a definite reversal will be of any avail in preserving domestic production.

As you know, it is our intense belief that the United States should and must have a jeweled watch industry. And it is quite clear that the United States has the authority and the power to preserve its industry by taking steps such as those which have been

adopted in France, Gerat Britain, and Russia. Failure to do so, in our judgment, would be a grave mistake. We hope you will understand, therefore, that in bringing the situation of the industry to your attention as we have, we are only seeking to let you know in a timely fashion that (1) some decisive action to put this problem at rest must be taken if the Government decides that an industry be maintained, (2) that this must be done very soon and (3) that no action is preferable to half-measures since the latter will not be of benefit to the country or the industry.

Sincerely,

PAUL F. MICKEY,
Vice President.

Iran Celebrates the Birthday of the Shah

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of one of the 29 participating nations in the Asian-African Conference on friendly relations with the United States.

Congress will not be in session when Iran celebrates the birthday anniversary of the Shah on October 26, 1957; hence, I wish to take this opportunity to send greetings to His Imperial Majesty Mohammed Reza Shah Pahlavi and the people of Iran in honor of this event.

After a decade of almost continual foreign menace and internal strife, Iran today is experiencing recovery. Internal order, a prowestern foreign policy, and a modest start on the profound economic and social reforms considered essential for long-term stability have been effected.

A major factor in the improvement of the country's position has been the cooperation extended through the United Nations and the United States technical assistance programs which have been operating in Iran since 1949 and 1950, respectively. These programs have met with much enthusiasm in Iran. Greater progress is still needed, and efforts are being exerted toward that end.

Although much remains to be done, there is much that is positive and satisfactory in the present Iranian situation. Iran has consistently demonstrated her confidence in the principle of collective security and helps to form a bulwark against communism. Menaced for centuries by the Soviet dreams of expansion, Iran has a life-and-death interest in the collective security aims of the Baghdad Pact and the Eisenhower doctrine.

As one who deeply believes in freedom, democracy, and the importance of achieving a better understanding among all nations, I want to take this opportunity to wish Iran every success.

Detroit Takes Pride in Her Port, the Busiest Waterway in the World

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. RABAUT. Mr. Speaker, it has come to my attention, since the opening of the St. Lawrence seaway, that several of the Great Lakes port cities and areas have been vying actively with one another over the attractiveness and advantageousness of their respective port facilities. It is my opinion that the basic criterion for a realistic comparison of ports and port areas is the amount or tonnage of business handled during a specified period of time.

The Greater Detroit Board of Commerce has compiled what I consider to be an exceptionally telling and impressive table of comparative tonnage figures from 1953 to 1956 for the Great Lakes ports of Detroit and Milwaukee. These comparative traffic and tonnage figures have been compiled from the latest and most authoritative figures available, the Annual Report of the Corps of Engineers, Department of the Army. The traffic breakdown excludes coastwise, internal, intraport, and local figures. It is easily observable, Mr. Speaker, that the city and port of Detroit, for the years 1952, 1953, 1954, 1955 has, in respect at least to the city of Milwaukee, handled vastly greater tonnage amounts and therefore, I think, demonstrated its superior port facilities and advantages.

Traffic analysis, ports of Milwaukee and Detroit, 1952–55

Year	Port	Total traffic	Total overseas	Total Canadian	Total lakewise
1952	Milwaukee	5,704,003	19,052	331,278	5,314,338
	Detroit	22,440,231	43,685	718,564	21,051,703
1953	Milwaukee	5,742,348	35,341	460,550	5,234,240
	Detroit	25,463,140	155,584	627,146	23,838,727
1954	Milwaukee	5,462,529	40,812	358,859	5,055,302
	Detroit	21,211,941	59,528	819,272	19,588,903
1955	Milwaukee	6,201,842	65,989	352,266	5,761,319
	Detroit	26,497,792	90,286	1,077,615	24,681,017

Mr. Speaker, I should also like to include in the RECORD an article by Gerald Warren, secretary of the St. Lawrence Seaway Committee, entitled "Detroit, Take Pride in Your Port." This article, Mr. Speaker, is an exceedingly comprehensive and illuminating story of the great port area of Detroit, which, I am sure will be of interest to all concerned with Great Lakes area:

DETROIT, TAKE PRIDE IN YOUR PORT
(By Gerald Warren, secretary, St. Lawrence Seaway Committee)

No port publication would be complete without directing attention to the pride we hometown folks should take in our port. The coming of the St. Lawrence seaway and the attendant excitement caused great ridicule to be cast on local port activity. In the 3 years since the seaway legislation passed it has been the rule for just about everybody in the Great Lakes to tell the other fellow how best to prepare for the opening of the modernized waterway in 1959.

Much of the talk didn't make sense to the shipper and during the excitement that important fellow remained serenely silent. It did reach a point, however, where some were sure Detroit would never recover from the severe complex developed over reports on the sorry shape of our port. Today it appears that the situation has settled considerably and that all concerned are working toward a common goal of planning realistically for tomorrow's port needs.

Detroit can and should be proud of its port. Last year our port handled 27 million tons of cargo. Iron ore, coal, steel, limestone, and chemicals made up the bulk of the port's domestic business. On a tonnage basis our port outranked the ocean ports of Los Angeles, Boston, or Mobile. Unofficial figures indicate that we rank with the top dozen ports in the Nation in size.

The Detroit River is the busiest waterway in the world. It has unlimited favorable navigation characteristics—no harbors to be dredged or low level bridges to hamper traffic—and a natural accessibility enjoyed by few ports in the world. These attributes of a natural port put us far and away ahead of our other lake competitors who must yet go to Washington for funds to get their harbors in shape.

HEAVY LIFT CARGOES HANDLED EASILY AT THE PORT OF DETROIT

The port of Detroit is equipped to handle the heaviest cargoes shippers can send by water. A giant 100-ton shear leg crane is available at our port to handle the very heaviest single-lift loads that can be hoisted aboard an ocean vessel. Great Lakes Engineering Works is probably the best equipped firm on the Great Lakes to give service to shippers that have especially heavy and difficult cargoes to handle.

Last year, for example, Ford Motor Co. wanted to send heavy machinery to its Bremen, Germany, plant. In most lake port cities, cargo of this type would have had to be sent to the east coast for shipment to Europe. Not so at the busy port of Detroit. Loads were hoisted aboard in excess of 85 tons. Ford reported a substantial saving and at the same time got unexcelled service at the port of Detroit.

McLouth Steel Corp. wanted to send a steel mill to Spain. In a run-of-the-mill Great Lakes port this would be an impossibility. Not so at the dynamic port of Detroit. Several 70-ton loads were lifted aboard the ocean vessel sitting in the deep water at the dock on the Detroit River, and with no more effort than is exerted on any busy work day this job was done in short order.

LARGEST FREIGHTER TO BE BUILT AT DETROIT

A true story of our port couldn't be told if we didn't also note that the Great Lakes Engineering Works is presently building the largest boat (yes, boat, that's what they're called on the lakes) ever to be built on the Great Lakes. Work was started on the 730-foot boat last year and it is scheduled for

completion in July of 1958. The vessel will cost in excess of $8 million. The vessel is owned by the Northwestern Mutual Life Insurance Co., and when finished will be operated by Columbia Transportation Co.

It is reasonable to expect that Great Lakes shipyards will find an increasing number of orders on their desks for the more modern and efficient bulk lake carrier. The Great Lakes fleet is, for the most part, outdated and with the deepened connecting channels, the race will be on among the lake carriers to modernize their fleets. All in all, this spells happy days for the Great Lakes shipbuilding industry. Other major companies on the Great Lakes are Defoe Shipbuilding Co., Bay City, Mich.; Manitowoc Shipbuilding, Inc., Manitowoc, Wis.; and American Shipbuilding Co., Cleveland, Ohio.

PORT TERMINALS ANXIOUSLY AWAIT MORE OCEAN BUSINESS

Along with the staff at the Port of Detroit Commission and the steamship agents whose job it is to see that shippers use the port of Detroit, the port terminal operators in Detroit are doing their level best to see that the shipper gets the best possible service at our port. Their record to date has been noteworthy. Shippers have high praise for the capable and efficient manner in which their shipments are handled at the port of Detroit. Ship captains are especially pleased with the speedy and efficient equipment available to help cut down in-port time at Detroit.

In 1956, the Detroit Harbor Terminals, Inc., was worked to slightly over 20 percent of capacity. There were 51 days during the shipping season in which there were no ships at the docks of the terminal and on another 58 days, there was only one ship per day that discharged cargo. The terminal operator is exceedingly anxious that the shipping season of 1957 will see more production of cargo over his docks. Effective trade development programs are being pursued to produce this new business.

Much the same story can be told for Detroit's other terminals that handle foreign cargo. The Detroit Marine Terminal has specialized in cost-saving, cargo-handling techniques which have gotten wide attention. Simply stated, the terminal operator does everything he can to avoid putting the shippers' cargo in the transit shed. Every effort is made to short circuit the usual ship-to-dock, dock-to-transit-shed and shed-to-truck cycle. The streamlined system in use at the Detroit Marine Terminal cuts out these steps by use of stopwatch timing, which starts before the ship arrives in port, from the ship to truck or rail car. This close attention to cargo control saves the shipper money.

DETROIT SECOND IN FOREIGN TONNAGE ON THE GREAT LAKES

The port of Detroit has held second place in foreign overseas business since this business started to blossom forth shortly after the end of World War II. Every indication points to the fact that our port is going to stay in the forefront of the race between port cities for cargoes in and out of the industrial heartland of the United States. Year in and year out, our port has handled more foreign business than Milwaukee, Duluth, Toledo, Buffalo, or Cleveland. This calls to mind a rather amusing incident that happened last year when Milwaukee's port director was paid to come to town and tell us how inadequate we were. Luckily our folks didn't put much stock in what was said at that time and our port business still continues to soar above that of Milwaukee.

POLITICIANS KEEP STEADY KEEL

Our local political leaders have been blessed with wisdom to meet the needs of our port. The Wayne County Board of Supervisors had repeatedly refused to be rushed or pressured into ill-conceived port schemes or programs. That body, which has the responsibility of raising the money for our port development program has buttressed itself with the best know-how available in getting all the information in before making decisions that could conceivably waste millions of the taxpayers' money.

The port commission itself has cast off that idle dream of governmental autonomy and has at last taken its proper role as an agency of Wayne County. As a result, the commission is getting the kind of support from the supervisors that is needed to build for our future port needs. The Commission's program for development on the riverfront near West Jefferson and West Grand Boulevard will get the most serious consideration when presented to the supervisors in the near future.

Saudi Arabia Celebrates King Saud's Anniversary of Accession to the Throne, November 12, 1957

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference I announced that I would address the United States Congress each time there was an anniversary of 1 of the 29 participating nations in the Asian-African Conference on friendly terms with the United States.

Inasmuch as the Congress will not be in session at the time of the event, I wish to take this opportunity to extend greetings to the people of Saudi Arabia, His Majesty Saud Ibn Abdul Aziz al Saud, and His Excellency Sheikh Abdullah Al-Khayyal, Ambassador of Saudi Arabia, upon the occasion of the celebration of the fourth anniversary of King Saud's accession to the throne of Saudi Arabia, November 12, 1957.

The Arabian Peninsula is the cradle of the modern Arab people. Since the consolidation of the Saudi kingdom in 1925, Saudi Arabia has been the largest and in many ways the most important of the states of the peninsula. The United States has had relations of special importance with Saudi Arabia for over two decades and looks forward to continued cooperation. Firmly committed against communism, King Saud follows his father's traditional policy of close friendship with the United States.

Upon this occasion of the celebration of the fourth anniversary of the accession of King Saud, I pray for divine guidance of the leaders and people of this noble country. May they discover what is basically just within the vexing issues upon which they are called upon to make their decisions. And may love fill the hearts of citizen of Saudi Arabia so that peace may be more surely secured and brotherhood helped to come alive for the peoples of the world.

William Proxmire: Wisconsin Senator

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. YARBOROUGH. Mr. President, the Washington Post, published here at the Nation's Capital, is one of the most influential daily papers in the Nation. In today's edition, Thursday, August 29, 1957, the lead editorial is titled "Wisconsin's New Senator" and discusses many factors that entered into the smashing upset victory won by Senator WILLIAM PROXMIRE in Wisconsin on Tuesday, as a candidate on the Democratic ticket.

Mr. President, while this able editorial weighs the forces of the Proxmire victory, I think it fails to give proper credit to the personality, popularity, energy, zeal, and capability of BILL PROXMIRE as a campaigner. The unpardonable factor of candidates' personality is, I think, the largest single factor for victory or defeat in any single statewide campaign. BILL PROXMIRE is a man seasoned in combat, undismayed by reverses, enlightened by education, blessed by a charming wife, endowed by nature with a keen intellect, vigorous in action, strong in mind and body, and dedicated to the public good. Such a combination in one man carried with it the elements of victory, and were, in my opinion, the biggest single factor in BILL PROXMIRE's victory in Wisconsin. The people saw a man, recognized him, and chose him to represent them. It would be a mistake to attribute his victory too largely to the failures of the Republican Party, as numerous and as dismal as they have been. It is a measure of restored confidence in the Democratic Party, blackened though it has been by the hucksterism of the past 12 years.

Mr. President, I ask unanimous consent that this editorial from the Washington Post of August 29, 1957, be published with these remarks in the Appendix of the RECORD:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WISCONSIN'S NEW SENATOR

After 25 years in the wilderness, the Democrats of Wisconsin have finally elected a United States Senator. The circumstances could not have been more extraordinary, and the Republicans are wise in recognizing the upset candidly as a sharp defeat for President Eisenhower. Dopesters and pundits concluded long ago that Democrat WILLIAM PROXMIRE hadn't the ghost of chance of defeating Republican Walter Kohler, the popular three-time Governor of the State. The backstairs boys on the Hill were already counting on Mr. Kohler's vote with an eye to possible Republican control of the narrowly divided Senate.

But the implausible came to pass, and Mr. PROXMIRE whipped the favorite by more than 121,000 votes in a special election for the seat left vacant by the late Senator Joseph R. McCarthy. In the process, he weakened some dubious stereotypes about midwestern politics. Mr. PROXMIRE is an internationalist and New Dealer. He is an out-

lander from Illinois who settled in Wisconsin only a decade ago. He once worked for the J. P. Morgan banking firm on Wall Street; he also holds degrees from both Yale and Harvard; he is divorced. About the only similarity between Mr. PROXMIRE and his predecessor is that both were interested in college boxing. Surely the time is past due for a new formula on what supposedly constitutes political poison in Wisconsin.

A number of circumstances contributed to Senator PROXMIRE's victory. The Wisconsin Democratic Party has been making steady inroads into rural Republican strength; in 1953, the rural Ninth District elected the first Democratic Congressman in its history, largely because of farm discontent. The rudderless course of the administration on some issues recently undoubtedly helped the Democrats. But in addition, the Wisconsin Republican Party is split into warring factions and there is reason to believe that many rightwing Republicans cast spite votes against the more liberal Mr. Kohler in the wake of a bitter party primary fight.

Finally, Mr. PROXMIER is an indefatigable campaigner who, like RALPH YARBOROUGH of Texas, had run three times for governor before winning the special election. He campaigned all over the State, where Mr. Kohler seemingly was overconfident and simply did not work as hard as his opponent. The Democratic victory is a salutary sign that Wisconsin may well become a two-party State for the first time since the demise of the La Follette Progressive Party.

McCarthyism played little part in the campaign. It is significant that two independent McCarthyite candidates gathered only a sprinkling of votes. Actually, the appeal of Senator McCarthy in Wisconsin had been widely exaggerated, and Mr. Kohler may now regret that he did not take on McCarthy 5 years ago instead of waiting for a sure thing. The late Senator trailed the entire Republican ticket by a substantial margin in 1952, and throughout his second term, he had been in political trouble in Wisconsin. The victory of a member of the erstwhile "party of treason" in Wisconsin is just one more sign that the madness of McCarthyism has ebbed, that men may again differ without poisoning the air with charges of disloyalty.

Adverse Effects of Expanding Government

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Nation's Business of September 1957:

ADVERSE EFFECTS OF EXPANDING GOVERNMENT

(Rapidly growing Federal power and its limiting effect on individual rights and free enterprise are shown in a new report prepared for Congress. The 9-part study, made by the Legislative Reference Service of the Library of Congress, is condensed in this issue as a special service to the readers of Nation's Business. The study was prepared at the request of Representative RALPH W. GWINN, Republican, of New York, and 16 other Republican and Democratic legislators who believe that the American people do not realize to what extent they have already voted away their rights to a mushrooming Federal bureaucracy. Specifically, the Congressmen asked for available data on the adverse effects of Federal encroachment on the free-enterprise system. The findings show in detail the disadvantages of letting Washington do the work which could be done by our individual States, communities, and citizens. Representative GWINN feels the drift toward socialism has progressed to a point where it is beyond control by Congress. He says Congress won't and can't stop it because it would have to attack the problem piecemeal. What it will take, he believes, is an amendment to the Constitution limiting the income-taxing power of Congress and thus reducing the Federal Government's capacity to dominate the activities which are the responsibility and right of States and communities. He has introduced and will seek passage of such an amendment in the House of Representatives next session. Senator EVERETT M. DIRKSEN, of Illinois, has introduced an identical amendment in the Senate. The condensation of the special report follows.)

1. ADVERSE EFFECTS OF HIGH TAXES

For 1956 the per capita tax burden of all levels of Government has been estimated at more than $600. About three-fourths of this burden was represented by Federal taxes. Twenty years ago the per capita Federal tax burden was only about $30.

Not only has the per capita tax burden increased sharply but taxes have also risen in relation to national income. Though national income rose about fourfold from 1929 to 1955, Federal taxes rose about 23-fold.

In the past decade Federal tax collections have been sustained at levels either approaching or exceeding 20 percent of our national income.

If we use Federal plus State and local tax collections we get an even more oppressive situation. During the period 1952–55 taxes exceeded 27 percent of national income in every year and averaged more than 29 percent of national income for the whole period.

In the following sections of this report, historical data on the individual and corporate income tax rates and burdens are presented to illustrate how these rates have risen since their initial imposition.

Effect of high taxes on incentive to work

The table below illustrates how the Federal personal income tax has increased since 1913. It shows for selected years the amount of income left after tax for certain levels of net income of a married couple with no dependents:

Net income before tax	Income left after Federal income tax			
	1913	1929	1939	1956
$10,000	$9,940	$9,948	$9,585	$8,112
$25,000	24,740	24,138	22,511	18,276
$50,000	49,240	45,810	41,131	30,408
$100,000	97,490	85,130	67,531	47,224
$500,000	474,990	389,130	195,856	96,452
$1,000,000	939,990	760,130	330,056	141,452

This table does not take into account the further reductions of income resulting from other taxes, such as the State income tax, Federal excise taxes, and local property and sales taxes.

After World War II—a period of high tax rates—a special tax committee reported to the House Ways and Means Committee its concern over the effects of high tax rates on production:

"With the present scale of tax rates we have put the brakes on men's incentives to a dangerous degree by piling heavier and heavier burdens on them as they try to climb up the ladder * * * this is stultifying to the kind of dynamic long-term growth that has characterized this country in the past. * * *

"If our economy is to survive and prosper, we must see to it that men are encouraged to work and produce, to turn out better goods at lower prices. Particularly we must see to it that tax rates are not so high that a man has little or no incentive to work harder and produce more."

A study conducted by a well-known economist attempted to determine the effect of high taxes on incentives of executive and managerial personnel to work. One of the questions asked in the questionnaire sent out to business firms was: "Do you believe that, the higher the tax rate, the less the incentive to work and save?" Out of 208 answers, 197 were affirmative.

In response to another question, more than two-fifths of firms replying said the rate structure for the personal income tax, especially the high middle-bracket rates, has affected either the supply or quality of managerial personnel available.

Of the companies answering another survey, 75 percent felt that high taxes were diminishing the incentive of employees at the executive level, 46 percent noticed reluctance on the part of executives to take on additional responsibility, and 43 percent believed the efficiency of junior executives impaired.

From this we see that one of the ways high taxes adversely affect a nation's productivity is by lessening the incentive of individuals to work. If taxes are so high—as the present taxes are—that they may take more than nine-tenths of any additional income, the taxpayer will feel that it is no longer worth while to earn additional money. His productivity and the productivity of the nation suffer thereby.

Effect of high taxes on individual investments

Unless adequate savings and investment funds are forthcoming from individuals, our high productivity cannot be maintained. Businesses must necessarily depend on these funds supplied by individuals, because their own internal funds are not adequate to finance their capital needs (plants, machinery, etc.). If the individual's desire or capacity to save or invest is curtailed, business will not be able to obtain necessary funds for its capital needs to maintain high productivity. However, high taxes impair both the desire and also the financial capacity of individuals to save and invest. In this connection Secretary of the Treasury Humphrey recently stated:

"We must create more incentive for more saving, to have more capital available for expansion. We must have it because we in our growing country have a milion new people every year looking for new jobs. Unless someone can invest from $10,000 to $20,000 each for them, they cannot get a job in which they can earn the kind of wages now being paid in America.

"Without savings and investments you cannot get high productivity."

Effect on desire of individuals to save and invest

If taxes are too high, individuals who normally provide these investment funds will prefer to use them for consumption purposes, because the rate of return on invested funds will not be worthwhile. Furthermore, high tax rates encourage individuals to place their funds in sources such as tax-exempt bonds, which may compete with private investment.

The growth in investment in tax-exempt State and municipal bonds during the last decade has been phenomenal. From 1946 to 1955 outstanding bonds increased from $15.7 billion to $42.7 billion.

The appeal of the bonds to the high-income taxpayer is obvious. A single individual having a net income between $150,000 and $200,000 would have to receive a 30 percent return on a corporate security to have the same net return as he would receive from a tax-exempt bond yielding only 4.2 percent.

Colin Clark, a noted Australian economist, holds that inflation results if taxes exceed 25 percent of the national income. He says that the first effect is on production.

The late Randolph E. Paul, tax expert who traced historically the views for and against a progressive income tax system, has pointed out that there are some who accept the general principle of progressive taxation but object to a high degree of progression, such as exists in the United States, because it adversely affects production by reducing the incentive to work and invest.

Effect of high taxes on the individual's capacity to save and invest

Even more serious is the unfavorable effect high taxes have on the financial capacity of individuals to save or invest. It is obvious mathematically that the more the Government takes from individuals whose savings are channeled into investment, the less these individuals will have for these purposes.

A taxpayer has only 9 cents left from each additional dollar of income over $200,000 ($400,000 on a joint return). This can be contrasted with the comparatively light burden on a taxpayer who, in the first years of the income tax (1913–15), was taxed at a maximum rate of 7 percent on income more than $500,000.

In 1956 a couple having a net income of only $10,000 would have paid the Federal Government 15.9 percent, or $1,590, a sizable part of which might otherwise have been savings, although there is no telling how much of this is squeezed out of the living standard of the families in this income group. In 1913–15, when the income tax was first in effect, a $10,000 a year net income family paid only $60. A couple having a net income of $500,000 in 1956 paid to the Federal Government 80.5 percent.

Effect of high taxes on investment by business

High taxes have also reduced businesses' retained earnings and other internal funds used for capital investment. A particularly acute problem is created for small business. We need only review the increase in the rates of corporate income taxes to understand how taxes can restrict these internal funds available for capital investment.

The Federal corporation income tax originated in an excise tax act enacted in 1909. This was levied at the rate of 1 percent on net income exceeding $5,000. The corporation excise tax was superseded by the 1913 income tax law. The Federal corporate income tax rates have shown a general trend upward since the first income tax law. Today, effective tax rates range from 30 percent to 52 percent.

The extent to which higher corporate income tax rates have affected the percentage of profits left after taxes since 1929 is illustrated in the table. It shows not only that the percentage of profits left to corporations after taxes has been reduced but also that the percentage of profits after taxes has dropped in relation to national income.

Year	Percentage of corporate profits left after taxes	Corporate profits after taxes as a percent of national income
1929	86.5	9.5
1939	78.1	6.9
1949	60.3	7.3
1955	49.4	6.5

Reductions in the percent of profits left after taxes from 86.5 percent in 1929 to 49.4 percent in 1955 means that corporations in 1955 had less than half of their profits for use either to pay dividends or to reinvest in their business. Any resultant reductions in the rate of return to the shareholders in the form of lower dividends discourages the desire and curtails the capacity of individuals to invest. Reductions in the amount of reinvestment in business reduced productive capacity of the Nation.

The problem of high corporate taxes is particularly acute for the small corporations. This was brought out in a recent report of the Joint Committee on the Economic Report:

"It is a widely held view that small and new businesses have limited access to credit and equity capital from external sources, as compared with larger, better established firms. The growth requirements of small and new companies frequently involve more extensive reliance on internal resources, particularly retained earnings, than in the case of other companies. A corporation income-tax rate structure which does not unduly limit the financial resources required to finance the growth of large established companies, therefore, may prove extremely burdensome in this respect for small and new companies."

Two Harvard University professors (John Lintner and J. Keith Butters), in a study of the effects of taxes on concentration, stated:

"The fact that retained earnings are a more critical source of funds for financing expansion for smaller than for larger companies leads to a further conclusion of major consequence to our analysis: High corporate income taxes will restrict the growth of smaller firms more severely than that of larger companies. * * *"

In spite of this acute need for internal funds by smaller business, profits after taxes of small corporations have declined in recent years.

Dangers of high taxes to a capitalistic economy

The forces of high taxation in the United States have been abetting the creeping socialism in the other parts of the economy.

Data have been presented to show that, if the United States continues its rate of absorption of national product by taxes, we will reach 100 percent socialization in the next century.

The greatest danger of high taxation lies in the fact that we are proceeding in the direction which Karl Marx in 1848 predicted would be the road to destruction of capitalism; that is, destruction of the middle class with the aid of a highly progressive tax.

2. ADVERSE EFFECTS OF PUBLIC HOUSING

There are reasons to question the kind and extent of governmental assistance which has been developing in connection with the provision of private housing over the past 20 years.

To some this assistance appears as intervention, interference—the usurping of the powers of State and local governments—and the restriction of the rights and privileges of the private building industry and the individual home consumer.

History reveals that governmental assistance has been accompanied by, or has in effect constituted, governmental intervention. Some degree of intervention is understandable once the decision has been made to assist.

The Government, no less than a private investor, desires an accounting of its funds and must establish rules designed to lessen the risks. Often, bureaucratization at its worst has resulted.

The bureaucratization which has taken place in public housing is viewed by some as no less than astounding.

This bureaucratization has largely been responsible for the growth of so-called public housing and for the varying conceptions and misconceptions as to its objectives and purposes.

These perpetually changing objectives have kept housing officials and other advocates of public housing constantly searching for new rationalizations adopted to changing economic, political and social conditions; and has kept realtors, homeowners, and taxpayers constantly searching for evidence of fraud, corruption, and unduly high costs. Time which might be spent examining the program with a view to improving or eliminating it has been spent in its defense.

Our housing laws, initiated during a period of general economic depression, are understandably incompatible with current conditions.

In a dynamic and expanding economy, a growing group of citizens are opposed to making publicly owned housing units available to families who can afford to rent privately owned dwellings. They likewise oppose dictation from the Federal Government as to how they shall handle local slum clearance and renewal problems. They are impatient with the lack of understanding and consideration for local laws which may not be compatible with Federal restrictions. Still others believe that the social and moral effects of public housing leave much to be desired both from the standpoint of public housing tenants and the general community.

Background

The institution of public housing through PWA had the objective of work relief and rehabilitation of the construction industry. But the objectives have changed to the provision of adequate housing for all Americans through home financing, low-cost housing, slum clearance and its corollaries—urban redevelopment and urban renewal.

A vast array of governmental machinery has been created for private and public housing, slum clearance, redevelopment, renewal, planning, and public works. The Public Housing Administration is located under the Housing and Home Finance Agency in Washington with approximately 900 local authorities administering some 490,000 low-rent public dwelling units.

The city in which the housing is to be constructed has no direct control over the authority, except that it might give or withhold its consent to certain undertakings.

Once a public housing project is established or begun, the city has no direct control over its operations. Thus, public housing is usually a separate little pocket of city government, dominated by rigid Federal rules and regulations.

In any exploration of the subject of public housing two questions immediately come to mind.

Just what is public housing?

Who pays for it?

In essence, public housing is a program of Federal loans and subsidies to local public housing agencies, designed to enable them to build and operate housing for rent to families whose incomes are deemed to be so low that they cannot afford adequate housing provided by private enterprise.

Who pays for public housing?

The local property taxpayer and the United States income taxpayers pay for public housing. The tenants of public housing pay rents based upon their income. Each family is required to pay not less than 20 percent of its income for rent, including utilities. In no instance has this covered the full cost of operating and managing the low-rent projects.

According to computations by the Housing and Home Finance Agency, some public housing tenants pay less than half their rent; the taxpayers pay the remainder.

The Public Housing Administration, in its 1957 appropriation hearings, requested $96 million ($93 million approved) for annual contributions and $10 million (approved) for the low-rent housing program's administrative expenses. The Bureau of the Budget estimates that $736 million will be spent on community development and public housing

during 1957; that these programs will have receipts of $556 million.

So Federal taxpayers will be paying about $180 million in taxes to help communities improve facilities and to pay for the subsidized public housing. This figure does not include the cost to the local community for schools, garbage and trash collection, sewage facilities, police protection, and other services; nor does it include the lack of taxation revenue from these projects.

These are the costs of public housing to the taxpayers. What about the actual cost of constructing and maintaining this Government housing?

The cost of public housing

Under the Housing Act of 1949, as amended, the cost of building and equipping dwelling units cannot exceed $1,750 per room, excluding the cost of land and nondwelling facilities. An extra $750 per room is allowed in some of the higher cost areas.

The Housing Act of 1956 permits an extra $500 per room for dwellings designed for elderly families.

Thus, the full cost for standard dwelling unit rooms can be as high as $2,500 each; dwellings for elderly families may cost as much as $3,000 per room, if built in a high-cost area. The size of the units varies within each project. The average is 2 bedrooms, but a few have 4 or 5 bedrooms.

Members of the real estate and building materials industries contend that public housing is not only costly in terms of the cost to the taxpayer of the subsidy, but that the original construction costs are higher than they would be if the projects were sponsored by private groups.

The Federal Government's increasing role

The Federal Government has been assuming more and more responsibility for housing and housing policies. Federal agencies now participate in financing—doing some direct financing themselves; they construct and administer low-cost public housing projects; they advance loans for slum clearance, urban development, and renewal; and give guidance to local projects.

There are indications that the Government's role has not contributed to the long-term stability of the residential construction industry and cost reductions are not apparent. Increasing local opposition to Government's interference points up the wide disagreement which exists as to the proper scope of Federal housing activities and the administration of Federal housing policies.

Some of this interference with administration at the local level can be directly attributable to the desires of the bureaucrats at the national level; some of it must, however, be laid squarely in the laps of the local and State governments. If local and State governments took more initiative in originating and carrying out the necessary programs, less interference would be forthcoming from the Federal agencies. More and more, the lower levels of government seek aid from the Federal Government. In many instances aid is sought under the mistaken notion that "it won't cost us anything, the Federal Government will take care of it for us."

With public housing, as with free public anything, there is always a tendency to increase the number of persons eligible to benefit and to expand the area of authority. This is especially true if there is a possibility to catch votes. New reasons can always be found why these benefits should be extended, and unfortunately, many of these, properly dressed up, sound plausible at the moment.

The moral and social effects of public housing

There is evidence that public housing is characterized by a confusion in its basic objectives, that it has fostered restrictions upon the earnings and initiative of its occupants, that it has deterred the production of rental housing by private industry and that it has permitted the growth of power hierarchies in the form of public-housing management.

The claims of the public housers that public housing eliminates slums, that it houses low-income families who could otherwise not afford decent housing, that it reduces crime, juvenile delinquency, and other antisocial behavior, are open to some question. Socially, politically, and economically, the segregation of low-income groups in subsidized publicly owned housing may not be the most desirable method of handling our housing problem.

Few definitive analyses have been made of the social effects of living in public housing. However, from time to time since 1934, civic leaders, sociologists, and others have made short-range, somewhat restricted studies of the adverse effects of public housing and the relationship of housing to social behavior. These studies, for the most part, have been prepared either in refutation of claims that subsidized housing is the solution to high rates of crime, illegitimacy, indolence, poor health, and other social deficiencies of slum dwellers and lower income persons, or as a warning to the country of the dangers inherent in socialized housing.

Public housing tenant morale: Based upon his service as the unpaid chairman of the Housing Authority of New London, Conn., and numerous discussions of the housing problem with other housing officials, Morton S. Baratz concludes that public housing results in a serious interference with freedom of choice. Mr. Baratz presents two arguments: "First, the market for shelter has been divided in half, necessitating an elaborate and cumbersome system of rationing. Second, the administration of the rationing system has adversely affected incentives to work and has contributed to a reduction in the size of the labor force."

As to the division of the housing market, Mr. Baratz visualizes two reasonably distinct parts: "On the one hand, private landlords and builders are providing modern facilities for families earning roughly $5,000 or more per year (though the minimum figure varies in different sections). On the other hand, federally subsidized projects service families earning an average of $3,500 per year or less."

What could represent less freedom, less privacy, than the process through which an applicant must go to qualify for residency in public housing: Investigation of credit records, inspection of present quarters to assure that the applicant will properly maintain his public-housing unit, the submission of an income-tax statement of the previous year, the signing of a waiver permitting the authority to inquire of his employer as to current earnings, and the swearing before a notary public that all the statements on his application are true and that he will report immediately any changes in his income or family composition.

In public-housing projects there is a rule that tenants' income may not increase more than 20 percent over the income earned at the time of acceptance. When income and employment are steadily rising (occupants of public-housing projects are typically between 25 and 40 years of age), incomes inevitably increase—if the tenant is ambitious.

This, if his income exceeds the amount set by the authority, the tenant either hides the fact, or his wife withdraws from the labor market, or he has to buy a house. These are harsh choices.

There have been instances when occupants of housing projects refused overtime work and promotions for fear of being made to vacate their project home.

Public housing and the lowest-income group

Public housing purports to meet the needs of the lowest-income group—but it falls far short of its objective.

In 1954, 6 percent of all United States nonfarm families had incomes of less than $1,000 and 9 percent had incomes between $1,000 and $2,000. The Ninth Annual Report of the Housing and Home Finance Agency indicates that the medium income for eligibility of families whose incomes were reexamined in 1955 was $1,793. A medium of $1,793 does not reflect a predominantly lowest-income tenancy in public housing, yet almost 6 million nonfarm families in this country have incomes of less than $2,000.

In 1954, 37 percent of the local housing authorities had income limits of $2,400 or less for admission of average size families. In 1955, only 34 percent had limits of $2,400 or less. In 1954, 6 percent of the authorities had income limits above $3,000; in 1955 this had increased to 10 percent. Thus, the eligibility requirements are on an upward trend to permit higher income families admission to the public housing.

Slum clearance no justification for public housing

The merits of public housing as a means of ridding communities of slums need to be examined with considerable skepticism. First, is the question as to whether or not public authorities are justified in changing the housing habits of thousands of citizens simply in the belief that they are thereby improving their lot in life.

Research indicates that a substantial number of persons whose total income appears adequate to allow them to live in homes that most people would consider standard, prefer to allocate their income in such a way as to minimize their outlay for housing. As is also shown, many people prefer remaining in what are widely considered to be slum conditions rather than to live in public-housing projects that carry with them restrictions and disruptions of long-established customs and relationships.

Even in circumstances where slum clearance is essential or unavoidable it is erroneous to conclude that public housing necessarily provides an acceptable solution.

As shown by specific instances the erection of a public-housing project on a former slum site has meant, in many cases, not the elimination of a slum but the spreading of slum conditions into other parts of the city. Not only do many persons not want to move into public-housing projects, but a large number who would be interested find themselves ineligible for a variety of reasons such as too low or too high income and, in many communities, their race.

In conclusion, it can be shown that public-housing projects themselves are in grave danger of becoming slums and several have apparently reached that point already.

Juvenile delinquency and public housing

Supporters of public housing frequently base their appeal on the presumed relationship of substandard housing and slum dwelling with a high incidence of crime and delinquency. These contentions do not reveal why some of the families living in slums or other substandard dwellings do not experience the social ills which the reformers attribute to their living conditions. For that matter, they do not explain why one boy in a family may be incorrigible, while his 3 or 4 brothers, living in the same environment, are not. When social behavior is concerned, the effect of housing is difficult to determine.

A study of juvenile delinquency in an East Harlem slum area revealed that:

The one unmistakable conclusion that emerges (from the study) is that there is no relationship between bad housing in its physical aspects and juvenile delinquency as revealed by court records.

In 1951, the Los Angeles police department conducted a survey of the cost of police services for the city at large, in blighted areas and for public housing projects. Chief of Police W. H. Parker reported that he believed

the data indicated that public housing police costs were at least equal to those for the city at large. Exceptions have been taken to this report based for the most part on the inadequacy of statistics and the methodology. However, the study does appear to document the fact that safe, standard housing is not a panacea for crime and delinquency.

What the proponents of public housing seem to overlook is that, in concentrating large families in a housing project, they are in most instances centralizing delinquency without offering substitutes in the form of wholesome outlets for youthful energy.

Political exploitation is inherent in public housing

A noted housing specialist, Charles Abrams, has warned against the abuse of the slum clearance and urban renewal programs.

As Mr. Abrams puts it:

"Slum clearance remains the most serious myth of the housing process." Areas are demolished which should remain in the housing inventory. The homes of small property owners, who have been initiating their own slums, are condemned—and their only choice is tenancy. Is this the perpetuation of the dream of all Americans for a home of their own?

It is conceivable that continued subsidization of housing accommodations for the lower income groups will eventually extend to Government housing of the middle-income groups. There is already much pressure on the Congress for Federal governmental assistance on the construction of middle-income housing. Should the Government begin providing middle-income housing, the votes of those who qualify will be extensive—they, too, will benefit from the housing supplied by their own tax money.

There have been some occasional incidences of overzealous housing managers using their offices for political propaganda. There have also been instances when other city officials have attempted to use the housing authorities for political gains.

How widespread this type of conduct may be is difficult to determine. It may be assumed, however, that most of the blatent incidences have been brought to light at congressional hearings.

Nevertheless, the possibility of political pressures being brought to bear on public housing tenants, managers and other officials is inherent in our public housing program.

Summary

As democratic governments are forced either in the public interest or by political pressures to assume more functions, it becomes increasingly important that the people maintain a constant vigil. A comprehensive review and reappraisal of the public housing program and other phases of the national housing program appear to be warranted.

Public housing has been a live issue for more than 20 years. Debates and discussions have been largely argumentative—they have not been studious appraisals of the program in the light of current conditions; they have not reviewed the programs and the results to ascertain if the original objectives have been or are being obtained.

This report points out some of the evidence indicating varying concepts of the objectives of public housing and delineates areas in the program which can be seriously questioned both with regard to their contribution to the promotion of the general welfare and to the welfare of the tenants of public housing.

More and more of the taxpayers are objecting to paying their neighbor's rent; city officials face the problem of congestion and its concomitants—increased services, crowded school facilities, lack of recreational facilities, overtaxed police forces; the majority of the lowest income group is still in need of decent standard housing; and slum clearance and redevelopment projects have in many instances succeeded in creating new potential slums because of the desire of those displaced by projects to remain in the same general neighborhood.

Obviously these are not the objectives of the public housing program.

3. ADVERSE EFFECTS OF FEDERAL AID TO EDUCATION

Federal participation in financing elementary and secondary education in the States mainly has taken the form of, 1, aid to special kinds of education—such as agricultural or industrial training—generally comprised within the term vocational education, 2, aid to certain localities, such as districts containing large federally owned, tax-exempt properties, and, 3, aid to an activity closely associated with education, such as the provision of school lunches.

The Government also makes available Federal surplus property for educational usage, and part of this has been utilized by public schools. As to whether all these programs are basically forms of Federal aid to education is a matter of opinion. It is fairly obvious that in at least one instance (that of the national school lunch program) the basic purpose is not aid to education. Nevertheless all of these programs have contributed to provisions for education in the States and local school districts affected.

The Constitution makes no mention of education. Under the 10th amendment the powers not delegated to the Federal Government and not prohibited to the States, are reserved to the States, respectively, or to the people. Since education is not among the powers expressly delegated to the United States, it falls within the provisions of the 10th amendment.

Some people have contended that the general welfare clause gave the Government not only the right but actually the duty to promote education. It is significant that the general welfare clause says only that: "The Congress shall have power to lay and collect taxes, duties, imports and excises, to pay the debts and provide for the common defense and general welfare of the United States * * *."

Not only under the Constitution but also traditionally in the United States, education has been principally a State and local responsibility. In our early history the organization of local school districts was a natural result of the geographical, religious, and political conditions of the time. No other aspect of American life has more clearly demonstrated the operation of grassroots democracy than the local administration of schools.

There are dangers in departure from this tradition. Nevertheless, through the years the Federal Government has assumed a great number of responsibilities in this field.

The many bills for additional Federal aid to education that have been introduced in Congress in recent years propose a continuation of this trend toward centralization of Government responsibility for education.

Federal aid may have helped retard State and local reforms

By causing people to change their philosophy of government and look to Washington for help, Federal-aid programs may well have contributed to retardation of State legislation for the advancement of education.

For example, although reorganization of school districts has been one of the most important measures for obtaining better schools in thousands of localities, some States have neglected to pass laws facilitating consolidation. In many instances, legislatures have refused to define what constitutes an adequate school district or to give the State educational authority power to approve sound consolidations. In some States, in fact, there has been an actual reversal of legislation expediting reorganization of school districts.

In about half of the States the public schools are supported mainly from the local property tax. Because some school districts are rich in assessed valuations of property, they have been reluctant to consolidate with districts poorer in this respect. However, except for constitutional restrictions, the State legislatures have complete power to enforce consolidation of districts for the improvement of education throughout their boundaries. It may be that in some instances the legislatures have refrained from doing so because of the hope that a renewal of Federal aid for school construction or other Federal intervention would make such politically undesirable enforcement at the local level unnecessary.

Past programs, and the multiplicity of current proposals for others, may have delayed other State action for advancement of education.

For instance, some States years ago placed upon their local administrative units restrictions which have made difficult local investments in education in proportion to the ability or desires of the people. Examples are homestead exemption acts which reduce revenue, and limits on tax levies or bonded indebtedness. These are in some cases outdated restrictions.

Of greater importance is the fact that some State legislatures have not provided sufficient State aid to local school districts for education. These States have allowed their local communities to continue depending mainly upon the local property tax without drawing enough support from State sources of revenue. Thus these State governments have not only failed to utilize some of their most important sources of revenue for the support of education, but they also have failed to distribute their revenues so as to provide better schools throughout their boundaries. In 32 States during the school year 1953–54 less than 50 percent of the revenue for public schools was drawn from State sources.

Schools which have had to depend upon the local property tax have frequently been unable to respond to expanding educational needs. In only a few States have the legislatures authorized local boards of education to secure school revenues from nonproperty tax sources.

There have been many inequities in the assessment of property and in local tax rates in many States. While some States have been using 10 to 12 sources of revenue to support education, other States have been using only 1 or 2 sources for this purpose.

A publication of the United States Office of Education in 1950 declared that nearly every State had some public school finance practices that might be seriously questioned. The publication stated that many of these practices were tending to perpetuate existing conditions and indirectly penalize improvements regardless of the desirability of these improvements.

These obstructions to provisions for the construction, maintenance and operation of better schools could be corrected through State leadership and State legislation. The inequities might have been removed in many instances if Federal programs had not encouraged the people to adopt a philosophy of "let's get some more Federal money to do the job." Federal programs have discouraged self-reliance among the States and communities.

Federal aid to education has had ill effects on our system of government in general

The increasing Federal activity in education has affected not only the philosophy of government with respect to education in some localities but it also may have had wide-sweeping effects on the general philosophy of government in other fields.

The indispensability of education to popular government has been an important premise of the American faith. The consequence of any Federal influence on educational philosophy and practice (however subtle) may be a significant alternation of fundamental American political concepts.

The determination of public educational responsibility at the Federal level may cause demands for Federal aid to be extended to private schools. Such a situation may, in turn, endanger the nature of separateness of church and state in our system of government.

Federal activity in education may have led toward orthodoxy and absolutism, with the accompanying undesirable effects on our American system of government in general.

Waste of Federal aid has led to Federal controls

Prior to the enactment of the Morrill Act of 1862, all of the Federal subsidies to the States for education were made for general or indefinite educational purposes and without restriction or regulation. The result was that some of the States, in what has been termed as "an administrative orgy of dishonesty and breach of trust," wasted a large portion of this money in ways which were never contemplated by Congress.

The subsequent history of Federal controls in grants-in-aid has been capsuled:

"Not since the day on which Lincoln attached his signature to the Morrill Act has any distribution of money been made to the States without safeguards for their expenditures."

In 1914 Congress created the Commission on National Aid to Vocational Education to study the implications for Federal subsidy to vocational education and to report their finding and recommendations. The Commission, while recommending the vocational education program that eventuated in the Smith-Hughes Act of 1917, disavowed proposing any Federal control. The Commission declared that:

"The Federal Government has no authority to control or manage the internal affairs of the States nor can it take part in controlling or managing their educational system."

However, it has been one thing to say, as did the Commission in its statement of principles, that "national grants to the States should be given for vocational education under those conditions which will conserve and promote the local interest, initiative, and responsibility, with all of their recognized advantages," and it has been quite another matter to realize such aims as the preservation of local autonomy. From the 1914 Commission's recommendations have sprouted the current Federal vocational education programs.

Certain control devices have existed in the Federal legislation and in the administrative machinery.

Yet, in 1938, President Roosevelt's Advisory Committee on Education observed that:

"An excessive amount of Federal control appears to have been exercised over many aspects of the federally aided system of vocational education. This control has been due in large part to the provisions of the statutes, but it also appeals to have resulted in part from the manner in which those provisions have been interpreted and administered in the United States Office of Education and its predecessor in the work, the Federal Board for Vocational Education."

Federal aid has given States an inferiority complex

Many statistical devices have been used to indicate the relative ability (or inability) of the States to support the maximum effort needed to meet the public responsibility for education. These relative ability studies have greatly influenced grant-in-aid allocation formulas. They have done much to establish the popular notion that the States—or certain States—cannot, of and by themselves, provide for the education of their citizens without Federal assistance.

The inferiority complex which has been more or less imposed upon the States can be partly attributed to Federal activity in the field of education. Indeed, the rapid expansion of overall Federal power during the first half of this century largely has been both the cause and the result of this belittling of State prestige and competence.

There are, of course, differences in income and tangible wealth among the personal, family, community, and regional units. There are also price or cost differences. Such differentials influence local and State taxability to some degree. That these differentials would prohibit adequate State and local support for education has not been proved.

4. DETRIMENTAL EFFECTS OF FEDERAL CREDIT AGENCIES

Today the Federal Government lends directly $1 for every $5 lent by private banks. Furthermore, pressure to increase the amount of Government lending and expand the areas covered seems to be rising.

The major fields in which the Government has instituted and expanded its loan programs are housing, agriculture, loans to business, foreign investment, and intergovernmental loans.

Some of the lending agencies have retired the capital stock owned originally by the Government, pay their own administrative expenses, and are essentially privately managed, subject to governmental supervision and control. Agencies mutualized in this sense include the Federal land banks, the Federal home loan banks, and the banks of cooperatives (partly).

However, as Federal instrumentalities, these mutualized agencies are free from much State and local taxation, and in most cases also from Federal income tax. Thus even these agencies have what may be considered an unfair advantage over competitive private enterprise.

Before considering the lending programs and loan guaranteeing of individual Federal agencies, certain dangers and risks of governmental lending programs may be pointed out.

In principle, it must be recognized that every governmental lending and loan-guaranteeing program involves the replacement of judgment and decision-making of private lenders by the judgment and opinions of Government officials. It is thus an interference in the private economy.

The criteria used by Federal officials are different from those of private lenders. The private lender is concerned essentially with earning a profit from lending and usually feels an immediate responsibility for the disposition of the funds at his disposal. These motives are either absent or less compelling on the part of the average Federal official.

Usually Federal loan programs have been instigated to bring sectors of the economy out of a depression, to minimize its severity, or to foster the defense effort. Desirable though these objectives at a given time may be, there is first the question as to whether a Federal loan program is economically and politically the soundest way of achieving them. The Government has available such alternatives as monetary and fiscal policies which can be used to further defense and antidepression goals, without the arbitrary intervention in specific parts of the economy that is inevitable in lending programs.

Second, all Federal programs have a tendency to be extended and perpetuated long after the original cause for undertaking them has been removed.

The governmental intervention in the economy by means of lending programs inevitably involves considerable favoritism. Firms or individuals who fail to meet the credit standards of private lending agencies receive an unfair competitive advantage if they are then granted a loan by a governmental agency. In deciding where available loan funds should be allocated, Federal officials often find the pressures of political considerations too strong to permit evaluation of loan applications on sound business principles alone. Further, standards for loans, which originally are specific and strict, gradually are relaxed, allowing even more room for laxity of administration, favoritism, and even corruption.

Housing loans

The Federal Government has assumed a rapidly increasing role in determining the levels of housing construction. Before World War II, about one-sixth of the mortgage debt on nonfarm one- to four-family homes was insured or guaranteed by Federal Government agencies. By the fall of 1955, the total home mortgage debt had increased to approximately $86 billion—about 37 percent Government underwritten.

As a result of these Government guaranty and insurance programs, mortgage loans have been substantially increased in duration, downpayments have been lessened, and interest charges have been lowered. Government activity in housing has been a significant factor in stimulating the building boom during much of the post-World War II period, with the result that building costs and prices of new as well as existing houses have been materially increased.

The lure of home ownership has been a significant factor in the postwar migration to the suburbs. This has created innumerable problems for urban centers. Property values, especially of rental property, have been adversely affected. Construction of moderately priced apartments has been severely cut back. Adequate maintenance has been neglected. Slum areas have tended to spread, which in turn has invited further Government intervention in slum clearance and urban renewal. As the real estate values in urban areas have been jeopardized, tax revenues have fallen, or have failed to keep pace with the increasing demands for municipal services.

These conclusions are borne out in more detail in the following discussion of specific housing programs.

Federal National Mortgage Association

Although the Federal National Mortgage Association makes no loans directly to individuals or institutions, except for certain housing in Alaska, its portfolio of FHA insured and Veterans' Administration guaranteed mortgages represents the largest volume of loans in the housing field by the Government. Its outstanding loans (mortgages) as of the end of June 1956, totaled $2.5 billion. The FNMA was chartered on February 10, 1938, and in 1954, was made a constituent agency of the Housing and Home Finance Agency.

The Federal National Mortgage Association has been subject to severe criticism.

It is possible that the continued propping up of the housing industry by this agency (and others) is retarding technological improvements in the housing industry and delaying the movement toward lower housing costs.

There is a serious question whether the special assistance activities will interfere with the sound management of the secondary mortgage functions. Such pump-priming activities, potentially inflationary, should probably be abandoned.

Federal Housing Administration

The Federal Housing Administration insures private mortgages for a wide variety of types of home and housing construction. This program has relieved private lenders of a substantial portion of the risk formerly assumed on mortgage loans.

The history of the Federal Housing Administration has been marked by a lowering of qualifying standards and an expansion of function well beyond that intended in the original legislation.

Veterans' Administration

The Veterans' Administration has as one of its major functions guaranteeing housing, business, and farm loans made by private lenders to World War II and Korean war veterans.

It also makes loans directly to veterans for the purchase or construction of homes in areas where the guaranty program is ineffective because of lack of private loans at 4½ percent interest. The Treasury reports that these direct loans outstanding, as of June 30, 1956, totaled more than $433 million.

While there was a substantial need to assist in the readjustment of servicemen at the end of World War II and, to a somewhat lesser extent, at the end of the Korean war, the question remains whether loan and loan-guarantee programs were the most desirable device to achieve rapid readjustment. In any case, there is even less reason for retaining these programs, many years after the end of the respective conflicts.

Lending institutions whose loans to veterans are guaranteed or insured under the various Veterans' Administration loan and guarantee programs are receiving, in effect, a subsidy from the Government which is assuming risks which the lending institutions themselves normally would have to assume.

Public Housing Administration

Although the Public Housing Administration is not primarily a lending agency, it makes loans and grants to assist local authorities in the construction of low-rent public housing. This program reached its peak in 1952 when nearly $1 billion was lent.

Since then the major portion of these loans has been liquidated, the loans being assumed by private investors.

However, the housing authority bonds purchased by private investors are secured by the pledge of the annual contributions of the Public Housing Administration which are intended to supplement the net proceeds from operation of the low-rent housing programs.

The Public Housing Administration also makes short-term loans for planning and construction costs.

Urban Renewal Administration

The Urban Renewal Administration is a constituent unit of the Housing and Home Finance Agency. Among its responsibilities are loans to municipalities to clear and redevelop slums and to rehabilitate and improve blighted areas. In addition, it guarantees private temporary loans through the pledge by local agencies of the Federal loan commitment. Thus in this area, too, the Federal Government's role involves considerable intervention in the specific problems of local communities.

Community Facilities Administration

The Community Facilities Administration was established as a constituent unit of the Housing and Home Finance Agency by the same order that created the Urban Renewal Administration. It is responsible for administering, among other programs:

1. Loans to institutions of higher learning to finance student and faculty housing and other educational facilities.

2. Public facility loans to State and local governments to finance construction of needed public works.

3. Liquidation of a program of loans made to manufacturers of prefabricated houses and components. This program was originally in the Reconstruction Finance Corporation.

The lending programs of this agency have expanded rapidly as requirements for loans have been liberalized. The low interest rate, 2¾ percent, has had such undesirable repercussions that the Commissioner of the Community Facilities Administration, John C. Hazeltine, has requested that Congress raise it to 3⅛ percent. The present rate has virtually eliminated all private investors from the college housing field, leading the commissioner to predict, "Increasing pressures will be placed on the Federal Government to make direct loans aggregating billions."

Thus we have the prospect that the low-interest rate actually slows down critically needed college housing construction.

The 1955 Housing Amendments also authorized $100 million for a new program of loans to local Governments for public facilities, such as water and sewage systems.

Home Owners Loan Corporation

The Home Owners Loan Corporation, formed in 1933 to preserve home ownership by refinancing foreclosed or delinquent home mortgages, is no longer in existence. By June 30, 1952, it had acquired 1,017,821 mortgages involving more than $3 billion, and had liquidated all of these mortgages. Its operations provide a useful example of how the true cost of a lending program can be concealed.

HOLC borrowed from the United States Treasury at a rate of one percent a year, substantially less than the Treasury paid on its borrowings from the public. Thus the $14 million earnings which HOLC paid into the Treasury in 1951 does not reflect a profit for the Government as a whole. According to the General Accounting Office report on audit of HOLC accounts, the cost to the Treasury for supplying funds to HOLC since 1933 was about $92 million.

Housing and Home Finance Agency Liquidating Programs

All told as of June 30, 1956, the Housing and Home Finance Administration had, in the revolving fund of various programs in liquidation, loans receivable outstanding totaling about $156 million. This is in addition to all the active programs carried on by the various constituent agencies of the Agency.

Agricultural loans

In agriculture, lending programs of a considerable variety have grown substantially in the past two and a half decades.

The farm lending agencies have been a factor in the greater availability of credit in rural areas than in urban areas during a period of generally tight credit. As the Governor of the Farm Credit Administration, R. B. Tootell, noted in December 1956, competition from the Federal land banks and from production credit associations have helped to keep interest rates of commercial banks from rising as much as elsewhere.

To the extent that this easy credit in rural areas is the result of governmental action, urban areas are paying a premium in terms of higher interest rates over what would prevail if the credit supply were more equitably distributed. The dangers of this kind of inequity are widely recognized.

Commodity Credit Corporation

In terms of volume of loans outstanding, the Commodity Credit Corporation is the major agricultural lending agency in the Government.

By far the most important CCC lending programs are its price-support operations. Sizable as these loans are, they reflect only a part of the price-support program.

As of June 30, 1956, while CCC loans totaled $2.3 billion before reserve for losses, and $1.9 billion after reserve for losses, the Corporation also had a commodity inventory of $6 billion before reserve for losses, and $3.9 billion after reserve for losses.

Its total assets were $7.5 billions as of June 30, 1956. Its capitalization, originally $3 million in 1933, has been increased to $100 million.

Originally it had no specific borrowing authority. When Congress gave it a permanent charter in 1948, its borrowing power was $4.7 billion. This was raised 5 times in 8 years.

As of August 1, 1956, it was $14.5 billion.

In the second category of CCC loans are the farm storage and equipment loans made to encourage farm storage at lowest cost of the commodities it holds as security on its loans. If storage facilities in an area are inadequate, CCC will make, or will guarantee if made by a private lending agency, recourse loans to producers for a maximum of 80 percent of the cost of new farm storage facilities.

In the third category are loans to the Secretary of Agriculture for the purpose of making crop insurance premium advances, soil-conservation payments, and certain other payments, and to pay the administrative costs of the county committees handling such programs. These advances are repaid to the Commodity Credit Corporation out of a congressional appropriation at end of the fiscal year, with interest at least equal to the cost of money to the CCC. None are outstanding at present.

Although these loans do not compete with private funds, such an enormous lending operation makes waste, fraud, and inefficiency inevitable.

Rural Electrification Administration

Since 1935 the Rural Electrification Administration has been making loans, chiefly to cooperatives, for financing construction of electrical distribution, transmission, and generating facilities to serve rural areas. Since 1950, similar loans have been made to finance construction and improvement of rural telephone systems. Interest rates are set at 2 percent. Administrative expenses are financed by a separate appropriation.

This is another example of a program which has grown larger and larger. In 1956 it lent $229 million to electric cooperatives compared to $180 million in 1955. Although 90 percent of all farms are now electrified, the Rural Electrification Administration seems to make no effort to require those to whom it lends to become more self-supporting, to rely more on private bank credit, to pay competitive interest rates, and to bear the costs of administration. Until such steps are taken, the taxpayer will continue to bear a part of the cost of these facilities which are of direct benefit to a relatively small segment of the population.

Farmers' Home Administration

The Farmers' Home Administration makes loans to farmers presumably unable to obtain credit from other sources for farm operation expenses and crop production, farm ownership and improvements, and for soil- and water-conservation activities. These loans are financed by annual authorizations. It insures long-term mortgage loans, and soil- and water-conservation loans. It administers emergency loan programs for farmers hit by production losses from natural calamities, or by unfavorable economic conditions.

The program was started as a relief measure at a time agriculture was seriously depressed. But the time is long past when it could be considered primarily a relief agency. Further, there has been a substantial shift of population away from farming which also should make it possible to cut back on this phase of farm aid. It is also dubious that a lending program is the most feasible way of carrying out its functions.

Other agencies are authorized to make loans to cover disaster and other emergency situations, and to help farmers carry out soil-conservation programs. Thus, there is unavoidable duplication when this agency handles these same functions.

In addition, the low interest rates, long terms of loans, and the Government's bearing the administrative costs, have meant that the taxpayers have been subsidizing a limited group of individuals. These loans have in fact probably tended to discourage marginal farm operators from shifting into other economic activities and have encouraged the retention of many farm units that are too small to be efficiently operated.

Farm Credit Administration

The Farm Credit Administration, though it is not a leading agency, is the supervisory authority for some important governmental and quasi-governmental lending agencies: Federal land banks, banks for cooperatives, Federal intermediate credit banks, production credit corporations.

The United States is divided into 12 farm credit districts, each with 1 Federal land bank, 1 bank for cooperatives, 1 Federal intermediate credit bank, and 1 production credit corporation.

The Federal land banks were established in 1916. Since 1947 their capital stock has been entirely owned by member national farm loan associations which act as agents of the banks in making long-term first mortgage loans on farm real estate.

Since their mutualization, these banks have been subject to relatively little adverse criticism.

The Central Bank for Cooperatives and the 12 banks for cooperatives are federally incorporated agencies making loans to farmers' cooperative associations. The majority of the capital stock is held by the Federal Government. The Farm Credit Act of 1955 provided for the retirement of the Government's investment and the eventual ownership of the banks by farmers' cooperatives.

As long as these banks have their capital provided in large measure by Federal funds, they will enjoy a considerable advantage over private banks. Having these funds available without payment of interest or other charges has enabled them to accumulate earnings, and in some instances to lend at rates of interest more advantageous than borrowers would have had to pay to other lenders.

The Federal intermediate credit banks are now under the supervision of the Farm Credit Administration. These banks make loans to, and discount paper for production credit associations, the banks for cooperatives, State and national banks, agricultural credit corporations, livestock loan companies, and similar financing institutions. Certain types of loans are made to farmer cooperatives. The funds they lend are borrowed from private sources. The equity capital is owned by the Federal Government.

There seems little reason for these banks to be federally owned. A system of privately owned production-credit discount banks, regulated and supervised by the Farm Credit Administration, would probably have all of the advantages and few of the disadvantages of the present system.

The production credit corporations are wholly owned by the United States. They supervise and assist nearly 500 production-credit associations in the extension of agricultural production credit, and in some instances partly finance them through investment in capital stock.

Bills were introduced in the Congress in 1956 to merge production credit corporations in the Federal intermediate credit banks and to retire the Government's capital in the latter.

LOANS TO BUSINESS

Federal loans to business center chiefly in the Small Business Administration.

The other business loan programs, including those connected with defense production, have not generally involved losses to the Government, or have been comparatively insignificant.

Small Business Administration

The Small Business Administration was established in 1953 but its growth has followed the pattern established by other lending agencies. It offers a variety of types of assistance to small businesses; this report will be limited to its lending functions.

Loans fall into two categories, business loans and disaster loans.

Total amounts authorized for these loans and the amount of the revolving fund appropriated for these loans have increased steadily. The original act authorized business loans up to $150 million and disaster loans up to $25 million. The disaster loan fund was increased in February 1956, to $125 million. In February 1957, the authorization for business loans was increased to $230 million.

The revolving fund of SBA, which covers both business and disaster loans, started at $55 million, was increased to $80 million in 1954, to $105 million in 1955, and increased twice in 1956, first to $125 million and then to $175 million. It was increased again in February 1957, by $45 million, to a total of $220 million.

The growth in the lending programs of SBA is due in no small measure to the liberalization of loan requirements and the widening of the area of eligibility for loans. It is potentially the most diversified of all Government lending agencies. Few kinds of business are now ineligible under its program and no specific end to its expansion is in sight.

Since the lending authority of the Small Business Administration is so broad, there is a serious danger of favoritism and of assisting certain businesses which thereby obtain an unfair competitive advantage over their rivals. Any conceivable volume of lending by SBA is bound to provide loans for particular firms that are no more deserving than scores of others who are turned down, or, more important, who, relying on their own resources and on private credit facilities, do not apply to a Federal agency for help.

Although it is too early to evaluate the effects of SBA's lending program in terms of return to the Government, there is at least some evidence that a number of loans were approved without sufficient thought as to availability of private capital, ability to repay, and the effect of the loan on the borrowers' competitors.

Maritime Administration

In 1956 Congress liberalized the law under which the Maritime Administration of the Department of Commerce insures private construction loans and mortgages on most types of cargo and passenger-carrying vessels. As a result the volume of insured loans has increased rapidly and is expected to grow still further. It is possibly ironic that legislation designed to facilitate private financing has involved such an extensive program of Government insurance. It seems apparent that, without this insurance, the level of shipbuilding privately financed would have been far lower.

The question remains, how sound economically are such construction projects if private capital is unwilling to support them without a Federal mortgage insurance program.

Export-Import Bank of Washington

The Export-Import Bank of Washington was established in 1934 as part of the national recovery program. Its purpose was to aid in financing and thereby stimulating exports and imports and the exchange of commodities and services in foreign trade. More recently it has come to be regarded widely as an instrument of United States foreign policy.

There are a number of reasons why a continuation of this agency may be viewed with some concern.

The original justification for the agency has long since disappeared.

Further, it is of dubious economic merit to encourage exports and at the same time admit additional imports only grudgingly. Unless the countries whose imports of American goods are financed by Export-Import Bank loans are thereby put in a position to increase their exports to the United States, the American Government faces the risk of adding one more giveaway program to those already accumulated.

Resentment is bound to be created between nations receiving loans and those who are turned down. To the extent that loans are made to foreign importers of American goods, it is even more doubtful that the funds will be used in a way to help the industrial development of their own countries.

It seems likely that the goals of American foreign policy cannot, in most cases, be reached by a Government lending program as well as by other more direct programs. In cases where a loan program seems warranted, it is quite likely that the International Bank for Reconstruction and Development, of which the United States is the major stockholder, is a more appropriate agency.

It is in a sense ironic that the United States has exclusive control over one bank designed for foreign lending and at the same time is the leading stockholder in its closest counterpart.

(EDITOR'S NOTE.—The full report analyses the activities of several additional lending agencies. These analyses are omitted in this condensation, either because the volume is small or has little direct impact on the economy. Bureau of Indian Affairs loans to start Indians in agriculture and Veterans' Administration rehabilitation loans to disabled veterans are examples.)

Conclusion

Few segments of our economy have not, in one way or another, felt the impact of Government loans. Furthermore, all evidence points to a continued expansion of these programs.

There can be little consolation in this trend for those who are clearly dedicated to a free private enterprise economy, operating with a minimum of governmental intervention, either in terms of control, regulation, or promotion.

It is virtually axiomatic that governmental assistance itself leads inexorably to a considerable degree of governmental control.

Those in favor of a truly free private enterprise economy would, therefore, do well to make their opposition to this extensive program of government loans known. Only in this way does it appear possible to have the current trend reversed.

5. DANGERS OF FEDERAL ELECTRIC POWER

In 23 years, the Federal Government has multiplied its power-generating capacity about 76 times—from 232,000 kilowatts in 1933 to about 17 million kilowatts now. In doing this, the Government has invaded what traditionally has been primarily a field of private enterprise.

This field involves millions of Americans who are participating directly or indirectly in the generation and distribution of electric power by private utilities. These people are participating directly through purchases of stocks or bonds, and indirectly through investments by insurance companies, banks, or religious and educational organizations and trust funds.

Thus the public can actually claim some form of ownership of the private electric companies.

The philosophy of Federal ownership of power does not encourage the people of a region or a country to rely upon their own

genius, their own initiative. To allow the Federal Government to take over where a private enterprise can engage profitably with benefit to the area encourages a careless and unaggressive attitude in the people of that area.

A private company must be inventive and must encourage the creative genius of its employees to provide better service to its customers and for greater profit to the business—a Government agency feels no such urgency. Our history proves how important this factor has been in creating our high standard of living and technological developments. The electric industry itself is living proof of what Americans have achieved in the stimulating and competitive system of free enterprise.

This subsidized Federal power is unfair. Not only are sections which do not have Federal power paying for the power developments in areas such as the Tennessee Valley and the Pacific Northwest, but they stand the chance of losing some of their industries to these areas.

Besides being harmful to general competition in industry, Federal power is unfair to private electric utilities which must charge higher rates because they pay higher taxes and must make a profit. The rates charged for Federal power do not include charges for Federal taxes. Only in a few cases do Federal agencies make payments to States and local governments in lieu of taxes. When such payments are made, they are generally only a small part of the amount the regular taxes would be.

In many instances little or no interest is paid on the money used, since the money is supplied by all the people through taxes.

Since taxes and interest on money invested in plants and facilities are two of the biggest items of cost in the utility operation, the Federal agencies can sell electricity at below real business costs.

Spurious comparisons are made of the alleged cheapness of public power. Such cheapness merely reflects the subsidies garnered by the Federal power plants. The owners of private utilities pay Federal, State, and local taxes; pay interest on their bonds; pay dividends; pay taxes on their dividends; and still do not charge rates higher than people can or are willing to pay. The rates and earnings of private electric companies are regulated by governmental commissions; consequently they are not allowed to make excessive profits.

Magnitude of Federal power operation

The Federal Government is by far the largest single producer and supplier of electric power in the United States.

It supplies practically all the electric utility power in Tennessee and is a major producer and supplier in Alabama, Mississippi, Washington, Oregon, Montana, California, Arizona, and Nevada. During 1953, the Federal Government produced electric energy in 22 States and sold it in 5 additional States.

Federal electric power capacity grew from 232,000 kilowatts, or 0.7 percent of the national total in 1939, to 17 million kilowatts, or 14.8 percent by December 21, 1955.

Further additions provided through completion of construction in progress and authorized by the Congress are expected to increase generating capacity to approximately 35 million kilowatts, at a total cost of about $10 billion.

These Federal electric properties will, if completed, include at least 168 hydroelectric plants, at least 17 steam-electric plants, and substantially more than the present 23,000 circuit miles of transmission lines.

In addition to this Federal power, nonfederal public bodies generated 7 percent of the total in 1953, an increase from 5.5 percent in 1933. Private investor-owned power, which amounted to 94 percent of the total electric generating capacity in 1933, dropped to 76 percent by December 31, 1955—a decline of 18 percent.

Of the hydroelectric power developed in the United States, more than 50 percent is generated by public agencies, with the Federal Government's share being 40 percent and local public power's share 10 percent.

The largest Federal electric power system is that of the Tennessee Valley Authority located and operated in Kentucky, Tennessee, Alabama, Georgia, Mississippi, North Carolina, and Virginia. The capacity as of June 30, 1956, of these TVA plants was 9,279,485 kilowatts.

This exceeded by more than twofold the capacity of our largest private electric utility system, the Pacific Gas & Electric Co. system.

The additional capacity of TVA plants now under construction and those on which the TVA proposes to start and complete construction through fiscal 1960 will raise its capacity to nearly 12 million kilowatts. That capacity, by then nearly 75 percent steam-electric, will constitute about 6 percent of the Nation's total electric utility power capacity as estimated for 1960.

From inception in 1933 to June 30, 1955, the United States Government has made available to TVA through appropriations, bond purchases, and property transfers, a total of $2,015,490,529. For the same period TVA has recorded a net income of $301,427,523 from its power operations, and net expenses of $159,290,652 for its other programs. TVA has repaid to the United States Treasury a total of $178,635,890. The resultant equity of the United States Government in TVA was $1,978,991,510 on June 30, 1955.

All Federal power is subsidized

Those favoring big government favor control of electric energy by Government. Such control can only be gained if the movement has popular support. The most obvious means of obtaining this support is price. To be politically desirable, public power must be made to appear cheaper than investor-financed power. Actually, in a country of such technological competence as ours, real cost differences in power production as between public and private development in a given area will be of little significance—provided all costs are included in each.

For example, comparative studies of costs by the Atomic Energy Commission revealed that (assuming a uniform fuel cost of 19 cents per million British thermal units and excluding all taxes), TVA energy at Oak Ridge costs 3.78 mills per kilowatt-hour and at Paducah costs 3.93 mills, compared with the investor-owned Ohio Valley Electric Co. cost of 3.79 mills per kilowatt-hour at Portsmouth, Ohio.

With true costs about the same, the only way an advantage can be shown for public power is by subsidizing it.

All Federal power is subsidized through one or more of the following forms: 1, use of interest rates lower than the actual cost of long-term money; 2, omission of interest during construction; 3, omission of Federal-income taxes or a comparable contribution to the cost of the Federal Government; 4, omission of State or local taxes (with two exceptions, TVA and Hoover Dam); 5, charging large parts of the initial capital costs to wholly subsidized Federal activities such as flood control, navigation, fish and wildlife preservation; 6, charging administrative costs, insurance, and pensions to other Government accounts.

Because Federal power is thus subsidized and because hydroelectric sites are not uniformly located in all States, the Federal taxpayers in many States find their tax payments going to subsidize the users of Federal power in other regions.

Cost allocations—another form of subsidy

Another form of subsidy of Federal power has resulted from improper allocation of costs.

Multiple-purpose development, because of allocations of the joint or common costs to the various functions served, provides savings over the cost of single-purpose structures. This results in lower costs of any one of the functions, such as hydro power, navigation, flood control, etc. So long as the power development is incidental to the major purposes of flood control, navigation or irrigation, a case may be made for allocation of costs in accordance with approved methods such as the separable costs-remaining benefits method or the alternative-justifiable-expenditure method.

However, where power is a predominant purpose of the structure, as in many recent developments, and therefore in direct competition with private industry, it can be argued that the full cost of the single structure required for power development only should be allocated to power in the multiple purpose structure and the savings resulting from such allocation be applied to repayment to the Treasury for the other purposes served.

If the Government's power operations are regarded as a business in which it is properly engaged, then it should be operated for the benefit of, or at least without loss to, the Federal Government and the Federal taxpayers, as well as for the benefit of the power users.

The principal reason for the low TVA rate is the fact that the power pricing policy followed relieves users of TVA power of the burden of making a sufficient payment in the price paid for power toward the costs of the Government in carrying on the program.

For TVA's total operations through 1953, there would be (on this basis) a deficit between total financial requirements ($794 million) and total operating revenues ($695 million) of approximately $100 million, or 14 percent. Similarly, the total cost of service ($803 million) would have exceeded revenues by about $108 million, or 15 percent.

From this, it can be assumed that increasing the TVA power rates 15 percent would eliminate the subsidy to TVA power users by the general taxpayers.

The conclusion, therefore, is:

1. That, partly because of its failure to charge as a cost the 3 percent interest on borrowed funds which the Federal Government has had to pay through 1953, and partly through the small payments in lieu of taxes, the TVA has understated its costs by about $108 million and that an equivalent power subsidy has been given to the TVA power users.

2. That, if the TVA had charged the fair regulated rates which other power consumers have to pay, at least a 30 percent increase in TVA rates would be justified.

3. That TVA power rates and revenues, which allow for the payment of all operating costs, depreciation on investment, and approximately 4 percent return on the Government's investment in power, include an item of $30 million in lieu of taxes—and this is $170 million less than Federal, State, and local taxes would have totaled during the period if full accrued taxes (especially the Federal corporate income tax) had been paid.

4. That the allocation of costs by the TVA to navigation and flood control adds a small additional advantages to TVA rates over the rates which must be charged by private utilities, but that this is a declining advantage with the increase in the proportion of steam plants with the TVA system.

Federal power causes power shortages

To meet fluctuations of peak demand and allow for outages, etc., a reserve of at least 15 to 20 percent in generating capacity is

considered good practice. Certainly, one of the most important duties of a public utility is to provide an adequate supply of power to meet the increasing demands of consumers.

The margin of reserve was sharply reduced in 1947 as the demands for electric power, pent up during the war, grew faster than new capacity could be installed. But since 1949 the electric utility industry has caught up with the demands and now has brought the margin between generating capacity and demand to between 17 and 20 percent. Consequently future installations need only keep pace with increases in demand and retirement of old machines.

As these figures show, the public utility function has generally been fulfilled throughout the country by local nonFederal sources. But this is not the case in all areas.

The TVA area and the Pacific Northwest face power shortages, because of the manner in which the Federal projects have been administered.

In fact, by 1954 the hydro power was insufficient for the loads of municipalities and cooperatives in the TVA area.

It is obvious that TVA power development is a policy of self-perpetuating socialism within the private enterprise system. It makes the local utilities dependent upon public power and then gets their support to extend public power.

It is also pertinent to review the effect of this Federal utility responsibility on the growth of industry in Tennessee, the heart of the TVA area. Many people would conclude that, with low cost power, industrial expansion would be booming. This is not the case.

The availability of power is as important a consideration as the cost. The supply in the TVA area is uncertain, partly because the water power is nearly all developed and partly because the Federal Government is growing more reluctant to build steam plants and subsidize TVA further.

Compared to other parts of the South the TVA area is having a relatively slow industrial growth. So-called cheap power has not proven to be a boon to the economy because of the uncertainties caused by the fact that the Federal Government is the sole supplier of power to the area.

Federal power is monopolistic

This steadily increasing utility responsibility by the Federal Government can lead to what, in effect, is a Federal monopoly on power development in the region.

For example, Adm. Ben Moreell, in his book "Our Nation's Water Resources," cites the TVA, under its sole supplier clause, as requiring all of its regular utility customers to take their entire supply from its facilities.

This policy creates an obligation on TVA to build all the generating facilities which are needed in the area it supplies. The result is that TVA has built large steam plants and extensive transmission systems. Distributors have no generating facilities of their own.

Federal power not now essential for national defense

The need for Federal power in the interest of national defense has been frequently used to justify projects or appropriations. Yet $21 billion has been spent by investor-owned electric companies for generation, transmission and distribution facilities since World War II while total expenditures of the Federal Government from the beginning of its program in 1906 to mid-1953 are only $2.3 billion. These figures refute the allegation that public power is essential for national defense.

Federal electric power is a menace to the private enterprise system

The hydroelectric power activities of the Federal Government were initially associated with navigation, irrigation and flood control, and were justified under the commerce clause of the Constitution. The development of power was merely incidental to these other functions.

However, not only are some projects now justified mainly because of the power development, but the Government has felt the need to go the next step further. Because water supply varies considerably and only so much of it can be counted on for a firm power supply, a more dependable additional source is needed. Steam power, which can be produced from a dependable fuel supply, is the best source of this additional power.

Since steam power production does not aid navigation, prevent floods, or provide irrigation, and since it has little to do with interstate commerce, advocates of public power are making other justifications for these plants. They assert that Federal construction of steam plants is necessary for defense or for the general welfare. If it becomes established that the Federal Government can build hydroelectric and steam powerplants wherever it wishes, then the Federal Government may be pressured to take over more and more of this traditionally private business in even larger areas.

The local business character of power production and distribution could thus conceivably die, not only because of the Federal Government's development of hydroelectric power and building of steam plants, but because it is, so far, the sole developer of atomic energy. If the Federal Government holds the monopoly on this great potential source of power, all power could eventually come under its control.

Federal public power is socialistic

Some of the advocates of public power deny that it is socialistic. But here is what Norman Thomas, five times candidate of the Socialist Party for President of the United States, had to say about it:

"The principle behind public development of power is socialistic and it is rather childish to deny it."

In a press conference on June 18, 1953, President Eisenhower was asked to give examples of what he had previously referred to as creeping socialism. The President gave as his example, TVA. He said that he had been asked to expand Federal expenditures in the TVA region. The Federal Government had seized and was purchasing a monopoly in power there, and it was impossible for the locality now to expand unless the Federal Government would spend more money.

President Eisenhower asserted that the TVA region quoted as one of its needs for power the fact that so many industries from other sections—New England and other places—wanted to come down there seeking cheap power. The President said:

"So we get to this curious thing in the socialistic theory that we provide such cheap power for one region that it can take away the industries from the other sections. It seems that we have got to have some kind of reevaluation of all these things."

6. THE CASE AGAINST FEDERAL RECLAMATION

One of the functions of the Federal Government is the collection and the expenditure of the taxpayer's money. In spending these funds, it is responsible for determining the most efficient and equitable use of the money.

Projects which are nonreimbursable should be those which benefit all the people.

Taxpayers should not be asked to subsidize projects or parts or projects from which they derive little or no benefit.

These principles have been violated by the Bureau of Reclamation projects.

To pass these projects by Congress, proponents have claimed dubious benefits. Especially noteworthy has been the abuse of the benefit-cost ratio which permits fabricating a case for the feasibility of a project.

To be economically sound, a project must produce total benefits exceeding total costs. However, an undertaking is not truly economic unless it is the best use of capital and resources and the least costly means of achieving a desirable end. The best solution can be found only by giving equal consideration to all possible measures, with a view to finding the combinaton which will produce a maximum of net return.

Many of the Nation's economists agree that in the past two decades the Bureau of Reclamation has been more interested in finding a use for surplus waters of the West than in planning and constructing economically sound projects. Fortunately for the taxpayers, the Bureau of the Budget, through issuance of criteria late in 1952, put a brake on the Bureau's efforts to disregard fair and equitable methods in their zeal to develop the West.

Benefit-cost ratio

Until a few years ago, standards of feasibility of constructing reclamation projects had been progressively lowered mainly because the benefits claimed as offsets to costs of these projects were exaggerated. The benefit-cost ratio should include valid reasons for constructing projects, not mere excuses for justification. If a close relationship exists between direct benefits to immediate beneficiaries and their ability to repay their proportionate part of the cost, the benefit-cost ratio formula will have more chance of being realistic.

The Engineers Joint Council recommended in 1951 that both benefits and costs should be expressed in tangible monetary terms and should be accurate and realistic.

Many groups, including the E. J. C., suggested that the benefits to be considered should be net benefits—the total of the net annual income and other tangible benefits minus all costs incurred by the beneficiaries (as distinguished from the Federal Government) in attaining those benefits and further, minus all disadvantageous or injurious, but tangible, results of the development.

The council recommended that, in order that Federal water resources developments may qualify as being economically justified, the ratio of tangible benefits to cost, each on an annual basis, should not be less than 4 to 3. In cases where the factors entering into the ratio cannot be estimated closely or where they may not be realized for a long or an indefinite period in the future, the corresponding ratio should not be less than 2 to 1. Depending upon the relative probabilities of realizing within a reasonable period the benefits and costs involved, the requirements, as to the ratio, may appropriately be intermediate between 4 to 3 and 2 to 1.

These recommended ratios of benefits to costs are not observed by the Bureau of Reclamation. The Fryingpan-Arkansas Project, which the Bureau has been trying to get through Congress, has a ratio of direct benefits to cost of only 1.05 to 1. At that, the benefits are estimated many times greater than the ability of the irrigators to repay.

Because of rising prices, it is unrealistic to reappraise the benefits and costs by the same multiplier or price-level index.

Costs become fixed as of the time of construction or expenditure, whereas benefits will vary from time to time in the future, depending upon not merely changes in price level but also technological progress in respect to the alternatives for the several functions of a given water development.

Benefits derived from increases in food and fibers

Although there is merit in increasing our food and fiber production, care should be taken that the most efficient manner of bringing this about is adopted and that it comes at a time when it is needed, not when it may add to the problem of surplus production.

In the first place, the increased land to be brought under cultivation through irrigation in the arid West is a small percent of

the total land now being harvested. If all the available water were used to the maximum extent, about 17 million more acres of new cropland would be added. Since 345 million acres are harvested at present, it would add less than five percent. The foods and fibers that would be produced by these reclamation projects would be relatively minor.

In contract, the Department of Agriculture estimates that there are 60 million acres of new land in humid areas suitable for first-class crop production, once it has been properly drained and cleared. The drainage and clearing method of providing new crops represents about 17 percent of the present total cropland and acreage.

The costs of the projects to be undertaken by the Bureau of Reclamation in the 17 Western States are high—estimates per acre on the Columbia Basin Project are between $500 and $600 and estimates on the Upper Colorado River Storage Project run even higher. For the proposed Fryingpan-Arkansas Project, the costs run $219 per acre for a supplemental water supply of 0.5 acre-feet per acre, which is equivalent to $1,166 per acre for a full water supply. This presents a serious question as to the justification for reclamation projects in general and for the consideration of the Fryingpan-Arkansas in particular. The average value of the irrigated farmland in the Fryingpan-Arkansas areas does not exceed $225 per acre.

In contrast, average costs per acre of drainage run about $40 in the Southeast and from $8 to $25 in the Mississippi River Delta. Cost of land clearing ranged from $50 to $100 per acre in the Northeast where brush was cleared for seeded pasture, from $95 to $160 per acre where woodland was cleared for cultvated crops, and from $15 to $30 per acre for light clearing of abandoned fields.

However, there is reason to believe that food and fiber requirements for our estimated 1975 population can be supplied by the existing farmland acreage.

It should be concluded, therefore, that projects should not be justified on the basis of increasing the food and fiber supply.

In addition to estimates of subsidiary benefits based on farm income, it has been customary to claim presumed increases in trade and commerce as offsets to the construction cost of projects. These have usually been computed on the gross volume of new business without recognition of the fact that no benefit is derived from the mere circulation of money. The engineers joint council stressed that, for such benefits to accrue, there must be tangible gains to those who transport, process, and distribute goods to the ultimate consumer, all without increased cost to him.

The council concluded that, regardless of how they are estimated, subsidiary benefits should not be lumped with direct offsets to costs to determine the feasibility of any project or unit of a project for the development of the water resources. Where such costs must in large part be defrayed out of tax revenues of the Federal Government, all subsidiary benefits will be no more than the margin above cost to which the general public is entitled.

Justification by projects rather than river basins

Arguments have been advanced for determining the feasibility of projects in a drainage basin collectively, even where the projects were not mutually dependent. To adopt such practices would be likely to increase the amount subsidized by the general taxpayer, and would encourage uneconomical projects.

Individual developments or projects should each be subject to the standard criteria of economic justification including margin of benefits over cost, except where such projects are physically and of obsolute necessity interdependent. No exceptions should be given to orderly stream development or to drainage basins. To allow such exceptions would result in using surplus values or benefits accruing from the stronger projects to make up for the deficiencies of the weaker projects.

Financing and repayment

In the first 50 years of the reclamation program (1903–1953) the Federal Government undertook 91 projects. These projects have cost much more, taken much longer to be paid for, and irrigated less acreage than was originally estimated.

Between 1903 and 1911 the Secretary of the Interior authorized 25 Federal projects. In 1910, at the time Congress made funds available for their completion, the estimated cost was about $147 million—an increase of $79 million over the estimated cost at the time of authorization a few years before. Up to June 30, 1952, these 25 projects actually had cost nearly $304 million, and the estimated cost of completion was about $368 million. This is a 440 percent increase in costs.

Of the 25 projects, 4 with 78,600 acres proposed for irrigation had to be abandoned with a loss of $1.3 million. In addition, Congress wrote off $16 million of the cost on 16 of the remaining 21 projects to reduce the repayment obligation until it was within the ability of the farmers to pay.

Between 1911 and 1933, 11 projects were authorized. At the time of authorization, these projects were estimated to cost $203.8 million, more than half of which was for Hoover Dam. On June 30, 1952, $281.8 million had been spent and the estimated completed cost was $305.3 million. At the time of authorization, it was proposed to make water available to 1,441,430 acres. However, the irrigation allocation as of 1952 is to supply 994,494 acres, of which 814,952 were irrigated in 1952.

One of the eleven projects had to be abandoned and Congress wrote off $2.4 million on 3 other projects. The reimbursable portion of the irrigation allocation has been set at $123.2 million, of which power income is to repay $890,582 and water users $121.3 million. Of this latter amount, $92.8 million is under contract; accruals total $5,419,705.

Only 4 of these projects have been able to maintain a 40-year repayment schedule. The Owyhee projects schedules call for complete repayment by 2039, Grand Valley by 2029, and Vale by 2024—all about 100 years after authorization. Owyhee and Vale have repaid less than 15 percent.

Between 1932 and 1942, 34 projects were authorized, 3 of which have a poor record of both estimating and repaying costs. These are Central Valley, Columbia Basin, and the Colorado-Big Thompson. The estimated cost of 32 of the 34 projects of this decade at the time of authorization was $917 million. The completed cost of these projects, as estimated in 1952, was $2,161,000,000, and of all 34 projects, $2,199,000,000.

Of the 1952 estimated completion cost, $656.2 million or 29.8 percent is charged to power, $259.5 million or 11.8 percent to flood control and other nonreimbursable purposes, $1,283,000,000 or 58.3 percent to irrigation. Of the total irrigation allocation, nonreimbursable items for relief and other purposes amount to $29.9 million, leaving $1,253,000,000 to be repaid—$661 million from power revenues, $565 million by the water users, and the remainder from other sources. Contracts to cover the water users' obligation amount to $385.7 million on which $3.4 million or less than 1 percent of the water users obligation has become due and been repaid.

At the time of their authorization, these projects were supposed to irrigate 5,209,707 acres. However, the 1952 estimate came to almost 1 million less, or 4,490,168 acres.

The three big projects, Central Valley, Columbia Basin and Colorado-Big Thompson plus Davis Dam and San Luis Valley and Palisades projects account for $1,136,000,000 of the $1,244,000,000 increase in cost of all projects between the time of authorization and 1952. The increase in cost for these 6 projects amounts to 147 percent, as compared with an increase of about 74 percent for the other 26 projects.

Seven of the other projects in this group have a high degree of writeoff. They are W. C. Austin, Buffalo Rapids, Buford-Trenton, Eden, Mancos, Mirage Flats and Newton. Originally estimated to cost $17 million, the 1952 estimate was $33 million, an increase of 93 percent. Writeoffs amount to $18,500,000, about $2,500,000 more than the increase in cost and 115 percent of the original estimates.

Between 1942 and 1953, 20 projects were authorized. The total cost estimated in 1952 was $445,700,000. Again, some of the projects were poorly estimated. Hungry Horse, for example, was estimated to cost $48 million at the time of authorization. But the 1952 estimate was $102,900,000.

The Missouri Basin contract, approved by Congress in 1944, is so large that it requires special attention. In 1944, the Bureau of Reclamation portion of the Missouri River Basin project was estimated to cost $840,000,000. In 1953, the same work was estimated at $3,700,000,000, an increase of 343 percent. The entire plan was reconsidered, and in 1956 the project was estimated at $2,800,000,000, which was a 234 percent increase.

Two projects of the original plan are good examples of the poor planning and unnecessary expenditures of the Bureau of Reclamation. The original plan included the Missouri-Souris project in North Dakota and the Oahe project in South Dakota.

The original plan for the main division of the Missouri-Souris project called for irrigation of 1,275,000 acres—more than one-fourth of the total area of new irrigated land (4,760,000 acres) contemplated for ultimate development under the plan. The cost of bringing this land under irrigation was to be $123,000,000. By 1952 the estimated cost had risen $438,000,000.

After construction had started, soil experts of the North Dakota State Agricultural College, and others, questioned the feasibility of irrigating much of the land included in the project. This led to a special investigation by a board of three outside experts, and a finding that a large proportion of the land should not be irrigated.

Thereafter, the Bureau of Reclamation abandoned its efforts to develop this area.

The proposal to irrigate 750,000 acres in the James River Valley of northeastern South Dakota in connection with the Oahe project followed a similar course. The plan authorized in 1944 contemplated irrigating the 750,000 acres at a cost of $84 million, or more than $300 per acre. Agricultural officials of the State seriously questioned the feasibility of the project from the agricultural standpoint, as did some individuals within the Bureau of Reclamation itself.

These developments led the Secretary of the Interior to appoint a three-man committee of disinterested experts to study the proposed unit. This committee has concluded that it would not be feasible to develop some 250,000 acres of the area originally selected, and that the remainder of the area should not be put under irrigation unless expensive drainage systems were first installed.

The situation is further complicated by the fact that the Oahe area is in a belt where the annual precipitation of from 21 to 24 inches makes it possible to grow, in most years, good crops of alfalfa, corn, and other field crops without irrigation. All the land is privately owned, and it is certain that in the circumstances outlined a great majority

of the farmers would not care to burden themselves with high-cost irrigation works which would stand idle much of the time.

The upper Colorado River storage project was approved by the President in April 1956. It authorized $760 million to be appropriated for 4 storage projects and 11 participating projects. Of the $199,749,400 allocated to irrigation, $80,546,500 will be paid by the water users, leaving $119,202,900 to be repaid from power revenues.

The power features will be paid off first, with interest, from the sale of electricity. After those expenditures are liquidated in an estimated 50 years, the power profits would be used to pay off the costs of the irrigation aspects of the plan. According to Robert LeRoy Cochran, ex-Governor of Nebraska and an official of the Bureau of the Budget, such repayment, if ever made, would take considerably more than another half century.

Mr. Cochran also pointed out that the power features might well be obsolete in 50 years.

Meanwhile, because of the high construction costs per acre of the irrigation works and the accumulating unpaid interest, the Federal subsidy would be enormous.

Conclusion

Reclamation does not pay for itself and has no general and regularly observed rule of repayment nor any contractual term which cannot be changed at any time. On many of its projects there is only a remote possibility of repayment, and the costs will ultimately be written off by the taxpayers. The write-offs plus the interest add up to a considerable sum, which is taken out of the pockets of all the people for the benefit of a few.

In its conservation and control of waters, the Federal Government is depriving the recipients of some of their liberties. Under the 1939 act, the Secretary of the Interior was authorized to make contracts to water users which, in effect, put the Government in permanent possession of the water rights, even after the costs allocated for repayment have been paid off in full. The reason given to Congress for this form of contract was to provide relief for water users unable to comply with the statutory 40-year period.

The Engineers Joint Council has stated that there was no need for the Federal Government to acquire any proprietary rights to such waters. Intrastate waters should remain in the control of the individual States. Jurisdiction over interstate waters can best be effected through compacts between States.

It can be seen that the Federal Government, in its role as the trustee in charge of disbursement of tax revenues and in its role as a banker responsible for the soundness of his loans, has failed to meet many established economic and financial principles.

Water resources have not been developed when they are needed, for we are spending millions irrigating land for additional crops at a time of agricultural surplus. The claim that these lands will be needed for the food and fiber supply of future generations is made without taking into consideration other means which may provide a greater supply at far less cost. Reclamation projects, therefore, are not being developed to meet proven economic requirements. The abuse of the benefit-cost ratio and the dreaming up of dubious benefits to make the project look good are examples of the failure to meet these requirements.

Those who are receiving the primary benefits from reclamation projects are not paying the cost of those benefits and the taxpayer ends up paying for a large share of the benefits that the farmers within the project area are receiving.

Such actions, although not socialistic in the full sense, tend to undermine the free enterprise system of growing crops and meeting the country's food supply. Certainly, through these Federal subsidies, which are fast getting out of hand, the seeds of Federal paternalism or even socialism are further spread.

7. ADVERSE EFFECTS OF GRANT-IN-AID ON THE FEDERAL SYSTEM

The Federal system is so ingrained in America's character, tradition, and political institutions that any force which in any way touches upon it or affects it should be a matter of serious interest and concern to all the people. This statement rests upon two basic assumptions: First, that American federalism is a highly desirable and essential configuration of government; and second, that it is a fairly sensitive and complicated mechanism.

For these reasons, the role of grants-in-aid in our society deserves our most thoughtful consideration. Both the number of grant programs and the amount of money involved have shown marked increases in recent years. Unless basic changes are made in policy, there is every indication that this upward cycle will continue.

This trend, if not reversed, poses a real threat to the Federal system. Power accompanies money, and as the States and even the local units have become more and more dependent upon Federal funds and have witnessed the progressive intrusion of the National Government into what have always been considered their own areas of responsibility, they have found their activities, authority, and the control of their own destinies more and more circumscribed. Conversely, the Government in Washington, already heavily burdened with legitimate responsibilities with which it alone can deal, continues its encroachment into the field of State government. By undertaking projects and services that could be handled more expeditiously and less expensively at the State and local level, the Federal Government, through the grants system, has jeopardized the equilibrium of the Federal system. It is not surprising that many people believe that the grants program, as it now exists, is wrong and dangerous in principle, wasteful and inefficient in practice, and that we can ignore its implications for the future only at peril to our fundamental politicial values and institutions.

Brief history of grants-in-aid

Grants on the vast scale to which we are now accustomed are stricly a product of the 20th century and primarily a development of the past 25 years or so.

Especially since World War II, both the dollar expenditures for grants-in-aid and the number of grant programs have shown a steep climb. In sharp contrast to the $900 million of Federal money spent for grants in 1946, something more than $5 billion, including money from the highway trust fund, is budgeted for grants for fiscal 1958. This becomes even more shocking when one considers the great prosperity enjoyed throughout these years.

During approximately this same period, the number of separate grant programs has substantially increased. More than 50 programs are now in operation, and more than half of them have been set in motion since 1944.

With the addition of new grant programs, the expansion of established programs, and the staggering increases in the amounts of money involved, has come additional Federal control over the destinies of the States. Once these controls become entrenched, they are difficult to dislodge. The growth of Federal authority within a State means a consequent loss in the State's own authority and an increase in its dependence upon the central Government. There is a real danger that this trend will get completely out of hand, with the result that the States will degenerate into no more than geographical and administrative units under an all-powerful National Government.

If it should come to this, our Federal system, instead of being the strong and vigorous arrangement of governments which has done so much to preserve our freedom, would become no more than a cherished memory of the good old days.

Federalism and grants today

What is the condition of our Federal system today? Is it still in good health? Does it still contain the strength to serve the Nation as well in the future as in the past? These are vitally important questions of the American people, and we are fortunate in having at our disposal a wealth of current data from which to seek the answers. Within the past few years the Federal system has been subjected to perhaps the most thoroughgoing examination in our history. The Commission on Intergovernmental Relations brought together a substantial amount of useful information and analysis which merit the careful consideration of all who wish to understand federalism in the United States.

The Commission report observes that "the national Government has gradually undertaken some new activities which are susceptible of a large measure of State and local handling," and that the more effectively State and local governments can function "the less occasion there will be for a by-passing State action in the future."

In the final analysis, the report continues, "the preservation and strengthening of our Federal system depend * * * on the self-restraint and responsibility, as well as the wisdom, of our actions as citizens." Tolerance and room for diversity of policy must be maintained if we are to preserve the essence and not just the legal fiction of federalism. We, as citizens, have the duty to make certain that the needs of the people that could be dealt with by State and local governments do not, by default, have to be met by the national Government.

Economic inroads of grants into State government

Broadly speaking, under the grants-in-aid system the Federal Government, through its taxing powers, draws money out of the States and then reallocates it to the States in accordance with the types of grant programs in effect, the distribution formulas in effect, and the needs of the States.

Any type of grant-in-aid redistributes the wealth because most Federal taxes are based upon ability to pay whereas grants are apportioned primarily upon the basis of needs, as accurately as these needs can be determined.

The Federal Government becomes, therefore, an arbiter of who gets what and how much.

Many people regard the round trip the money takes from the States to Washington and back as being, at the least, absurd, unnecessary, wasteful, inefficient, and unjust to the more prosperous States. At the worst, this procedure threatens to sap the States of all their vitality and purpose while the national Government grows ever larger and more powerful.

The movement of taxing power from the State and local governments to the national Government is a comparatively recent development. A study made by the government of Indiana revealed that in 1932 local and state governmental units collected and spent three-fourths of all taxes, leaving one-fourth to the Federal Government. In 1954, this study goes on to say, the reverse was true. Three-fourths of all tax dollars go to the Federal Government, one-fourth to local and State units. It is interesting to note that this inversion coincides closely with the burgeoning of grants-in-aid.

This shift in tax power and the concomitant mushrooming of the number of grants programs and the money involved in them has been noted by a number of other observers. For example, Harley L. Lutz, a distinguished economist, has expressed his alarm over what this may mean to the future relationship between the Federal Government and the States. He says that the increasing taxing power of the national Government has reduced the capacity of State and local governments to meet their costs out of what tax sources are available to them. This makes the apparent case for grants seem stronger, resulting in higher Federal taxes and still fewer tax sources for the States. Here indeed is a vicious circle. If this policy is allowed to continue and expand, the dependency of the States upon Federal money could become so great that they would lose all their capacity to resist domination from Washington.

It has been asserted that the States cannot or will not raise the money at home and spend it for services the people want, and that, therefore, the Federal Government must undertake these responsibilities. Since the money comes from the States in the first place, the validity of this argument can be questioned.

The fiscal aspects of grants have damaged American Federalism in other ways than just through the tendency of the national Government to take over so many tax sources. The desire to get free money has tempted some States to expand grant programs that simply do not need expansion. As a result, other services in these State that may really need development often have to suffer.

Another phase of this fiscal domination of the States by the Federal Government is revealed in the feeling of compulsion States sometimes experience to spend unnecessarily and beyond their means just to get some of their own money returned to them.

The idea that Federal grants represent free money and a real saving is about as persistent in some minds as it is erroneous. It is not unusual for a project within a State to cost more with Federal assistance than if it had been built solely with local funds.

The purely administrative costs of Federal grants are impossible to calculate accurately. The New Jersey Taxpayers Association is probably correct in saying that no one knows. Although there are figures available that show administrative costs for a few programs as being almost 20 percent of the total grant, it is doubtful whether these costs can be as exactly determined as the amount, say, of an overall appropriation. A dollar taking the trip from a State to Washington and back to the State certainly undergoes a measure of shrinkage, and it is not surprising that many people wonder why it has to take this trip at all.

In still another way the fiscal features of the Federal grants have brought about the intrusion of the National Government into what is generally considered to be purely a State affair. The States' own internal budgeting problems have been greatly increased by grants, and as Federal aid has come to make up more and more of each State's finances, the budgeting difficulties have likewise increased. When one considers, for example, that the budget for Ohio for 1953 included 49 different Federal appropriation items, the problems of that State's budget officers become immediately apparent.

The State's budget is to some extent contingent upon what action the National Government takes from year to year with regard to grants. The long view of the State's financial prospects is, therefore, difficult to conceive, and a lot of second guessing is required of State officials. All of these problems are heightened by the fact that with some of its grant programs the Federal Government bypasses the State treasury and the State's budgeting operations, and there is a tendency for the State to lose control of the whole situation.

Administrative and political inroads of grants into State government

To get Federal aid for a project, a State must comply with the rules laid down by Washington. This also applies in many cases, to the wages paid workmen, although these wages may well exceed the prevailing rate for similar work. If a State cannot or will not comply, the money may not be forthcoming.

The setting of project specifications by remote control from Washington is only one of the many ways by which the Federal Government is chipping away at State autonomy. The establishment of standards for State personnel who handle grant money presents another foot-in-the-door approach by which the Federal Government can exercise some control over the States. As with project specifications, these personnel criteria are often set with little or no regard for the accepted traditions or practices of the various States.

Controversies between the National Government and the States that are directly or indirectly attributable to the setting of these personnel standards have been commonplace.

It may not always be true that the placement of State employees under civil-service standards and their enforced compliance with these standards work to the benefit of a State agency. A provision to this effect is, however, incorporated in some grant laws. The genuinely harmful results of this provision were noted in Massachusetts. Personnel standards in that State have been lowered in the Public Health Commission as a result of the enforced application of civil-service rules.

The services of some exceptionally trained medical men have been lost because they did not wish to be restricted by the rigid civil-service requirements.

It is not only through the establishment of personnel standards that the Federal Government, in its grant programs, tends to weaken the governments of the States in ways concerning personnel. There are elements that rarely go down on paper and psychological factors that are occasionally as real and injurious to the States as they may be intangible.

For example, there is sometimes a problem of loyalty. It should be safe to assume that the primary loyalty of a State employee is to his superiors and to his State government. But if this employee's job is to administer Federal grant money, he may find himself in an uncomfortable position if the interests of the State should conflict with a grant program. Although it certainly can be assumed that the overwhelming number of Government employees at all levels of government are conscientiously trying to do their best work, it would be naive to conclude in all cases every employee would shun what he believes to be his own best interests in such a test.

The Government also may coerce a State into a reorganization of its governmental structure.

For instance, compliance with the provisions for public assistance grants may require a State to designate a certain agency or set up a special agency to administer this money.

The fact that a State believes that its existing facilities may be adequate or that its own plans might be better than those prescribed by Federal law may make no difference. The reorganization must be undertaken regardless.

One of the most damaging effects of Federal grants-in-aid upon the strength and structure of State governments is their tendency to weaken executive control and responsibility and to increase greatly the problems of efficient administration. Too often the governor finds that he simply cannot do his duties well and thoroughly because of the way grants are administered. Too often for the same reason the administrative apparatus of the State is splintered and disintegrated and by no means as effectively under control as it should be.

A management consultant firm found, for example, that in Connecticut the necessity for the State to comply with certain Federal administrative criteria in order to get grant money discourages, if it does not actually prevent, quality administration.

It was found that some State agencies in South Carolina that are administering grant funds are developing and growing in a different direction and at a different speed from those agencies not handling Federal money.

More than 50 years ago James Bryce listed as one of the blessings of the Federal system the belief that "it prevents the rise of a despotic central government, absorbing other powers, and menacing the private liberties of the citizens. * * * The States are represented as bulwarks against its encroachments."

Less than a decade ago, in a report on Federal-State relations prepared for the First Hoover Commission, a study group declared:

"Through the grants-in-aid, the National Government influences, and to some extent controls, 75 percent of the total activities of State governments. With grants goes control. With control goes power. With power goes centralization—and in too much centralization lies danger to our entire Federal system of government."

Since those words were written the amount of money being spent for Federal grants has doubled.

There is reason to think that new grant programs calling for new expenditures, as well as increased outlays for established programs, are to be expected in the future. Not including expenditures from the highway trust fund, the 1958 budget estimates that net expenditures for aid to State and local governments will be more than $500 million greater in fiscal 1958 than in fiscal 1957.

Grants for the established programs continue to rise. Primarily as a result of legislation enacted in 1956, payments to the States for public assistance are expected to be $97 million higher for fiscal 1958 than for 1957. The net increase in all other established programs totals $249 million. Although there will be some decreases, they will be more than offset by numerous increases in such categories as construction grants for waste-treatment facilities and aid for schools in federally affected areas.

The assumption of new powers by the Government has moved steadily ahead during the past generation. A study made a few years ago by the Legislative Reference Service lists almost 200 governmental functions which have been transferred from the States to the Federal Government or to joint control since 1920. This is just a selected, not a definitive, list.

Money allocated for grants constitutes 5 or 6 percent of the total Federal budget, but it makes up a much higher proportion of many State budgets. Over the years the percentage of State budgets supplied by grant funds has tended to increase, making the States progressively more dependent upon this money. In 1915, only 1.2 percent of the total State revenue receipts came from Federal grants. In 1929 this figure had reached 5.2 percent.

Through the late 1930's and into the World War II years, the proportion of total State revenue derived from grants remained between 13 and 14 percent. It dropped to 10.9 percent in 1945, but had risen to 13.2 percent by 1947. In 1954, 16.9 percent of all general State expenditures came from Federal grants. These figures are averages for all of the States. Several States receive from 20 to

30 percent of their budget in the form of grants, and in a few States the ratio is even higher.

This dependence of the States upon grants today and the trend toward even larger grants and greater centralization of power in Washington are interrelated phenomena that do not foreshadow a hopeful future for either the States or the Federal system. The prosperity and strength of the States and of American federalism are inseparable. They will flourish or fade together.

Our grants-in-aid may be leaving largely unmarred the facade of State sovereignty and the formal structure of federalism, but their substance is being drained off. The longer we ignore or remain indifferent to this trend, the more difficult it will be to arrest or reverse it; and for the possible tragic consequences we shall have no one but ourselves to blame.

8. FOREIGN AID AS A SUBSIDY TO NATIONALIZATION

In countries where nationalization programs have long been under way, it is evident that postwar financial aid from the United States has assisted the movement.

Socialization in Western Europe

Since World War II socialism has been encroaching upon the free economies of Western Europe, Eastern Europe, and Asia.

The war brought much havoc to normal economic relationships on the European Continent. Physical plant, population, property relations and emotions all were radically altered. In the areas of Europe occupied by the Germans, property owners had been liquidated, currencies were all but exhausted.

Because of the disruptions caused by 6 years of conflict, the people were weary of war, uncertainty, unemployment, and other dislocations resulting from conflict. The war had bred a reliance upon Government for the necessities of life and radical groups expected their demands to be met in return for the cooperation they had given in the war. People seemed more concerned over personal security than anything else. Their spirit of initiative and self-reliance appeared to be shattered.

As a result of these conditions, the countries of Western Europe have relied upon programs of nationalization of industry, particularly basic or key industries, as a partial answer to their economic troubles. Private capitalism has lost ground.

It is true that in most of Western Europe the railroads, the postal service, telephones and radio communications, and many public utilities were public enterprises before World War II.

While the degree and intensity of nationalization since the end of the war has varied from country to country, depending upon the amount of nationalization already undertaken, the economic condition of the country, the strength of the political parties advocating nationalization, and other factors, only a few countries in Western Europe have not undertaken some nationalization.

The large financial resources needed to implement socialization programs have not always been readily available. In some cases the effect of foreign aid has been to facilitate nationalization and socialization schemes already under way.

During the war, of course, aid funds were employed exclusively for the defeat of Germany and Japan. The really perplexing questions arose after the war. Specifically, does our financial aid support nationalization programs in the recipient countries?

Clearly, the answer is yes. Although it is true that the degree to which the success of such programs should be attributed to foreign aid cannot be determined, it stands to reason that nationalization programs have been aided, both directly and indirectly, by the postwar financial assistance from the United States.

[EDITOR'S NOTE: America has spent $64 billion on foreign aid since World War II. The mutual security program for fiscal 1957 earmarked $527 million for economic aid purposes. Other money has gone into direct military assistance, to refugee aid and other channels.]

About half the national income of the United Kingdom is presently being spent by the state.

When the Labor government came into power in 1945 it embarked upon a broad program of nationalization and a cradle-to-the-grave program of social security. A radical rebuilding of the economy along socialist lines was undertaken, notwithstanding the desperate financial situation of the country.

Since 1945, when the program was initiated, millions of pounds sterling have been spent to pay for the property of industries that have been nationalized.

A substantial proportion of our nonmilitary aid has gone to nationalized industries in the United Kingdom and other Western European countries.

During the years 1940–1951, when most of the postwar nationalization was undertaken, with Lend-Lease, emergency relief, the loan to Britain, the Marshall plan, military aid, the North Atlantic Pact, and other programs, the total of American wealth distributed throughout the world has been about equal to the present national wealth of Great Britain.

What did Western Europe do with these billions? We sent them food, fuel, raw materials, machines, and even permitted some of our aid to be used to retire their public debts. With the aid provided, we built for them new factories, new power houses, and modern roads.

We restored their railroads, we built irrigation works, and we provided aid for agricultural programs in their colonies.

Some people emphasize that much foreign aid has been granted to facilitate the disposal of our surpluses, especially agricultural surpluses. In the back of the minds of such people appears to be the thought that, because certain products are in oversupply in the United States, they are no longer wealth and hence no longer valuable.

Whether or not the products that we give away are surpluses, they still are wealth. Although our plane of living has been rising while we have been extending aid, would it not have risen more had we employed in our own country the wealth that we have given away?

Could not some of this money have been used to reduce our own huge public debt instead of making it available to other countries for that purpose?

Aid to nationalized industries

It has been said that, in our foreign-aid programs, the nationalized industries have been given financial aid in preference to private industry. Roy Gilliford, of the Detroit Board of Commerce, in testifying on the extension of European recovery, stressed that the Economic Cooperation Administration program placed almost everything on a government-to-government basis.

He stated that there was no desire on the part of the British Labor Government to help private industry. Since many of the other Western European governments were in the process of nationalizing many of their key industries, they, too, would be likely to favor government rather than private enterprises. One of the main criticisms of the European recovery program, he felt, was that it started at the government level, rather than with requests from business, a practice which tended to shut out private enterprise.

France

In France the first big plunge into the nationalization of industry took place in April, 1946, when the state took over the production, distribution, and transmission of electricity. A month later came the coal mines. Before the war the state was in control of the railroads, aircraft factories, civil aviation, the central bank, the Alsatian potash mines, and the manufacture of tobacco. It also had acquired the branch banks and, as a result of the war, it had fallen heir to considerable interests in the automobile (Renault) and chemical (Francolor) industries.

Once she had taken over these large industries France faced the problem of modernization and repair of war damage. Five years after the nationalizations by the French, the Statist reviewed how successful the program had been in coal mining and electrical production. It said:

"But what is abundantly evident is that Marshall aid has been the salvation of nationalized coal mines and electricity."

In 1952, Richard B. Frost pointed out in the magazine, "Inside Michigan," that the taxpayers of the United States were paying for the construction of the French Genissiat project. This entailed huge power and navigational projects on the Rhone and Rhine Rivers. In this article Mr. Frost stated that no consideration had been given to whether the project would be self-supporting or self-liquidating. The entire cost of the program was to be borne by the already overburdened taxpayers of the United States. Although the project was so costly that it was turned down twice by French taxpayers, the United States came to the rescue.

Italy

Edmund Stevens wrote a series of articles in the Christian Science Monitor in November and December, 1952, entitled "United States Aid and Italy," which shows how our assistance program has helped perpetuate Government control of industry. He points out that:

"In Italy, nationalization has gone further than in any country this side of the Iron Curtain, not excepting Great Britain, which, after the war deliberately embraced socialism."

In the same article, Mr. Stevens states:

"Not only did (the original) framework of state enterprise survive the demise of fascism, it has grown far more rapidly since the war than it ever did under Mussolini, thanks, in no small measure, to American aid."

In Italy the aid program has failed to make credit available to private enterprise and to lower prevailing interest rates. Four main groups—finsider, the state steel trust; finmeccanica, the state mechanical trust; the power interests (state and private combined) and the private automobile monopoly, Fiat—accounted for more than two-thirds of all aid. Small business received only small amounts of help from the ECA. As Mr. Stevens points out, only $6.5 million out of $250 million worth of dollar purchase loans to Italian industry was parceled out in loans of less than $15,000.

In another article Mr. Stevens said that although the Italian state was refusing legitimate aid from American capital, it was receiving American taxpayers' dollars through ECA.

Congressman DANIEL A. REED of New York has cited another type of American aid that was given to the Italian Government:

"I call attention to the railway station in Rome, Italy, financed by our American taxpayers. This great, monumental railway station is a mile long, into which you could put the Pensylvania Station, the Grand Central Station, the Cleveland Union Station, and all the railroad stations of the Chicago area, and a few small stations left over.

"When our internationalists visit Rovigo, Italy, a town of 40,000 population, between Venice and Bologna, take a look at the tre-

mendous railroad station. It dwarfs our railway stations in Albany, Rochester, and Syracuse, and it has private offices for everybody from stationmaster to lamplighter. This station was financed by our American taxpayers."

In 1953, a team of American businessmen, headed by P. C. Crawford of Thompson Products Co., made a brief survey of Italy. Their observations have been described as follows:

"• • • Thanks to the $3.5 billion spent on that country, it is now 40 percent better off than it has been in 2,000 years, but there has been no real fundamental improvement in the economy. For one thing, taxes are high, are based on the production-hour measurement, and work so as to keep (labor) costs high and wages low."

United Kingdom

The United Kingdom was governed by the Labor Party from 1945 to 1951. During its tenure of office a broad program of nationalization of industry and of social welfare was undertaken. Coal, electricity, gas, civil aviation, cable and wireless, inland transport, and iron and steel were nationalized. In addition, a broad program of social welfare, including free medical and dental care, family allowances (cradle-to-the-grave security) was undertaken. After the Churchill Conservative government assumed office in October 1951, iron and steel and the road transport section of inland transport were denationalized.

There seems little doubt that American aid to Britain has aided their socialization program either directly or indirectly.

Official spokesmen for the Labor Party as well as for the Conservative Party have frequently voiced the need for American aid to carry on the program of the British Government. Sir Stafford Cripps, when he was Chancellor of the Exchequer in the Labor government, stated this clearly:

"Recovery in Britain is not complete and its achievement depends on continued American aid. We can speak of our recovery being complete only in the very limited sense that our production is now back to the levels, indeed substantially above the levels, of prewar production • • •.

"The continuation of American assistance is, therefore, a vital element in our progress toward full recovery. Moreover, aid to Britain is essential, not only to our own recovery, but also the recovery of Western Europe."

Winston Churchill, Conservative Party leader, caustically criticized the Labor government for its claims of the prosperity it was creating, while all the time the real prop under the economy was American foreign aid. Following is a representative statement:

"The socialist governments have become dependent upon the generosity of the capitalist system of the United States."

In 1950, near the close of the Marshall plan, the Conservative Research Bureau stated:

"The Washington loan and Marshall aid from America are, of course, the two factors which, ever since 1945, have buttressed the British economy and shielded it from the more disastrous consequences of Socialist incompetence and misrule."

Counterpart funds

Active withdrawals from counterpart funds as of December 31, 1955, were $9,681,500,000. Of this total only $1,697,200,000 was used for military purposes.

Promotion of production, $4,334,800,000, was the largest single item in this program. Much of this huge total contributed directly to the nationalized industries, particularly in such fields as coal mining and transportation. The French coal mining industry received $306.2 million of counterpart aid, while the British coal industry received only $400,000. The railroads of France benefited from $125.1 million of counterpart funds, while the British received $6.3 million.

Perhaps the greatest assistance counterpart funds have made to the nationalized industries of European countries is in the retirement of the public debt. Foreign aid has been used to retire $2,510,700,000 of the public debt of European countries.

This means that European countries have been enabled to retire part of their public debt and use the money so saved for any type of program that they might desire. Following is a list of countries which have used counterpart funds to retire their public debt:

Austria	$12,500,000
Denmark	130,000,000
France	171,400,000
Netherlands	197,400,000
Norway	292,700,000
United Kingdom	1,706,700,000
Total	2,510,700,000

This is a unique position in world history. No government before has been willing to go deeper into debt to supply other nations with funds for the purpose of retiring their debts.

Naturally, the fact that nationalization and social welfare programs have increased the national debt of European countries, while we are permitting them to retire this debt with counterpart funds, has troubled many Americans. Senator B. B. HICKENLOOPER, of Iowa, has stated this feeling cogently:

"I am under the personal impression that it does not make any difference what the bookkeeping system is, if the national debt of Great Britain is increased by the nationalization, and we contribute dollars to the reduction of the British national debt, we are at least to that extent contributing to the nationalization program."

About 60 percent of French counterpart funds were utilized in making loans to the various sectors of the French economy, as well as to the French overseas territories. These loans were made by Government agencies, either directly in the case of nationalized industries, or through the normal banking channels in the case of private industry. According to the task force report on overseas economic operations of the Commission on Organization of the Executive Branch of the Government, "the major portion of the loans were made to nationalized industries."

United States foreign aid has permitted use of budgetary resources for socialization

Numerous writers have attested to the fact that the foreign aid has been the deciding factor in encouraging social experimentation by European nations.

Charles H. Wolfe has stated the reasons that Europe needed our aid, as follows:

"Why was it, at the start of the Marshall plan, that European countries appeared to need United States dollars so urgently? Because, ordinarily, heavy sums were being spent on armaments, on subsidies to the nationalized industries that were running a deficit, on food subsidies, and on increasing pensions, family allowances, and other forms of social security.

Melchoir Palyi, American writer on economic topics, agreed that our financial assistance was necessary before the socialization programs could be carried out, saying:

"As American aid during the war saved the Communist regime in Russia, and enabled it to become a threat to our national security, so American aid after the war made possible Europe's collectivistic and semicollectivistic experiments. It is a reasonable inference that, without American dollars, the planners of Europe would have had to curtail their schemes, and Europe would have lifted itself up from the war by the simple and effective process of going to work and conserving its capital."

Even European economists have been cognizant of the relationships. Wilhelm Roepke has written:

"It is a bit of irony that the Marshall plan, which should have pulled Western Europe out of the muck of collectivistic, nationalist economic polity, has threatened to create a new supercollectivism on a superstate level. More than that: It runs the danger of becoming an economic planning machinery which will provide a powerful incentive to the various national collectivistic systems, either by strengthening the existing dyed-in-the-wool collectivistic government, or by forcing other governments which are either ready to give up bureaucratic planning or so far have been able to resist it, to accept a collectivistic controlled economy. Indeed, as a result of the American Marshall plan, an international planning bureaucracy is about to be created which is the most valuable help for the national planning bureaucrats. How, through this means, the European economies can be freed from the collectivistic paralysis and disorders is a secret which seems to defy solution."

One official of the ECA admitted as much (with respect to Great Britain) while he was testifying before a congressional committee:

"We are providing financing for the import of items and equipment for certain nationalized industries in Britain. In particular, we are financing the import of mining machinery for the coal industry, and the coal industry is a nationalized industry. It was nationalized well before the ECA came into existence, so there is a case where, in a sense, it can be said that the ECA has direct contact with nationalized industry in Britain."

9. ADVERSE EFFECTS OF BUREAUCRACY ON AGRICULTURE

The adverse effects of the growth of Government farm price supports and controls are well stated by Secretary of Agriculture Ezra Taft Benson in his book, Farmers at the Crossroads, and by a committee of outstanding agricultural economists in a pamphlet, Turning the Searchlight on Farm Policy.

Harmful effects of high, rigid price supports

Concerning the effects on individual initiative and economic progress, Secretary Benson writes:

"The farmers' basic problems are due in large part to Government price and acreage control policies." These took away the initiative of management, making it impossible for farmers to make the most efficient use of their machinery. Continued indefinitely, these policies would have driven free farmers to a condition of peasantry.

The high, rigid price supports were never responsible for the high prices the farmer received during the war periods. Prices were higher than the supports.

But the continuation of supports after the war has had a most harmful effect. Their principal result has been to pile up, in Government bins, surpluses of farm products that have hung over the market like the sword of Damocles.

Stockpiling toward catastrophe

The Commodity Credit Corporation has almost $9 billion invested (autumn, 1956) in price support inventory and commodity loans—and this in spite of aggressive disposal programs under which this administration has moved more than $5.5 billion worth of surpluses. Without this disposal the Government would have more than $14 billion worth of agricultural products on hand. As it is, warehousing charges cost the American taxpayer (including farmers) $1 million a day.

This stockpile is a catastrophe to our farmers. It is a part of the world supply and as such is a depressing influence on

farm prices. Department of Agriculture economists estimate that, without excessive stocks, the 1955 net farm income would have been 20 percent higher. Therefore, at least $2 billion was lost by our farmers because of the surplus problem.

The surplus problem began with our price-supported basic commodities—wheat, corn, cotton, peanuts, rice, and tobacco. Accumulations of these commodities led to acreage restrictions.

Nearly 30 million acres were diverted out of wheat and cotton.

These acres were shifted mainly into feed grains. This shift accounted in large part for the increase in total feed grain production, and contributed substantially to the surplus of corn now in Government hands. The resultant low price of corn and other feed grains encouraged added livestock production, which helped to bring on the low prices for hogs and feeder cattle in the winter of 1955–56.

This illustration of how the cotton and wheat problems were shifted, in part at least, to feed grains and thence to hog producers entirely outside the Cotton and Wheat Belts, demonstrates the interlocking nature of American agriculture. It is difficult, if not impossible, to impose an artificial adjustment on one sector without its having an impact elsewhere.

Rise of foreign competition

There are other important and undesirable consequences of this system of uneconomic price manipulation. It stimulated excess productions abroad as well as at home. It encouraged substitute products to rob our markets both in this country and in other lands. It helped destroy our export outlets, as expanded production abroad robbed us of traditional markets. It even attracted foreign production to our shores to compete with domestic output.

Unless the basic problems are solved, these things together will bring upon our farmers the most stringent production and marketing controls in the history of American agriculture.

Controls versus initiative

These controls are the undesirable product of an uneconomic system of price fixing.

Producers of our basic crops have been cut back on production quotas required under the law to the point that many of them are nearly forced out of farming.

Midwestern corngrowers operating under acreage allotments have found it difficult to have enough volume to operate efficiently. In 1955, for example, only about 40 percent of the corn grown in commercial areas was within acreage allotments and was therefore eligible for price support. Most Corn Belt farmers voted with their corn planters against acreage allotments for their corn crop. They foresaw the futility of pursuing a price support and control program which would further restrict their volume.

There is no Government program that can provide a decent living for a family with a cotton allotment of 4 acres, a tobacco allotment of less than 1 acre, a wheat allotment too small for efficient use of necessary equipment, or a corn allotment cut down to the size that the rigid 90 percent price support program would impose.

When a commodity gets into the fix of being produced for the Government rather than for a growing market, its producer almost inevitably finds a ceiling placed on opportunity.

Paternalism leads to disaster

Secretary Benson presents the issue facing farmers as follows:

The issue is clear. Is agriculture to manage its own affairs? Or is it to be managed from Washington?

Which better serves the farmers' interests—and the Nation's interests? Shall Government subsidize agriculture in such a manner that it also takes control? Or shall Government be kept in the role of servant—or partner—but never the master?

These are not put as rhetorical questions.

History teaches us that when individuals have given up looking after their own economic needs and transferred a large share of that responsibility to the government, both they individually and the government have failed.

If we are to profit by the lessons of history and avert the fate of these other nations, we must steadfastly pursue and strengthen the course which leads toward greater individual freedom and toward more self-reliance.

These conclusions of the Secretary of Agriculture are supported by the group of agriculture economists who drafted the report Turning the Searchlight on Farm Policy. They pointed out that high price supports lessen farmers' drive for operating efficiency, and production controls tend to spread. They said:

The quest for prices maintained above the trend of market values leads to undue reliance on organizational power and political pressures. This tends to lessen the farmers' drive toward economically desirable adjustments of their industry (or component parts of it) to the other parts of our economy. It may even weaken the motive to make maximum improvement in operating efficiency.

If farm prices are supported at a higher level than that which the market would establish, control of production or/and marketing or use will have to be instituted in the effort to keep prices up to this artificial level. Those controls often rely on voluntary enforcement at the start but move inevitably toward compulsory controls and substantial restriction of the farmers' freedom of choice.

Besides limiting freedom of choice and thus of flexible adaptation to local and changing conditions, these controls aim to restrict the supply of agricultural products available to the market. In the case of acreage allotments, any output lost in a given year is gone forever, except as fertility may be conserved by nonuse of land.

In the case of marketing quotas and related storage operations, the shrinkage in market supply is temporary (except for ultimate deterioration of diversion to lower uses), but not without its harmful consequences.

Production controls are ineffective if applied to a limited range of products and therefore tend to spread. If farmers are restricted in acreage of specified crops, they select their best acres, apply more fertilizer, and give better care to the crops so that outputs prove to be reduced less than planned. Idle acres are put into nonrestricted crops.

The administrative or legislative authority is prone to meet this situation by extending the list of controlled commodities. For this reason and also because jealousy is engendered by Federal aid given to some producers and not to others, the area of production control tends to spread from a few staple or strategic commodities to embrace practically the whole field of agriculture. As the administrative area widens and the control machinery becomes more complicated, costs to the Federal Treasury greatly increase.

A high price policy hurts consumers

This group of agricultural economists also commented on effects on consumers:

A high-price program involving restriction of production hurts consumers, particularly in the lower income groups, because they cannot satisfy their wants as adequately as they could if productive resources were used more fully. Government price supports at high and rigid levels can work over a long period only if the amounts produced and sold are effectively restricted.

The controls needed will curb the freedom of farmers in using their productive resources in the most effective manner.

We do not believe that such restrictions and controls will serve national well-being or provide the highest attainable real income for either farmers or the rest of the Nation.

Domestic production and foreign outlets disrupted by farm program

Prof. Carl Malone of Iowa State College has shown how our price supports have disrupted domestic production and foreign outlets for American farm products:

The fixed-formula price-support program has had effects quite unanticipated by its designers. It led to a boost in potato production from around 350 million bushels annually in the late 1930's to around 450 million bushels in the late 1940's—during a decade when consumer potato demand was decreasing. The result: About a sixth of the crop in the late 1940's went to the Government, mostly to be destroyed. * * * Thus, a fixed-formula price program may develop a big gap between what buyers are willing to buy and farmers are encouraged to produce. * * *

With a storable export product, wheat, the 90 percent of parity price-support program has encouraged production and required a divorce of the American wheat market from world prices. The Government often finds itself a major wheat buyer through the loan program, selling at a loss in the export markets to meet world prices. Then it backs up the supported domestic price with tariffs or quotas since the high American price acts as a magnet to supplies elsewhere.

Where a product has ready substitutes, the fixed-formula 90-percent price support may keep the price above the free-market level. A major effect, then, is to encourage production of the substitute product and discourage consumption of the supported product. Cotton price supports are proving a real boon to the rayon industry—butter supports to the margarine industry.

The cost of Government farm programs, 1933–55

The Office of Budget and Finance of the United States Department of Agriculture has prepared a detailed tabulation of the realized cost of all agricultural and related programs for the fiscal years 1932 to 1955. The total realized cost of programs primarily for stabilization of farm prices and income, 1932–55, was $9.8 billion.

Summit Avenue Baptist Church Celebrates 100th Anniversary, 1857-1957

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. SIEMINSKI. Mr. Speaker, on May 5 of this year, it was my pleasure to attend the 100th anniversary communion service at the Summit Avenue Baptist Church in Jersey City, N. J. It was a pleasure to join with others in the congregation to wish the historical little church many happy returns of the year.

As a boy, over 37 years ago, I attended Sunday school at the Summit Avenue Baptist Church. The late Supreme Court Justice Charles Evans Hughes and his father are among those who have taught and preached at the Summit Avenue Church.

Under unanimous consent, I should like to list three items in rememberance of the 100th anniversary services, Mr.

Speaker. The items include the table of contents from the book, Hymns of the Christian Life, the church covenant, and the program:

TABLE OF CONTENTS

MORNING WORSHIP

Worship.
The church.
The Lord's Day.
The scriptures.
The Holy Spirit.
Jesus Christ: Nativity, suffering, and death, resurrection and ascension, second coming.
Christian experience: Love, grace, repentance, faith, peace, assurance, prayer, consecration, sanctification, divine healing, comfort, guidance, service, missions, communion, close of life, national.

EVENING SERVICE

Evangelism, missions, second coming, invitation.
Responsive reading.
Topical index.
General index.

SUMMIT AVENUE BAPTIST CHURCH, REV. R. EARLE PETTINGILL, MINISTER, 575 SUMMIT AVENUE, JERSEY CITY, N. J.

OUR CHURCH COVENANT

As we trust we have by divine grace been brought to embrace the Lord Jesus Christ, and by the influence of the Holy Spirit to give ourselves up to Him; so we do now solemnly covenant with each other, as God shall enable us:

To walk together in brotherly love.

That we exercise a Christian care and watchfulness over each other, faithfully warn, rebuke, and admonish our brethren as the case may require.

That we will not go to law, brother against brother, before unbelievers.

That we will not forsake the assembling of ourselves together nor omit the great duty of prayer, both for ourselves and others.

That we will participate in each other's joys, and endeavor with tenderness and sympathy to bear each other's sorrows.

That we will seek divine aid to enable us to walk circumspectly and watchfully in the world, denying ungodliness and every wordly lust.

That we will contribute for the support of a faithful and evangelical ministry among us, and for the spread of the Gospel abroad.

And that through life, amidst evil report and good report, we will seek to live to the glory of Him who hath called us out of darkness into His marvelous light.

100TH ANNIVERSARY YEAR, 1857–1957, THE SUMMIT AVENUE BAPTIST CHURCH, SUMMIT AVENUE AND COTTAGE STREET, JERSEY CITY, N. J.

Rev. R. Earle Pettingill, minister, 575 Summit Avenue; The Church With a Heart in the Heart of Things. Mrs. R. Earle Pettingill, organist; Mr. Bert Crolius, director and soloist.

100TH ANNIVERSARY COMMUNION SERVICE

9:45 a. m., church school. Our school has been showing a steady increase all year, but there is still room for you, if you have not made this a habit. Come out and join with us.

11 a. m., morning worship.
Organ prelude.
Call to worship: Psalm 8.
Hymn No. 2: Come, Thou, Almighty King.
Invocation, Lord's Prayer, Gloria Patri.
Special music: The Radiant Morn (by Woodward): Choir.
Morning Scripture reading: Genesis 12:1–9; Hebrews 11:8–16.
Pastoral prayer.
Choral response: Choir.
Responsive reading: Church covenant.
Hymn No. 111: Faith of Our Fathers.
Pastor's informal word.
Tithes and offerings.
Offertory.
Special solo: Mr. Bert Crolius.
Doxology.
Organ meditation.
Morning message, He Dared To Trust God; pastor.
Hymn No. 24: The God of Abraham Praise.
The Lord's Supper.
Anniversary memberships.
Fellowship offering.
Benediction hymn, Blest Be the Tie That Binds.
Organ postlude.

The flowers today are in loving memory of the pastor's parents, Mr. and Mrs. Fred H. Pettingill.

The hostess for the month of May is Mrs. Roy Smedes.

Communion hostesses for today are Mrs. Walter Cleaver, Mrs. Elmer Lewis, and Mrs. William Ennis, Sr.

THIS WEEK

Monday, 8 p. m.: Adventurers' Club in recreational rooms, for juniors and seniors.

Monday, 8 p. m.: Trustees' meeting, at the church.

Wednesday, 4 p. m.: Junior choir rehearsal; 7 p. m.: senior choir rehearsal; 8 p. m.: midweek hour of Christian fellowship.

Thursday afternoon and evening: Meeting of the Women's Missionary Union of Hudson County. Supper will be served.

COMING EVENTS

Wednesday, May 15, hold the evening open. Our 100th anniversary business meeting will follow our midweek hour of Christian fellowship. Wednesday, May 22, our 100th anniversary catered banquet. Reservations are going fast. See Mr. or Mrs. Cleaver today and make your reservation, as we are going to open the ticket sale to those outside our congregation next week. Sunday, May 26, Mrs. J. W. McCrossen, of the New Jersey State convention, will be our speaker at the morning worship.

Have you joined the new Booster's Club? About 22 people have joined a special Anniversary Booster's Club, agreeing to pay $1 a week for 60 weeks. This plan was started with the hope that our mortgage, taken in 1952 to run for 10 years, may be liquidated by the end of the year. We are not behind in our agreement, but the church could very easily be free of debt at the close of the anniversary. We should have 50 more to assure success. See Mrs. Cumings at the booster table today. It can be done—a debt-free church by 1958.

OFFICERS OF THE SUMMIT AVENUE BAPTIST CHURCH

Minister: Rev. R. Earle Pettingill, 575 Summit Avenue, Jersey City, N. J.

Church clerk: Miss Erilynne Forsberg, 299 Bergen Avenue, Jersey City, N. J.

Financial secretary: Mr. Ronald E. Davis, 434 Union Avenue, Belleville, N. J.

Treasurer: Mr. William C. Ennis, Sr., 161 Palisade Avenue, Jersey City, N. J.

Deacon's board: Mr. Elmer R. Lewis, chairman; Mr. Alexander Luken, secretary; Mr. Frank Anderson, treasurer; Mr. Eric Forsberg, Mr. Ray Leach, Mr. William Hick, Mr. Edward Wardell.

Trustees board: Mr. August Bahr, chairman; Mr. Walter Cleaver, secretary; Mr. Bert Crolius, Mr. Louis P. Manfredi, Mr. Charles Colgrove, Mr. Ronald E. Davis, Mrs. L. T. Cumings, Mr. J. Peter McNamara, Mr. Clifford Crolius, Mrs. W. Roberts, Mr. William C. Ennis, Sr.

Board of Christian education: Mr. George Butler, Mrs. R. E. Davis, Mrs. R. E. Pettingill, Mr. William C. Ennis, Mrs. Carl Haag.

Chief ushers: Mr. Peter M. McNamara, Mr. Robert Thornton.

Flower committee: The deaconness board, Mrs. Roy F. Smedes, chairman.

This church is a member of the Hudson Baptist Association, the New Jersey Baptist Convention, the American Baptist Convention, in full cooperation.

Reflection Is Good for the Political Soul

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. MULTER. Mr. Speaker, as a prelude to my 1957 annual report to my constituents, I should like to call attention to my report at the close of the 84th Congress in July 1956, which read as follows:

REFLECTION IS GOOD FOR THE POLITICAL SOUL

(Extension of remarks of Hon. ABRAHAM J. MULTER, of New York, in the House of Representatives, Friday, July 27, 1956)

Mr. MULTER. Mr. Speaker, 4 years ago a giant hoax was perpetrated on the American people. They were promised a new approach to Government, one that truly was to represent them. In 1952, they were promised a world of peace and prosperity, lower taxes, higher wages, lower prices, and a balanced budget. The best business heads in America were to run our Government.

Two years went by, and the disillusioned American people went back to their own party, the Democratic Party, by electing a Democratic Congress. The administration moaned and warned of a partisan cold war, of a stalemate within the Government. President Eisenhower cried loudest. Let us now review what happened.

Whatever good there was in the President's program had more support in every instance from the Democratic Party than from his own Republican Party. The President, himself, presently admits that the Democratic Congress produced a substantial amount of worthwhile legislation.

In 1952 the American people were fooled into believing in a program that its authors themselves did not believe in. We hope in this election year they will not fall prey to the hoax that the elephant will again try to foist upon them.

Evaluation of the past will help us to spot the election year myths when they are presented by Republican campaigners.

THE ADMINISTRATION—ABSENTEE MANAGEMENT; WHO'S MINDING THE STORE?

We were promised a President who would be a guiding knight, an active and strong manager, a leader of our country, an expert in military affairs, and a friend of our foreign allies.

Instead we have an ailing gentleman, who had no experience in government, and who has shown no interest or desire to learn about his tasks. On several occasions he has told his press conferences about seeking the enactment of bills he had already signed into law. This disinterest or lack of knowledge cannot be attributed to ill health. Eisenhower's pleasing personality and past military achievements are no substitute for political leadership. There can be no justification for his delegating the authority and responsibility vested by our Constitution solely in the President.

The business managers of our Nation, such as Secretary Wilson and Secretary Humphrey, may be fine in business, but they have proved they do not belong in government. The promotion of the national well-being for the

benefit of the many rather than the few is foreign to their philosophy.

It is not true that what is good for General Motors is good for the country. Profits of an automobile industry are not equivalent to the welfare of a people.

Our health program should not be measured with an eye to a balanced budget. Nor has Secretary of the Treasury Humphrey earned the right to act as an adviser to our Armed Forces. Defense and national security must not be impaired by a desire for a balanced budget.

THE CONSUMER, LABOR, AND THE FARMER—THE TIGHT SQUEEZE

The one problem common to the farmer, to labor, and to all of us, is that of the consumer.

Candidate Eisenhower promised us a lower cost of living. President Eisenhower will surely disclaim responsibility for a higher cost of living.

Consumers prices are at a record high. The National Consumer Price Index rose for the fourth successive time in a year. It has reached the highest peak in 5 years. Next month another rise is expected.

The Democratic farm program is based on the knowledge that general prosperity cannot be maintained while we continue to depress the farmer. President Eisenhower vetoed our Democratic farm price support bill and then quickly raised price supports himself. Apparently his sliding scale had slid too far, for farm income is down 30 percent in the past year.

Milk prices to the consumer have continued to rise. Secretary Benson decided to raise dairy prices just when manufacturers had warehouses filled with cheese and butter bought at the lower price level. The farmer who sold his milk at the lower price then had to buy it back as high priced butter. This apparently is the Republican idea of how to aid the dairy farmer. No wonder so many of these farm families spread oleo on their bread.

Milk prices do not worry Secretary Benson who finds that the little farmer is of no importance. Benson is more concerned with the three members of his advisory board whose firms have been indicted for monopolistic practices. Mr. Benson is apparently fully occupied in directing the administration's everchanging farm policy. He first opposed and then supported a soil bank; he first opposed and then approved the plowing under of crops; first opposed and then approved the idea of farm policy as a political issue.

The present administration makes many boasts as to the increase in the size of the labor force. This increase is largely a result of our ever-increasing population. Of far greater significance is the fact that at least 2,900,000 people who want jobs, cannot find them. In the past year one million persons have been added to our unemployed rolls. That represents a total of nearly 10 million American men, women, and children who have lost their means of support. The billion dollar year that General Motors has just concluded does not help these people.

The Democratic Party sponsored a bill to help our unemployed learn new skills when their previous trades no longer offer employment. Retraining these people will help to relieve all of us of the burden of support. This is the type of constructive, positive, legislation which brought our country to the prosperous state which it enjoyed in 1952 when Republican businessmen began to tear it down.

Candidate Eisenhower pledged himself to the amendment of the Taft-Hartley Act. President Eisenhower has consistently refused to live up to his campaign promises. Former Secretary of Labor Durkin offered the President 19 amendments, which were in accord with Candidate Eisenhower's promises. Eisenhower refused to go along with any of them. Instead he submitted to Congress a program which would toughen the Taft-Hartley Act. His Labor Secretary resigned and was replaced with another big businessman. Congress refused to go along with President Eisenhower's labor program as presented.

In an attempt to meet the increased cost of living, Congress has raised the minimum wage to $1 per hour over President Eisenhower's protest that 90 cents was adequate.

The Republican Party as represented by President Eisenhower may be a party of the people, but of and for a very few people.

BAD GOVERNMENT

During his 1952 campaign candidate Eisenhower had much to say about corruption in Government and useless personnel in Government.

We said then and repeat now: no political party has a monopoly on virtue or efficiency. Every party when trusted with the privilege to govern must be ever alert to weed out the loafers, the incompetent, and the criminal.

President Eisenhower has sadly failed the people in that regard.

The executive departments, in almost every instance, are employing more people and more top executives at higher salaries than in any previous administration. The exceptions are in the so-called service departments.

The Post Office Department serving all of the American people is using fewer employees and giving the worst service we have ever experienced.

The Veterans' Administration, serving our veterans and particularly our disabled veterans, has been reduced in force, moved around, kicked around, and made a less useful agency to those who need it most.

The Agriculture Department has been reorganized to take out of the hands of the farmers, most of the things they can do best for themselves.

Misappropriating funds is the order of the day for this administration. This administration has appointed more corrupt officials than any other in our history.

Starting with Secretary Benson using Department funds to refurbish a Government lodge for his personal use, we find corruption rampant in every department.

Warehouses bursting at the seams, because improperly constructed; selling millions of dollars worth of cheese to the processors and buying them back at higher prices, without the cheese ever leaving storage or changing hands; indictments of three members of Secretary Benson's advisory board; self-dealing for his private profit of one of his paid subordinates; loading the school lunch program with more than $400,000 worth of phony transportation charges in Illinois for the sole benefit of one of his Republican friends. There are, no doubt, many more such incidents which have not yet been exposed. We are just beginning to investigate the monopoly enjoyed by three companies in disposing of surplus commodities.

Under 20 years of Democratic administration the Commodity Credit Corporation never exceeded an authorization of $6¾ billion. The total lost in those 20 years from operation of the program, was about $1 billion. During 3½ years, the Republicans have increased that authorization to $14 billion. The losses have increased by at least $4 billion. No small part is attributable to the increased interest rates paid to bankers and much of it paid in violation of law.

Dixon-Yates was bad, so bad that even the Republican administration has backed down on its spurious claim of legality.

The cancellation of a Defense Department contract awarded to the Chrysler Corp. and awarding the same business to General Motors is only a small part of the wrong doing in that Department.

The foot-in-mouth statements of Secretary Wilson is the least important of the many things that are bad in this administration.

The Small Business Committees of the Congress have devoted some part of almost every day to urging the Defense Department to follow the law and its own regulations in awarding contracts and making payments earned thereunder.

The Office of the Comptroller of the Currency and that of the Federal Deposit Insurance Corporation have also been managed in a manner adverse to the public interest.

The big banks and big holding companies have grown bigger with the aid and abetment of the Republican appointees to those agencies.

The responsibility for the Illinois bank scandal, the theft of State funds through bank manipulations, must be borne at least in part by those same Republican Federal appointees.

Internal mismanagement by those officials of their offices I hope will soon be the subject of thorough investigation.

Under the leadership of the Secretary of the Treasury and the Comptroller of the Currency attempts are being made to weaken our banking laws for the benefit of the big banks and to the detriment of the small banks and small investors. A part of that scheme was the abortive attempt to destroy the right of minority stockholders to minority representation on the directorates of national banks.

The full story about the giveaways by the Interior Department, the attempt to destroy TVA, REA, and our other public facilities and natural resources requires much more time than I can give here.

SMALL BUSINESS

Since 1953 our Government has been taken over by big business and the big banking interests of the country. The little fellow has had no representative in the Cabinet or at the top of any executive department. On the contrary, he has had as antagonist big business and the big banks, not only in the market place but also in every department of Government.

What is even worse, the so-called WOC—the big-business man on loan to the Government, drawing no compensation from the Government but being paid by his big-business employer—has an inside track keeping big business constantly informed as to Government plans and channeling Government business away from the small-business man and to big business.

Credit restrictions are manipulated so as to dry up all sources of credit for the small-business man.

Except in times of war or emergency, WOC's should not be employed by the Government.

I have contended and will continue to urge that the Small Business Administration Act must be strengthened by eliminating the Policy Board now dominated by Secretary of the Treasury Humphrey and Secretary of Commerce Weeks. The agency must be made not only permanent, but permanently independent of the Treasury Department and the Department of Commerce.

The small-business man, displaced by slum clearance and highway construction, should be entitled to low-interest-rate loans based upon character and ability to perform, rather than bankable collateral.

The Defense Department must be directed by the Small Business Administration to discard, as required by law, the old arbitrary, numerical definition of a small business firm, and follow a more realistic one. This will give small business a larger and more equitable share of Government contracts.

The Small Business Administration may boast that during 3 years, it has approved 3,560 business loans in an aggregate amount

of $137,915,000 on account of which it disbursed $52,578,000. Compare that, however, to what this administration has done for big business in the same period through the Export-Import Bank alone, to wit: 805 loans for a total authorized aggregate amount of almost $7,500,000,000 against which it disbursed over $5,171,000,000. The Export-Import Bank made 22 percent as many loans with an average disbursement of over 426 times more per loan. To put it more simply, SBA's loan disbursements averaged less than $15,000 each and the bank's more than $6,400,000 each.

While big business has made more and bigger profits than at any time in the history of our country, small business has been going into bankruptcy in greater numbers than at any time since the depression days of the early 1930's.

For years, I have led the fight to establish offices of the Small Business Administration in Alaska, Hawaii, and Puerto Rico so to enable American citizens residing so far from the mainland to avail themselves of the privileges accorded by law to all. I personally urged the Appropriations Committee to give the agency the money for that purpose. The money was voted. I am still waiting to be informed that even one of those offices has been opened.

GIVEAWAY: THE GOVERNMENT'S PRIVATE CHARITY

The administration in its "partnership" plan gives, and gives, and gives, and the people get nothing in return. First, it was offshore oil lands, then TVA, then natural gas. Now, any river or forest that big business wants, it can have for the asking.

The President wanted and got a Federal water storage project on the upper Colorado River. Since no big business wanted it, the President's partnership plan was forgotten. And Idaho Power Co. wanted to build a private power project at Hells Canyon, so the administration opposed the public sponsored Hells Canyon project. The administration opposed the idea of municipalities in New York State having priority purchase rights to the electric power which would issue from the Niagara River power development program.

The development of atomic energy for peace is an idea that the Democratic Party sponsors wholeheartedly. But we voted against the administration's atoms-for-peace program since it would have given a few big businesses a monopoly in the development of atomic energy for peacetime use.

Incidentally, Attorney General Brownell now has completely disavowed the Dixon-Yates contract and has accepted the view of the Democratic Party that the whole agreement was illegal.

It took New Deal reclamation programs to give us back our forests. It has taken less than 4 years of an Eisenhower administration to lose them. The administration's policy is to lease them to private industry—which flagrantly abuses them.

We have no right to expect anything else of the Department of Interior under this administration. Its consistent policy is to put political appointees in the place of ardent careermen. It has been no accident that many of these political appointees have been anticonservationists. There is no necessity for commenting on the scandals that have evolved over the private uses that many of these appointees have made of the assets of the Department.

FEDERAL AND POSTAL EMPLOYEES

Anyone aware of the importance of all Federal and particularly the postal employees, can see no reason why they should not have many of the rights that are accorded to workers in private industry.

We have, over the objection of the administration, raised their wages, to enable them to meet the rising costs of living. This, while the President kept clamoring for increased pay for those already in the highest brackets. We have also liberalized the civil service retirement benefits.

We have not yet devised any method to stop administrative destruction of the merit system.

Nor have we been able to abolish the brazen gag order that Republican Postmaster General Summerfield has imposed on postal workers. He has forbidden them to complain about the post office to anyone but their superiors in the post office. Members of Congress and the press have become off limits to these employees. We must now write into the law permission for these employees to complain to their Congressmen without impairing their merit standing.

The Supreme Court's decision, limiting the scope of the security program to those areas of government which can be defined as sensitive, would seem to have eliminated the problem created by the unwarranted administrative security clearance procedures. The administration is now sponsoring a bill which would classify all Government positions as "sensitive." The recommendations of the Association of the Bar of the City of New York, which fundamentally agree with the decision of the Supreme Court, should be followed in this regard. No American wants subversives in our Government. We can and must provide adequate means for protecting the Government's best interests. But we must do it without needless duplication of effort and without destroying our fundamental principles of fair play and of good Government.

VETERANS AND ARMED FORCES

Neither the veterans nor the Armed Forces have been forgotten by the 84th Congress. Aware of our debt, we, the Democratic Party, sponsored and supported measures to better their lot.

The veteran home-loan program has been extended, as have been the disability benefits for the veterans of World Wars I and II. Neither forgetting the youth of our Nation nor those who were their fathers, we are providing educational asisstance to children of servicemen who died in World War II and in Korea. We have extended the Missing Persons Act authorizing continued pay for service personnel missing or captured in Korea.

To maintain a strong armed force, we have extended the draft law to 1957. To provide greater incentive for career personnel—a necessary essential in our defense program—we have placed all military personnel under our social-security program, and have increased the benefit payments to survivors of servicemen and veterans. We have also provided for medical care for the dependents of members of our Armed Forces. We have raised the pay of our 6-month trainees under the Reserve program as well as the pay of the Armed Forces in order to attract and keep better men in the service.

SOCIAL LEGISLATION—THE UNBALANCED SCALE

Social legislation is not a partisan matter to the Democratic Party. The welfare of the Nation is more important than party politics. We, of the Democratic Party, were happy to note that much of the welfare legislation of the administration was an extension of New and Fair Deal plans. These acts and others of a similar nature were supported wholeheartedly by the Democrats.

Over the administration's protests we succeeded in amending the Social Security Act by lowering the retirement age for women to 62 and permitting the disabled to become eligible for full benefits at the age of 50. Democratically supported and New Deal initiated, and administration sponsored, the benefits under the Railroad Retirement Act, and the Longshoremen's and Harbor Workers' Compensation Act were increased.

National disaster insurance for the victims of flood and hurricane disasters was established.

We have extended the Federal school milk program to include child-care centers, nursery schools, settlement houses, summer camps, and other similar nonprofit associations.

I sponsored a Federal Scholarship Act. Worthy students who desire a college education or postgraduate work would be enabled to apply for these loans to aid them through school. This is no giveaway, since the students will repay these loans when their education has been completed. Such a program has been found feasible in prior years. It should have never been abandoned.

We have also authorized $378 million in Federal aid for school construction, in areas which have become overcrowded by increased governmental activity.

Little need be said of the failure of the school-aid bill. Due to a shameful coalition of a minority of the members of my own party and of a majority of the Republicans, this much-needed bill was defeated.

In matters of national health and medical research we went beyond what the administration requested. The Oveta Hobby attitude, of health being a strictly private affair, did not reoccur during this session. Ninety million dollars have been set aside for medical research of crippling and killing diseases, for extended hospital construction and for training nurses and health specialists. Four million dollars have been set aside for a dental research institute.

The housing bill authorizes a public housing program of only 35,000 units a year for 2 years. The Democratic majority in the House felt that this was an unrealistic attempt to remedy the housing shortage. Administrative opposition proved too strong and we were compelled to settle for less than is needed. We did succeed in liberalizing the terms of Federal mortgages; for financing home improvements, for financing single-family home purchases, and for financing rental dwellings. We also liberalized, not enough, but somewhat, the Federal mortgage terms for elderly people and for urban renewal projects.

The administration sponsored a civil-rights bill which was quite innocuous. It provided for things which the President now has the right to accomplish without any new laws. Once again a self-interested coalition of a few Democrats and a great many Republicans thwarted this measure. That action will no doubt be President Eisenhower's excuse to do nothing about the matter.

We did not enact the health insurance program of the President since it would have done nothing except help some insurance companies. It would have done nothing for the individuals who need medical and hospital assistance or insurance to pay therefor.

Throughout this program, the unbalanced scale continued to dominate the administration's thinking. No matter who sponsored the legislation, the Democratic Party approach was: If it was for the benefit of the people as a whole, we supported the bill. This cannot be said of the Republican Party. Their narrow interests and petty insights have not yet revealed to them the importance of the broadest approach for the benefit of the greatest number.

INTERNATIONAL AFFAIRS—PERILOUS PATHS

Under our system of government, the President must assume the leadership in the realm of International Affairs. He must make the policy in the first instance. His State Department should be his spokesman. Congress may respond by approving appropriations or by Senatorial action on proposed treaties.

The path of peace is always difficult. The Democratic Party believes it can only be maintained by an unequivocal but honorable approach to foreign affairs. To find a permanent peace, we must be vigilant and alert, honest with ourselves and with our allies, and firm with our potential enemies.

The ideological conflict between the East and West continues. The Communist countries have changed their outward demands, but they have not changed their aims of world domination. This administration has made no attempt to move forward in this field. It has mumbled and fumbled, it has bluffed and rebuffed, it has bleated and retreated.

The Democratic Party has supported President Eisenhower in his attempts to find a road to peace. We have supported his foreign-aid program authorizing $3.9 billion to be used for military, economic, and technical assistance to our friends and allies during the next year. Although the President asked for more, his aides have admitted that they cannot spend in the next year the funds now appropriated for those purposes.

The removal of United States troops from Japan is imminent and will permit her, as our ally, to regain her true place in the world of nations. The House passed a resolution asking that Japan be admitted to the United Nations.

I have been continually opposed to the Near East policies of President Eisenhower and Secretary of State Dulles. Their blindness, if not stupidity, has helped raise Egypt's Nasser to a position in which he thereatens the peace of the world.

Our demand for arms for Israel have been ignored. Instead of firmly insisting upon a cessation of hostility, Dulles has encouraged Arab fighting. We demanded that Dulles and Eisenhower protest against blocking the Suez Canal to Israeli and Greek ships. My question is still unanswered: "What will the United States do when American ships are barred?"

The anti-Semitic boycott by the Arab States has been approved by a delinquent administration. It has excluded American soldiers and American civilian employees of the Jewish faith from American bases in Saudi Arabia.

PROTECTING THE INTEGRITY OF UNITED STATES CITIZENSHIP

From the very earliest days of the establishment of our Nation, we have insisted that American citizens, wherever they may be and wherever they may go, must be treated as such regardless of race, color, or religion. We have a long history of having come to the aid of American citizens wherever their rights have been threatened, impaired, or impeded.

This administration has sadly failed the American people and has repeatedly and constantly backed away from that fundamental principle of American freedom.

The protection of the integrity of United States citizenship and of the proper rights of United States citizens to lawful trade and travel and other activities abroad, is a basic principle of United States sovereignty. It is a primary principle of our Nation that there shall be no distinction among United States citizens based upon individual religious affiliations.

Any attempt by foreign nations to create such distinction among our citizens in the granting of personal or commercial access, or any other rights otherwise available to United States citizens, is inconsistent with and contrary to our principles. Any such distinctions directed against United States citizens is incompatible with the relations that should exist among friendly nations.

We should insist that in all negotiations between the United States and any foreign state, that every reasonable effort should be made to maintain these principles. We should carry on no negotiations and engage in no conventions, agreements, or treaties with any foreign nation that does not recognize these principles or violates them.

These principles have been so firmly imbedded in our tradition that up to 1952, no political party found it necessary to restate them in a political platform.

In 1952, however, the Republicans inserted these words in their platform, to wit:

"We shall see to it that no treaty or agreement with other countries deprives our citizens of the rights guaranteed them by the Federal Constitution."

That should have been a warning signal. We had no such treaties or agreements then and have none now. No prior administration, Republican or Democratic, ever permitted the rights of American citizens to be impaired by any foreign country.

This administration, however, has permitted the Arab States to disregard, ignore, and even trample upon the rights of American citizens in travel and trade. They prohibit Americans from traveling into, through, or over these nations because of religion. On the same basis they refuse to allow Americans to trade with their own citizens.

This administration has ignominiously permitted a foreign nation to violate a treaty obligation and acquiesced in that country, Saudi Arabia, banning American citizens from an American base on the sole ground of religion.

CIVIL DEFENSE

To aid our civilian defense program Congress has increased the appropriation for construction of aircraft control and warning systems.

Testimony adduced before congressional committees established that our so-called civilian defense is utterly worthless and completely valuless in the event of an atomic bomb attack. Every penny presently being spent by the so-called Department of Civilian Defense is wasted.

Nevertheless, this administration would do nothing to improve this horrible and horrifying situation.

CONCLUSION

The record of the 84th Congress speaks well for our country. It could have been better. I am sure it would have been better, if we had had a Democratic President.

The levelheaded approach of a Democratic Congress under a Republican President produced meritorious legislation. We did not enact all the legislation that should have been passed. What was accomplished, in the main, is a record that the Democratic Party can be proud of. Even though we worked under an unsympathetic administration, the national interest was our first thought at all times. I am proud to have had the privilege to serve in the responsible 84th Congress.

During the ensuing recess I will continue to serve my constituency. My office at room 1305, New House Office Building, Washington, D. C., will remain open and fully staffed for that purpose.

The Restrictions on Trade With Red China Are Working—Relaxing Them Can Only Benefit Our Enemies and Injure Ourselves

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 29, 1957:

RED CHINA'S COTTON

The economic woes of the Chinese Red regime are again becoming apparent. A new rationing edict on cotton cloth has been announced. A further 20-percent cut is decreed and women are urged to change their style of dress to use less raw material. The army is already put on short clothing ration and this is the second civilian cut this year.

This is important because it is an index to the economic life of the society. The Chinese are normally heavy cotton consumers. The lack of adequate cotton supplies shows not merely a failure of domestic production—which never did meet the need—but also the impact of restrictions on trade with Red China. When cotton clothing has to be rationed there is hardship in the whole community.

Actually, Red China is repeating the experiences of other Communist societies. In the beginning great emphasis is placed upon the growth and development of heavy industry. This is a twofold program. In the first place it is suposed to create and sustain that industrial proletariat that is the backbone of a Marxist state. In the second place it is supposed to provide the sinews of war. What happens, meanwhile, to the individual is of no importance. Human values must give way to theories and human needs must be ignored. Clothing is one of those needs, and it can be rationed.

It has been reported, again and again, that Red China has made important industrial gains. The miles of railway that have been built or reconditioned are impressive. There is more steel. There are some new mines, both iron and copper. There is more coal. Peiping is even boasting that it can now make tanks and even jetplanes.

But there is less cotton in China to clothe the individual Chinese. The gains are obviously being made at a cost. The pattern is not new and it is not surprising. What remains to be seen is how far the individual Chinese can be pushed. A further cut in the cotton ration is a gamble. It may pay an undesired dividend.

H. R. 8002

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I would like to request that the following letter to the editor appearing in the New York Times of August 22, 1957, be printed in the CONGRESSIONAL RECORD. This letter was written by Mr. Clarence Francis, national chairman, Citizens Committee for the Hoover Report. He explains H. R. 8002, the many reasons why it should be enacted into law, and answers very forcibly some questions that have been raised about the bill. The letter follows:

TO IMPLEMENT BUDGET—BILL'S PURPOSE SAID TO BE TO MODERNIZE FEDERAL FISCAL SETUP

To the EDITOR OF THE NEW YORK TIMES:

On August 11 the New York Times published an article by Hanson W. Baldwin, "Wilson and the Budget," and the following day an article by Edward H. Collins, "Budgetary Reform." Both of these articles present the arguments of the opponents of House Resolution 8002, which would implement the

budgetary reforms proposed by the Hoover Commission. Mr. Collins and Mr. Baldwin then proceed to pass adverse judgment upon this bill. We feel that your readers should have both sides of this important question.

Mr. Collins refers to this budgetary reform as "a gadget proposal" and so would intimate that it is simply a tricky way of doing things. Actually, of course, this proposal is part of an elaborate program offered by the Commission to reform the whole fiscal setup of the United States Government and to modernize it. The task force that made this study for the Commission was composed of outstanding accountants and businessmen and it made 31 recommendations.

The Commission itself, in adopting the report of its task force, made 25 different recommendations. These cover both accounting and budgeting and would put the Government of the United States, for the first time, on a firm business basis.

SYSTEM OF COST ACCOUNTING

Neither Mr. Collins nor Mr. Baldwin mentioned the fact that the major part of these recommendations has already been enacted into law, Public Law 863, enacted last year, and establishing cost accounting throughout the Government. It was not until this was done that it was possible to carry out the Commission's proposed method of budgeting.

As the Commission itself pointed out, budgeting is far more than preparing figures and estimates of proposed expenditures. Budgeting functions are vital to the whole conduct of our Government. In the preparation of the budget lies not only the control of departmental expenditures but the power to insist on efficient methods of management in the spending agencies. And within an effective budgeting system lies restoration of full control of the national purse to the Congress.

Much of this program of fiscal reform for the Government is highly technical. But the budgetary plan would provide, in effect, for a budget that would pay for the costs of goods and services received in the fiscal year, instead of providing the full amount for projects for many years in advance with no further check on expenditures. This is the principle applied generally in American business and in most homes.

Under the present system of appropriating the full amount in advance we have had huge carryover funds that now total more than $70 billion. The exact amount is not known. Mr. Baldwin, in his article states that these carryovers "were due primarily to one cause, the weaknesses of our Armed Forces prior to World War II and the Korean conflict."

ACTUAL CASH OUTGO

May I point out that the facts do not bear this out. The carryover, for instance, in 1950 was estimated at $11.5 billion. By 1953 it had grown to $68.8 billion and now is estimated by the Comptroller General as exceeding $70 billion. Also, while the current budget is about $70 billion, the actual cash expenditures will be closer to $86 billion.

Mr. Collins says that Budget Director Percival F. Brundage has refused to identify himself with a firm figure of $4 billion savings yearly for this reform. This is true, of course. But Mr. Brundage did affirm that it would mean not only improved program control by the Congress and Executive of the expenditures but would also provide large economies. The Commission itself did not make an estimate of savings, and the task force did not make a firm estimate. Here is what the task force said:

"The benefits which would result from improved financial management cannot be calculated with any degree of precision, but we believe the resultant dollar savings could reasonably be expected to amount to $4 billion, which is approximately 8½ percent of the controllable budget expenditures."

This, of course, does not apply to the budget proposal alone; it applies to the whole fiscal program outlined in 31 recommendations. The budget plan is 1, No. 11.

MR. WILSON'S VIEWS

Mr. Baldwin's article deals largely with a statement made by Secretary of Defense Wilson in executive session and made public by the members of the Appropriations Committee, evidently thinking that it would help their cause. Actually, Mr. Wilson's statement proved the two major contentions of the Hoover Commission—first, that Congress in a large degree has lost control of the purse and second, that H. R. 8002 would mean large financial savings.

Mr. Wilson testified that this bill would cause him difficulties because while the Congress is budgeting $38 billion for the new fiscal year for his Department it is spending at the rate of $40,200,000,000. This means that he is spending more for the fiscal year than authorized by Congress. He said that if this bill were enacted he would have to cut his expenditures by $2,250,000,000, which is quite a substantial saving in any man's money.

Mr. Collins' article makes much of the fact that contract authority, one method that would be used in some degree under this proposed budgetary plan, had been tried in 1942 and later rejected. This, of course, was before the new methods of accounting were installed in the Government by Public Law 863. Before, this kind of budget and this kind of contract authority could not work. Under it, both can.

Neither Mr. Collins nor Mr. Baldwin mentions the reasons for H. R. 8002. These are outlined in the Commission's reports; they are the confusion and waste in the fiscal management of the Government.

For instance, the Government has no adequate inventory. We do not know exactly what the Government owns; we do not know exactly what it owes; we do not know from year to year what it will spend. Neither can the Government strike a balance sheet, listing its assets and its liabilities, so you can know whether it is solvent or not—apart from its authority to collect taxes without limit.

Neither Mr. Collins nor Mr. Baldwin mentions the fact that H. R. 8002 has the approval not only of the distinguished gentlemen of the Hoover Commission and its task forces but also has received the approval of the President of the United States, the former Secretary of the Treasury, the Director of the Budget, the Comptroller General of the United States, the American Institute of Certified Public Accountants, and numerous authorities on accounting and budgeting methods. Neither did they mention the fact that this bill, in the form of an even stronger measure, S. 434, the Kennedy-Payne-Byrd bill, passed the Senate unanimously.

CLARENCE FRANCIS,
National Chairman, Citizens Committee for the Hoover Report.
NEW YORK, *August 14, 1957.*

The Honorable Samuel McConnell

SPEECH
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. CANFIELD. Mr. Speaker, the distinguished gentleman from Pennsylvania we affectionately know as SAM MCCONNELL leaves the House this week to become executive director of the United States Cerebral Palsy Association.

Having felt the friendly and inspiring influence of this most characterful and dedicated legislator during his 13 years of productive service in this body, I wish to make these observations:

He is an unforgettable statesman and humanitarian.

He believes his mission in life is to add to the sum of human happiness, subtract from the sum of human misery.

He has been preeminent in legislative endeavors for the handicapped, the underprivileged.

He has exalted service above self in a quiet yet very persuasive way and he believes he has been truly called to his new and challenging work.

I shall always feel close to SAM MCCONNELL and I believe that those, young and old, soon to feel and understand his ministrations, will be uplifted and come to love him.

Congressman Nimtz Plans Tour of 25 Cities in Third District of Indiana

EXTENSION OF REMARKS
OF
HON. F. JAY NIMTZ
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. NIMTZ. Mr. Speaker, in order to bring the services of my congressional office directly to the people in their home communities, I am planning an official business tour of 25 cities and towns in the Third Indiana District while Congress is in recess.

My 1957 grassroots tour has been scheduled for September 16 through September 20 and will include visits to 7 communities in Elkhart County, 6 in St. Joseph County, 7 in La Porte County and 5 in Marshall County.

A temporary office will be established in a central location in each community where I will have an opportunity to meet local constituents and discuss with them current problems and policies of the Federal Government.

A member of my Washington office staff will accompany me and we will welcome the chance to be of service to any and all callers. No advance appointments will be necessary.

After 8 busy months in Washington, I am eager to return to Indiana and renew my personal contacts with friends in the Third District. This tour will give me an opportunity to do so and it also will make it possible for me to report directly to the people on my stewardship in Congress.

During the congressional recess my office at 301 Federal Building, South Bend—Telephone, Central 4-5616—will be open daily to answer any inquiries from constituents. My office in Washington also will remain open to assist visitors from the district.

The complete schedule for my September tour of the district follows:

MONDAY, SEPTEMBER 16

Lakeville, Town Hall, 9 a. m.
Plymouth, Court House, 10 a. m.
Bourbon, News-Mirror office, 2 p. m.
Argos, Town Hall, 3 p. m.
Culver, Post Office, 4 p. m.

TUESDAY, SEPTEMBER 17

Michigan City, Court House, 10 a. m.
Westville, Public Library, 1 p. m.
Union Mills, Fire Station, 2 p. m.
Wanatah, H. W. Welkie office, 3 p. m.
La Crosse, Town Hall, 4 p. m.

WEDNESDAY, SEPTEMBER 18

North Liberty, Post Office, 9 a. m.
Walkerton, Town Hall, 10 a. m.
La Porte, Court House, 11 a. m.
Rolling Prairie, Fire Station, 3 p. m.
New Carlisle, Town Hall, 4 p. m.

THURSDAY, SEPTEMBER 19

Osceola, Fire Station, 9 a. m.
Elkhart, Court House, 10 a. m.
Middlebury, First State Bank, 2 p. m.
Bristol, Town Hall, 3 p. m.
Granger, Post Office, 4 p. m.

FRIDAY, SEPTEMBER 20

Wakarusa, Exchange State Bank, 9 a. m.
Goshen, Court House, 10 a. m.
New Paris, State Bank, 2 p. m.
Nappanee, City Hall, 3 p. m.
Bremen, Town Hall, 4 p. m.

Career Compensation Act of 1949

SPEECH
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MARTIN. Reserving the right to object, will the gentleman explain the bill, please?

Mr. BROOKS of Texas. I will be glad to.

The bill provides for the validating of payments to women members of the Air Force which were paid because they were living with their husbands while the Government would provide them with single quarters. They did not want to live in barracks. The Air Force paid them a quarters allowance. This legislation validates those payments, and the amendment of the Senate provides that future such requests must be approved by the Secretary of Defense.

Mr. BASS of Tennessee. Mr. Speaker, reserving the right to object, will this make possible the payment of Air Force personnel who were denied payments by Congress because their wives happened to be stationed at the same base, but they were not given joint quarters?

Mr. BROOKS of Texas. I believe this takes care of all the problems of female members of the Air Force who were paid as a result of that problem.

Mr. BASS of Tennessee. But it would not take care of the male members of the Air Force whose wife was a civilian employee on the same base but they were not given joint quarters?

Mr. BROOKS of Texas. This deals with women only.

State Retirement Fund Finances Plants

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mrs. BLITCH. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following newspaper article:

[From the Atlanta Journal and Constitution of August 4, 1957]

STATE RETIREMENT FUND FINANCES PLANTS

(By Jim Montgomery)

SYLVESTER, GA., August 3.—A new kind of optimism is taking hold of folks in this traditionally agricultural south Georgia community—a feeling being generated by the promise of regular jobs for more than 400 people in a brand-new apparel plant.

Their smiles are new because up to this time Worth Countians had been able to do little more than shake their heads sadly over the realization that inability to win better living standards had forced thousands of their neighbors to seek greener pastures.

This growing exodus left the county with a population of only 18,200 a year ago—some 3,000 less than in 1940.

Natural population increase alone should have added some 2,100 citizens to the 1950 census total of 19,357, but Worth's natural gain potential in the 6 years that followed was more than offset by the loss of nearly 3,300 people who moved away.

Coupled with shrinking agricultural opportunities, this outmigration of 17 percent of its residents since 1950 provided scant cheer for those who remained.

Though many of these manage to supplement their income with paychecks from jobs held in nearby Albany, Worth County itself was looking desperately for new payrolls to stem its ebb tide of humanity.

Then, a year ago, came a glimmer of hope—an industrial prospect brought to Sylvester by State commerce department and Georgia Power Co. development experts.

Mortician W. A. Banks, Druggist E. M. Moore, Merchant H. I. Powell and other civic-minded businessmen here launched a campaign to raise some $90,000 through the Sylvester-Worth County Development Corp., in which 435 local people bought stock.

But this was only a start toward the $455,000 cost of the 72,835-square-foot, air-conditioned plant. The Sylvester Textile Corp., the private company which will begin operating in the just-completed building later this month, could match the amount put up by the community.

But where was the rest to come from? The big insurance companies can put as much as 51 percent of their massive resources into topnotch mortgage loans, but they like bigger potatoes in the industrial field.

The tight money bugaboo also makes it harder for small firms to borrow expansion capital, and the Sylvester company didn't want to raid its working capital reserve.

The answer to Worth County's prayers—a loan of $271,440 at 5.5 percent interest for a maximum of 15 years—came from 1 of 2 Georgia organizations charged with responsibility of safely investing combined trust fund assets of close to $110 million.

Approval of the loan by the investment committee of the board of trustees of the Employees Retirement System of Georgia came after a thorough investigation into the financial soundness of the company that will operate the plant—an established manufacturer of ladies' negligee.

This loan will bring the fund's total investment closed and committed on new Georgia industrial plants to $1,936,140 since the beginning of 1955, when the first such loan was made, according to W. Frank DeLamar, executive secretary-treasurer of the employees system.

He said applications amounting to $535,000 are pending on another 4 plants, which would raise the grand total in this type loan to $2,471,140 on 15 plants, most of which have been partially financed by community development corporations.

The system's first loan in the industrial area, he said, was $110,000 at 5 percent interest to Patcroft Mills in Dalton on January 14, 1955. Next, in February 1956, came a $60,000 loan at the same rate to Wright Garment Co., Bremen.

Other 5-percent loans include 1 of $498,200 last September on the Monroe Auto Equipment Co. plant at Hartwell; 1 of $32,500 in January on the Venus Textile Manufacturing Corp. garment plant at Social Circle; 1 of $300,000 in April on a Conyers plant that doubled production capacity of Lithonia Lighting Products Co., and 1 of $125,000 early last month on the Momar, Inc., sanitary chemical plant in Atlanta.

Loans were closed late last month on the Diamond Bros. furniture plant in Swainsboro ($165,000), and the Waynesboro Garment Co. facility in Burke County ($161,000)—but the rising cost of money had by then pushed the mortgage interest rate to 5.5 percent.

This higher rate also applies to other outstanding commitments due to be closed soon—$66,000 on a Loganville garment plant, and $147,000 on a Perry textile products manufacturing plant.

And just as the 5 percent rate is a thing of the past, some financial seers are guessing that the going rate of interest will soon climb to 6 percent.

Should this happen, much needed industrial expansion in Georgia and elsewhere will be more costly. Development people hope that won't make new plants too costly, and thus slow down the State's industrial growth rate.

Right now, according to DeLamar, the State employees' fund will be right at its 30-percent mortgage investment limit when and if its present industrial loan applications are approved.

New plant loans will then account for nearly 10 percent of its nearly $26 million in assets, with other types of mortgages accounting for about 20 percent, and with the remaining 70 percent in stocks, bonds, and Government securities.

However, this fund's assets, which are invested to earn the highest rate of return consistent with maximum safety, are mounting at the rate of $5 million a year, most of which is from contributions of State employees that are matched by State government payments.

In addition, it gets new lending power from payments which steadily diminish the principal and interest on old loans.

The fund's mortgage-lending operations works this way:

On receipt of an application, the investment committee through the fund's retained investment adviser, the First National Bank of Atlanta, conducts a thorough investigation to determine the soundness of the company that will operate the plant.

If its meets the strict criteria, and if sufficient money is available within the fund's 30 percent mortgage loan investment limit, a commitment is made to lend no more than

90 percent (usually closer to 50 percent) on the value of the building, at the going rate of interest.

The commitment, for which the manufacturer is charged 1¼ percent of the total loan, enables him to obtain a short-term commercial bank loan to go ahead with construction of the building.

The retirement system loan is closed only after the building has been completed and appraised by a recognized private real-estate expert. The average length of these mortgages is 15 years, during which the deed is assigned to the retirement system as collateral, and the operating company is liable for complete repayment of principal and interest.

The fund's emphasis on safety in such investments is evidenced by the fact that, according to DeLamar, "we turn down 2 applications for every 1 we approve."

Trustee Edwin L. Swain, State merit system director, summed up the investment committee's viewpoint on aiding new industry: "We are vitally interested in keeping industry coming into—and scattering over—our State in order to keep our people from having to move away."

Nobody is more aware of that philosophy than the Sylvester man who said, "I just don't know where we could have borrowed enough money for our new plant if it hadn't been for the State employees' retirement fund."

Other trustees of this fund are B. E. Thrasher, Jr., State auditor, chairman; Zach D. Cravey, comptroller general; Dr. T. F. Abercrombie, State health department director emeritus; Ben T. Huiet, State labor commissioner; George B. Culpepper, Jr., Fort Valley attorney; and James D. Robinson, Jr., board chairman, First National Bank of Atlanta.

Robinson, Swain, Cravey, and Culpepper make up the committee that reviews all the fund's investments, on which reports are submitted to the entire board of trustees.

Address by Hon. James Roosevelt Before American Medical Center Annual Auxiliary Dinner, Denver, Colo.

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. ASPINALL. Mr. Speaker, one of the most successful charitable institutions of Colorado, indeed of our entire Nation during the first part of this century, has been the American Medical Center, formerly known as the Jewish Consumptive Relief Society of Denver, Colo. Its good deeds and unselfish service to countless thousands is an enviable record of people of good will.

Following in the magnanimous tradition of the other members of his distinguished family, our colleague, JAMES ROOSEVELT of California, has given unstintingly of his time for many years in the service of this fine organization. His generous work and constructive efforts have been highly appreciated by all of those who have worked with him in this cause and especially by the recipients of the services afforded by this institution.

On August 3 of this year, our colleague JAMES ROOSEVELT, addressed the members and friends of the organization at the annual auxiliary dinner held in Denver, Colo. The address is replete with valuable material and is a statement of the program of the American Center for the year.

I take great pleasure in inserting this address in the Appendix of the CONGRESSIONAL RECORD so that my colleagues may have the advantage of the information which it contains.

The address follows:

REMARKS OF HON. JAMES ROOSEVELT, JCRS—AMERICAN MEDICAL CENTER ANNUAL AUXILIARY DINNER, DENVER, COLO., SATURDAY, AUGUST 3, 1957

Friends, when Kipling wrote that "East is east and west is west and never the twain shall meet," he certainly didn't reckon with our JCRS–American Medical Center. For here we are tonight, a Congressman from California talking to a group of charmingly effective auxiliary and advisory board leaders from New York, Washington, and other eastern communities at this inspiring western city in the foothills of the Rockies.

Why is this so? Why do so many of us, from such widely scattered backgrounds and geography, come together with such wonderful unity and kinship? Whence this warmth of feeling that entwines us—or entwains us, if I may—with a sense of dedication and loyalty I have not experienced since the days I worked with my father and the people of the Warm Springs Foundation?

For me the answer is one word—devotion.

Think for a moment of this amazing town of Spivak, with which we have been renewing an old and deep acquaintance these last few days. You won't find it on the map, not even a dot. Yet you will find it warmly remembered in the hearts of tens of thousands of people in communities stretching from sea to shining sea. For this little town of Spivak—our JCRS–American Medical Center—is truly a unique town that only real devotion itself could build.

Its very founding was an act of faith and love. You will recall, I am sure, how a small group of workingmen moved with deepest compassion at the sight of fellow humans trekking to Denver for relief of their consumption and literally dying in the streets for lack of facilities, chipped in $1.10 to set up 6 tents and a wood structure. Look how we have grown in 53 years, with our wonderful structures of health and healing and the city coming to our very doors with its modern shopping center.

But over the span of unfolding decades and steady growth, our unique open door policy has remained constant. In 1957, as in 1904, we still only ask, "Are you ill? Are you in need? You are welcome here." To the victim of cancer, tuberculosis and chest diseases today, as to the victim of consumption yesterday, our hospital offers a rather rare and unusual handclasp. Most hospitals are unwilling to tie up their beds with patients needing prolonged treatment and care. Let it be said to the glory of our hospital that we welcome patients in all stages of disease for an unlimited period of time. You have seen our doctors and nurses and medical team work far beyond the call of duty. You have talked to our patients and heard them glow about the most potent wonder drug they receive here—devotion. It is inspiring to realize how many lives we have saved; how much anguish we have saved loved ones; how rich a contribution we have made to the medical arsenal of our Nation. I know you were as thrilled as I to hear Dr. Seife report that in the 3 years since the inauguration of our cancer service, we have handled 227 cases and snatched many fellow humans from the very valley of the shadow of death.

But can we sit back feeling that we have licked the problem? Certainly not. Your presence here tonight underscores your understanding of the need for continued and heightened effort. The enemy we are fighting is a formidable one. The United States Public Health Service informs me that 28 million Americans are now afflicted with chronic diseases, half of them under 45 years of age.

This is truly our Nation's number one medical problem. Chronic diseases are costing Americans 1 billion days of disability, the services of 1 million workers, and the lives of 1,100,000 each year. This cost in lives is appalling; but the cost to the living is more than the Nation can afford. Victory over death and disability from major diseases depends on dollars to pay for brains, training, buildings, and equipment, all of which can be produced with your help and the understanding of an enlightened public.

This year, some $45.5 million is being spent by all sources on cancer research, or about $1.75 per American now alive who will eventually die of cancer unless new treatment, cures, or preventive measures are found. In contrast the polio people allocated $2,905 per expected death in 1955, the wind-up year of the research that led to the Salk vaccine.

I am strongly suggesting here that what we need is a crusade to conquer cancer, tuberculosis, and other chronic diseases through an all-out partnership of Government, science, and public philanthropy.

I am happy to learn that thanks to our fair and stalwart ladies our research into cancer, tuberculosis, lung cancer, and other vital areas will be augmented through their help in supplementing the $77,000 grant from the Ford Foundation and completing the Dr. Philip Hillowitz Laboratory.

Like yourselves, perhaps, I have often wondered what is the "mah-nish-ta-naw" of our institution. (I participated in the Passover Seder at our hospital, and remember how the Haggadah starts with its haunting questioning, "mah-nish-ta-naw.") What then makes our hospital so different from all the rest? What motivates these wonderful women of ours in their tireless toiling, filling canisters, enlisting the participation of friends and neighbors, planning luncheons and fashion shows and spending long hours in all-out participation? What inspires our business leaders here to give so generously of their crowded time and energy? The answer goes deep into our Judeo-Christian tradition. You delegates from our auxiliaries throughout the Nation and you warm-hearted men give the inspiring affirmation, "Yes, we are our brother's keeper. Yes, we love our neighbor as ourselves." Your thanks can be most eloquently found in the letters of our patients. Many of these patients have come here to die. They return to live. What greater personal reward can we have than the feeling that you and I and so many others have made this possible?

I feel prouder of myself as a human being when I pick up the recent issue of our bulletin and see this letter from a young Jewish patient:

"I don't think that all the money in the world could buy this friendly consideration for one another that I find here. There is still hope for the human race; atom bomb or no atom bomb, I believe once again people are here to stay and I am proud to be part of them."

Since we are a family together, may I share something with you about which we are not so proud?

You have visited the Texas Building. On its first floor, you have heard the busy steps of doctors and nurses as they work to bring new life to victims of cancer. On the second and third floors, however, there are no footsteps. There are only empty corridors and waiting beds. What a challenge that is. We have the skills and the staffs to save lives. There are human beings waiting for those beds. They have turned to us in their anguish and suffering. And we hear their cries; for our ears are sensitivity attuned.

Yet, ironically, despite our unique open-door policy, we cannot admit them.

Why not?

Money.

It costs us $5,000 a year to take care of one patient. To operate our hospital at full capacity, we must raise $1,250,000 annually, compared to our current income of $700,000. It is to step up our fund-raising and to provide 100 more beds to victims of TB, cancer, and allied diseases that we are now launching our national development program.

I am happy to announce the recommendations of the national development committee to the board of trustees. I am sure that these recommendations constitute the beginning of an effective program to put every facility of the hospital to its fullest use for better service to patients, and to enable us to do our share in the overall research into the fight against cancer and chest disease.

The budget this year calls for an increase of $125,000 over the existing agreement with President Winocur if the aim of operating the hospital at full capacity is to be realized. I have every confidence that the board of trustees will find a way to raise this additional money that will fill our empty beds.

The national office will soon be moved to Denver, where the office of the national executive director will be based. Mr. Jack Miller, because he is unable to move to Denver, has agreed to remain as director of the eastern region, and a new national director will be appointed shortly. Mr. Miller's help and guidance in working out a plan for the years ahead has been invaluable. Although tonight he is working on resolutions at the office and cannot be at the dinner with us, I know you all join me in expressing my heartfelt and sincere thanks to him for his tireless devotion to the hospital, and for the wonderful job he has done.

Four regional offices will be set up in the East, Middle West, Southwest, and Far West. They will help the existing auxiliary and member groups coordinate the work of forming new groups and developing new sources of funds.

I am happy and pleased to announce the recommendation of the National Development Council for the appointment of Mrs. Sara Zeecov to the board of trustees. She will be the national director of the ladies auxiliaries with an office and staff in Philadelphia. To carry out her important work she has plans for an expanding staff.

The National Development Council has held healthy and constructive discussions with the medical advisory board, which I am sure will lead to an even better medical program.

Each generation must accept new responsibilities. Our fathers have built structures of healing and faith. We must maintain and extend them. Our JCRS has a glorious past. The future of our American medical center looms wonderously before us. With renewed loyalty and with devotion, we rededicate our efforts to mankind's noblest cause—to alleviate suffering humanity with humanity.

Protecting the Citizenship of Naturalized Clergymen

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. MULTER. Mr. Speaker, on January 3, 1957, I introduced H. R. 791 to amend the Immigration and Nationality Act to provide that clergymen who are naturalized citizens shall not lose their nationality by residence abroad, even though they are not representatives of American organizations, if they devote full time to their clerical duties.

Until about 20 years ago we found that many clergymen and members of religious orders were coming to the United States to help meet the religious needs of our communities. Since World War II this situation has reversed itself, and now the entire world is drawing on our theological schools for its graduates. These men and women are being called upon to serve abroad, and some of them, while otherwise willing to do so, refuse for the reason that they are naturalized citizens and would lose their citizenship by accepting such extended employment abroad.

In order to eliminate this hardship, I introduced H. R. 791, which would protect the citizenship of these naturalized clergy, provided that such persons register each year at the appropriate Foreign Service office.

The second part of my bill would restore citizenship status to those persons fulfilling religious assignments abroad at the time of the enactment of the Immigration Act in 1952, who lost their citizenship rights for that reason. Such persons would be restored to citizenship by taking the required oaths referred to in section 310 (a) of the Immigration Act.

I have kept in more or less constant communication with the House Judiciary Committee about this bill and had been led to believe that it would be incorporated into the next immigration bill brought before the House for action.

It is indeed regrettable that S. 2792 which was passed today under suspension of the rules did not contain any such provisions.

The bill being considered under suspension of the rules was not open for amendment and I therefore had no opportunity to offer my bill as an amendment thereto.

I urge the House Judiciary Committee to take action on my bill or incorporate it into an overall immigration bill early in the next session of Congress.

Lowndes, Davis, Sumter Know How To Win Plants and Influence Industry

EXTENSION OF REMARKS

OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Jim Montgomery, Constitution business editor, Atlanta Constitution, Atlanta, Ga., entitled "Lowndes, Davis, Sumter Know How To Win Plants and Influence Industry."

The article follows:

LOWNDES, DAVIS, SUMTER KNOW HOW TO WIN PLANTS AND INFLUENCE INDUSTRY

(By Jim Montgomery)

VALDOSTA, August 7.—South Georgia communities setting out on their first organized efforts to build industry usually take a close look at highly successful counties like Lowndes.

Any county in this area that could raise its industrial employment from 1,500 to 3,500 since 1947, they figure must have some sort of "secret weapon" worth knowing about.

There are, of course, a whole lot of factors involved in such a success story, but when asked to single out one of the most important, a lot of folks around here unhesitatingly refer to a hustling banker named Jim Blanchard.

Two other counties bear scrutiny, too.

Over in Jeff Davis County, a lot of credit for building industrial payrolls from almost zero at the end of World War II to a level of around 1,000 workers today goes to a native son who got his first taste of business hawking peanuts in the streets of Hazlehurst some 30 years ago.

And the bustling new look in Americus in Sumter County is attribtued to a revitalized development committee boasting a big entertainment fund and a man whose full-time job is to pay his respects at the home-office lairs of nothern prospects.

These are some of the elements of success in the ever-developing art of "how to win new plants and influence industry."

Here in Valdosta, Blanchard would be the last to claim credit for what's been done, and the first to rattle off a list of other who "have done much more."

But other civic leaders are sure this community will feel the loss when he leaves soon to take the reins of a bank in Columbus, which town they feel is getting a lucky break.

The main things they'll miss are Blanchard's intense leadership in community affairs, industrial, and otherwise, and his dogged determination to let no barrier impede progress.

Back in 1946, for instance, Valdosta stood to get a new metal products plant if the building could be financed locally. So its industrial development corporation was formed to do the job.

It dug up $40,000 by selling 930 shares of common stock to some 90 people here—a little over half the cost of the 35,000-square-foot building.

Another $25,000 was needed; so was the industry. Traditional policies notwithstanding, Blanchard saw to it that the remainder was provided by his bank on a 10-year real estate loan (that was retired in 5 years).

Loans of $70,000 covered two expansions which meant more jobs for Valdosta and more business for his and other banks. Then, with this amount nearly paid off, Blanchard's bank provided another $167,000 (secured by notes on the old and new buildings) that enabled the metal firm to build an additional plant here.

Soon to be opened, this facility will be 1 of 3 being operated here by Metals Products Division of Thompson Industries, providing scores of relatively high-wage jobs because a local banker was farsighted enough to realize he could help both his community and his bank by daring to restyle old policies.

Another type plant employing some 300 workers is here for the same reason.

No wonder a local observer remarked somewhat gloomily, "Keep your eye on Columbus after Jim gets there."

The Americus Industrial Development Committee apparently caught fire when a group of young businessmen decided last fall it was about time to do something about the fact that no major new industry had taken root there in 20 years.

First off they should have enough money to entertain prospects as lavishly as neces-

sary, and to finance traveling expenses for one or more of their number to personally visit industrial home offices in the North.

The new plant just announced, and at least two others on the verge of locating there, indicate that this $10,000 fund made up of individual donations is being used expeditiously.

And the former Indiana trailer manufacturer chosen to smoke out Northern prospects—the committee feels such a man is necessary to keep the city from being too dependent on state-level industrial promoters—has already earned his keep.

The biggest industry in Hazlehurst before World War II was a cotton warehouse and building materials business operated by a merchant, the late Roland Cook, and his son Claude, a young man with big brown eyes and big ideas.

The younger Cook's success story of parlaying these attributes into a huge wood products manufacturing business employing some 400 workers in a 500,000-square-foot plant layout is now almost legend.

But when he realized he didn't have enough jobs for the community's World War II veterans, Claude Cook launched a one-man campaign that included a steady stream of personal correspondence on his company's letterheads and personal follow-up visits to New York and Chicago, aimed at bringing in new payrolls.

Within 6 years, Hazlehurst was boasting three new industries with combined employment of 600—giving a community that had but 1,600 residents in 1941 an industrial payroll of around 1,000 in 1952.

And its population today is estimated at 3,300.

Two of the new plants were built by Cook's own construction crews and financed by some $360,000 of the young industrialist's own capital, though he had no assurance that he would be able to sell the notes to the mortgage investment institutions that eventually did take them.

Today, at age 40, Cook is expanding his own enterprise, with a new metalworking contract about ready to bring desired diversity and more jobs to the area.

Persuasive and self-assured, Cook has long relied on maintaining personal and friendly contact with as many businessmen as he gets to know.

That's how he's brought new plants to his home town and won handsome conracts for his own business.

One of his favorite activities along this line may conceivably have an effect on the location of new plants in other parts of the State some day.

For winter after winter the top brass of some of America's biggest blue chip industrial corporations spend many a happy day in Georgia as Cook's guests at his plush hunting and fishing lodge on the outskirts of Hazlehurst.

These and other communities could list numerous factors that have contributed to their successful economic growth, but none would outweigh the work of one or a few key individuals.

Retirement of Elton Layton

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, may I note with a touch of personal sadness the resignation of Elton Layton as clerk of the Interstate and Foreign Commerce Committee of the House of Representatives.

Although Mr. Layton has resided in Virginia for many years, I still dispute Congressman BROYHILL'S claim that Elton is his No. 1 constituent. I feel that because of the fact that Elton for many years was a resident of my own district I can also lay claim to him.

Since coming to Washington and particularly since he began his work on the Interstate and Foreign Commerce Committee, he has endeared himself to the members of that committee under whom he has served over the years and his gracious and courteous manner to those who have had dealings with the committee certainly has given him stature of such a nature that two Congressmen could claim him as their own.

Elton Layton comes from Matamoras, Pike County, Pa., where his twin sister, Mrs. Elda Lord, still resides. He is the son of the late Cora Layton Hine, of Matamoras and Orson, Pa.

Mr. Layton started work on his 16th birthday in 1906 as a stenographer with the Erie Railroad Co. in New York City and, after working 5 years with them, he accepted a better position with the Borden Condensed Milk Co. in New York City. Five years later he accepted a position in the Quartermaster General's Office of the War Department here in Washington. He was soon promoted to secretary to the Quartermaster General of the Army. In this position he came into contact with Members of Congress, one of whom, Hon. Samuel E. Winslow, had taken note of his ability and offered him his present position which he accepted at the beginning of the 67th Congress in 1921. It is believed that no one on Capitol Hill has ever continuously served as a clerk of any committee for that length of time.

It is my sincere hope and prayer that Almighty God will shower His choicest blessings upon Elton and his family during the years to come.

The Federal Income Tax

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. BURDICK. Mr. Speaker, the organization, For America, has issued a bulletin on the Federal income tax which is of vital interest to every taxpayer and every citizen of the country. The following article shows the evils of the excessive taxation under which our people are now struggling, and offers, sensible and workable suggestions as to how we can rid ourselves of this burden which is strangling our initiative, infringing our constitutional rights, and playing directly into the hands of the Communists:

The strongest modern advocate of a graduated personal income tax was Karl Marx. In his Communist manifesto of 1848, he vigorously advocated a graduated personal income tax as a means of establishing an all powerful state and of destroying the right to private property.

After our Civil War an income tax ranging from 3 to 5 percent was enacted but soon abolished. In 1894 another income-tax law was enacted. It was declared unconstitutional after a single year in operation.

Since 1913 our present income-tax amendment has become a monster with which politicians deny each of us the right to the full fruit of his labor. Today one-third of America's human effort is taken from us by confiscatory taxes.

Propaganda pictures the income tax as a tax to soak the rich. Actually, 83 percent of the personal income tax collected by the hungry Government in Washington comes from those who earn annually $6,000 or less.

In 3 years, 1954–56, the present administration spent $193 billion. From President Washington—152 years up to 1940—our Government spent a total of $167 billion. Thus, in 3 years, our Government spent $26 billion more than had been spent in 152 years.

The total cost of World War I was $31 billion. The Washington Government now spends more than this in 6 months—even when our country is at peace. This is bureaucracy run riot. Since World War II $60 billion in foreign aid have been siphoned from American taxpayers. This is sixty thousand million dollars. It is a sum equal to "the assessed valuation of all real and other property in the 17 biggest cities * * * New York, Chicago, Philadelphia, Los Angeles, Detroit, Baltimore, Cleveland, St. Louis, Washington, San Francisco, Boston, Houston, Pittsburgh, Milwaukee, New Orleans, Buffalo, and Dallas.

"We would be appalled by the mere suggestion that these 17 biggest cities, if it were possible, be shipped overseas as gifts to foreign nations. Yet, in effect, that is what we have done." (Hon. Spruille Braden, Manion Forum, January 27, 1957.)

Our national debt, which totals $270 billion, is more than the combined debt of all other countries; despite this our Government continues to outspend all other countries combined. (Data on Russia unavailable.) Could anything be more irresponsible?

What results from this spending orgy? Our dollar is now a 47-cent dollar. In terms of what the dollar bought 20 years ago, we are already more than halfway to a worthless dollar. No currency in history which became irredeemable—and our dollars are no longer redeemable to us in gold—ever kept even a fraction of its value for more than 42 years. On this basis starting with 1938, should present Government spending continue, by 1980 our dollar won't be worth a continental. This continuous drop in dollar value undermines all insurance policies, savings bonds, savings accounts, and retirement pay; it endangers every type of dollar investment.

How can we stop this inflationary spending orgy? So long as the Government has the power to levy and collect income tax, the spending will continue. The American people can stop this only by repealing the income tax (16th) amendment.

The income tax deadens initiative. It penalizes thrift. It prevents the accumulation of individual capital, especially venture capital. It enables foreigners to make American investments and our do-good Government has pledged to redeem foreign, but not domestic, investments in gold. Under this agreement foreign investors could draw $9 billion from our $22 billion gold reserve.

It breeds dishonesty where it never before existed. It reduces the States—sovereign under the Constitution—to beggars for Federal handouts. It is rapidly changing our free country into a Socialist state. It is financing foreign Socialist and Communist states and leading us into world government.

It gives the Government unlimited power over the citizen.

The income tax (16th) amendment is the only provision in the Federal Constitution which grants unlimited power to the Government. It gives the income tax collectors a license to violate the Constitution including the Bill of Rights. Income tax collectors can enter your home or business and demand private, personal records without a search warrant. They may require you to testify against yourself. You are assumed guilty until you prove—not to a judge or jury but to the tax collector who makes his own interpretation of a labyrinth of conflicting tax laws—that you are innocent. It is furthering the Communist goal for us to spend ourselves into destruction.

How can the Government be financed without income tax? Enormous savings could be effected were the Federal Government willing to save. The Hoover Commission recommendations would save $7.5 billion annually. Senator BYRD finds $6.5 billion new or unnecessary items in the 1958 budget.

The Government engages in competition with private enterprise; it owns 25 percent of all the land in the 48 States. Liquidation of this unfair competition and a major portion of ownership would save billions.

Foreign aid is unconstitutional. It is immoral to use American taxpayers' dollars to support Socialist and Communist governments abroad.

America can have more effective defenses for less money. A new defense concept, which rejects old-fashioned mass armies and doubtful alliances, and places principal reliance on American air supremacy, first as a war deterrent and second as a weapon of victory if war is forced upon us, will save billions. It would give us and the free world stronger defenses. It would also make conscription unnecessary and bring more than a million servicemen home. These several savings are estimated at $25 to $30 billion. They would equal the major portion of our present personal income tax.

Repeal of the 16th amendment would end corporate income taxes. However, Congress would still be free to raise money by taxing corporations.

Income tax is not reducing the national debt. Our tax-and-spend rulers protest—How can we pay the national debt if the income tax is repealed? How are we paying it now? The truth is, our various tax-and-spend rulers have made no genuine effort and have no plan to pay the national debt. Our crushing national debt can never be paid until a moral Government exercises strict economy.

A more equitable tax system is possible. Repeal of the 16th amendment will require, at best, 3 to 5 years to become law. This gives the Congress ample time to effect necessary and enormous savings. The time required to achieve repeal also gives the Congress time to create a Tax Commission to examine our entire tax structure and to recommend an equitable tax program. Such a new tax system, after huge savings have been effected, could easily meet the Federal Government needs.

There is nothing irresponsible about income tax repeal. Rather, our irresponsibility increases daily as we fail to take action on repeal.

How can repeal best be effected? This can be done by the State legislatures as is provided in article 5 of the Constitution:

"The Congress * * * on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments * * * which shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States, or by conventions in three-fourths thereof."

The Jenkins-Keogh Bill

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. JENKINS. Mr. Speaker, I dare say that every Member of the House has received letters with reference to the Jenkins-Keogh bills. Many of you have received dozens of letters, many of you have spoken to me about these bills. I want to say at the outset that many of the intelligent people of the country favor the passage of one of these bills.

Our existing tax structure contains a regrettable discrimination against self-employed taxpayers in that they are denied the tax benefits accorded to employees generally for their retirement. Under existing law a general employee is not taxed on amounts paid by a corporation for the establishment of a retirement fund with respect to the employee. The employee does not become subject to tax until he begins to draw his retirement benefits. A self-employed person does not have a similar opportunity to defer his tax liability on amounts set aside for his retirement. The doctors and the lawyers and thousands of other self-employed are interested.

There are several disadvantages in this discriminatory aspect of our Federal tax structure. The first of these is the fact that this discrimination results in an inequitable apportionment of the total tax burden among our citizens. A second disadvantage is found in the fact that existing law with its onerous schedule of tax rates virtually precludes the self-employed individual from making any realistic provision for his years of retirement. A third disadvantage of the present law treatment of self-employment income is that it prevents the accumulation of investment savings that is vital to the industrial and technological development of our Nation.

Mr. Speaker, there is legislation pending before the Congress that would remove the discrimination I have referred to. I refer to "The Self-Employed Individuals' Retirement Act of 1957", H. R. 9 and H. R. 10, introduced by my distinguished colleague from New York [Mr. KEOGH] and myself. In commenting on this legislation, Mr. Speaker, I believe it is appropriate that I first make brief reference to the outstanding work on this matter by my distinguished cosponsor. The gentleman from New York as a member of the House Committee on Ways and Means, has worked conscientiously and effectively in behalf of this legislation. Mr. KEOGH has worked with diligence and with dignity to have this meritorious legislation made a part of our Federal tax structure and I express the unequivocable conviction that in the not too distant future our efforts will meet with success.

Mr. Speaker, simply stated this legislation would allow self-employed individuals to exclude amounts up to 10 percent of their otherwise taxable income in computing their tax liability, provided such amounts are invested in prescribed types of retirement funds, annuities, and insurance contracts. These bills would provide an annual maximum deduction of $5,000 and a lifetime maximum deduction of $100,000. Appropriately the bills would allow a somewhat larger annual deduction for individuals who are age 50 or over at the time the legislation becomes effective. The amounts excluded from tax would become subject to tax as they are withdrawn after the taxpayer reaches 65 and retires.

From this brief description of the legislation it is evident self-employed individuals from all walks of life would receive deserved benefit from the enactment of this legislation. Examples of specific economic groups that would be benefited are farmers, self-employed businessmen, physicians, lawyers, and other self-employed individuals.

The principle embodied in the so-called Jenkins-Keogh proposal has been pending before the Congress of the United States for years. I believe it is proper to state that there is general agreement that the principle is sound but objection has been raised to the legislation on the grounds that its enactment would entail a revenue loss. The Treasury has felt obligated to oppose the legislation under both Democrat and Republican administrations. However, with the modest improvement in the fiscal affairs of our Nation that has occurred in recent years I believe that the time is at hand when the Congress can and should take favorable action on the Jenkins-Keogh proposal. It is my hope that this prospect will become reality during the 85th Congress and will be made possible through substantially reduced Federal expenditures and enlargement of the budgetary surplus. It is my hope that across-the-board tax reduction fairly granted to all our taxpayers will be possible and that an important part of such a tax reduction program will include the provisions of the Jenkins-Keogh bills.

It is a matter of simple justice for the 10 million American citizens who are the victims of this discrimination in our present tax structure that this result should be realized without delay. That is not to say that the enactment of the Jenkins-Keogh bill will remove all the tax discriminations against the self-employed. Existing law would retain special benefits for corporate employees not available to self-employed individuals such as stock options and accident and health benefit programs.

Mr. Speaker, as one of the coauthors of this legislation I have been gratified by the public response that I have received in support of the Jenkins-Keogh bill. This support has been expressed by responsible citizens across the Nation, from my congressional district and from virtually every congressional district, from individuals who would personally receive equity under the bill and from individuals who have no economic interest in its enactment but who recognize the merit in its objective.

My distinguished colleague from New York [Mr. KEOGH] and I have worked

hard during this 1st session of the 85th Congress to bring about favorable consideration of the bill. The fact that the legislation has not become a part of our Federal tax structure does not imply that our efforts have been to no avail. I believe that a great deal has been accomplished that will be reflected in results in the foreseeable future. This legislative proposal will undoubtedly play an important part in the revenue revision hearings scheduled by the Committee on Ways and Means to begin January 7, 1958. I am confident that when the legislation is presented to the House of Representatives for a vote that it will receive the overwhelming support of the distinguished membership of this great legislative body. If the employees of the country are taken care of in this respect why should not the men who employ them be given some protection?

Mr. Speaker, this legislation represents tax fairness and tax equity. It represents principles that are consistent with our American way of life. It represents in my judgment must legislation for favorable action during the 85th Congress.

Dulles Was Right

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. MICHEL. Mr. Speaker, I should like to have inserted in the RECORD the following editorial which appeared in the Tuesday, August 27, edition of the Peoria Journal Star:

DULLES WAS RIGHT

For months Secretary Dulles has been taking an editorial beating from the Nation's newspapers because he refused to let American reporters go to Red China. Now that he has finally consented and Peiping has said "No," it may dawn upon our eager journalists that there was wisdom in his position after all. For the Chinese Communists are now using the situation as an entering wedge to open the way for American diplomatic recognition of Red China and a seat for them in the United Nations.

Red China says the United States wants its reporters to act as spies and to stir up trouble in China. That is pure hokum. Their real objection is that the United States won't allow reporters from Red China to enter the United States. And the reason Peiping wants reciprocal arrangement of that kind is that it would force the United States to give formal recognition to the Communist regime in China.

Our State Department has said that it wants no deal with Red China as to exchanging reporters. That position is logical and right and it should be stoutly maintained.

We are in what our Government calls a state of quasi-war with Red China. There is no way in which we can protect Americans in China. In fact, the Communists in Peiping still hold Americans in their prisons, Americans whom they were pledged long ago to release.

We do not recognize the Communist regime as the Government of China and there are many compelling reasons why we should not. And we cannot enter into a reciprocal agreement with Peiping regarding an exchange of reporters when we recognize no such government.

Secretary Dulles is right. If American newsmen want to go to China, and Peiping is willing to admit them, let it be tried for 6 months. But as for buying that privilege by inviting Peiping to send reporters here—no deal.

Dr. Salk and His Vaccine

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FULTON. Mr. Speaker, this House has already paid tribute to Dr. Jonas E. Salk, who, I think it can be fairly said, has become the most world renowned citizen of Allegheny County and the city of Pittsburgh, Pa. A unanimous resolution of the Congress authorized a gold medal for him. It was presented on January 26, 1956, with the statement:

> Through dedicated and selfless effort * * * you have brought new hope to mankind in the continuing battle against a dread disease, poliomyelitis, infantile paralysis.

It is difficult to pay tribute again to one whom the world has so widely honored and whose name has become a household word in these United States. It is fitting, however, for this House and the citizens of the world to realize what has been further accomplished in the worldwide conquest of polio in the year and a half since Dr. Salk was officially honored by Congress. I cannot give you all the intricate details of this story, but I should like to present some of the highlights and a few examples of both national and international importance.

In July of this year a Fourth International Poliomyelitis Conference was held in Geneva, Switzerland, at which Dr. Salk was one of the principal speakers. It was clear on this occasion that Dr. Salk's work has had international repercussions of the happiest kind. The Salk vaccine has blanketed the world. It is a free gift from America, including Canada, to all the nations of the globe. In freeing children, parents and adults from the threat of surprise attacks of a capricious, terrifying disease, it is a major contribution to the peace of mind of all the peoples of the world.

Vaccines made essentially the same way as the Salk vaccine are now being manufactured in Australia, Belgium, Canada, Denmark, England, Germany, Israel, and South Africa. Wherever these vaccines have been administered to large sections of the most susceptible population, dramatic declines in polio paralysis have been registered. Little Israel, for example, which gave vaccine to all its preschool children, has just reported that only 8 cases of paralytic polio occurred during the summer polio season of 1957 whereas it had 125 cases last year.

While countries that enjoy the protection of the vaccine have all showed immense declines in paralytic polio, World Health Organization reports indicate an increase in epidemics of polio throughout the world. Epidemics are now occurring with frightening frequency in countries where they were never reported up to 10 years ago. Such epidemics have taken place in India, Ceylon, Israel, Mexico, Argentina, and a considerable number of other countries in South America and Africa. By exporting the know-how of making Salk-type vaccine, the United States is bringing a kind of technical assistance to nations of the globe which cannot help but warm the hearts of their people toward this country.

Mothers and fathers in the United States itself will also continue to be grateful to Dr. Salk and his many coworkers for freeing them of that lump-in-the-throat fear of polio that used to darken the otherwise happy and carefree days of summer vacation. I am happy that this fear has now been virtually eradicated from Allegheny County, Pa. In June 1957 the 1-millionth shot of Salk vaccine in my county was administered. Jonas Salk deserves extra credit for this as a citizen as well as a scientist because he used his good offices to spur the organization of a model community-wide vaccination program in Allegheny County. "Your neighbor's vaccination would protect you," he said—and acted accordingly.

Since 1955, when the Salk vaccine came into use, the ravage of paralytic polio in this country has been spectacularly reduced. The total number of cases of polio reported in 1956 was only half the number in 1955 and this year, 1957, the number is again running less than half that of the previous year. Indeed, up to the middle of August, only about 3,000 cases had been reported since the first of the year from the entire country. And the number who suffer the cruel attack of crippling polio has declined even faster.

Three properly spaced shots of Salk vaccine, the first 2 given 2 to 6 weeks apart and the third shot from 7 to 12 months later, are over 90 percent effective in preventinly paralytic polio.

Unfortunately, however, there are still 87 million people under age 40 in the United States who have not yet received the full protection against paralytic polio that 3 properly spaced doses can supply. Only 1 person in 5 under age 40—mostly schoolchildren—have yet received the full recommended dosage of the vaccine. Emphasis on getting "Salked," as the phrase now runs, must now be devoted primarily to teenagers and preschool children.

Before we can really achieve the conquest over paralytic polio which Dr. Salk's vaccine promises, we must vigorously continue to prosecute the nationwide and communitywide vaccination programs of which Allegheny County, Dr. Salk's home county, affords such a splendid example. I wish to express my gratitude, which I am sure Dr. Salk shares, to all the physicians, nurses, public health workers, community leaders, press and radio officials, and volunteer workers in Pittsburgh and its suburbs who have made this communitywide vaccination program such a model for

the Nation. The National Foundation for Infantile Paralysis has widely advertised the Allegheny County vaccination plan to its 3,100 local chapters throughout the country.

We can add but little here to the reputation of Jonas Salk. He has already received many gold medals. While the congressional gold medal—for distinguished civilian service to mankind—was one token of our regard for him, I am sure Dr. Salk himself would consider that this House had paid him much higher tribute when in 1955 and 1956 it appropriated the total sum of $53,600,000 for purchase and administration of the Salk vaccine to protect millions of children and young people under 20 and pregnant woman promptly against the threat of paralytic polio.

Universities have vied to confer honorary degrees on Jonas Salk, a distinguished academician, who now holds the rank of commonwealth professor of preventive medicine and director of the virus research laboratories at the University of Pittsburgh School of Medicine. He has accepted honorary degrees from the University of Pittsburgh; from the City College of New York, his alma mater; from New York University, at whose medical school he received his doctor of medicine degree in 1939; and from Roosevelt University, Chicago, where—the university president said—Dr. Salk's award "was in memory of a man who was a victim of polio, who began the nationwide March of Dimes to finance its conquest, and to whom this university is a living memorial, Franklin D. Roosevelt."

One of Dr. Salk's most treasured memories is the visit that he, his charming wife, and three sons were invited to pay at the White House on April 22, 1956. When President Eisenhower's invitation was phoned to him at his laboratory in Pittsburgh, he thought he was receiving a call for somebody else.

On the occasion of this White House visit, Presidential citations were conferred upon Dr. Salk himself as "a benefactor of mankind" and upon the National Foundation for Infantile Paralysis, represented by Mr. Basil O'Connor, its president and Dr. Salk's close personal friend, "without whose support Dr. Salk's work could not have gone forward so rapidly."

The official Presidential citation called Dr. Salk's achievement "a credit to our entire scientific community, which does honor to all the people of the United States."

Mr. Eisenhower's personal remarks were more prophetic. The President said:

> When I think of the countless thousands of American parents and grandparents who are hereafter to be spared the agonizing fears of the annual epidemic of poliomyelitis—when I think of all the agony that these people will be spared in seeing their loved ones suffering in bed—I must say to you that I have no words in which adequately to express the thanks of myself and all the people I know—all 164,000,000 Americans, to say nothing of the rest of the people in the world who will profit by your discovery.

Dr. Salk's reply to Mr. Eisenhower was characteristic of the man himself. He said:

> My reward, you might say, came to me in the quiet of the laboratory some 2½ years ago when a light glimmered through the darkness with hopeful brilliance. * * * The honor for the discovery of a polio vaccine must be shared by the members of my staff and all the other scientists who helped make it possible. * * * I hope that we may have the opportunity to see, again in our own lifetime, the beginning of the end of other fears that plague mankind.

Jonas Salk, a boy who had to work his way through college and depend heavily on scholarship and fellowship grants for his graduate education, today stands as a symbol of American science. As both his presidential citation and he himself assert, he could never have put together the jigsaw puzzle of earlier scientific research and develop a practical vaccine without the dedicated efforts, before and after the event, of other men and women of science.

It would be impossible to mention by name here even all the scientists whose work had a direct bearing upon the development of Dr. Salk's successful vaccine against paralytic polio. As token of all the rest I will mention only a few:

Dr. John Enders of Harvard University, who was awarded a Nobel prize for his work on tissue culture which made the Salk vaccine realistically possible.

Dr. Thomas M. Rivers, now medical director of the National Foundation for Infantile Paralysis, who since 1938, when the national foundation was organized, was the architect of the search for a successful vaccine.

Dr. Thomas Francis, Jr., young Dr. Salk's teacher first at New York University and later at the University of Michigan, and author of the famous Francis report, which announced to a waiting world on April 12, 1955, that the Salk vaccine was a safe and effective preventive of paralytic polio.

Dr. William McD. Hammon, of the University of Pittsburgh, who conducted extensive field trials with the best polio preventive that preceded the Salk vaccine, gamma globulin; Dr. David Bodian, of Johns Hopkins, and Dr. Dorothy Horstmann, of Yale, who independently showed polio antibodies do circulate in the bloodstream, thus demonstrating that a vaccine, if developed, would have a good chance to work against polio virus infection.

Yet the roster of those who made possible the Salk vaccine is much larger than even the scientists who contributed to it. Properly viewed, it should include all the thousands of physicians, nurses, schoolteachers, and administrators, public health workers, and volunteers who took part in the historic 1954 field trial of the Salk vaccine. It should include the 650,000 United States schoolchildren—polio pioneers—who received injections of the trial vaccine or a placebo substance during the vaccine field trial, the largest controlled experiment in medical history. And finally, it should include the parents of these children and the 80 millions of other Americans, little people and big, who gratefully contributed their dimes and dollars to the March of Dimes that the fight against polio might be carried on to victory.

No one appreciates better than Dr. Salk how much these willing pioneers, volunteers, and scientists have contributed to the vaccine that bears his name. He has expressed his special gratitude to the physicians and residents of Sewickley, Leetsdale, and other Pittsburgh suburbs, from which the first volunteers for the preliminary tests of his vaccine were drawn. It is a measure of the fortitude, conscience, and scientific confidence of the man that his own sons were among the very first children to be vaccinated with his own still experimental vaccine.

Dr. Salk himself already has, and I think this great House should, pay tribute to the first unsung heroes in this remarkable saga of man against disease. I am referring to the children—some crippled in mind, others in body—in Pennsylvania who helped Dr. Salk cross the bridge of experiment from animals to human beings as he progressed in his research. The children at Polk State School and the D. T. Watson Home—and their parents—deserve special praise. Polk is a State institution for mentally retarded children. The Watson Home volunteers were children who already had suffered polio crippling.

The honors that have been heaped upon Jonas Salk have not destroyed his usefulness as a productive scientist in the broad field of virus research. He continues to work quietly in and ably direct his laboratory to the end that the Salk vaccine itself may be further improved and other virus diseases, such as influenza, conquered. He has consistently turned down offers to profit personally by his fame or make a fortune out of his discoveries.

Many scientists who contributed to the welfare of mankind have been ignored and even persecuted in the process. Ignaz Semmelweiss, the Hungarian obstetrician, and America's own Dr. Oliver Wendell Holmes, for example, were heartily denounced for their efforts a century ago to save mothers from dying of childbed fever. Jonas Salk has at least had the pleasure and privilege of seeing the fruits of his own scientific work.

His career to date, and it is far from being over, has many lessons to teach. Not the least of them is the fact that genius, when properly nourished, can strike anywhere. In the course of his academic training, Dr. Salk was fortunate enough to have available to him a National Research Council fellowship for the advanced study of virology. The funds for this fellowship were actually supplied by the March of Dimes. Upon this House, and the Nation at large, falls a continuing responsibility to support basic scientific research and keep open the lines of educational opportunity which gives genius a chance to flourish.

Address of Hugh G. Grant, of Augusta, Ga., Former State Department Official and United States Minister to Albania and Thailand, Under the Auspices of the Citizens Council, Florence, S. C., August 29, 1957

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. DAVIS of Georgia. Mr. Speaker, pursuant to unanimous consent granted to me, I insert herewith an address delivered this date by Hon. Hugh G. Grant, of Augusta, Ga., to the Citizens Council, Florence, S. C.

The address follows:

I assume that the great majority of you South Carolinians here tonight are members of the Citizens' Council or are in sympathy with its objectives. I assume also that most of you are fathers and mothers who have children in the public schools and that you are chiefly concerned over the grave question of whether or not you, your fellow citizens and your political leaders, including your Governor and members of your State assembly, will be able to continue to hold the line against any and all attempts to mix the races in your schools. This is a natural and logical attitude on your part since the education and welfare of your children constitutes your chief concern.

The maintenance of segregation in the schools, as important as it is, is only one phase of this issue which involves the status of the whole social structure of your State of South Carolina and of all the other Southern States. I shall discuss this later.

I pause at this point to commend in the highest terms the efforts of you South Carolinians and your political leaders in resisting successfully, up to this time, the assault against racial segregation in your public schools which was touched off by the United States Supreme Court more than 3 years ago. South Carolina, as on the eve of the War Between the States, has been in the front battle lines in resisting this unconstitutional attack against her sovereign right, as a member of the Federal Union of States, to manage her own local affairs.

I am proud to say that my own native State, Alabama, and Georgia, where I am now a resident, are included in the list of eight Deep South States which so far have successfully resisted the assault. These eight States are South Carolina, Alabama, Georgia, Virginia, Florida, Mississippi, Louisiana, and North Carolina.

Four of these States, South Carolina, Alabama, Georgia, and Mississippi, have been widely described as constituting the "hard core of southern resistance" against the race-mixing program.

Despite the resistance in the eight Southern States, the battle is still raging. We are on the defensive with powerful forces, official and unofficial, arrayed against us.

Chief among the official forces are the United States Supreme Court headed by Chief Justice Earl Warren, the present executive branch of the Federal Government headed by President Dwight D. Eisenhower and Vice President Richard M. Nixon, and top officials of both major political parties.

In the unofficial category are the spearheading National Association for the Advancement of Colored People (NAACP) and its satellites, some racially mixed, others all white. These include the so-called liberals; minority groups; national labor organizations; tax-exempt foundations; national magazines; church organizations (Protestant, Catholic, and Jewish); sections of the press, TV, radio and movie industries; interracial councils and, significantly, behind the scenes but potent, Communists and fellow travelers who would bring about racial discord and strife among the American people as a part of their plan to effect the collapse of the United States from within.

The great majority of the advocates of race mixing are to be found beyond the borders of the eight resisting Deep South States. At the same time there are a great many influential persons and groups within these resisting States who, directly or indirectly, are giving aid and comfort to the outside forces attacking the South and its way of life.

On the outside of the resisting States are many well-meaning northern and western white people who have had little or no personal contact with the Negro. These people have no real conception of the racial problem in the South. They, therefore, theorize about it, and criticize the southern white people, under the impact of the enormous propaganda campaign directed against the South from the North.

I recall an incident at Portland, Oreg., a few years ago when I was a guest at an assembly of Presbyterian Church members, at which the speaker was a Negro from Ohio who, in discussing the race problem, proceeded to castigate the South and all white southerners for their alleged mistreatment of Negroes. This man was a mulatto, about 50 percent white, a graduate of an Ohio college, and a fluent speaker. I sensed that the reaction of this audience of some 200 white Presbyterians was sympathetic to this speaker's allegations. These white Oregonians had come under the spell of the same kind of insidious propaganda about the South that has been widely disseminated throughout the country over a considerable period of time. One of the contradictions in this attitude was that most of these white church members were direct descendants of the pioneers who went west in covered wagons, settled Oregon and herded the American Indians into reservations where their descendants live today segregated and in many cases in utter squalor.

A ray of hope that our misguided northern and western fellow Americans may begin to understand and sympathize with the South's views on segregation lies in the ever-increasing migration of Negroes from the South to the North and West. Washington, D. C., today has the largest Negro population percentage of any city in the United States. Chicago's Negro population has jumped by 197,000 since 1950 and today the Windy City has more Negroes than Atlanta, Memphis, Birmingham, and Houston combined. New York City has a Negro population of 840,000. This is more than the total population of New Orleans. Some 2,000 southern Negro migrants are reaching Los Angeles every month. Meanwhile, the Negro population in the South in proportion to the white people gets smaller each year, although 60 percent of the Nation's 18,000,000 Negroes still live in the South. These statistics have been compiled by David Lawrence's U. S. News and World Report. Incidentally, this publication has been very fair in its presentation of the facts in regard to the race problem. I have seen no evidence of any slanting of the news against the South, in contrast to the policy pursued by other national periodicals.

It does not see unreasonable to suggest that the Deep South States should take definite steps to encourage further Negro migration to the North, especially among those Negroes who appear to be dissatisfied with the southern pattern of segregation. It would be a fine thing, for instance, if several hundred thousand Negroes would migrate to Minnesota, the home State of Senator Hubert Humphrey, ardent Democratic foe of the South. I believe there are now only about 14,000 Negroes in Minnesota.

Also among those on the outside of the resisting States who condemn the South are top flight Republican and Democratic white politicians in the North. These men have no real concern for the welfare of the Negro. They want his vote to keep themselves in political power. The election of governors, legislators, Senators and Representatives in the Congress—even the President and Vice President of the United States—is involved, as well as the election in the lower political brackets of mayors, councilmen, sheriffs, etc. The great migration of Negroes from the rural South to the big urban centers of the North and West is radically changing the political complexion of the Nation. I will refer to this subject later in a discussion of the so-called civil-rights legislation.

Among other outsiders vigorously opposing the South are highly organized minority white groups, many of them late comers to our shores. Many of these people have ideologies alien to those upon which this Constitutional American Republic was founded. Not being fully amalgamated, despite all the talk about the "American Melting Pot," these white people, Jews and Gentiles, have established powerful organizations in the big cities of the North and have thrown in their lot with the Negro agitators of the NAACP for complete equality, economic, political and social.

Among the sponsors of race mixing are the powerful national labor bosses in the North who seek their objectives by enlistment throughout the Nation of millions of dues-paying members, regardless of race.

Now let us turn to the homefront and see who among us are, directly or indirectly, obstructing the resistance movement. It cannot be disputed that the number is considerable. There are the so-called liberals, many of whom, having received their higher education in northern universities, have developed theories in conflict with the fundamental facts of race. Many of these people are psychologists and sociologists on the faculties of our southern colleges and universities. They exercise great influence upon many of our southern young people.

There are also among us here in the South some of the modern do-gooders. Among these are some of the leaders of such organizations as the YMCA, the YWCA, the PTA, the Boy Scouts, the Girl Scouts, and the Community Chest.

There is still another important group within the resisting States that it not resisting. This group is made up of business and professional men in our southern towns and cities who, fearful of losing some profits and fees from the increasing number of prosperous Negroes, keep their mouths shut and refuse to take a stand. Many of these men are actually antagonistic toward such resistance organizations as the citizens' councils. I have personally felt pressure from such individuals because of my activity in the resistance movement.

I have been publicly labeled as a "militant segregationist." Well, I take the position there is no middle ground on the issue of segregation. One is either for it or he is against it. I am for it, now and for all time. If that implies militancy then I am a militant segregationist.

Many of the men in this business and professional group of obstructionists to the resistance movement are members of civic luncheon clubs. Being a member of one of these clubs myself, I believe I can state without challenge that today among these clubs there is a definite trend toward main-

taining silence on the subject of segregation on the theory that such discussions would be controversial and, therefore, to be avoided. The State president of one of these luncheon club organizations in Georgia wrote me recently that while he agreed wholeheartedly with me on my stand on segregation, he did not believe the organization should be drawn into it since it was not supposed to deal with any controversial political matters. And furthermore, he said, the organization would be severely crippled if it should take part in the segregation issue.

Recently I learned through correspondence with a Citizens' Council leader in Kentucky, where I spoke a few weeks ago, that his contacts to enlist the support of the civic luncheon clubs in his section had revealed an unwillingness to cooperate. The attitude of the club members, he said, was that any effort at preparation would lead to trouble with the NAACP, that if they [the clubs] kept quiet they might avoid suits. This is shocking to my way of thinking.

My correspondent added that the battle against race mixing would have to be fought by the farmers and the workers.

I am of the opinion that this hands-off policy on the segregation issue on the part of civic luncheon clubs stems partially from the policymakers in the international headquarters of these clubs, the majority of which are located in the North. If such is the case I favor the withdrawal of the southern clubs from the international organizations.

These references to the reluctance to take a stand for segregation on the part of many of our business people in the southern communities seems to point to the fact that one of the most effective weapons in this conflict involving race mixing is economic. Keep this in mind always, my friends. This weapon has been used by certain white resistance forces in meeting the challenge of the NAACP agitators in the South. It also has been, and is, being used effectively by the Negroes to break down white resistance to race mixing. Examples are the Negro bus boycotts in several southern cities, notably in Montgomery, Ala., and in the recent Negro boycott of white merchants in Tuskegee, Ala.

Time is running out, my friends. Our southern white business people, many of them leaders in their communities, should stand up and be counted on this issue and if necessary take some losses in order to help hold the line against this insidious race-mixing conspiracy.

Another obstacle to the resistance movement against race mixing in the South stems from Federal appropriations in southern communities for all sorts of local projects, ranging from free lunches for the schools to street improvements and housing developments. Where United States military camps are located in southern communities, large appropriations may be available for military projects such as housing, which will put many dollars into the pockets of certain local businessmen. There is also a lot of money spent in the local communities by military personnel. The net result is the tendency on the part of local business people to keep quiet on the segregation issue, with a view to avoiding any possible antagonisms with the powers that be in Washington who hold the Federal purse strings. A big factor in this situation today is the fact that the armed services, including hundreds of thousands of soldiers in training on southern soil, are completely integrated under Federal Executive orders. President Truman started this system and President Eisenhower has completed it—for political purposes (the Negro bloc vote).

Federal aid anywhere along the line means Federal control, which in these times means pressure from Washington for race mixing. I wish to congratulate the leaders of your own South Carolina Clemson College for their recent refusal to accept certain Federal appropriations.

One of the most effective instruments of opposition to the South's resistance movement against race mixing is in the church. Tens of thousands of our church members, Protestant and Catholic, under the influence of false leadership, are being led to believe that race separation is in conflict with the spirit of brotherly love and, therefore, un-Christian. Handpicked church committees and commissions draw up wordy resolutions endorsing the Supreme Court decisions against segregation. These lengthy documents are read and quickly adopted at huge church conventions. Nine-tenths of the delegates don't know what they are voting for.

It is a sad story that many devout church ministers, priests, and laymen who are opposed to such church resolutions, lack the moral courage to speak out against them. Many lay church members of the rank and file feel that any opposition to the church leadership is a sin.

I do not doubt that many ministers who are preaching segregation in un-Christian believe they are inspired of God. Well, so did the clerics who burned Joan of Arc and those who condemned Galileo for hearsy for saying the earth was round rather than flat.

I personally believe that the concept that race separation is un-Christian is not in conformity with Bible teaching and in fact is utter nonsense. Race is God-made and not man-made.

I have been informed that some South Carolina church ministers have recently secretly organized a group known as "Concerned South Carolinians." The object of this group is reported to be the promotion of gradual integration of the races. In this connection, I commend Governor Timmerman for exposing the prospectus of this so-called Concerned group.

I said in the beginning of my remarks that you South Carolinians are gravely concerned over the possibility of retaining segregation in your public schools. You have a right to be deeply troubled since the resistance methods adopted in the Deep South States have been in the nature of delaying actions. Unfortunately, there has been a lack of uniformity of action among the resisting States. Much hesitation and timidity have been shown in official circles in some of our States. There has been some actual resistance to the resistance movement, as in Tennessee where, unfortunately, a young politically ambitious Governor, Frank Clement, is at the controls, and in Kentucky where Gov. "Happy" Chandler has his eye on the White House. You and I can take pride in the fact that Governor Timmerman and Governor Griffin have taken strong stands against race mixing.

It is my opinion that if the governors of our Southern States had assembled immediately following the Supreme Court decision of May 17, 1954, and had joined in concerted action then against the decision, following up this action with uniform legislative proposals, including strong acts of interposition—if this had been done—we would not today find ourselves on the defensive.

Furthermore, on the national scale, to quote one of the most stalwart defenders of the right of the State to carry on its own local affairs, Representative JAMES C. DAVIS, of Georgia, it is possible that the Supreme Court program for race mixing could have been blocked before the decision was announced, through the concerted opposition of southern Senators and Representatives in the Congress. Congressman DAVIS made this statement to me in his Washington office in June 1954, shortly after the Supreme Court decision against segregation in the schools.

The lesson to be learned from these failures is that unified action at the State level in the Southern States and at the national level among southern Senators and Representatives in the Congress is necessary. To achieve this unified political action there must be determination and unity of purpose in the rank and file of white citizens throughout the South. A monster grassroots organization should be perfected without delay.

Delaying legal actions are not enough to stem the creeping tide of race mixing. This procedure alone can result in complete and final defeat for the forces of resistance.

As I have pointed out, the plan to force the mixing of the races in the schools of the South is only one phase of the conspiracy. Let us be realistic and face it. An all-out attempt is being made to change the whole social and political structure of this Nation on behalf of a minority group of Negroes comprising only about 10 percent of the total population of the United States. This is revolution.

The tactics being pursued in this revolution in the North as well as in the South, strongly suggests totalitarianism and communism. Our American constitutional Republic is rapidly becoming a police state with highly centralized government control of almost every phase of the lives of the individual citizens. There are numerous examples. I shall refer to only 2—1 in the North and 1 in the South.

Last week a Negro family (probably at the instigation of the NAACP) took possession of a $12,150 home in an all-white neighborhood at Levittown, Pa. The white residents protested. There were some demonstrations. The State police, by order of the Governor of Pennsylvania, moved in with the local police in full support of the Negro intruders. Then came the order from the commanding officer of the Pennsylvania State Police—hereafter no gatherings of three or more persons would be permitted and only residents and those on official business could enter this residential area.

Here is your police state, Communist style, in action—the Pennsylvania State authorities, in accordance with the race-mixing edicts of the Federal Supreme Court, telling the white citizens of Levittown that they cannot even meet together to protest the violation of their rights under the Constitution of the United States. Is this the United States of America or Soviet Russia?

Let us travel down from Pennsylvania to Tennessee. Last fall in the little town of Clinton, Tenn., with a population of some 5,000 persons, a Federal judge, the son of a former governor of the State, ordered the integration of the white high school. This judge forgot his own oath to support the Constitution of the United States and slavishly followed the sociological decree of the Supreme Court. The white citizens held meetings and protested vigorously, resulting in a rigid Federal injunction by this Federal judge against anyone interfering with his race-mixing edict.

There were some demonstrations by the white citizens who sincerely believed that their rights were being violated. Collaborating with the Federal judge in order to force the Negro students into the white high school, Tennessee's politically ambitious Governor proceeded to turn the high-school grounds into a battleground with Tennessee State militiamen, tanks and tear gas. Between solid lines of these soldiers with drawn guns and bayonets the Negro students were led into the Clinton High School.

The opposition to this tyrannical procedure continued for several weeks, the school being finally closed in December after a Baptist minister, a self-appointed agent in the race-mixing program, attempted to escort the Negroes to school.

Now, President Eisenhower's Attorney General Herbert Brownell, got into the act

after the Clinton, Tenn., school board appealed to Washington for help in keeping the Negro pupils in the white school. Brownell boldly stated that the Federal Government would prosecute anyone who interfered with this race-mixing affair—in the sovereign State of Tennessee.

The next episode in this sorry business was that some of the "town leaders" of Clinton went into a huddle with the United States District Attorney and the Federal Judge at Knoxville. The "leaders" did not suggest the withdrawal of the Negroes from the white high school as a means of restoring what they described as "law and order," but instead demanded the arrest of some of their fellow citizens who had dared to speak out in protest against this violation of their constitutional rights.

The Federal judge now issued contempt citations and the arrest, handcuffing and deportation to Knoxville of 16 white citizens of Clinton, in addition to John Kasper, followed. The judge was going to try them without a jury, but mounting public protests caused him to back down and arrange a jury trial. Press reports of the trial indicate that the judge practically dictated the verdict of guilty (six were so adjudged) on the basis of the "law;" according to the interpretation of the judge.

A significant comment on this Clinton, Tenn., trial is that of Washington Columnist David Lawrence:

"The case now goes up on appeal through the higher courts, and eventually the Supreme Court of the United States will have to decide whether those defendants who stand convicted today—and who did no more than associate with one another to express opinions to their fellow citizens on the subject of segregation in the schools—are to be given the same benefits so generously bestowed on members of the Communist Party. For in recent decisions of the Supreme Court it was ruled that freedom of speech, guaranteed by the first amendment of the Constitution, includes the right publicly to advocate even the forcible overthrow of the Federal Government itself."

The Clinton, Tenn., case has established the pattern for the Nation's Federal judges, who are political appointees, for the enforcement of the revolutionary and unconstitutional race mixing program decreed by our sociological Supreme Court.

Two Southern Governors, Clement of Tennessee, and Chandler of Kentucky, and a Northern Governor, Leader of Pennsylvania, have established the pattern for the ignominious surrender of State sovereignty under the false slogan of preserving law and order, in conformity with Federal edicts which violate the constitutional rights of the citizens of the States.

Are these patterns, one in the South and the other in the North, going to prevail in this country? If they do, then our political leaders should stop talking about the Communist tyranny in the land of our adversary, Russia. I am reminded of the old adage, "People who live in glass houses should not throw stones."

I say to you, my fellow American citizens, with all the earnestness at my command, that these patterns will prevail in this Nation unless the rank and file of our white citizens, North, South, East, and West, rise up in angry protest and declare that this shall not happen. There is no place for compromise on this issue. We will either abandon our system of constitutional government and submit to a Federal police state or we will not. Which shall it be?

Let us take a look at this so-called civil-rights bill. First, the historical background. After the American Revolution, a Federal Union was organized by the States under a Constitution. The Negroes were slaves, not citizens, and had no part in it. Later, 10 amendments, known as the Bill of Rights, were added to the Constitution. The purpose was to insure to the citizens of these States freedom from any oppressive measures by the newly created Federal Government. This was clearly set forth in amendment 1, providing for freedom of religion, speech, the press, and the right of peaceable assembly; amendment 9, providing that the rights listed in the Constitution were not to be construed to deny or disparage other rights retained by the people; and amendment 10, providing that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Seventy years later came the tragic War Between the States, the result of economic factors involving the Negro slaves. Four years of bitter warfare left the South broken, poverty stricken, and devastated, with the former Negro slaves to be supported.

Not satisfied with their decisive military victory, the Republican politicians of the North now plotted the total destruction of the white civilization of the South. The purpose was twofold—the vindictive punishment of the South and perpetuation of Republican political control through the Negro vote. This was to be accomplished through a civil-rights bill, the first of its kind, and three amendments to the Constitution: the 13th, abolishing slavery; the 14th, establishing equality of the Negro before the law and making him a citizen; and the 15th, prohibiting the denial of the right of suffrage to the Negro.

The 13th amendment was promptly ratified in 1865, but the 14th and 15th amendments were not ratified until the Southern States, with the exception of Tennessee, had been placed under rigid military rule, the white citizens disfranchised, and the former Negro slaves placed in political control under the supervision of the avaricious Carpetbaggers from the North. These two amendments were, therefore, fraudulently ratified and are not legally a part of the Constitution.

After some 10 years of what historian Claude Bowers has described as "The Tragic Era," the Republican plot to destroy the white civilization of the South was thwarted. This was accomplished through the fortitude, courage and sacrifice of the Southern white people, with the support of a Supreme Court which fulfilled its oath to support the Constitution. In effect the court held, in a series of momentous decisions, that the Congress has no constitutional power to nationalize all civil rights and thereby centralize all power into the hands of the Federal Government.

For some 70 years there was peace, progress and increasing prosperity in the South for both the white people and the Negroes, two distinct races of people living in friendly coexistence.

Meanwhile, there were ominous political undercurrents stemming from the tragic Reconstruction Era. The Republican Party controlled the Negro vote which was becoming increasingly important with the migration of tens of thousands of Negroes from the rural South to the urban centers of the North. The Democratic politicians in the North looked on enviously, and finally in 1936, through Roosevelt's New Deal, grabbed the Negro bloc vote.

The South, still with the bulk of the Negro population, again became the target. The politicians of both major parties in the North engaged in the attack against the South. Federal civil rights legislation was resurrected and broadened by Democratic President Truman to include the notorious FEPC. A Senate filibuster led by Southerners, with the assistance of a few Northern conservatives, killed this vicious measure.

From now on there was a knock-down-drag-out battle between the Democratic and Republican Parties for the Negro vote. Sparked by the Supreme Court decision of May 17, 1954, declaring segregation in the public schools unconstitutional, the battle was carried into both Democratic and Republican Conventions and the subsequent campaigns of 1956. Both sets of nominees for President and Vice President, Stevenson and Kefauver, for the Democrats and Eisenhower and Nixon for the Republicans, backed by party platforms, went all-out for Negro equality all along the line.

And so today we witness the strange and sordid spectacle of the political leaders of this great Nation, which was founded and developed by sturdy white pioneers, with a racial heritage of thousands of years, groveling for political gain by means of the vote of a minority group of primitive people only 92 years out of slavery. One wonders what has crept into the thinking processes of these white men who are selling their birthright for a mess of potage. In order to accomplish their program these political leaders would scrap the Constitution and change the American Constitutional Republic into a centralized police state.

This state of affairs is at the core of the present civil rights legislation. U. S. News & World Report in its issue of August 16, 1957, headlines it as follows: "Outside the South—It's 4 Million Negro Votes That the Fight's All About—Four Million Negro Votes in 14 States—These Votes Can Decide Elections."

A few weeks ago I had the privilege of appearing as a witness before the Senate Judiciary Subcommittee which held extensive hearings on the proposed legislation. I have followed the debates in the Senate through the CONGRESSIONAL RECORD and press reports. I have had some correspondence with Members of the Congress in regard to the bill. I have read columns of opinion in newspapers and magazines concerning the merits and demerits of the bill. I have reached the conclusion that this bill is very bad for the South and the Nation and that every possible means to defeat it, including the filibuster in the Senate, should be utilized.

The bill is bad because it is a fraud, since it professes to be designed for the welfare of the Negro. It is no such thing. It is designed to place millions of Negro votes on the auction block to the highest bidder, the Republican or the Democratic Party. The bill is bad because it is a violation of the constitutional right of the State to establish and maintain the civil rights of its citizens under its police power. The bill is bad because it is another step in the creation of an all-powerful Federal police state, patterned along the lines of totalitarian and communistic forms of government which the American people abhor.

As Columnist David Lawrence points out, "Under this bill the Federal Government now is to become the policeman by a law—in disregard of the Constitution—to arrest and put in jail not only those local officials of the States who seek to obey the voting procedures as set forth in their State laws, but those individuals who allegedly influence improperly the votes of other persons."

The issue of States rights should have been the main line of attack against this bill in the Senate and not the question of the jury trial, as important as jury trial is. The prolonged jury trial debate only served to becloud the key issue in this insidious bill, since there is no assurance of a jury trial, the Federal judge having the right to inflict a 45-day jail penalty for coercion, without a jury trial.

Party politics ran all through the plan of strategy in the Senate. LYNDON JOHNSON of Texas, Senate Democratic majority leader, and WILLIAM KNOWLAND, of California, Senate Republican minority leader, both potential presidential candidates for their respective parties in 1960, were calling the signals in the interest of their parties and themselves. Democratic Speaker of the House,

SAM RAYBURN, also of Texas, and Republican minority leader in the House JOE MARTIN, of Massachusetts, were coaching from the sidelines. Under this leadership it was announced in advance that the southern Senators would not resort to the filibuster, the South's final weapon. That decision was a very grievous error. It sets a very bad precedent for the future. It constitutes a defeatist attitude which can be fatal.

I heartily commend your South Carolina Representatives in the Congress and your Governor who are urging resort to the filibuster against this evil bill in the Senate.

Teachers Pension Fund Helps State Economy Gain Through Loans

EXTENSION OF REMARKS

OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mrs. BLITCH. Mr. Speaker, I would like to include the following article so ably written by Mr. Jim Montgomery, of the Atlanta Constitution, telling how the citizens of my hometown of Homerville, Ga., helped finance part of the construction of the Standard Container Corporation, a new industry which will open there soon. The article follows:

[From the Atlanta Constitution of August 5, 1957]

TEACHERS PENSION FUND HELPS STATE ECONOMY GAIN THROUGH LOANS

(By Jim Montgomery)

HOMERVILLE, August 4.—An unfamiliar assortment of metallic noises will soon swell into a thunderous overture that will sound as the sweetest of music to folks in this south Georgia land of pine trees and honeybees.

Already outlined on the western horizon of this Clinch County seat are the steel girders of a 30,000-square-foot factory where, in about 3 months, some 100 new workers will start drawing paychecks for making insect spray guns out of sheet metal.

And there are indications that Standard Container Corp. plans someday to double or triple the size of this new plant to include operations that will be performed elsewhere initially.

Like nearly 100 other Georgia communities, Homerville stood ready to finance part of the construction cost—through the Clinch County Industrial Association, Inc., which sold $50,000 worth of 5.5 percent debentures to some 150 residents of the area.

This investment will eventually return 3 to 4 percent interest after taxes to each of the purchasers, but their subscriptions covered but a relatively small part of the total cost.

And Standard Container, which will spend some $100,000 to ship the plant's machinery here, didn't want to foot the rest of the bill out of its own reserves.

So Clinch County turned to the teachers' retirement system of Georgia, a pension trust fund with current assets of around $83 million that is growing at the rate of close to $12 million a year.

Intensely interested in Georgia's economic development, though just as concerned over the safety and income of their investments, the trustees of this fund approved a loan committee of $130,000 at 5.5 percent interest.

SHORT TERM LOAN

This amounted to a go-ahead on construction, with commercial banks willing to put up the needed building funds as a short-term loan on the basis of the commitment.

Dr. Dan B. Terry, who along with Mayor Wellie K. Peagler, and other civic leaders heads up Homerville's industrial development activities, had a special reason for asking the trust fund to make the loan.

"Our main reason for borrowing from the teachers' fund," he explained, "was to give our people the benefit of their professional experts in investigating Standard's financial soundness.

"When they made the commitment, we knew for sure that we were getting a goot industry."

LIKE EMPLOYEES' SYSTEM

Mortgage investment operations of the teachers' system are similar to those of the State employees' system—both conduct thorough investigations of the company involved, neither will make a construction loan (the commitment is contingent on appraisal by a recognized real estate expert after completion), and both want long-term investments at the going rate of interest.

Some differences include the commitment fee (1 percent for the teachers' fund, 1¼ percent for the employees), the maximum amount of the loan (up to two-thirds of appraised value for the teachers, no more than 60 percent for the employees), and the amount of money still available for mortgage lending.

NEAR THE LIMIT

The employees' system mortgage investments, close to 10 percent of which are in industrial properties, now stand close to its 30 percent limit on that type investment.

But the teachers' fund is nowhere near its probable 30-percent mortgage limit, according to Citizens and Southern National Bank vice president James S. Budd, who also serves on the board of trustees and the investment committee of the older and wealthier retirement system.

"We're trying to make more industrial loans to help spur Georgia's economic growth," he said in Atlanta, "but we're not getting many applications. You can just about count the number we've turned down on the fingers of one hand."

In terms of those closed, committed, and pending likely approval, the teachers' fund has some $3,458,500 invested in 4 industrial facilities—or only about $1 million more than the much smaller employees' fund has invested in this field.

The first such teachers' fund loan was made to General Industrial Corp. (on the old Atlanta Paper Co. plant) in 1949. The 4-percent interest rate on the $300,000 principal has since been raised to 5 percent.

A year later it invested $130,000 at 4 percent in the S. P. Richards Paper Co. Atlanta plant.

Next, in 1952, this fund invested $139,500 at 4-percent interest in a new rug mill at Hazelhurst, which had been built by that city's young industrialist Claude Cook.

Four years ago it put $105,000 at 5.5 percent in the Atlanta plant of American Art Metals, and in 1955 and 1956 it invested some $544,000 in 3 Atlanta truck terminals, with a 5-percent rate on 2 of these loans, and 4¾ percent on the other.

Increased activity this year has included closing of a $50,000 loan at 5.5 percent to the individual owners of a new aluminum extrusion plant in Marietta.

Commitments due to be closed this year include $600,000 at 5¼ percent on the huge new Butler's shoe warehouse and office building in Atlanta; $60,000 at 5.5 percent on a new shirt plant in Camilla, the other half of which was financed by Greater Camilla, Inc., a community development corporation; $175,000 at 5.5 percent on the new Marks handkerchief plant in Augusta; and, of course, the new container plant in Homerville.

Budd said an additional $1,225,000 now applied for is likely to be approved on 1 new plant and 1 expanded facility.

FIFTEEN TO TWENTY YEARS

Though one of the above investments is scheduled for repayment in 7 years, most of the fund's industrial paper matures over 15 to 20 years, Budd said, and deeds remain assigned to the fund until payments are completed.

He indicated that loan applications have been turned down on such grounds as inexperienced management, overly specialized one-product plants, and general corporate financial weakness, despite occasional politically motivated pressures to make such loans.

The fund trustees apparently feel a strong responsibility to see to it that their investments bring the best possible returns under the least possible risk.

NOT ABSOLUTE

"Of course," commented State auditor B. E. Thrasher, Jr., a trustee of the teachers' fund and chairman of the employees' fund board of trustees, "there's no absolute guaranty of safety.

"But we come as close to it as possible by thoroughly investigating all the investments we consider, and by keeping our investments diversified."

Thrasher, Budd, and other trustees say that is why they attacked a measure backed by Comptroller General Zack Cravey (who also is a trustee of the teachers' and employees' systems) that would have required investment of 45 percent of these funds in Georgia insurance companies and real estate.

Both this bill and a substitute resolution urging such action were defeated in the 1956 general assembly. It was termed "unrealistic" by investment advisers, who pointed out that greater flexibility is needed to adopt to interim-market fluctuations.

More than 15 small Georgia communities can attest to the wise use of these trust funds in helping them obtain new payrolls, and the teachers' fund is looking for more investments of this type right now.

Though some would like to be able to utilize these funds at less than the going rate of interest, others emphasize that Georgia's teachers and employees should get the most they can out of their investments.

It is also pointed out that the extensive investigation work that precedes approval or rejection of a commitment gives a community assurance of getting a good company that the going rate of interest won't make or break.

SACRED TRUST

A commercial banker in south Georgia feels the retirement funds, as a sacred trust, should not be used for industrial mortgages as long as other money is available; and that a top limit of 20 percent should apply when pension money is so used.

"Their investment portfolio should be well diversified," he declared.

True, in some Georgia communities, commercial banks have been and are investing in long-term real-estate mortgages that mean new plants for their areas. Sometimes a number of banks participate in such loans, and some have done so at well below the going rate.

FEW MATCH INTEREST

But few institutions, outside of the major insurance companies just as interested in other States as Georgia, are as willing and able to support sound new industries throughout the State as Georgia's two biggest pension funds.

Trustees of the teachers' retirement system of Georgia, in addition to Budd, Thrasher, and Cravey, include Dr. George M. Sparks, president emeritus, Georgia State College of Business Administration, chairman; Frank Hughes, secretary, Georgia Education Association; Mark Smith, Bibb County superintendent of schools, and Miss Esalee Burdette, Washington schoolteacher.

The Door Ajar

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. SANTANGELO. Mr. Speaker, I favor the passage of Senate bill S. 2792, which will permit 60,000 worthy aliens to enter the United States. This bill is a step in the right direction, although it is a very short step.

For the 60,000 aliens who shall benefit by this bill, it is a long stride to America, freedom and reunion with their families. The authors of this legislation deserve commendation and praise for the passage of this bill, and while, in my opinion, it does too little, it is not too late.

This bill is humanitarian in purpose, compromising in spirit, and recognizes inequities in our present immigration law, which cry out for revision. The wails of anguish of separated families have reached our ears, and we have heard. The groans of refugees from communistic oppression have been faintly heard in the din of hysterical outbursts and propaganda. In this bill, we have provided for the use of leftover visas from the Refugee Relief Act, which expired in December of 1956. These can be distributed, not only among some of the classes of aliens listed in that law, but also among the aliens who have fled from oppression in Hungary or Egypt.

The most humanitarian and noble provision deals with the admission of orphans. Many American couples denied the blessings of parenthood will be able to hold the warm hand of an orphan child, who in turn, will know the tender love of a mother and the handclasp and counsel of a father. Truly, these are hands forming a bridge across the seas.

In our joy of seeing the passage of this legislation, we forget temporarily its shortcomings. The quota system which relegates certain peoples to second-class citizenship and the discriminatory provisions against naturalized citizens contained in the present law should be modified. Unused quotas should be reallocated and distributed. Our economy can profit by a fresh stream of skilled specialists and persons who appreciate freedom and opportunity.

Our Lady of Liberty holds high her lamp beside the golden door, smiles faintly, and once again, extends her welcome. While the doors to democracy have not been fully opened by this bill, the door to democracy is ajar.

I favor wholeheartedly the passage of this bill.

Definition of "Producer" as Applied to the Soil Bank Act

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a letter I have received from the Comptroller General's Office, dated August 26, 1957, clarifying the meaning of the word "producer" as applied to the Soil Bank Act. I am proud to say that the Comptroller General has ruled in accordance with my thinking in the matter, that the $3,000 limitation apply to each producer relative to a farming unit, rather than to operate as a ceiling on the amount of compensation that can be paid to him for all farms in which he may have an interest, thus excluding the landowner as a producer and allowing the tenant to participate in the program. I have fought vigorously in behalf of this interpretation, and many times have called upon the Department of Agriculture urging that such clarification be placed upon the act.

The letter follows:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, August 26, 1957.

The Honorable SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: On August 9, 1957, the Assistant Secretary of Agriculture, Marvin L. McLain, requested our decision concerning the meaning of the word "producer" as used in the limitation on the funds made available for the acreage-reserve program under the Soil Bank Act, contained in the Department of Agriculture and Farm Credit Administration Appropriation Act, 1958, Public Law 85-118, approved August 2, 1957 (71 Stat. 338). The appropriation limitation involved, in pertinent part, reads as follows:

"*Provided further*, That no part of this appropriation shall be used to formulate and administer an acreage-reserve program which would result * * * in total compensation being paid to any one producer in excess of $3,000 with respect to the 1958 crops."

Subtitle A, title I of the Soil Bank Act, Public Law 540, approved May 28, 1956 (70 Stat. 188, 189), provides that under the acreage-reserve program producers shall be compensated for reducing their acreage of certain basic commodities below their farm-acreage allotments or farm base acreage. Section 105 (a) of the act provides that the rate of compensation payable to producers for participation in the program shall be at such rate or rates as the Secretary of Agriculture determines will provide producers with a fair and reasonable return for reducing their acreage. Section 124 authorizes the Secretary to prescribe such regulations as he determines necessary to carry out the program.

Your department takes the position that the Congress intended the $3,000 limitation to apply to each producer with respect to a particular farming unit, rather than to operate as a ceiling on the amount of compensation that can be paid to him for all farms in which he may have an interest. The effect of the construction contended for is to apply the limitation of each farm separately so that a producer having an interest, for example, in 3 separate farms could receive as much as $3,000 for each farm or a total of not to exceed $9,000. The letter sets forth several other examples of payments, so far as concerns such interpretation of the limitation, as an aid in our determination of the matter.

In support of that position the Department points out that while the enabling act contains no statutory definition of the term "producer" the administrative regulations governing the 1956 and 1957 acreage-reserve programs, as well as the conservation-reserve program (subtitle B) defines it to mean any person who is an owner or a landlord, cash tenant, standing-rent tenant, fixed-rent tenant, share tenant, or sharecropper. Also, that a similar definition is contained in the regulations on the agricultural-conservation program, the price-support programs, and the acreage allotment and marketing quota programs. Under that definition, the Department contends that it is necessary to look to each farming unit to determine whether a person is a producer, and that the term "producer" has no meaning thereunder except as it relates to a particular farm. The word "farm" is defined in the referred-to regulations as meaning all adjacent or nearby farm or rangeland under the same owner which is operated by one person. Thus, the Assistant Secretary expresses the view that the Congress, in adopting the provision in question, had in mind the definition of the words "producer" and "farm" as used in the 1956 and 1957 acreage-reserve programs and other agricultural programs and intended that the $3,000 limitation apply to each such producer on each such farming unit.

In further support of this view, the Assistant Secretary quotes the following statements made on the floor of the Senate (CONGRESSIONAL RECORD dated August 1, 1957, p. 12105) by Senator MUNDT, one of the conferees of the committee of conference on the Department of Agriculture appropriation bill, 1958, and concurred in by Senator RUSSELL, spokesman for the managers on the part of the Senate, during consideration of that part of the report of the committee of conference relating to the limitation in question.

"What we were trying to do * * * was to establish a ceiling to avoid unduly large payments to a single farm operation.

"So I think it should be established in the RECORD here and now that what we had in mind in conference was really a $3,000 limitation on a single farm operation or on a single farm; that it is the producer we have in mind, rather than a farm owner who might own several farms. In my own State of South Dakota, frequently there are widows who support themselves from the income of 2, 3, or 4 pieces of property which they rent on shares to different tenants.

"I should like to establish with the chairman of the Senate Subcommittee on Agricultural Appropriations the fact that we were not trying to discriminate among tenants; we were thinking in terms of the producer, as that word applies to the operator of a single farm, rather than to the individual who might own several farms, and thereby, by working out some acreage reserve contract with one tenant farmer, preclude himself from participating with other tenants on different farms to the disadvantage of those other tenants."

The primary question here involved is whether the limitation quoted above on the use of funds made available to the Department of Agriculture to carry out the acreage reserve program of the Soil Bank Act inhibits your Department, during the fiscal year 1958, from paying "to any one producer in excess of $3,000 with respect to the 1958 crops." Of course, there can be no more convincing evidence of the purpose of a statute than the words by which the legislature undertakes to give expression to its wishes; and, on first examination of the

provision, there would appear to be no doubt that payments of any one producer aggregating in excess of $3,000 regarding the 1958 crops would be contrary to the restriction and, therefore, legally improper.

However, in view of the contention of your Department that such an interpretation of the limitation would operate to prevent it from obtaining sufficient participation in the acreage reserve program to achieve the acreage reserve goals for the major commodities covered by the Soil Bank Act, a result certainly not intended by the Congress; and in the light of the arguments and evidence advanced to support the Department's position on the matter, we have carefully examined the legislative history of the enabling legislation as well as the appropriation limitation here involved in order to ascertain the congressional intent of the proviso.

As indicated by the Assistant Secretary the Soil Bank Act does not itself define "producer" but it is clear from the text that the term is used to denote a person who raises agricultural crops and puts them in a condition for market. See *Sancho* v. *Bowie* (93 F. 2d 323, 326). As thus used the term clearly is not limited to land owners but comprehends in addition, tenants and sharecroppers as defined in the referred-to administrative regulations. If any further support for this view is needed, it may be found in the provisions of section 122 of the act, 70 Stat. 197, wherein the Secretary of Agriculture is directed to provide adequate safeguards to protect the interests of tenants and sharecroppers in respect of payments made under the acreage reserve program.

Under this description of "producer" there remains for consideration whether the Congress intended, by the proviso in question, to limit the amount of compensation payable to him for all farms in which he may have an interest, or whether it was intended to limit the compensation payable to producers for a single farm operation.

The proviso was first introduced as an amendment to the cited appropriation on the floor of the House by Representative REUSS. See CONGRESSIONAL RECORD, May 15, 1957, pages 6182, 6183. The amount of the limitation—namely, $5,000—was charged to $2,500 on amendment of Representative ABBITT, and, as amended, was agreed to and passed. The following statement by Representative REUSS, quoted from page 6183, summarizes the attitude of the House of Representatives on the debate of the proviso:

"As the report of the Committee on Appropriations at page 26 well states: The principal justification for the acreage-reserve program is to restore to the farmer some of the income he has lost through reduced prices and acreage.

"Now, this $5,000 limitation to any one farm producer means that Government help will go where it is needed, not where is is not needed. Aid to the large-scale combination producer simply increases the tendency away from the family-sized farm, a tendency which has already gone much too far."

The Senate Committee on Appropriations in reporting out the bill increased the amount of the limitation to $5,000. The committee of conference settled on $3,000 which was agreed to and passed by both Houses. The above-quoted statements by Senator MUNDT reflect the attitude of the Senate on the application of the proviso.

Thus, the legislative history of the proviso discloses that the Congress, in deciding upon the $3,000 acreage reserve payment ceiling to producers, thereby intended to discontinue the large payments made to a single farm operation without in any way discriminating against farm tenant operators. Such being the case the limitation may be given effect only by regarding it as applicable to a single farm operation and each operator thereof.

In view of the foregoing comments, you are advised that we concur in the understanding of your Department that the Congress considered the applicability of the $3,000 limitation to each producer regarding a particular farming unit, rather than as a ceiling on the amount of compensation that can be paid to him for all farms in which he may have an interest. The acreage reserve payment illustrations outlined in the letter are based upon this understanding and appear unobjectionable.

Sincerely yours,

FRANK H. WEITZEL,
Assistant Comptroller of the United States.

Congressional Investigation of International Labor Organization Imperative

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. SCHERER. Mr. Speaker, the Senate recently considered a resolution (S. J. Res. 73) to raise the ceiling on United States contributions to the International Labor Organization from $1,750,000 a year to $3,000,000 a year.

The Senate approved an increase of $250,000, which would raise the ceiling to $2,000,000 a year.

The resolution has now been referred to the House Foreign Affairs Committee. It will come up for discussion and action at the next session. It would be most constructive, therefore, to give the questions raised by this resolution some study in the meantime—and I therefore propose to go into it today, with the hope and expectation that what I have to say may lead to a closer examination of the advisability of the ILO budget increase.

Just what is the ILO?

Most of us know that it is a holdover from the League of Nations, and that it is now one of the agencies of the United Nations.

We know that it holds an annual conference every June in Geneva, attended by representatives of labor, employers, and government from each of its 78 member countries.

We know that the ILO is presumed to concern itself with the welfare and the standards of living of the workingman, all over the world.

We are told by the Labor Department, the State Department, and various international idealists, that the ILO is a vital instrument for the preservation of world peace.

But all of this still leaves us in the dark. I repeat—just what is the ILO, and what does it do?

Fortunately, we have available factual information on this subject, gathered from people who have had ample experience in ILO conferences. I refer in particular to William L. McGrath, of my own city of Cincinnati, who served for 6 years as a member of the United States employer delegation to the ILO, and has also served a 3-year term as a member of its governing body.

Mr. McGrath's reports on the actual workings of the ILO have aroused the National Association of Manufacturers and the United States Chamber of Commerce, which nominate the employer delegation to the ILO, to the point that these two organizations have seriously questioned the advisability of further participation in the ILO. They sent a delegation this year practically under protest, at the urgent insistence of the Government, and have recommended that the Congress of the United States conduct a searching joint investigation as to the advisability of the United States continuing to remain a member of the ILO.

The concern of the NAM and the United States Chamber of Commerce lies in the fact that the ILO has long since ceased to be a body devoted to the affairs of labor, and has instead become a political forum and propaganda agency devoted chiefly to fostering the philosophy of socialism, communism, and nationalization of industry.

To further its purposes the ILO uses the convention device. As you know, a convention is, in effect, a draft of a basic law which, when ratified by member countries, stands as a treaty among the nations which have ratified it.

ILO conventions can be, and are, used as the framework for specific legislation in countries all over the world. Left-wing political orators use them to lend support to their campaign proposals. From the standpoint of ideologies the ILO is probably the most influential propaganda organization in the world today; and this propaganda is in the main absolutely contrary to the beliefs and principles of the United States.

We, that is, the great majority of us, believe in freedom for the individual; the ILO is dedicated to mastery by government. The underlying intent of practically every ILO proposal put forward in recent years has been along the lines of more power for government, more control by government, more regimentation by government, more regulation by government—until the state would be the complete master of human destinies and affairs.

In its earlier days the ILO devoted itself to subjects concerned directly with labor. But then, in 1944, the ILO passed the so-called Declaration of Philadelphia, which said, among other things, that it was a responsibility of the ILO to examine and consider all international economic policies and measures in the light of the attainment of conditions under which human beings pursue their material well-being and their spiritual development.

By incorporating this declaration in its constitution, the ILO assumed the presumed right to draft proposed international laws on any subject under the sun; and that is exactly what it has proceeded to do. Let me give you some examples:

The ILO has drafted a proposed international law to the effect that government should give people money for ill-

ness, injury, childbirth, unemployment, old age, invalidity, which is defined as the inability to engage in any gainful activity, and a morbid condition. Interwoven in the provisions of this convention is a complete system of socialized medicine.

The ILO has drafted a proposed international law to the effect that all private employment agencies should be put out of business, and all employment placement should be concentrated in the hands of government. If government can tell people where they must go for jobs, government can direct the destiny of mankind.

The ILO has drafted a proposed international law to the effect that government should pay benefits to employed women at the time of childbirth, that the children should be put into a Government-run nursery, and that interruptions of mothers' working time for purposes of nursing the baby should be counted as working hours and paid for as such by the employer. I am told that when this convention was being drafted, an argument arose as to whether the convention should prescribe that a woman should nurse her baby for 1 hour during the working day, or for 2½ hours.

The ILO enacts recommendations as well as conventions—and in its recommendations it can give its socialistic ambitions full sway, for recommendations are pure propaganda, and do not have to be held within bounds which are practical for ratification purposes.

In 1955 the ILO passed a recommendation to the effect that in each country the public authorities, meaning government, should take over the education of all youngsters on the farm, providing them with textbooks, and teachers, prescribing examination requirements, and providing buildings, transportation, equipment, and so forth. This was a blueprint for the Communist technique of forcing young minds into the pattern prescribed by government.

In that same year the ILO recommended that the competent authority—meaning government—should prepare suggestions and guidance for the operation of canteens and cafeterias in industrial plants, subject to legal enforcement. In short, government is going to prescribe what people shall eat.

The ILO also enacts resolutions. One of its resolutions, passed under the pretext of dealing with unemployment, prescribed that government should take over production, allocation of markets, distribution of products, price fixing, wage fixing, financing—in fact, all phases of the economic system—and in addition, prescribed how workers should use their leisure time.

The ILO has what it calls a program of technical assistance. Theoretically, the ILO is supposed to send out experts to underdeveloped countries to help them increase productivity. But a large share of the technical assistance projects undertaken by the ILO turn out to be projects having to do with giving government a greater voice in the affairs of men.

For instance, the ILO calls the setting up of a social security system, the organization of a labor department, the establishment of a cooperative, the undertaking of a manpower survey, technical assistance. It is my suspicion that the technical assistance of the ILO consists largely of providing assistance in the promotion of socialism.

The Socialists took control of the ILO some years ago, when socialism took a firm hold in Europe. The underdeveloped countries of the Far East, impressed with Socialist ideas, followed the European pattern. Then in 1954 the Communists came back into the ILO in a big way. Russia returned as three nations—the U. S. S. R., the Ukraine, and Byelorussia—and began to bring its satellites back in full strength.

Today the Soviet countries have a solid block of 36 potential votes in the ILO, as compared to 4 for the United States.

The recent Communist invasion of the ILO has operated to push the nature of its proposals further to the left. While the Socialists and the Communists compete for followers, they nevertheless agree on certain basic theories such as nationalization of industry and government regimentation.

The net result is that today, as I said before, the ILO is spreading the doctrines of socialism and collectivism all over the world.

The Labor Department and the State Department say that the ILO represents an opportunity to sell the American way of life and the competitive system to the rest of the world. But have our Government delegates ever stood up at an ILO conference and made such an attempt? The answer is "No."

The employer and worker delegates from the free countries of the world have tried to have the so-called employer and worker delegates from the Soviet nations disqualified, on the ground that they cannot possibly represent free associations of employers and workers, and are merely stooges of their governments and the Communist Party. But has the United States Government helped in this effort? Again, the answer is "No." Our Government's policy has been simply to accept the doctrine of coexistence.

In short, the Socialists and the Communists have been gaining increasing headway in the ILO, and the influence of the United States has been growing less and less.

Hour after hour, in the plenary sessions, I am told, the Reds condemn our way of life and make frequent abusive reference to the United States—and for the most part we just sit and take it.

And is an international forum in which free enterprise is damned by a continuous flow of leftwing and Communist oratory of any possible help in selling the philosophy of the United States or in the preservation of world peace?

This brings me to the question of the proposed increase in our annual contribution to the ILO. We are asked to give more money to an organization in which our influence has been growing steadily less, and which is becoming increasingly successful in selling the rest of the world the very principles to which we are most opposed.

But that is just the beginning of the budget story. The detailed facts are almost incredible.

The United States pays 25 percent of the ILO budget; the other 77 nations pay the rest. This means that we bear one-fourth of the cost, and have one-seventy-eighth of the votes.

Sixty-four member nations of the ILO pay a total of 24.07 percent of its budget. In short, 64 nations, all rolled together, pay less than the United States; and yet those 64 nations, which include the smaller, underdeveloped and Socialist nations, can completely outvote the United States on any issue.

In 1955 the budget was apportioned among 66 member nations. But then the three Russian nations, the U. S. S. R., the Ukraine, and Byelorussia, came back in, and Honduras also joined. These 4 new members contributed 11.5 percent of the ILO budget. As a result, 41 nations got reductions in percentage allocations of ILO expense. But did the United States get a reduction? The answer is "No." For some years there has been a persistent drive within the ILO to get an even higher percentage from the United States of America.

The 1958 budget for the ILO contemplates a further percentage reduction for 27 member nations.

Now, in the face of the facts I have previously given you, let me ask this simple question—why should our country provide additional financing to an organization which is dedicated to the destruction of the very principles for which our country stands?

Of course, there are people who gaily assume that everything is for the good and that the ILO must be a noble enterprise because of its announced intentions. There are also people who may feel that the interests of the United States are well protected in the ILO because Mr. David Morse, Director General of the ILO, is an American citizen.

I would like to say a few words about Mr. Morse. Back in the Roosevelt era he was General Counsel of the National Labor Relations Board, and then became Under Secretary of Labor. He headed the Government delegation to the ILO, and then in 1948 was elected its Director General. This was a natural progression, the implications of which you can judge for yourselves.

When the Russians came back into the ILO, bringing their satellites with them in full force, Mr. Morse took a very factual view of the situation. After all, they represented a substantial increase in the ILO budget.

At the May meeting of the governing body this year, the question arose as to the reelection of Mr. Morse as Director General. His term was to expire in 1958. The governing body voted to extend his term for 5 more years.

Speaking in support of that proposal, Mr. Arutiunian, representing the Government of the U. S. S. R., said that he wished to stress the fact that Mr. Morse had been personally responsible to a very large extent for "certain developments in ILO activities in recent years";

that during his directorship it had become a universal organization, which made it possible to organize cooperation between countries which had different social and economic systems.

Following his reelection, Mr. Morse "hinted"—according to the Christian Science Monitor of June 27—that he would submit formal proposals soon for full ILO recognition of employer delegates for Communist countries.

I draw no implications and make no criticism of Mr. Morse. The executive head of an international organization owes his allegiance to that organization, and must shape his policies in line with majority opinion of its membership.

When he assumed his office, Mr. Morse took the following oath:

I solemnly undertake to exercise in all loyalty, discretion, and conscience the functions that have been entrusted to me as Director General of the International Labor Office, to discharge these functions and regulate my conduct with the interests of the International Labor Organization alone in view, not to seek or accept instructions in regard to the performance of my duties from any government or other authority external to the International Labor Organization, and at all times to uphold the constitution of the International Labor Organization.

It is my understanding that Mr. Morse is an exceptionally able man, which he must be, to hold the position he does. I simply wish to point out that the fact that Mr. Morse is an American citizen does not make him, in the ILO, an official representative of the interests of the United States. To carry through his job with honesty and integrity, he must follow the thinking of majority ILO membership, and such thinking is contrary to the philosophy of the United States.

I would like to mentioned another individual currently in the limelight in connection with ILO affairs, Joseph E. Johnson, president of the Carnegie Endowment for International Peace.

Last year, when the NAM and the United States chamber launched a serious blast of criticism of the ILO, the administrative branch of the Government set up an independent committee composed of college professors to look into the matter. Mr. Johnson was the chairman.

The Johnson committee came up with a report to the effect that, although there were many things wrong with the ILO, it was nevertheless a glorious institution. I have always been intrigued by the unfailing instinct of people in Government to select a committee chairman who will come up with a report which suits their purposes.

Mr. Johnson showed up this June as one of the advisors on the United States Government delegation to the ILO Conference in Geneva. No doubt this is merely a singular coincidence.

I think it is high time that the Congress of the United States turned the spotlight on the ILO.

The Congress has not been in the least backward in turning the spotlight on organized labor. Why should we hesitate as far as the ILO is concerned? It is rather interesting that, when Dave Beck was wanted by Senator MCCLELLAN'S committee, the first story was that he could not come because he was on his way to attend an ILO meeting in Hamburg. I believe the time has come for the Congress to take a new look at this whole ILO proposition.

I should like to explore this pertinent question—can anyone from the Labor or State Department, or any place else, point specifically to any particular advantage or accomplishment gained for the people of the United States as a result of our participation in the ILO?

I say that either the United States should be more effective in the ILO than it is now, or we should get out of it—one or the other.

But the correct answer can only be obtained by really digging into the subject. That is why I think we should have a joint congressional investigation.

Mr. McGrath, who has devoted many months of time and effort to the ILO, was once told by a member of the State Department that as to ILO matters there were "global considerations which no mere businessman could be expected to understand." Perhaps there are global considerations which no mere Congressman can be expected to understand. If so, I would like to know what they are.

It is my present intention to introduce at the next session of the Congress a joint resolution calling for a complete investigation of the International Labor Organization.

The American Legion of Kansas

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a copy of a resolution passed by the American Legion of Kansas at its convention held in the city of Hutchinson on August 23–25, 1957:

Whereas we are shocked by the announcement made by the United States Far East Command in Tokyo that Sp3c William Girard of the United States Army will be surrendered to Japanese authorities for prosecution on a homicide charge while on duty on a military reservation occupied by the United States forces, and while discharging an assignment given him by his superior officers; and

Whereas the ratification on July 15, 1953, of the Status of Forces Treaty of the North Atlantic Treaty Organizations, and similar agreements with other nations, has deprived our servicemen of the traditional protection extended by our Constitution and enjoyed by United States servicemen on foreign soil, and now subjects our men to trial, imprisonment and even the death penalty under foreign laws in foreign courts and prisons: Now, therefore, be it

Resolved, That the American Legion, Department of Kansas, petition our representatives in the Congress of the United States to support legislation which will nullify that part of the NATO treaty and similar agreements referring to the Status of Forces and which deprives American servicemen of the protection of the United States Constitution, when serving in more than 50 countries in the world; and be it further

Resolved, That a copy of this resolution be sent the Honorable ANDREW F. SCHOEPPEL and the Honorable FRANK CARLSON, our United States Senators, and our representatives in Congress.

Whereas the Armed Forces of the United States are continuing to discharge or release thousands of war veterans, many of whom are disabled and will need counseling, and employment assistance; and

Whereas a majority of these war veterans are young and had no civilian employment experience before their service with the Armed Forces, and many of them will seek the help of the Veterans Employment Service to obtain gainful employment: Now, therefore, be it

Resolved, That the Department of Kansas of the American Legion in regular convention in the city of Hutchinson, August 23–25, 1957, endorse this essential service and urge the Congress to appropriate sufficient funds to enable the Veterans Employment Service to do adequately the job so necessary to the security and welfare of the veterans; and be it further

Resolved, That a copy of this resolution be forwarded to the National Adjutant, the Director of the Economic Commission of the American Legion, for appropriate action at the National Convention in Atlantic City, N. J., September 16–19, 1957, and that copies be forwarded to our delegation in Congress, and to our United States Senators, urging them to give this resolution appropriate consideration.

Hon. Samuel K. McConnell

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. COLE. Mr. Speaker, it is my genuine regret that I was not present in the Chamber of the House on Tuesday last, when some Members, including yourself, gave expression of their high respect and esteem for our distinguished colleague of Pennsylvania, who is resigning from this body soon.

It was not long after SAM came to the Congress approximately 10 years ago that I became impressed with his high character and sound judgment. He was always of even temper, always friendly and gracious, always a gentleman with never an unkind word, always calm and deliberate. He was the kind of legislator who appeals to his colleagues and associates to a very high degree. We shall miss him in this Chamber.

His good advice will be needed in years to come and, personally, I will miss his friendship which I have treasured highly. In our regret, however, Mr. Speaker, there is consolation in the thought that Mr. MCCONNELL is leaving us in order to render service to the unfortunate persons suffering from physical handicap. I am sure that he, too, must have some misgivings in leaving the Congress, but I am confident that he is motivated by the high sense of duty which has been char-

acteristic of him, and his desire to be of genuine help to his fellow man, Mr. Speaker, we wish him God's speed and good health.

Serious Problems in Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. HILL. Mr. Speaker, this 1st session of the 85th Congress is at an end. For more than 7 months we have been in session wrestling with the problems facing our country. Millions of words have been recorded on the floor and in the committee hearings of the House, but very little in the way of constructive legislation has been enacted. It is not my purpose to find fault with the inaction of the Congress. It is a normal thing for the first session of a Congress to produce less in the way of final legislation than does the second session, but I wonder if it is normal to spend thousands of hours in session in committee and on the floor and produce but a fraction of the program that has been suggested by the President or by the Members who have introduced more than 10,000 bills embodying their ideas of needed legislation.

My primary interest in the Congress for many years has been in the fields of small business and agriculture. On occasion I have taken the floor to outline suggestions which my thinking and study in these fields have convinced me are needed to solve some of the serious problems facing these two segments of our economy.

In agriculture particularly are we facing serious difficulties about which little is being done. When we close the books on this session of Congress, we will have to conclude that no major farm legislation will have been enacted by the Congress. However, the Committee on Agriculture, on which I have the honor to serve, has done a world of work in committee, and many hearings have been held. Much testimony has been heard on major agricultural problems, and certainly during the 2d session of the 85th Congress this House will have an opportunity to consider fundamental changes in the approach toward the solution of the difficulties. As I said in an address on this floor last year, changes must be made in our basic agricultural legislation to bring it in conformance with the era in which we live. Our present price and production control legislation had its genesis in the postwar depression following World War I. The skid of prices received for farm products in 1919 and 1920 brought home sharply the importance of our agricultural economy to the economy of our Nation as a whole. Failure to solve or ease the problem at that time, in my opinion, paved the way for the depression of the early thirties.

In 1933 a determined effort to bolster the farm economy saw a movement toward managed prices and production that resulted in the Agriculture Act of 1938. This act, with minor amendments, is still the basic agricultural act under which most of our farm programs are operated.

These programs were depression born and geared to an emergency that had little or not relation to present-day economic factors. I find no fault with the attempt to help the farmer at that time, but I am certain that experience has shown that the type of programs devised would not solve the problems that arose when the tremendous energies of our agricultural producers met the challenge to feed the free world during World War II, the Korean war, and the immediate postwar period.

Agriculture is not like most production processes where adjustment can be made by shutting down an assembly line or abandoning a line of production when the demand has slackened or ceased. The success with which the challenge of the war years was met is to be commended, but the gradual readjustment of world markets to improve local conditions without a corresponding adjustment of our own production and marketing has led to a disjointed imbalance which has caused much of the serious difficulty into which agriculture has been plunged. It is to the credit of this administration that the problem has not achieved disastrous proportions.

The specter of ever-increasing surpluses and ever-increasing production was met with increased production controls while the price support program attempted to compensate the farmer for reduced plantings. How inefficient this process really is can best be illustrated by what is happening to our basic crops under the basic Agriculture Act of 1938, as amended. Cotton is probably the best, or perhaps I should say the worst, example of outmoded programs attempting to aid a crop and by this assistance practically ruining the cotton producers.

It is abundantly clear that high-level rigid price supports are not good for the cotton industry. Our cotton loses out in markets both at home and abroad. Stiff competition from synthetic fibers and from expanding foreign cotton production abroad means that our growers cannot find a market and cotton is piled in Government warehouses.

By our own actions we are pricing our cotton out of important market outlets. Our rigid high supports for cotton enable competitors—the synthetic fiber producers and foreign cotton growers—to expand their production and take over an increasing number of our cotton customers. As the saying goes, we "hold an umbrella over our competition." All of this happens because we were unwilling to recognize the basic fact that competitive prices for cotton are still highly important in holding and broadening domestic and foreign markets for the output of our efficient cotton farms.

High, rigid price supports, which discourage domestic consumption and exports, are largely responsible for cotton backing up into the hands of the Federal Government. When that happens, severe acreage curtailment is necessary.

There is a growing realization today that we must be able to sell our cotton to people—not to the Commodity Credit Corporation via the price-support route. The CCC itself consumes no cotton; it is people who do. People—not the CCC—make up the lasting and permanently profitable market that cotton must have.

Official reports of the Department of Agriculture reveal some very interesting facts about plantings and production of cotton. In the 1934–38 period the average of cotton acreage in the United States was more than 29 million acres a year. For 1957 the acreage is down to 14.2 million acres. Despite these drastic reductions in acreage, the United States had 60 percent of the world's accumulated cotton stocks on August 1, 1956.

During the same periods that domestic producers were being forced to reduce their cotton acreage drastically, foreign countries, spurred on by our price support umbrella over the world market, increased their cotton acreage by leaps and bounds.

During the 1934–38 period Syria planted 74,000 acres of cotton. In 1956 their cotton acreage was 675,000 acres—nine acres for every one planted prior to World War II.

Mexico increased its plantings from 680,000 acres in the 1934–38 period to more than 2,690,000 acres in 1955—nearly 4 times as many acres as in the prewar period.

Prior to World War II Turkey planted approximately 621,000 acres. By 1955 plantings were nearly 2½ times as large, or more than 1,500,000 acres.

Production yields kept pace with these increased plantings, and American producers have been producing for storage instead of consumption. The price umbrella made it possible for foreign countries to undersell United States price supported cotton. The obvious result is the loss of actual and potential foreign markets.

Certainly what is true concerning the loss of markets for cotton will positively apply to every other type and kind of farm commodity that depends on foreign consumption for the disposition of the surplus.

The failure of the price-support programs as provided for under the basic act of 1938 is not so much the failure of inactivity—we have attempted with patchwork amendments to bolster the act on a hit-and-miss basis—but the failure to proceed vigorously with corollary programs to keep it modern.

In the face of outmoded programs that need changing, we have made some progress. Last year, net realized farm income was 4 percent above 1955—the first peacetime year in which net farm income increased since 1947. Computed on a per farm basis the increase amounts to 7 percent.

For the first half of this year, realized net farm income was at the rate of about $12.1 billion, 2½ percent higher than in the first half of 1956.

Prices which farmers received for crops and livestock in the month ending July 15 rose 1 percent. At the same time, farmers' costs of production and living supplies fell one-third of 1 percent during the same month.

Market prices for cattle and hogs have been running $2 to $3 per 100 pounds above a year ago. Meat consumption last year averaged 167 pounds per person—the highest in more than 50 years.

Milk prices received by farmers have averaged higher, above the previous year at this time, for the third consecutive year.

Exports in farm commodities in fiscal 1957 were the highest in history. Most of this was due to increased activity made possible by the administration sponsored Agricultural Trade Development and Assistance Act of 1954 (Public Law 480).

Government-owned surpluses are being reduced. Commodity Credit Corporation investments in price supported commodities were about $7.6 billion on May 31, 1957, a net reduction of about $900 million since May 31 of 1956, and a reduction of about $1.3 billion below the peak holdings of February 1956.

Farm values reached an all-time high in March of this year, up 7 percent over the previous year.

An alltime high of $176 billion in total agricultural assets was again set January 1, 1957. Farmers have only about $12 in debts for each $100 of assets they own. Only about 1 farm of each 3 has a mortgage. Farm ownership is at an alltime high. There are fewer tenants as compared to farm owners than ever before.

Over 94 percent of all farms have electricity.

Despite cries about the plight of the family farm and its disappearance from the scene, we find that large-scale farms are only about 4 percent of all farms—the same as 30 years ago.

Most of this strengthening in agriculture has been due to the reduction of surpluses. The results of the soil bank and surplus disposal programs are serving to halt the trend of lowered farm net income.

William Howard Taft

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. SCHERER. Mr. Speaker, 100 years ago, on September 15, William Howard Taft was born in Cincinnati in the First Congressional District of Ohio which I have the honor to represent in the Congress of the United States.

We all know that the Taft family has made tremendous contributions to this country. William Howard Taft has been the only person to serve this Nation both as President and Chief Justice. It is, therefore, patricularly fitting that we in Cincinnati, the birthplace and home of William Howard Taft, pause for a few moments to pay tribute to a great American on the 100th anniversary of his birth.

The William Howard Taft Memorial Association is doing just that. Among other things, it has this month passed the following resolution:

Whereas September 15, 1957, marks the 100th anniversary of the birth of William Howard Taft, the 27th President of these United States; and

Whereas beginning with that day in June 1900, when he stepped ashore at the port of Manila, Philippine Islands, he began his services to his country culminating in the highest offices that the United States can bestow on any man. From that date until his death in 1930, he bore the burdens of government as Governor of the Philippines, Secretary of War, President of his country, and Chief Justice of the United States. No other American in the history of this country served in all of these high offices.

In the freshness of youth and early manhood, Mr. Taft's interests centered almost exclusively in the sphere of jurisprudence where his activity was prodigious. He was a man of noble character with a powerful mind. Powerful and striking in person, he towered above the masses of men in his mental talents as much as he did in form and bearing.

He became beloved by the Philippine people as their Governor-General. He supervised the building of the Panama Canal as Secretary of War. As President of the United States, he governed a land inhabited by a busy and enterprising people, and as Chief Justice he lived the most satisfying portion of his life.

His career was filled with drama, romance, and adventure, with the backdrop the kaleidoscope of a growing Nation, and while the wars, the peace, the flag waving of political activity were the orders of his day, he undauntedly devoted his life to aid in the building of his country: Therefore be it

Resolved, That the event of the centennial of his birth be brought to notice on the floor of Congress so that the worthiness of his contribution to the history of our Nation shall receive appropriate acknowledgment.

Given under our name on this 24th day of August 1957 at Cincinnati, Ohio.

THE WILLIAM HOWARD TAFT MEMORIAL ASSOCIATION,
STACEY HULBERT ALLEN,
President.
SARALEE ROBINETTE MELEDY,
Vice President.
MABEL KRAUSE HOYER,
Secretary.
IOLA COOK WILBUR,
Treasurer.

After Retirement—What?

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mrs. KEE. Mr. Speaker, it has just been my pleasure to read a scholarly and thought-provoking paper prepared by Mrs. Ruth Helmick Tipton, formerly a student at George Peabody College, in Nashville, Tenn., where she received her master's degree in August of last year. Mrs. Tipton is also a former teacher in Davidson County, Tenn.

Mr. Speaker, I feel this paper is worthy of the attention of all Members of Congress and all readers of the CONGRESSIONAL RECORD, and, therefore, under unanimous consent, ask that it be printed in the Appendix of the RECORD.

AFTER RETIREMENT—WHAT?

(By Ruth Helmick Tipton)

"What knowest thou, that we know not? What understandest thou, which is not with us? With us are both the grayheaded and very aged men, much elder than thy father." (Job 15: 9–10.)

INTRODUCTION

This topic was chosen because my father is within 5 years of retirement and we have been considering the various possibilites of what we, as a family, can do after retirement. I say we because as a widow with a young child I am presently making my home with my parents. Having always been a very close family, we feel that it will continue to be advantageous to all of us to remain together. This, of course, presents double problems for I must consider possibilities for my continued work, advantages for my daughter, such as music, ballet, and her continued study of French. My parents in turn must consider the type home they wish, climate, possible continued work, travel, friends and family.

Friends who have retired have given us insight into what we do not want to do as well as what we might enjoy doing. My parents are both physically fit and young in heart so have no intention of retiring to the rocking chair for many a long year. Nor would they be happy just resting, puttering around the yard or a workshop. Therefore, we are busy investigating all possibilities that allow for growth and activity.

They will probably spend the first 2 or 3 years in traveling. They plan to live abroad for these first few years, really getting to know the people and countries by living long enough in each place to make friends. My father was overseas during both World Wars and has friends in some of the countries that they will visit. After this they plan to come back to the States to work.

The problem now is what type of work will be most enjoyable and not too demanding on physical strength.

My father's hobbies are woodcarving, cabinetmaking, drafting, photography, and mechanical drawing. We have thought of a gift shop combined with a motel where possibly light snacks might be served. Mother has so many wonderful recipes that we feel are different and would be appreciated.

The next idea they have toyed with was traveling around taking pictures of historical spots, scenes of natural beauty, etc., which they might be able to sell to film companies who make up series of slides for tourist trade.

Too, they believe they can sell a good line of toys or clothes for children and combine photography with this. The problem will not be to make a regular salary, but rather to keep occupied so that they will not grow older than they feel. We firmly believe that nobody is old who is growing and giving of himself to help others.

"Now I turn to the future for wine and bread,
I have bidden the past adieu;
I laugh and lift hands to the years ahead,
'Come on, I am ready for you.'"
—*Edwin Markham* (at 80).

John J. Corson and John W. McConnell, authors of Economic Needs of Older People, say, "Generations passed before the American people became fully aware of their stake in the development and training of children as future workers and citizens. Additional decades will be required to bring about a so-

cial consciousness of what is involved in conserving the health, capabilities, and social relations of the population living in retirement."

"It is estimated that at present 36 percent of the more than 13 million persons in the United States over 65 have no income of their own, that 38 percent have an annual income of less than $1,000, and that 11 percent have an annual income between $1,000 and $2,000. Only 15 percent have incomes of $3,000 or more.

"The number of older persons is steadily increasing in relation to the total population. Since 1900, the number of persons 65 and over in the United States has quadrupled, while the total population has only doubled. The number of aged dependents per 100 workers is climbing." [1]

Some people retire because they have enough money saved to live on the rest of their lives and they plan to spend their time in travel and recreation. They are fortunate, but as we see from the figures above, they are in the minority.

Some are retired at a given age (65, 68, or perhaps 70) by the company they work for. Some retire because of ill health, because no one is willing to employ them, and many other reasons. Whatever the reason all these people need something to occupy their time—something useful and gainful. Many find that their retirement pay is not sufficient to meet the rising cost of living and must seek gainful employment.

We all need to plan early to make our retirement years independent, useful, and active within our physical capabilities. How? "By saving money toward old age, by investing wisely, by seeing to it that you get the social security credit you've earned, by looking around for the money-making possibilities in your hobby, by familiarizing yourself with the details of a small business you can open after you retire, by fitting yourself for possible employment then, and by care in selecting a retirement spot, if you choose to move." [2]

We will likely face a general pattern of disinterest in the services of the over-age worker, so we will have to put ingenuity and initiative to work. We will have to be willing to take the little jobs, even the odd jobs. We will have to plan shrewdly and may even have to revert to tasks and activities that we first started out with. The main thing is that the earlier we realize our needs after retirement the better chance we will have for a happy, useful, and successful retirement.

The three most common problems are lack of interesting occupations, lack of adequate income, and illness. We must remember that the years after retirement are indefinite in number. The first step is to have a savings account, next life insurance, Government bonds, and finally investment securities.

The main thing is to go about our planning systematically. We should have a budget and thus get an idea in black and white where our money is going. How much we save, put into insurance and bonds, will depend on our individual expenses. With your plan down in black and white you can see where your money oozes away. We should save a minimum of 10 percent, but 15 percent would be better. The important thing is that our savings should be systematic. Next, we should take our savings out before we get into our paycheck and start spending. Safety, rather than income on savings should be our first consideration. All deposits are insured up to $10,000. We need to look around at the banks, their rates of interest, when interest starts, etc.

The principal point in buying life insurance is to buy it early and save money. It is more expensive as you grow older. Be sure the policy you buy fits your needs. "Straight life" is usually the best foundation and the first $5,000 or $10,000 should be in that form. In an annuity you pay a stipulated sum first, and collect regular income payments as long as you live. The trouble here is that what would have been an adequate income before the war is now shrinking in purchasing power.

The average person should buy bonds for safety of principal, and for income. A modest backlog of United States savings bonds should be acquired first. The bonds sold on the payroll-deduction plan are series E bonds and are sold at 25 percent less than face value. The United States savings bonds can be combined with a savings account and other investments to insure a balanced financial plan.

The authors of Successful Retirement tell of one family who decided to develop their financial plan for retirement along a unique line. They decided to follow the pattern set by corporations for funding their debts. They decided that the telephone bill of $4.50 a month, or $54 a year, was a good place to start. With American Telephone & Telegraph common stock paying $9-a-year dividend, it meant that an investment in six shares of A. T. & T., paying $54 a year in dividends, would pay for the phone bill.

A special savings account, exclusively for the purchase of securities, was opened in a mutual savings bank. The original savings account opened at the beginning of the budget planning was not touched—that money was for emergency use only. Extra money was placed in the new account and when enough had accumulated they bought two shares of the American Telephone & Telegraph stock. When the first quarterly dividend check of $4.50 arrived they decided not to use it to pay the phone bill since this was already in the budget, but to place this in the special security savings account and save toward buying the required 6 shares to save the $54 a year.

Next they decided to invest in the local utility company (light and gas bill). They later on saved enough to invest in the chainstore where they did most of their food buying. Later on when this company began to lose customers they decided to drop into the brokerage office and when they discovered that the company was dropping back in earnings, and that new competitors were pressing them hard. They decided to sell the chainstore stock and put this nice profit in the special account. They learned that you don't fall in love with stocks, but get out if things begin to go wrong with the company. They also learned to draw out money just after interest was paid, also, to buy stocks in 10-share units whenever possible and save on commissions. Whenever rights were offered to buy additional shares, they were always exercised, never sold. They developed more interest in the companies and their products; newspapers and magazines were carefully read with reference to the stocks they owned.

Many people move to find inexpensive living quarters (and living quarters with a minimum of housekeeping effort); to seek employment opportunities that are open to those receiving old-age and survivors insurance benefit payments; or to find a climate suitable for their state of health.

The older person should not bemoan the fact that he must live alone. Many younger people choose this way of life—the bachelor and the bachelor girl—and many older people have this same desire to be independent.

As we get older our ability to attend to the details of housekeeping and property-holding are lessened. There is also the reduced financial ability to maintain property and living expenses, due to the necessity to live on retirement and/or savings (usually far below the income of the wage-earning period). Often older people cannot adjust to reducing their scale of living either as to space or the amount of money it takes to keep up a home. We should give serious thought to our retirement home and not lose sight of the values in a change.

If parents will not be happy in another home then often the children will have to help the parents live in the established pattern. This may well prove an excessive drain financially on children who have their heaviest responsibilities elsewhere (raising families and getting started in business and their profession). If the children are unable to pay for necessary help for aging parents the children must perform the household duties (major ones) in addition to their regular job. This often means that they remain in the parental home. In some cases the children may reach middle-age before having a chance to "live their own lives." In the case of an unmarried daughter this may mean being too old to start out into competitive business and therefore must take "left-over" jobs which are often uncongenial. This may result in severe frustration and often unacknowledged resentment of the aged parents.

If the parents move into their children's homes they find insufficient living space because of real estate values, modern architecture, and small houses. There are personality conflicts, sharp differences in social customs, and often conflicts arise because the elders have difficulty in relinquishing authority over "children."

Any of the above require major adjustment at a time of life when it is most difficult to make. Therefore, we should plan for our home after retirement just as we plan for financial security.

There are many things that a retired person might do to add to their income. Some of these develop from hobbies, some from previous work, and many from exercising a little ingenuity.

Many city people have the idea that they will retire to the farm, but this requires experience, capital, and strength they are not likely to have. In general, part-time farming will not add cash to the family income, but it will give you your food and in some areas you may be able to sell your surplus. If you are in a resort area then you have opportunities to dispose of fresh produce at a profit to the hotels, especially if you can beat the market by a few days. For men who like hunting and fishing the resort hotels will often snap up the frogiegs, fresh-caught fish, and game in season.

A roadside stand that offers various items for sale can be managed by a retired person. You should identify your product with the region—old-fashioned New England * * * and so on. People enjoy such local color; and they like to think they are getting something they can't get any other place.

Another country service is the fresh berries and cream, fresh berry shortcakes, or freshly made pies, cake, or cookies with milk from your own cow, and good coffee. Tourists are tired of the usual snacks along the road and will welcome such things as the above.

If you have a berry patch let the people pick their own fruit and weigh it as they leave and collect. We did this on the west coast. During the war the farmers were unable to get people to pick the fruit and the servicemen were called on for help, but even with their help the fruit was ripening before it could be picked. We went into the peach orchard with our own containers which were weighed as we went in. We picked the peaches and as we came out they weighed

[2] Evelyn Colby and John G. Forrest, Ways and Means to Successful Retirement (B. C. Forbes and Sons Publishing Co., Inc., New York, 1952, p. 4).

the fruit and we paid for it. This was loads of fun to those of us who had never had a chance to do such things and to those who had missed doing this. The added bonus was that we were not weighed as we went in and were allowed to eat all the fruit we wanted as we picked. They saved their fruit crop and built good relations too.

Some part-time New England farmers have built up a steady trade in maple fudge with butternuts or black walnuts, maple syrup, maple sugar, cream, and candy. Also honey is a good seller and this can also be a mail-order business. Fruit preserves that are a specialty of the region or locality are often inexpensive to make in the country and can be sold in many areas.

Some farmers are raising rabbits for both meat and wool. Some raise mink, chinchilla, goats, guinea fowl, fox, and even earthworms and other worms and insects. Goat milk is part of the diet of certain ailments and you should notify every physician and hospital in the locality that you can supply goat milk. Guinea fowl are a luxury food and are served in high-class restaurants and hotels. They are relatively difficult to raise, but can be sold for high prices. The retired man or woman or couple will have time for the attention necessary to raise them. The earthworms can be sold to farmers to enrich and aerate the soil, also to fishermen. The zoos will buy certain worms and insects for their animals.

There is a demand today for herbs, both fresh and dried. Some plants are used in medicine, some cultivated, and others are found wild by hunters. Here you could combine your exercise with moneymaking.

If you have a large house (in the country) you might convert part of it into an apartment for summer vacations. You might erect a studio for rent to artists, authors, musicians for the summer—just advertise in the newspapers of the nearest large town or city. These people appreciate a quiet place where their odd hours and practice will not disturb neighbors. If you are in a resort area you might build 1 or 2 cabins or take in summer boarders. If you are where there is no day nursery and one is needed you might start one of these for working mothers.

A small nursery or greenhouse in the country is often successful and appeals to those retired persons who like to work in a garden. You should have some specialty and encourage everyone to use this plant. It can become a fad to have your specialty.

Kennels and boarding homes for dogs and cats will often do well in the country, particularly when not too far from towns.

City people who have fireplaces in their homes will be glad to buy firewood. This requires a truck to deliver and a power saw, but a regular route can be built up and a fair amount collected for the few hours in the open air.

Many rural and small towns could use a children's exchange shop. The idea is to place on sale whole and clean but slightly worn and outgrown clothes.

Some exchanges take on children's toys and furniture. We had just such a shop in Newfoundland during the war where we took all things we no longer needed, and the items were sold for us, with the shop keeping a certain percentage. This was called a Thrift Shop and worked very well. When the child no longer needed his toilet seat, Baby Tenda, high chair, baby bed, rocking horse, playpen, stroller, or what have you, these items were made available to others who needed these things. We even exchanged other hard-to-get items such as shoes, pots and pans, extra dishes, irons, and so on.

Some country homes that are not near restaurants offer meals served along the road.

Many rural areas would welcome the services of the physician and dentist who retire from city practice; the nurse, and especially the practical nurse. A retired civil engineer could put his skills to ues in many country areas. The retired man who can operate an airplane could do crop dusting for insect control. Also retired salesmen can find jobs selling to those in the rural areas. The careful driver might get a job as a schoolbus driver.

Resort hotels employ people during the season as chambermaids, waitresses, clerks, cashiers, gardeners, and so on; and roadhouses and tearooms require similar help. The waiters and waitresses in resort hotels are generously tipped.

Operators of large farms need berrypickers, vegetable pickers, weeders, etc. The large farm needs extra cooks and waitresses during the threshing season.

Children's camps need extra help, too. If you can teach crafts, games, etc., you would be of use, as well as with cooking and serving food for the campers.

In small towns, suburbs, and in the city you might be able to start a rental library.

If you plan to go into a small business after you retire, then your wife should enter the business and learn as much as possible before you venture with your capital. If the business you hope to start after retirement does not employ women, then you might work part time or nights in the business yourself to get the information you need. If you explain your interest, you may be able to get much helpful information from the owner. We are interested in a children's shop on retirement, and I plan to spend some of my summers in such a shop to get all the information possible. I have several friends who are in this type business and they know that we are interested for future use and in another locale, so will not be competition. They are willing to discuss the problems as well as the many advantages of such a shop with us.

A diaper washing service is needed in many small towns and a retired person could operate such a business.

A retail business run from the home is easier on the retired person, for then they can dovetail business and household duties. One friend is a retired beauty parlor operator, and she keeps just as busy as she wishes taking care of the neighborhood women. She is always willing to run you in in case of an emergency, and so has built up much goodwill among her customers. She has her shop in her front room of the house. She also has made use of her maid as the hair washer. In order for the maid to do this part of the beauty parlor work, she had to take a beauty course at her colored beauty school and get a license. They made an agreement that her course would be paid for by the shop, and in return the colored girl would work a certain length of time using this new trade for the benefit of the customers of the shop.

In retirement towns you might be able to use your dressmaking experience by specializing on work for elderly women, particularly alterations.

Many retired people can go into real estate and insurance selling. A notary public is needed, and this can be done by retired persons. A photostat shop or shop duplicating by machine, form letters, addressing and stuffing envelopes, mailing and the like, can be done by retired people. A typewriting service which you advertise to schools, hospitals, physicians, dentists, lawyers, ministers, real estate and insurance agents, and, particularly, to local authors. Be willing, be eager to do emergency work. The work of public stenographer is also open to the retired person. A traveling salesman often needs stenographic help that the small town does not afford.

Too, you can address envelopes, and especially addressing envelopes (handwriting) for wedding announcements, to record gifts and givers for the bride's thank-you notes—do the secretarial work for the wedding, and this is usually well-paid work. If you really take a lot of the burden off the bride and her family, you can be sure of recommendations to their friends.

You might open a small shop serving sandwiches, pie and coffee in containers to be eaten off the premises and located near a school, factory, or other institutions.

A dessert shop which could open late in the morning and after movies, where something besides the usual ice cream would be offered—fruit and berry shortcakes, layer cakes; offer a variety of unusual sherbets and cookies for the reducers; homemade puddings. Superlative coffee is a must.

Desk lunches for business people and rainy-day service. Good homemade soups, casserole dishes, salads, home-made cakes and pies. Serve a few really good lunches rather than many dried sandwiches, etc.

You might start with a small line of homemade bakery products and homemade confections. You might take orders for parties, dinners, and showers. You might specialize on children's birthday parties or holiday parties. Offer a set price per head for the guests so the mother knows exactly what she will have to spend. Serve normal-diet foods in fancy guise to children instead of rich and sweet dishes—avoid stomach aches the next day. Provide an inexpensive gift for each child with your advertisement on it for the child to take home from the party. If you have an extra room you might turn it into a party room? The mother would appreciate this for the home is usually upset after a party and too there is an element of surprise in taking the child to a party instead of bringing it to him. Many hotels do this sort of thing now and more and more parents are beginning to see that it is just as reasonable to have the party outside of the home and so much less work on the mother. Too, older women might act as hostess in the hotel for parties not only for children, but for adult groups—most hotels have this sort of service and if not you might talk it up to the local hotel. This brings more business to the hotel and at the same time will give employment to a retired woman.

A petshop, kennel, or breeding pets can be a good business for a retired person. You might follow up the sale of your pet with a mimeographed sheet explaining the care, training and feeding of the pet. You can then stick in your price lists for the various needs of the pet sold. If you board a pet you can drop the owner a card now and then to let them know how the pet is getting along for owners worry about their pets while they are on trips.

Concessions in hotels and office buildings for newsstands, cigar standse, etc., offer suitable work for the retired or handicapped people. So does a back-number magazine stand.

Gift shops and holiday stores where you keep supplies of favors for all the holidays, birthdays, cards and small gifts also can be run by retired people.

Along with the beauty shop or barbershop could go grooming for the ill in hospitals or homes * * * it is good for the morale of the aged or ill to look their best and often age or illness keeps them from going to you, but you could go to them.

Renting electrical appliances such as sanders, waxers, fans, heaters, etc., could be carried on from one's own home. Also invisible mending or weaving will offer work to those with good eyesight, manual dexterity and patience.

A sporting goods store appeals to many retired persons. You might just handle fishing equipment and athletic equipment for boys.

A mechanical laundry where the housewife carries her bundles of wash to put through the machine in the laundry, are popular these days and many locations do not yet provide these. You might add a drier, facilities for starching, dyeing, and a large machine for washing scatter rugs, etc.

Frozen food lockers are popular, but require a good-sized investment. Householders rent lockers in the plant and store food in them. Generally, the plant cuts meat into family-size portions and packages them for freezing; this might require the butchering ability which you might not have and would have to hire, since the meat may be a whole side of beef or whole deer.

A lock-and-key shop is a good business for a retired man and can be operated from the home in a small town.

Taxi service in a small town or in an area that attracts tourists—a guided tour of the spots of interest could easily be handled by the retired person.

The retired professional man or woman, or one whose career was in an unusual field might be a lecturer for business or fraternal clubs and associations, women's clubs, garden clubs, writers' groups and the like.

A retail art supply store, music store or record shop are possibilities for the retired artist and musician. They might also give lessons to the young people and the adults.

A retired photographer in a small town might interest his neighbors in photographs of their homes, both interior and exterior. Distant relatives like to see the garden in spring, summer, autumn, and winter. Specialize in photographing pets; emphasize the value of photographing a child on every birthday and offer an album designed to hold such a series. One friend went to dog shows and photographed the pets making a considerable sum for his efforts and patience.

There are so many things a retired person can do—babysitting, help with household tasks, efficient dinner maid, a retired woman who can cook and serve for a dinner party, holiday and anniversary parties require extra help—often the woman to cook and the man to serve. Part-time housekeepers for businesswomen or bachelors or a business couple. Companions for elderly people.

"Animal-sitting" in the city is a welcome service. Many owners do not want to board their pets while they are absent, but do need someone to feed, water and/or exercise animals left at home by the owners. Absolute reliability is needed and prior acquaintance with dogs is essential; if you are a stranger when you walk in, Rover is likely to defend his home from you, food or no food.

Social director or hostess at hotels, resorts, ranchos, and the like offer employment for the retired person. This is usually seasonal. The hostess welcomes guests, introduces them to others and makes them feel at home, arranges a program of activity for their entertainment. Often the guest's birthday is observed with a cake or champagne. This could be both profitable and interesting work. Often a retired couple can do this sort of work together.

Some hotels, hospitals, and other institutions hire women to mend the linen. Often this is part-time work and the work is light. Linen checker, hotel maid, porter, room clerk, reservation clerk, key clerk, room-service clerk, parcel delivery clerk, waiters, waitresses, kitchen helpers, locker-room attendant, etc., are all jobs offered by hotels that the retired person could fill.

Tourist-court attendant, parking-lot attendant, used-car lot attendant, bathhouse attendant, restroom attendant, checkroom attendant, safe-deposit vault attendant, veterinarian hospital attendant, turnstile attendant, ticket taker, vehicle fare attendant at bridges and ferries—all of these offer jobs for the retired person. The retired man might be a watchman, bank guard, building superintendent, movie usher, porter, elevator operators in office buildings, hospitals, stores, and hotels. Large plants employ guides to conduct people through the establishment and older people can be used here. Golf courses offer caddying and greenskeeper for older workers. Florist and other retail stores need messengers. Many office and factory messengers are older men; so are timekeepers, shipping-room clerks in stores, plants, and offices; so are stock clerks.

The retired woman is offered a chance to work as housemother, librarian to run hospital library, cashiers in some restaurants, movie theaters, or other places of amusement, cashier or wrapper in retail stores, switchboard work in hotels, particularly on the night shift and mailroom work is often light and can be done by the older worker. Mature women are often preferred by physicians and dentists as receptionists. Substitute work pays well, and when secretaries take their vacations they often need someone to fill in who is familiar with office routine. Laundering fine silks and laces can be turned into a tidy sum for the laundries of today ruin these finer things. A few hours a day spent in the care of children or reading to an invalid will also earn money for the retired woman.

There are probably many other jobs available to the older worker that I have not mentioned, but these should give us some choice and, too, we can develop paying jobs from our hobbies. Before going on to hobbies I should like to mention what is being done to help older people find jobs.

"The ability of the aged to learn, to accustom themselves to long and irregular hours of work, even to perform strenuous manual duties not generally associated with their age, was proved during the war. The War Manpower Commission reported on the actual experience of employers with older men and women workers. The employers indicated that even in cases where the production of the aged per time unit has been relatively less than that of younger persons the experience, judgment, concentration, carefulness, and patience of the older wage earners are compensatory factors 'which pay dividends in quality of product, salvage from waste and rejects, and often in long-run output.' The reluctance of many employers to employ the aged may have been reduced by their experiences during the war." [3]

Marjorie King, of San Francisco, Calif., spends her spare time finding jobs for women over 40. Careers Unlimited for Women is flourishing, and its services are free to both employee and employer. The agency is financed by donations and office space and equipment are contributed by businessmen, some of whom once hesitated to hire older women. She says these people do not want retirement but work.

The Detroit section, National Council of Jewish Women and the Jewish Vocational Service of Detroit, sponsored a program known as the National Council of Jewish Women-Jewish Vocational Service Special Placement Program for Older Persons. They used selective placement, which involves a careful determination of the client's physical capacities and finding jobs with physical demands to match. Actual placements have far exceeded expectations and have shown a progressive increase each year. There were 32 placements in 1951, 57 in 1952, 76 in 1953, and 70 percent were of persons 60 years of age and over. The women have interested employers in the program. A followup study with employers showed that they were well satisfied with clients placed from the program. Clients proved to compare favorably in terms of length of stay on the job and degree of job satisfaction. They earned less, but were paid rates for the particular job in the particular industry. Late in 1952 a suitable sheltered workshop was established to assist in the vocational adjustment of certain hard-to-place persons.

Charles H. Meyer, personnel director of Jewish Hospital of Brooklyn, says, "Age is of little consequence to satisfactory performance among certain industrial workers." [4] Carpetweavers at Alexander Smith & Sons Carpet Co., were compared and those under age 45 and over 45 showed up about the same as to satisfactory performance.

State Teachers College, Florence, Ala., has put their retired teachers to work, but not as teachers. There is a small museum in one building and one retired teacher has an apartment in the building and is in charge of the museum. Others live with younger teachers and have their room and board furnished them by the college in return for duties of a supervisory capacity. There is one disabled person in 50's and others over 75. One is acting as housemother and is in charge of the maid service of the dorm.

Hobbies can make money for you. Many people retired and active make money from their hobbies. Your hobby may not produce money after you retire, but it does provide excellent recreation and relaxation now and for the future. A hobby to be rewarding in old age should have been started years before and continued as opportunities permitted. One friend collected antiques as a hobby and after retirement opened her home as an antique shop. She kept the pieces she did not want to part with in one room, but the other rooms were open and one might better see the display of old glass, odd pieces such as bed warmers, fireplace equipment, melodeons, etc. She was constantly on the look out for more antiques to replace those sold so she continued her hobby but made it work for her too.

One friend collects snakes to sell to the small zoos. The Children's Museum uses live animals to feed their snakes and some retired person could easily raise white rats or other small animals to sell to the zoos or museums that require live food for their animals.

Malcolm C. Dizer was a stamp collector and has worked his hobby into a profitable business. Along with his stamps he writes things that will enhance the meaning of the stamps—factual information, quotations from famous writings, a bit of poetry that is suitable, drawings and photographs. He arranged these bits of knowledge and the stamps into little booklets which he published. When Edward abdicated and the United States was in a furor about it he sent out the stamps of Edward and beside them he printed Edward's abdication message as his Christmas card to friends. His friends came back asking to buy additional copies and also people he did not know who saw these cards asked to buy them. This was the way he started making his hobby pay.

The stamps honoring famous Americans have been made into a booklet. He not only spent his spare time looking up material and learning about his stamps for his own enjoyment, but is able to sell these to other collectors.

One man enjoys making costume jewelry as his hobby, and when he retires he plans to supplement his income with this hobby for he is already picking up a fair amount on the side making this jewelry.

Needlework, knitting one-of-a-kind dresses, crocheted place mats, etc., are hobbies for women that can be turned into money after retirement.

[4] The Personnel and Guidance Journal, Age and Productivity (vol. 34, October 1955), p. 85.

Woodworking, metalworking, and furniture making are hobbies that men can turn into money after retirement. Doll houses that are duplicates of the child's house could be sold at Christmas or for birthdays. Leathercraft in which you specialize on binding valuable books.

The amateur magician or puppeteer is sometimes in demand for entertainments in private schools, at dinners, and other social gatherings.

Genealogy—a booming subject today. What started out as a hobby or interest in one's own family could work into a good business by research into other family backgrounds. It is a highly specialized field, but fascinating.

After retirement you should always have something you can do but try to confine to the minimum the things you must do. Loneliness is a problem with many retired people today. Their children grow up, marry, move away. Some of their friends and relatives move or they become ill or frail. So one thing we can do in preparation for retirement is to get into contact with as many friends and relatives of about our years as we possibly can—and keep in contact with them. One way to keep in touch is letter-writing or sending out postal cards. You could write these about every 2 weeks with a bit of family news and a friendly message—don't be alarmed if you don't hear right away—you probably will hear from most of them eventually. If you travel a bit after you retire, then it will be a very pleasant break in the journey to stop by and visit some of these friends and relatives you have been writing. We need to keep our friends, and if we fail to keep close to others whom we found congenial in interests and personality we invite a lonely and unhappy old age. We also need young friends, for they stimulate us.

Find out about the older group in your church and join them as often as possible. Before you retire make it a point to seek out and cultivate the friendship of the older people, make your friendly circle as wide as possible for you won't be able to keep up with the younger people as you get older.

Another valuable thing to do is to clean out your household so that it is as easy to clean and care for as possible. Clear out those articles that take space and need care but contribute little to usefulness. One older friend went through her house and got rid of most of her figurines, silver service, and dishes, and other dust catchers. When asked how she could bear to give up these lovely things, she said she had been slave to them long enough (the constant polishing) and it was time they had a new master. So often we are slaves to our material possessions. As we get older we had better part with some of these useless material possessions so the decks will be cleared for real action when we retire.

Idle lives are empty, unsatisfactory. The physical strength is less, but less is needed; life is easier, and machinery does for the feebler hands what once required the strength of youth.

Older people have equal power to learn, but less speed. Since they have much more time their somewhat slower reactions need not trouble them. They need to keep mentally alert. To keep the mind alert set for yourself the task of improving yourself by reading, learning a foreign language (Spanish in 3 weeks—conversation), or take hold of one of the great causes of the world. They will give you enthusiasm, purpose. Begin to grow spiritually—get rid of prejudices—study race, a ruler, or whatever.

You must not be isolated. Get together in a group and study current events, including political affairs in your own community. There are many places where voluntary services are needed—children's institutions, churches, social service groups, and parent-teachers' associations.

Mrs. Mary Traffan Whitney, of North Weare, N. H., says, "It is the beginning of a new phase of life, as interesting and valuable as any that has gone before * * *. When seniors as a group come to feel that life has for them new duties and responsibilities as well as new enjoyments, a new social influence will be felt because a whole section of the span of life which has gone to waste or lain fallow will be recognized as one of its most fruitful portions."

A little study of "Who's Who in America" will show that a great number of the names listed are 65 or over.

Walter Damrosch in the middle seventies produced an opera. Carrie Jacobs Bond began her radio career at 72. Wagner wrote the opera Parsifal after he was 65. Edison worked on to a very late date. Paderewski, after a musical career, a political career, then entered the movies. Dr. Lilliam Martin resigned at 65 from her chair of psychology in Stanford University, but she did not remain idle; she turned to hard work in psychological clinics, traveled, wrote several books, and worked on the problem of salvaging old age.

Yes, you can live these later years as usefully and happily as those which have preceded; perhaps even fill them with more usefulness and happiness. There is no reason to stop growth or cease those things which give us pleasure, just because we have passed 65.

"Grow old along with me,
The best is yet to be;
The last of life for which the first was made.

—*Browning.*

"For age is opportunity no less
Than youth itself, though in another dress;
And, as the evening twilight fades away
The sky is filled with stars, invisible by day."

—*Longfellow.*

John Prather Fights for Right To Live Out His Life on His Ranch

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. ROGERS of Texas. Mr. Speaker, I watched with great interest the developments in the case of Mr. John Prather, the 82-year-old New Mexico rancher who stood up against the Federal Government and all of its powerful arms, demanding that he be allowed to live out his few remaining days on his ranch. Although many probably feel that this fine old gentleman was wrong and that he should not have raised his arms or his voice against the all-powerful Federal Government, I want the record to show that I am proud of the action taken by this rancher and I glory in his spunk. I thought that he was right. He was fighting for a cause just as those who led the American Revolution were. The time should never come in this country when a man, who sincerely believes he is following the right course, should not be permitted to stand up and fight for his cause. The records will show that the military in this country has not been guiltless of land-grabbing activities. This has been brought out most pointedly in recent committee hearings.

The military is not above and beyond human error. Its particular choice as to land it desires to utilize does not mean that decision is infallible. Mr. Prather has, no doubt, paid many thousands of dollars into the tax coffers of this land. He is a living example of the free-enterprise system to which a democratic society must be dedicated if it is to survive. He should not only have every right in the world to retain the land for which he has worked so hard, but he should have the help of those who would take that land away from him to see that every possible alternative is resorted to.

I have received many letters from people who reside in the district which I have the honor to represent. Among these was a letter from Mr. Elmo Duke of Amarillo, Tex. I also received a column that was written by the very able editor and publisher of the excellent newspaper, the Castro County News,

which is published at Dimmitt, Tex., Mr. Bascom Nelson. I am requesting under unanimous consent to insert, with my own remarks, a portion of Mr. Nelson's comments, which appeared in his paper on August 15, 1957:

ABOUT DIMMITT AND CASTRO COUNTY

(By Bascom Nelson)

There is an old man in New Mexico who is probably on the receiving end of much unspoken moral support from people everywhere. He is Mr. John Prather, 82, who swears the United States Army's not big enough to put him off his home place.

It seems the Army has a guided missile test range adjacent to his 27,000-acre ranch and they need his property to make the range big enough. A roomful of Army generals and other assorted brass probably came to this conclusion and decided to take the old man's land. To be magnanimous, they offered him $209,000 for his land, which was probably more than it is worth. But Mr. Prather didn't want to sell.

Then came a court order for him to sell his land. The old gentleman still said the ranch wasn't for sale at any price.

So now it stands with Mr. Prather in one corner, the United States Army in the other. A group of a dozen M. P.'s and three marshals tried to evict him Thursday but couldn't muster the nerve to come out from behind the rocks and face the old man's rifle.

It could be argued that Mr. Prather is in the wrong, that he is unpatriotic, a near-criminal, and should get off his land. But it is refreshing to see someone, once in a while, do a bit of defying of a tremendously powerful Federal Government. He will probably eventually lose his argument. When he does, his quiet but firm resistance will have only marked another time that a man was forced from his home against his wishes.

Europe Acclaims Cleveland Orchestra

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. VANIK. Mr. Speaker, among one of the more successful cultural exchanges made possible by the State Department policy, the Cleveland orchestra was permitted to tour Europe and to include Warsaw on its concert itinerary. It is regrettable that the concert planned for the city of Prague had to be canceled because of diplomatic problems. However, as a Clevelander it was thrilling to learn of the response to the Cleveland orchestra throughout Europe.

An article by Martin Mayer in the September issue of Esquire magazine pays tribute to the Cleveland orchestra, excerpts of which are as follows:

ON RECORD

(By Martin Mayer)

The Cleveland is not merely a very good orchestra for the size of its home city; it is, as its conductor George Szell says, "a very good orchestra for the size of the world."

Arthur Krock of the New York Times called the Cleveland group's European tour the greatest success American propaganda had experienced abroad since cultural exchanges began, and the reasons are obvious. Nobody in Europe would be much surprised to hear a great orchestra from Philadelphia, New York or Boston—but Cleveland—mon Dieu! An orchestra of such stability and balance—such even crescendos and adaptable strings—how did this happen?

The answer is: Through care and love and money. The care has been shown in the choice of conductors, who have traditionally been given more administrative authority in Cleveland than almost anywhere else. In 40 years, the orchestra has had only four leaders: Nikolai Sokoloff, Artur Rodzinski Erich Leinsdorf and (since 1946) George Szell. The love is shown in the number of concerts Clevelanders attend; last season the orchestra gave more home performances than any other American symphony—over 100. And the Cleveland budget gives Szell five rehearsals a week, enough time so he can place an unfamiliar contemporary piece on almost every program. The money is visible in Severance Hall, built specifically for this orchestra in 1931, and in the superb instruments played by the string section. It is generally believed that in the orchestra's endowment is an instrument fund, which would explain a great deal.

In personnel, the Cleveland is now definitely George Szell's orchestra: "my instrument," he says. It had to be, both because Szell's temperament is not one which tolerates obstacles and because the situation on his arrival was chaotic. The orchestra had been without a permanent director for 3 years: Leinsdorf had been drafted into the United States Army and the directors had felt obliged to hold his job open for him. Szell organized the situation by intensive personal attention to every least and last post, bringing about a measurable change in the personnel. He considers that "the personnel of the orchestra is now consolidated. Artistically and from the human angle it is exceptionally congenial."

Sixty years old, well over 6 feet tall and utterly erect, Szell is perhaps the most imposing presence in the musical world today. He was born in Budapest, but the family moved to Vienna when he was 3. A child prodigy on the piano, and assistant conductor to Richard Strauss at the Berlin Opera before he was 20, he has never stopped studying music, and he sees no reason why anyone else should, either. In recruiting for his orchestra, he says, "I offer them myself. They enjoy making music, and they know they can learn more." Nobody in music, however, has been more kind to young ambitions: he organized a program which brought to Cleveland each season for 3 years two student conductors who worked under him. When funds for this program ran out, Szell organized a unique conductors' workshop under which two young conductors of small-town orchestras come to Cleveland for 2 weeks to study Szell's procedures and to work with the Cleveland orchestra.

Szell's particular specialties over the years have been Mozart, Wagner, and Czechoslovakian music (he was director of both the opera and the orchestra in Prague from 1929 to 1936). All three are represented in recent Epic releases—the last two Mozart symphonies on one disc, orchestral excerpts from The Ring on another, and a notably dramatic performance of Dvorak's Slavonic Dances in a two-record set (which also includes Szell's own impeccable and imaginative orchestration of the Smetana quarter From My Life.) Most earlier Szell recordings are on Columbia, and two of them, presenting the conductor as a pianist, are particularly worth hearing—the two Mozart Piano Quartets with the Budapest, and a collection of Mozart Violin Sonatas with (unfortunately) Szigeti. The records make one regret Szell's devotion to the orchestra: there are few conductors as good as he is, but there is literally nobody who plays Mozart on the piano with his combination of great strength and genuine grace.

One of Ten in a Private Job?

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. WHARTON. Mr. Speaker, we who believe in initative and enterprise will be gratified to know that the public press from time to time takes note of the continuing effort to saddle more and more activities and functions on the Federal Government.

I am very happy to quote for the RECORD a thought-provoking editorial from a recent issue of the Poughkeepsie New Yorker:

ONE OF TEN IN A PRIVATE JOB?

We are approximately one-third socialized. And if the trend continues at the rate it has followed since 1929, in 50 years 99 percent of our economy will be socialized and only one person out of 100 will be privately employed.

That startling observation comes from Emerson P. Schmidt, director of economic research for the Chamber of Commerce of the United States. He points out that last year nearly one-third of the national income was channeled through Government, either Federal, State or local. He adds: "Just as human wants are unlimited and insatiable, it appears that the pressure for Government intervention and expenditures is unlimited and insatiable."

Dr. Schmidt is particularly concerned with the continuing effort to load more and more activities and functions on the Federal Government. As he sees it, "We've seemingly become incapable of distinguishing between national problems and nationwide problems." Washington now runs 54 grants-in-aid programs and 13 new ones are in the current budget—including one for assisting States to plant trees. The results are inevitable. The Government bureaucracy grows. The proportion of our earnings taken by Government tends to incerase. More and more Government controls and regulations come into being, to detriment of the free market. As a consequence, he finds, "Our growth has not been what it could be under more favorable tax treatment and less debilitating regulations." According to him, since 1946 our per capita real income (which is income adjusted for changes in taxes and in prices) has increased only $182, or about $18 per year per person.

Dr. Schmidt deals in considerable detail with the steady growth of governmental intervention in the fields of money and banking. Intervention has taken various forms at various times, including the forcing down of interest rates, guaranteed loans, and easier borrowing arrangements. And this, he writes, "puts the economy under constant inflationary pressures and creates political pressures for direct Government lending, direct controls, and regimentation. It must finally lead to capital investment rationing, compulsory saving, price and wage controls, profit controls, the allocation of labor to specific assignments—a regimented economy."

It is frequently said and commonly believed that the demand for new services and interventions by Government comes from the people and so is irresistible. Dr. Schmidt characterizes that as "almost 100 percent hokum and buncombe." He is convinced that the demand comes, instead, from a comparatively small number of researchers, writers, and intellectuals. They got their

ideas widely talked about—and then "the politicians latch on to them and make them their own."

Is the situation hopeless? It is not, in Dr. Schmidt's view. Today, he feels, the basic drift of thought in the Western World is toward more conservatism—and that this drift can be capitalized upon. We can, he argues, get better representation at all levels of government. He makes his final point in these words: "If we each begin somewhere at the local level, within a few years we can change the socio-political climate in the direction of greater productivity and more freedom for all."

Col. Pauline Kirby

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. SMITH of Mississippi. Mr. Speaker, Col. Pauline Kirby retired last month from the Army Nurse Corps after one of the most distinguished careers in the history of that great organization. Colonel Kirby's final assignment was as Chief of the Nursing Service of Walter Reed Army Hospital, where she achieved a fine record in keeping with the best traditions of Walter Reed.

The people of Leflore County, Miss., are proud of the distinguished medical and military record achieved by Colonel Kirby. By unanimous consent, I include the official Department of the Army release about Colonel Kirby's retirement.

Pauline Kirby, retired Army Nurse Corps colonel, was born in Mississippi on July 9, 1905. A graduate of Greenwood High School (Greenwood, Miss.), she received her degree as a registered nurse from Baptist Memorial Hospital, Memphis, Tenn., in 1926. On entering the Nurse Corps the following year, she was assigned to the station hospital at Fort Sam Houston, Tex.

Among the stateside tours served by Colonel Kirby have been assignments at Northington General Hospital, Tuscaloosa, Ala.; Moore General Hospital, Asheville, N. C.; Percy Jones Hospital, Battle Creek, Mich.; and Army and Navy Hospital, Hot Springs, Ark. During World War II (1942–45) she was assistant director of nurses in the Southwest Pacific, and from 1949 to 1952 she served as chief nurse at Tripler Army Hospital, Honolulu, Hawaii.

In April 1954 the Mississippi native was named chief of the nursing service at Walter Reed Army Hospital, Washington, D. C. With her promotion to full colonel in November 1956, the Army Nurse Corps became the first woman's military organization to have 3 officers of that grade on active duty at the same time.

When Pauline Kirby retired from active military duty on July 31 this year, the honors paid her were many. First, she received a certificate of retirement, signed by Army Chief of Staff Gen. Maxwell D. Taylor, awarded as a "testimony to duty faithfully performed." Next, she was presented with an award of outstanding service, witnessed jointly by Maj. Gen. Silas B. Hays, Army Surgeon General, and Col. Inez Haynes, Chief of the Army Nurse Corps. This citation paid tribute to her "outstanding and faithful service as a nurse and administrator," and noted that she was "influential in establishing the Army Nurse Corps to the national recognition it warrants today."

Still another certificate of achievement was awarded to Colonel Kirby by Maj. Gen. Leonard D. Heaton, commanding general of Walter Reed Army Medical Center. This citation commended her "superior qualities of leadership, astute judgment, and constant endeavor for the development of the individual nurse and enlisted technician toward unity and total effectiveness of military nursing."

Colonel Kirby's immediate postretirement plans were to visit her Greenwood, Miss., home to spend some time with her family. Her mother, Mrs. Cora Kirby, lives at 611 Market Street.

Interesting and Important Contribution of Nutt-Shel Co. Employees to International Comity

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I call to your attention the following text of a report to me by Mr. Hal Butler, distinguished resident of the great 23d District, California, which I represent in this great legislative body.

Here is the letter transmitting this very interesting and significant report to me:

MAYWOOD, CALIF., *August 27, 1957.*
Hon. CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR MR. DOYLE: I am writing this letter to you as you asked, in regard to our conversation on Sunday afternoon, at Leo Rule's concerning the efforts of the children of the employees of the Nutt-Shel Co., in their presentation of over 150 books (picture) on life in the United States. I think this effort on the part of these children is worthy of some note, and feel that their efforts will accomplish a great deal in cementing the friendship between the peoples of Thailand and the United States.

As you probably remember, you asked that I get the names of those participating in the project to you so that you might have their names read into the CONGRESSIONAL RECORD. So I am enclosing the names of those participants, and their addresses. I know that some are not fortunate enough to be in our great 23d, but nevertheless I feel they are a credit to their congressional representative.

I am enclosing a rundown on the affair from its inception, so you may make your own remarks from what you have read. By the way, I think a telegram to the employees of the Nutt-Shel Co., 811 Airway, Glendale, Calif., would help immeasurably in boosting the spirits of the people who are making these goodwill gestures.

Will close now, so that I might get this off without further delay.

Loyally and sincerely,

HAL BUTLER.

Several weeks ago, when there was so much talk about the children of many California families making an appearance at the World Communist Youth Festival in Moscow, a group of young people, children of the employees of the Nutt-Shel Co., Glendale, Calif., got together and approached the head of the company (through his administrative assistant, R. H. Blakeley). The president of Nutt-Shel, L. E. Hutson, listened to what they had to say.

What they said was primarily this. What can we do as kids to combat these tales and bad publicity of all kids either being rowdies, delinquents, thugs, and radicals. Mr. Hutson, just listened, and finally, after much musing dumped it in the lap of his advertising executive, Mr. Henry Welsh. Knowing that I have been quite active in youth activities, as well as being publicity officer of the American Legion's 19th District, Mr. Welsh called me.

I met with a group of the children, and we found out that Thai Airways was purchasing some Lockheed Super Constellations, and that they were getting ready to take them to Thailand. Just where the idea for picture books came up, I don't know, but anyway we batted that idea around for a while. The more we discussed it, the more they liked it. Seems as though the thought of a hands-across-the-sea gesture of friendship to the Thais was good, and it was from this that we started.

I acted as coordinator, and the kids went out and bought picture books with very little writing in them, so that the language barrier would not interfere. This was in about 2 weeks.

This morning I attended the presentation ceremonies at the Lockheed Air Terminal, and it would have done your heart good to see the simple little show that the kids put on. The company matched the number of books the kids donated, and they are planning to carry on with other worthy projects, similar to this one.

That just about brings us up to date on the story.

The names follow:

Pat Fitzsimmons, Roger Fitzsimmons, Ann Fitzsimmons, Mark Sutton, Richard Sutton, Mrs. Thomas Imboden, Mrs. Betty Eastwood, Bud Eastwood, Steven Eastwood, Marilyn Eastwood, Ralph Eastwood, Tom Burgnon, Ted Burgnon, Mrs. Harold Burgnon, Richard Johnson, Mrs. Leonard Johnson, Mrs. Richard Poucher, John Poucher, Steve Poucher, and Ray Poucher.

The Plight of Certain of Our Aged Folks

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. GAVIN. Mr. Speaker, in the past several weeks we have discussed legislation that would give our country authority to spend some $3 billion presumably to aid and assist foreign nations. We provide this assistance on the theory that it will better the economic condition of friends abroad and thus strengthen the democratic way of life as contrasted with communism throughout the world. Certainly we all want to help friendly nations, and as good neighbors it is well that we give attention to their needs. We have been most generous in the past on matters of economic and military aid to promote peace and stability throughout the world. While today our thoughts are centered on how we can help foreign nations help themselves, I cannot help but feel that we have some home problems that need attention. Con-

centrating on poverty abroad to the exclusion of our own needy just does not make sense to me. Charity begins at home.

I am thinking particularly of the plight of certain of our aged folks. We have in this country some 14 million who are 65 years and over. About 2½ million of these are on old-age assistance, where their average monthly pension is less than $60 a month—these are our unfortunate and needy elders—they are not on social security nor do they have retirement. They have to depend upon this dole of $60 or less to keep themselves alive from one month to the next. It is obvious that no one can live in health and decency on this pittance. I hate to think of this session of Congress coming to a close without doing something about this home problem. It involves 2½ million of our very own senior citizens. You do not have to go around the world to extend aid to humankind; it is needed right here in our own country. During the coming year let us do a little soul searching and see if we cannot come up with something better for these old folks, at least in partial keeping with what we are about to do for foreign peoples throughout the world.

Irrigation Aid Refused

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BUDGE. Mr. Speaker, on leave to extend my remarks, there follows an editorial from the Twin Falls Times-News, published at Twin Falls, Idaho, under date of August 14, 1957:

IRRIGATION AID REFUSED

Those public power enthusiasts who have minimized the fears of Idaho farmers if the Government should get control of Snake River through construction of a high dam in Hells Canyon, might explain a little news item from Salem, Oreg.

The Army engineers, according to a story in the Oregon Journal, have informed Harley Libby, president of the Oregon Farmers Union, that no additional release of water from Detroit Dam is planned this season.

The farm organization had asked additional water to aid irrigation in the Jefferson area. Some farmers believed less than normal flow was provided by the Army engineers who operate the dam facilities.

In a letter to the Farmers Union president, Col. Jackson Graham, district Army engineer, said the flow at the dam has been maintained, but the drain downstream was heavy. He explained further that officials had asked all water possible be held back to provide storage for a feared power shortage. Power, he added, takes priority.

Runoff above the dam is dropping rapidly and no replenishment can be expected this season, said Colonel Graham.

Farmers Union President Libby is a Jefferson area farmer. Many farms in this particular area use well water for irrigation.

It was because these wells are unusually low this summer that the farm organization appealed for more water from the dam over which the Army engineers have control.

In this connection, it is interesting to note that a number of Farmers Union organizations are among the contributors to the National Hells Canyon Association which has waged a long and relentless fight to give the Federal Government control of Snake River with a high dam in Hells Canyon.

We wonder how President Libby and the members of the Oregon Farmers Union now feel about Government operation of a dam in which they happen to be particularly interested.

Memorial for Those Lost on U. S. S. Arizona

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, on August 19, 1957, H. R. 5809 came before the House and was passed by unanimous consent. This is a measure introduced by my able colleague, the delegate from Hawaii, Mr. Burns, and has for its purpose the construction of a memorial to the memory of those who lost their lives on December 7, 1941, in the sinking of the U. S. S. *Arizona*. I am proud of the fact that I was chairman of the subcommittee which heard testimony on this measure and which piloted it through the Congress. I am honored that I was permitted to help shepherd the measure through the House on August 19, 1957.

Mr. Speaker, on December 7, 1941, there were 1,473 men and officers serving aboard the U. S. S. *Arizona*. Of this total complement, 1,157 were declared dead or missing as a result of this most treacherous attack on December 7, 1941, which day President Roosevelt declared to be a day dedicated to infamy. One hundred and sixty-one bodies were accounted for following the dastardly attack on Pearl Harbor; but, today, the final remains of 996 American boys are still entombed in the hull of the U. S. S. *Arizona*. This ship, by decree of this Government, is the final resting place of almost 1,000 American men wearing the uniform of the United States Navy; and if there is a hallowed place on earth, this surely is the place.

My home State of Louisiana paid a fearful price when the losses of that black December day are added up. My State lost 24 young men who came from all parts of the State, 1 of them being from my home city of Shreveport; and the bodies of these men lie today entombed in this sunken ship. Their names and home addresses are: Achilles Arnaud, Arnaudville, La.; Claude Duran Arnold, Jr., Lake Charles, La.; Wilburn James Ashmore, Elizabeth, La.; Miller Xavier Aydell, French Settlement, La.; Malcolm Clark, Pollock, La.; John Quitman Davis, Tangipahoa, La.; Louis Felix Ducrest, Broussard, La.; Charles Donald Frederick, Albeville, La.; Ivan Joseph Huval, Folsom, La.; Floyd Baxter Jones, Shreveport, La.; Joseph McNeil Legros, Norse, La.; Jessie Huall Murphy, New Orleans, La.; "J" "D" Naylor, DeRidder, La.; Amos Paul Pace, Robert Leo Pritchett, Jr., New Orleans, La.; Wilburn Carle Roberts, Pollock, La.; William Edison Stoddard, Vinton, La.; Robert Tyson, Oak Grove, La.; John William Whitaker, Jr., Pollock, La.; Adrian Delton Williams, Gonzales, La.; Robert Kenneth Willis, Jr., Pineville, La.; Vernon Wesley Woods, Springhill, La.; Thomas Raymond Jones, Tallulah, La.; Walter Samuel Savage, Jr., Monroe, La.

A number of years ago, Mr. Speaker, I had the privilege of visiting Pearl Harbor and going by harbor boat to the wooden tramway which at that time connected with the superstructure which was the portion of the U. S. S. *Arizona* which remained above water several hundred yards offshore in the Pearl Harbor. This ship is located in an arm of the Pearl Harbor. It is about 400 feet from shore; and lies on the bottom in between 36 and 38 feet of water. Within recent years, the ship seems to have settled somewhat and now about the only portions of it above water are a few funnels of air vents, forming a part of the upper portion of the ship. It is awe inspiring to be able to stand on the steel deck of what remains above water of that great battlewagon. It is impressive to be able to uncover one's head and watch Old Glory, flying from the original mast and waving in the breeze. It brings one nearer to God as he ponders prayerfully on the lives of those 1,000 Americans who peacefully slept that Sunday morning safely, so they thought, within the steel sides of this great ship.

The American people have not forgotten those brave Americans. Although 17 years have passed since then, I believe it is yet the proper time to provide by popular subscription a memorial, either on this ship or adjacent to it, befitting the rare courage and pristine patriotism of those 1,000 Americans who sleep now and forever in the waters of the Pearl Harbor of Hawaii.

Getting A Break From Senate Probers

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. DIRKSEN. Mr. President, I submit for inclusion in the RECORD an editorial from the Saturday Evening Post dated August 24, 1957, which embraces some comment on the hearings before the Subcommittee on Monopoly of the Senate Judiciary Committee, with respect to the hearings on the activities of American oil companies in the Middle East resulting from the closure of the Suez Canal. I am quite certain that the question raised by this editorial has been in the minds of many of the people over a period of time and I deem it of sufficient interest for inclusion in the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY CAN'T A CORPORATION GET A BREAK FROM THE SENATE'S PROBERS?

Some of our corporate executives, especially those who operate the Nation's oil industry, are wondering how they can profit from the Supreme Court's solicitude for the rights of individuals who testify before congressional committees. Oil executives, who took it on the chin before Senator O'MAHONEY's Subcommittee on Public Lands, would like to find the formula.

During the June hearings before Senator O'MAHONEY's subcommittee, the oil companies were accused, on the basis of a report by the committee's staff, of using the Iranian crisis to grab Middle Eastern oil for themselves; and of taking advantage of the situation to stifle competition in defiance of the antitrust laws. None of this was based on testimony before the committee. Charges were also made that the oil companies had profiteered from the Suez oil lift.

American oil companies went into Iran, after the nationalization of Britain's oilfields, as a means of keeping Iran's oil out of Soviet hands. They were exempted from antitrust prosecution by the Government for the reason that the companies had to be assured that they would not be prosecuted later for doing what the State Department wanted them to do in the emergency.

As far as the oil lift of 1956 is concerned, the cost of bypassing the Suez Canal, with a shortage of tankers to overcome, was high. But the oil lift is generally regarded as a triumph of American efficient management under peculiarly difficult circumstances. Surely those who directed it, and thus prevented a catastrophic oil famine in Western Europe, deserve something better than the reiteration of unproved charges dredged out of a report by the committee's staff—a report largely based, as Senator DIRKSEN brought out during the hearings, on articles in newspapers and other secondary sources.

Unlike a suspected subversive, an oil company can hardly challenge the legislative purpose of a staff report leaked to the press outside the committee room. However, oil companies and other corporations which think their rights are being overlooked by congressional committees might try leaking it around that they are up to some sort of shenanigans with the Communists. Once identified with the Red conspiracy, the oil boys could defy their inquisitors, take the fifth amendment, cite the first, and make the committee's day hideous with endless statements of principle. At all events, they would seem to have as good a chance for a square deal as they have been getting by acting in the Nation's interest.

Ohio and Foreign Trade

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mrs. BOLTON. Mr. Speaker, having long been an advocate of an enlightened world-trade policy and representing a district in the State of Ohio that is keenly aware of the importance of foreign trade, I was pleased to submit an article for the October 1957 issue of the GOP Trunklines publication.

Under leave to extend my remarks in the RECORD, I wish to include the article, as follows:

SOME OF THE BENEFITS OF FOREIGN TRADE

On the very day I received an invitation to contribute a brief article to Trunkline on the role of Ohio in foreign trade, I was writing our Ambassador in Tunisia about the recent shipment of roadbuilding equipment which left Cleveland a few weeks ago destined for north Africa. You may have read in the local papers about these trucks and other machinery which were manufactured by the Euclid division of General Motors.

We Ohioans should be very proud of our expanding export industry. One sees the products of Ohio's mills and factories no matter where one travels.

How delighted I was during my trip to Africa in 1955 to see Euclid trucks, manufactured by this very company, at work in the Bomi Hills mine in Liberia. This mine, in turn ships 20,000 tons of the highest grade iron ore to Cleveland mills each month for turning into countless steel products.

In my own 22d Congressional District it is difficult to gather figures which indicate the great extent to which we are dependent upon export business. We produce paint, enamels, automobile and airplane parts, and many other items which go into making a complete machine. Moreover, there is concentrated in the State of Ohio, almost one-third of the entire machine-tool industry of the United States, the backbone of any peacetime industrial or wartime armament program. All of this points up the growing importance of reciprocal trade to hundreds of business and industrial firms in Ohio.

A good indication of our dependence upon foreign trade is shown in a recent Ohio industrial study by the United States Department of Commerce. It showed that about 30 percent of Ohio workers are in industries whose export sales on a national basis are more than 20 times as large as the corresponding United States imports; and another 40 percent of Ohio's workers hold jobs in industries which sell to foreign markets from 4 to 20 times as much as is imported to this country in comparable goods.

But the maximum effects on Ohio will be in years to come when the great St. Lawrence seaway will be bringing new markets to our doors and new products to our people. The seaway may transform the whole Great Lakes area into another coastline and those of us who look toward the future see that our best interests lie in an enlightened world-trade policy.

As Republicans we can feel great pride in the accomplishments of the Eisenhower administration in the field of foreign trade. The administration has effected measures and programs that have resulted in the greatest expansion of peacetime world trade in history. United States commercial exports increased from $12.3 billion in 1953 to $17.3 billion in 1956, and imports rose from $10.9 billion to $12.6 billion during the same period.

The Secretary of Commerce reports that among the Department's activities which have contributed to this increase are the organization of the Bureau of Foreign Commerce in the Department, programs designed to stimulate tourism and United States investment overseas, and the initiation of American participation in international trade fairs abroad. In the past 3 years, the Department estimates that some 30 million people visited United States exhibits at fairs in 27 countries, including 1 in Poland which attracted an estimated 1.25 million persons.

Not only does all of this help in maintaining our own prosperity, but it contributes much to carrying abroad to people everywhere the message of what is accomplished under our free way of life.

Imports of Foreign Plywood Are Robbing Thousands of American Workers of Their Jobs

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MACK of Washington. Mr. Speaker, several large plywood plants in the Pacific Northwest have announced that they are closing their plants "indefinitely." Many other plywood plants in Oregon and Washington are operating on a curtailed basis. Many plywood workers and also the loggers who supply these plywood mills with logs are idle.

Why this slump in business and this unemployment in the plywood industry when most of the other industries of the Nation are enjoying boom or near-boom times?

The answer is to be found in reading the Department of Commerce's figures on plywood imports. A few years ago practically no foreign plywood was being imported into the United States. Now, however, 75 million square feet of foreign hardwood plywood valued at almost $6 million is coming into the United States each month, and worse still, this volume of foreign plywood imports is flooding the United States in increasing quantities month after month.

In May of this year, the last month for which plywood-import figures are available to me, plywood imports into the United States totaled 77,424,000 square feet and had a dutiable value of $5,698,411.

Based upon these figures, it is a fair estimate that about 900 million square feet of plywood with an import value of about $60 million will come into the United States this year, most of it from Japan where the wage rate in the forest products industries is about 11½ cents an hour.

Arnold Koutonen, of Olympia, Wash., general manager of the St. Paul and Tacoma Lumber Co. plywood operations, says that the amount of plywood now coming into the United States from Japan alone is equivalent to the production of 12 large American plywood mills employing a total of 5,000 workers.

Of the imports of foreign plywood, Mr. Koutonen, who is a past president of the Douglas Fir Plywood Association, said in a recent press interview:

No question about it, these foreign imports are taking a deep dig into the domestic industry. The Japanese are producing a high quality product that is not only competing with our American hardwood plywood but in certain instances is replacing fir plywood in some areas.

Right now—

Says Mr. Koutonen—

the Japanese are exporting 75 million square feet of hardwood plywood a month to the United States. This is equal to the production of 12 of our own plants employing 5,000 workers.

Plywood imports into the United States from Japan are 50 to 60 percent greater

this year than last year and, worse still, are increasing. Imports of Japanese plywood in May 1956 were 43,823,000 square feet according to the United States Department of Commerce and in the same period of this year were 63,203,000 square feet or a 50 percent increase over the same month of a year ago.

The Japanese plywood worker receives a wage of 11½ cents an hour and is paid no overtime rate for overtime work. American workers cannot and should not be expected to compete with such starvation wages.

While practically all of the plywood coming into our country is hardwood plywood, still this hardwood plywood due to the low price paid the labor that makes it is selling at prices below those at which softwood plywood can be manufactured in this country. As a result, imported hardwood plywoods are being used as substitutes in fields which heretofore were exclusively served by our western softwood plywoods. The result is much unemployment in the plywood industry of the Pacific Northwest.

Multitudes of Americans suffer financial losses and often financial hardship when plywood mills are closed due to loss of their American markets to foreign competitors.

Workers in the plywood plants lose their jobs or find their workweeks curtailed. Their income shrinks.

Operators, when their plants are down, make no profits. They lose money.

The workers and operators in industries that supply American plywood mills with materials such as logs, also, have to close down with loss of wages and profits.

Merchants and others whose businesses rises when labor prospers also suffer from job and profit curtailments.

The biggest loser when too much foreign goods come into our country is the Government of the United States itself.

When a plywood manufacturer makes money he pays 52 percent of his corporation profits into the Federal Treasury as income taxes.

All workers when earnings are high and employment steady, pay large sums in Federal income taxes but they pay little or no such taxes when forced into idleness.

All the suppliers of industries crippled by too much imports also suffer loss in profits, wages, and salaries and also pay less income taxes.

Foreign workers and foreign industries which make plywood in foreign plants in foreign countries pay no income tax into the United States Treasury.

I have a bill that has been pending consideration by the Ways and Means Committee for many months.

My bill (H. R. 5942), if enacted into law, would limit the imports of foreign hardwood plywood to 15 percent of the domestic consumption of the United States for the previous years.

This year plywood imports are totally almost 50 percent of the hardwood plywood consumption of the Nation. These imports this year will total, it is expected, about 900 million square feet valued at $60 million. Under my bill these plywood imports would be cut to about 300 million square feet valued at some $20 million.

My bill (H. R. 5942), if adopted, would allow Japan and other nation's a large market in the United States but still a much smaller market than they now have. The result of enactment of my bill would be that while our American plywood workers still would be injured to some extent they would not be hurt nearly as badly as they now are being injured by the deluge of foreign plywood that is pouring into the United States in ever-increasing quantities.

Every effort that I and other Congressmen have made this year to get legislation reported by the Ways and Means Committee that would slow down the foreign plywood imports which are wrecking large segments of our Nation's economy, closing plants and depriving workers of jobs, has, so far, failed.

I hope that when the Congress reconvenes on January 7, 1958, that one of the first orders of business will be to clear for congressional action bills, such as my bill (H. R. 5942), which if enacted into law, would create anew the jobs of 5,000 or more workers who have been deprived of employment due to too heavy imports of foreign plywood.

I pray that the Ways and Means Committee will act to give relief to the plywood industries and the cities where it exists by speedily enacting legislation that will place quota limits on the quantities of plywood low-wage, low-living standard nations now are shipping in ever-increasing quantities into the United States.

Justice in the United States Customs Court

EXTENSION OF REMARKS
OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. TAYLOR. Mr. Speaker, the Congress seeks endlessly for new sources of revenue. The matter of protection of its revenue is, therefore, important to all legislators.

A most enlightening article on this subject appeared in a recent edition of the American Import and Export Bulletin. The article was written by Miss Mollie Strum, who, incidentally, is the only woman trial attorney on the United States Department of Justice customs trial lawyers' staff.

It would be remiss not to mention the fact that Miss Strum has had unique success in the prosecution of important cases as Government counsel. Her efforts have resulted in the acquisition of millions of dollars in revenue to the Government.

In addition to her being the darling of the Federal Bar Association—she was the first woman president of that body—Miss Strum has been honored by other organizations and associations. In 1955 she was the first woman lawyer to be selected as the outstanding professional woman in the United States. She received the scroll for outstanding achievement in the field of Federal jurisprudence and, recently, she was elected vice president of the United States division of the United Nations League of Lawyers.

Her article is as follows:

Among the least known but highly significant activities for protecting enormous amounts of Federal revenue, is the Customs ligitation of the United States Department of Justice, under the leadership of the Attorney General of the United States, the Honorable Herbert Brownell, Jr., which is handled by a small staff of highly specialized trial lawyers who travel to every port of the United States to represent the Government. Upon reflection, one finds that our entire national economy and our international relations are all entwined with the enactment and enforcement of the laws, which these lawyers uphold; and with the far-reaching effects of the outcome of the litigation.

President Eisenhower said: "The United States continuously seeks to strengthen the spiritual, political, military, and economic bonds of the free nations. By cementing these ties, we help preserve our way of life, improve the standards of free peoples, and make possible the higher levels of production required for the security of the free world."

Our foreign-trade program and the reciprocal trade agreements are designed not only to promote world trade but also to insure world peace. As a result, merchandise flows into the United States from every corner of the globe. Machinery, drugs, chemicals, metals, oils, toys, jewelry, fabrics, lumber, rugs, foodstuffs, surgical and dental instruments, optical instruments, agricultural implements, perfumes, earthenware, bamboo wares, and every other article known to man, travel to our shores. When it crosses our borders, customs problems arise as to the scope of statutes, trade agreements, judicial decisions; various benefits, proper rates of duty and value; the construction of rules and regulations; and generally, the protection under our laws of the privileges of those citizens who observe their obligations; which are ascertainable prior to the importation.

Customs duties date back to ancient days. The earliest record is found in the Old Testament (Ezra, chapters 1–2; 4: 3–6; 4: 13). It was said: "There have been mighty kings also over Jerusalem, who have ruled over all the country beyond the river; and tribute, custom, and toll was paid unto them." (Ezra 4: 19–21; 7: 24.) In the New Testament there appears the statement that Jesus called Matthew from "the receipt of customs." (Mark 2: 14, Luke 5: 27–29.) Was Matthew a collector of customs duties at the Sea of Galilee and a forerunner of our present-day Federal collectors of customs?

The word "customs" is defined in the Encyclopaedia Britannica (vol. 6, 14th ed., p. 904) as a British term of early origin, which is an abbreviated form of customary dues, anciently used to describe any customary payment, whether to king or church.

The power of our Federal Government to impose customs duties is derived from article 1, section 8, of the Constitution of the United States; and the courts have upheld the constitutionality of tariff acts. Congress enacted our first tariff act in 1789.

Our present customs laws cover the greatest conceivable variety of subjects ranging from the mundane to the extraordinary. No matter how strange or sublime an area of life may appear to the uninitiated, sooner or later some phase of it will appear under the microscopic examination of customs enforcement or litigation—be it the appraisement and classification of the most diversified materials and articles known to our

civilization; the constitutionality of a Federal statute; the authority of the President of the United States to terminate trade agreements; the treatment of merchandise from Communist countries; or the various other types of cases which are presented to the customs lawyer. For example, recent test cases won by the Government involved the applicability of certain customs statutes and regulations to the airlines (*Pan American World Airways* v. *United States* (C. D. 1851); and the right to exclude certain merchandise from entry into the United States, upon the authority of orders of the President issued pursuant to the provisions of section 337 of the Tariff Act of 1930, relating to unfair practices in the import trade (*Charia & Co.* v. *United States* (C. D. 1642, 135 F. Supp. 727, affirmed on appeal)).

It is not the obligation of Government officials who enforce the customs laws to seek to collect the highest possibly duty or to punish legitimate importers. It is our responsibility to ascertain: What did Congress intend when it wrote these statutes? When disagreement as to the interpretation of these laws arises, the parties may resort to the courts for judicial determination.

The United States is the only country in the world which has a customs court devoted exclusively to customs litigation. The effect of its decisions upon our economic life is probably unparalleled by any other court. For instance, a decision resulting in exceedingly low tariff costs to the importers may cause a sudden, increased flow of foreign merchandise to such an extent that the competition may affect an entire domestic industry.

An American manufacturer, producer, or wholesaler, has certain rights to file a lawsuit in the United States Customs Court, protesting the classification of, or the rate of duty imposed upon, certain imported merchandise.

An importer is entitled to his day in court. All importers ought to be aware of the fact that all administrative decisions of collectors of customs at any port in the United States as to the rate and amount of duties chargeable, or excluding merchandise from entry, under any provisions of the Customs laws may be protested in writing by the importer, consignee, or agent within 60 days after the date of liquidation, reliquidation, decision or refusal. Otherwise, it becomes final and conclusive. The collector shall, within 90 days after the filing of the importer's protest, review his decision and may modify it in whole or in part. However, if the collector shall, upon reviewing it, affirm his original decision, the collector shall transmit the papers to the United States Customs Court for due assignment and determination as provided by law.

When the importer and the customs officials at the port of entry disagree as to the proper dutiable value applicable, under the law, to certain imported merchandise, the importer may file an appeal for reappraisement within 30 days after the customs appraiser at the port of entry has determined the dutiable value, and the importer, his attorney or agent has received due notice.

There are cases in which the appeals for reappraisement have been filed by the Government. They are known as collector's appeals and are comparatively few. Such proceedings are initiated by the collector of customs in instances where the customs appraiser has received new information regarding the proper dutiable value after he has officially made his appraisement which is binding upon the Government as well as the importer unless a timely appeal for reappraisement is filed.

Unless an importer or his representative, is aware of his rights and privileges under customs laws and the stautory periods of limitaton within which to bring certain controversies before the customs court for determination, he may unnecessarily incur financial losses. On the other hand, he should also be aware of his obligations and prohibitions under the law, which include the proper marking of imported merchandise (additional rules may be imposed for failure to mark properly); requirements for detailed invoice descriptions and the disclosure of all facts deemed necessary to a proper appraisement, examination, and classification of the importation; the prohibition of the importation of convict-made goods, the prohibition against meat unfit for human food, and meat from foreign countries where public notice has been given in our country that rinderpest or foot-and-mouth disease exists; and others ranging from minor points to fraud and criminal actions, which may result in fines and imprisonment after trials in the United States district courts.

However, the importer need have no hesitancy in becoming a party to litigation in the United States Customs Court which Congress established in 1926 for his benefit, with exclusive jurisdiction to review the decisions of any collector of customs, including all orders and findings entering into the same, as to the rate and amount of duties chargeable and as to all exactions of whatever character within the jurisdiction of the Secretary of the Treasury. In a recent case, *Horton* v. *Humphrey* (146 F. Supp 819), importers of cast iron soil pipe, claiming that they were threatened with the application of a special dumping duty under the Antidumping Act of 1921, as amended, brought an action for declaratory and injunctive relief in the United States District Court of the District of Columbia. That court dismissed the complaint and held that the imposition of the dumping duty must be reviewed by the customs court, which provides an adequate and exclusive remedy in this sort of case, with the right of appeal to the Court of Customs and Patent Appeals and further recourse to the Supreme Court through petition for certiorari.

The United States Customs Court, of which the Honorable Webster J. Oliver is chief judge, is composed of nine judges appointed for life by the President, by and with the advice and consent of the United States Senate. They hear and determine cases which arise throughout the country. The chief judge may set hearings to be held at any port of entry in the United States, its Territories, and possessions. Thus, no matter where an importer resides, he may request a hearing near that place convenient to him and where his witnesses are accessible, and he may have his case heard by the court either at a seaboard city or an inland city. At the end of each calendar year there is published a schedule of the ports of entry at which hearings will be held during the forthcoming year. The number of hearings scheduled to be held at the same port of entry during each year will depend upon the number of cases arising there.

The increase in foreign trade has increased the amount collected in revenue, and also the volume of litigation affecting imports. An indication of the change in customs revenues can be found in the 1956 report of the Secretary of the Treasury (pp. 318–322). For the years 1789–91, customs receipts amounted to $4,399,473. By 1956 annual customs receipts had increased to $704,897,516.

The Annual Report of the Attorney General of the United States for 1880 (p. 91, table No. 7) lists 586 Federal suits against collectors of customs and agents or officers of the United States. The number of customs cases has increased tremendously not only because of the great increase in foreign purchases, but probably also due to the greater awareness of importers of their rights under customs laws in the United States Customs Court. Despite the heavy volume of litigation, the old cliche of justice delayed is justice denied is not true in the customs court. The Annual Report of the Attorney General of the United States for the fiscal year ended June 30, 1956 (p. 247), states that 33,641 customs cases were disposed of during that year. Any importer who is ready to try his case can be heard very speedily, that is, within 60 days after it is filed in the court. The testimony is recorded by a court reporter. After he transcribes his notes, the parties may file briefs which, together with the record, are studied by the judges prior to rendering a decision in the case.

Usually the case which is tried before the Court is a test case. Since it would involve an unnecessary expenditure of time and effort to try the same issue on the same merchandise at each of the ports where it is imported, other cases involving the same questions of law are "suspended" pending the decision in the test case. Thus, numerous cases are stipulated by the parties under decided cases and disposed of according to the Court's decision in test cases. The so-called test case itself may seem to involve a comparatively small amount of money but the eventual disposition of the suspended cases and the customs treatment of future importations involving that merchandise with that value or rate of duty may amount to millions of dollars in revenue to the Government or in refunds to importers.

Discussions of tariff laws always involve mention of customs duties but it is important to note that the Tariff Act of 1930 provides for the importation of 691 articles of merchandise free of duty. Sometimes litigation is required to ascertain whether an imported article was intended by Congress to be free of duty or dutiable under some tariff provision.

Even the Iron Curtain has left an imprint upon our customs laws. By virtue of the Reciprocal Trade Agreements Act, the President of the United States was authorized to negotiate reciprocal trade agreements with foreign countries, and at least 1,000 of the dutiable provisions of the Tariff Act have been reduced by trade agreements which apply to all countries alike when the agreement is made with any one, except Iron Curtain countries. This, too, has resulted in litigation to determine when merchandise is from an Iron Curtain country. For instance, when has the identity of material produced in a country not entitled to the reduced rate, lost its identity as Iron Curtain merchandise and become a new article in another foreign country which is entitled to the reduced rates of duty and from which it is finally exported to the United States? Several cases have been decided on this subject and several are pending before the Court.

Innumerable judicial interpretations exist concerning customs laws. Rules for construing statutes are complex, and numerous. While customs laws are generally subject to the same rules of construction as other legislative acts, some rules have been established for constructing tariff laws, which have characteristics all their own. However, this specialized field of customs law is but a small part of the tremendous law practice of our Nation's own law office, the Department of Justice, which has specialists in every field of law, who strive to keep the scales balanced for the benefit of more than 170 million citizens whom we represent.

It is a great privilege for a lawyer to represent the United States in customs litigation at all the ports of the United States, upon appeal before the United States Court of Customs and Patent Appeals, Washington, D. C., and to participate in the preparation of customs cases which may reach the Supreme Court of the United States—actually to contribute knowledge and effort to uphold the laws of the land, to safeguard and

protect the interests of the Government and its citizens, and to help to make "Justice for all" a living reality in our great democracy "of the people, by the people and for the people."

A Rebirth of Freedom

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. NEUBERGER. Mr. President, because our Supreme Court has lately been the subject of many political attacks, I desire to have printed in the Appendix of the RECORD excerpts from an effective editorial from the Progressive magazine of August 1957, which praises the illustrious Chief Justice Warren and his colleague for their concern over civil liberties and human rights.

This editorial, entitled "A Rebirth of Freedom," emphasizes the fact that our Supreme Court has risked contumely and criticism in order to make sure that traditional constitutional guaranties are respected.

I am particularly pleased to include this editorial in the RECORD, because two of the members of the Court who have contributed greatly to the tribunal's defense of our freedoms are outstanding men from the great American West—Chief Justice Earl Warren, former Governor of the State of California, and Justice William O. Douglas, who was brought up in the State of Washington and spends his mountain vacations in the uplands of the State of Oregon.

The vigorous editorial from the issue of the Progressive for August 1957, has been partially edited by me so as to eliminate any personal criticism, direct or implied, which it might possibly contain of my colleagues in the Senate and the House. I desire to discuss this great question without, in any way, voicing criticism myself, or including criticism of my colleagues in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

A REBIRTH OF FREEDOM

The fury of the current assault on the United States Supreme Court constitutes one of the most shameful chapters in recent American history. Because it dared reassert the rights and liberties of the individual in a series of memorable decisions that called a halt to a 10-year wave of repression, the Court has been subjected to a torrent of vilification almost without parallel in modern times.

These comments were but a trickle in the torrent of abuse that roared around the Court. Justices of the Nation's highest tribunal were flooded with vituperative mail, some of it obscene, most of it anonymous, and much of it so vitriolic that "dirty Communist" was the mildest epithet used.

Why? What had the Court done to provoke this storm of hate bordering on hysteria?

It all began with the case of *Jencks* v. *United States*, certainly the most criticized—and most misunderstood—of the Court's recent decisions.

Clinton E. Jencks, president of Local 890, International Union of Mine, Mill, and Smelter Workers, had been convicted on two counts of perjury in filing a non-Communist affidavit under the Taft-Hartley Act. The Government's principal witnesses, Harvey Matusow and John Ford, both former undercover informers for the FBI, testified they had known Jencks as a Communist. Under cross-examination, however, they said they could not remember exactly what they had told the FBI about Jencks' activities. Counsel for Jencks demanded that the FBI produce the informers' reports, but the trial judge rejected the motion.

In reversing the judgment of the lower court and ordering a new trial, the Nation's highest tribunal held, 7 to 1, Justice Tom Clark dissenting, that when Government witnesses testify in court that they have made reports of the events and activities related to their testimony, the defendant is entitled to inspect these reports to see if they are inconsistent with the witnesses' testimony on the stand.

Many Congressmen and newspaper editors, most of whom seem not to have bothered to read the text of the Court's decision, interpreted this conclusion of the Court as a mandate that the FBI must bring all its raw files into court and that everything it has learned from informers must be made public. No one who reads the decision can escape the conclusion that this is total misrepresentation. For the majority of the Supreme Court, speaking through Justice Brennan, clearly emphasized that the demand of the dependent must be for production of * * * specific documents and that it must not propose any broad or blind fishing expedition among documents possessed by the Government on the chance that something impeaching might turn up. Moreover, the Court held that the demand may not extend to statements taken from persons or informants not offered as witnesses.

The conclusion seems clear enough: The decision emphatically does not mean that the FBI must open all its files to the accused. Far from authorizing a fishing expedition among the raw files of the FBI, the Court specifically limited the right of the defendant to examine the files only of those informants the prosecution chooses to call as witnesses in open court, and to examine only those portions of the reports which are directly and specifically related to counts on which the defendant was indicted.

In handing down this judgment the Supreme Court was merely affirming one of the most ancient and honored principles of American law—that in a criminal proceeding a man whose life or liberty is at stake is entitled to all evidence in the hands of the prosecution that is relevant and essential to his defense. This great principle was best stated by the late Justice Sutherland when he wrote that the interest of the United States in a criminal prosecution is not that it shall win a case, but that justice shall be done.

Despite the bitter outcry based on shabby reporting in many newspapers, the Court did not, as widely charged, go chasing off on new legal tangents and disregard long established precedents. On the principal issue, the Court merely made applicable to that holy of holies, the FBI, a long accepted principle of law.

The fallacious outcry that the Jencks decision would cripple the FBI and destroy its usefulness in the struggle against subversion was paralleled shortly afterward when press, politicians, and professional patriots pilloried the Supreme Court for its decision in the case of *Watkins* v. *United States*.

John T. Watkins, a labor official, had been summoned before the House Un-American Activities Committee in April 1954. Watkins did not claim the immunity of the fifth amendment; on the contrary, he testified freely about himself and his own past associations with Communists, and he readily agreed to identify any persons he had known to be Communists and who still were. But he refused to give the names of persons who had once been Communists but who had, to his knowledge, broken with that movement. It was this refusal, based on his conviction that such questions are not relevant to the work of the committee, that led to the contempt citation by Congress and conviction in the lower court.

In a 6-to-1 decision, Justice Clark again dissenting, the Supreme Court reversed this conviction. Speaking for the majority, Chief Justice Earl Warren held that the investigative powers of Congress "are broad but not unlimited." Congress may investigate only those matters about which it needs to know to perform its constitutional legislative functions.

"We have no doubt that there is no congressional power to expose for the sake of exposure. The public is, of course, entitled to be informed concerning the workings of its Government. That cannot be inflated into a general power to expose where the predominant result can only be an invasion of the private rights of individuals. * * * There is no general authority to expose the private affairs of individuals without justification in terms of the functions of Congress."

The Chief Justice and his five concurring colleagues made it clear that since there are limits on the investigative power of Congress, a witness before the congressional committee has the right not to answer questions which go beyond these limits. Moreover—and this is the heart of the Watkins case—just as a criminal statute must be definite enough so that a person can tell whether the conduct he is considering would be criminal, so also the constitutional guaranty of due process of law requires that witnesses before congressional committees be advised as to the claimed pertinency to legislative purpose of the questions asked them, so that they may have a fair opportunity to decide whether they would be within their rights in refusing to answer.

As for the specific committee and its purpose—the House Un-American Activities Committee, which has been going its ruthless, sometimes lawless, way unmolested for two decades—Justice Warren concurred with countless Americans when he observed that "It would be difficult to imagine a less explicit authorizing resolution. Who can define the meaning of un-American? * * * The committee is allowed, in essence, to determine its own authority. * * * [Committee members] may act pursuant to motives that seem to them of the highest. Their decisions, nevertheless, can lead to ruthless exposure of private lives in order to gather data that is neither desired by Congress nor useful to it."

The uproar generated by this decision resulted from the widely circulated misinterpretation that the Court had destroyed the power of Congress to investigate. But even the most casual reading of the full text of the decision makes it clear that the Court did not in the slightest degree curtail the congressional investigative power when it is used constitutionally—to acquire data to guide the House or Senate in legislating.

In another notable case, *Sweezy* v. *New Hampshire*, the Supreme Court reinforced constitutional safeguards for amademic freedom and freedom of political belief. Prof. Paul M. Sweezy, Marxist author and lecturer, had been summoned twice before Attorney General Louis C. Wyman, of New Hampshire, to whom the legislature had delegated its powers to investigate subversion. Examined at great length, Sweezy answered most of the questions put to him. He responded freely to all questions about the Communist Party, and denied he was a member of

it. But on two topics he refused to answer questions. He declined to discuss his association in 1948 with the Progressive Party, claiming that the State had no right to inquire into his activities in support of a lawful political party. And he refused to discuss the contents of a lecture he had given to a class at the University of New Hampshire, except to deny that the lecture included any advocacy of overthrow of the Government.

The Supreme Court reversed the New Hampshire judiciary's conviction for contempt, but produced no majority decision. Chief Justice Warren filed an opinion which was concurred in by Justices Black, Douglas, and Brennan. Justices Frankfurter and Harlan filed a separate opinion invalidating the State court's decision, and Justices Clark and Burton dissented.

The New Hampshire Supreme Court, in upholding the citation for contempt, had agreed that the questioning of Sweezy trespassed on freedom of speech and academic freedom, but said these freedoms must yield to the right of the State to meet subversion. Chief Justice Warren responded to this contention with an unusually eloquent opinion in which he found that the questions asked Sweezy "unquestionably [constituted] an invasion of petitioner's liberties in the areas of academic freedom and political expression—areas in which the Government should be extremely reticent to tread." Said the Chief Justice:

"To impose any straitjacket upon the intellectual leaders in our colleges and universities would imperil the future of our Nation. No field of education is so thoroughly comprehended by man that new discoveries cannot be made. Particularly is this so in the social sciences, where few, if any, principles are accepted as absolutes. Scholarship cannot flourish in an atmosphere of suspicion and distrust. Teachers and students must always remain free to inquire, to study, and to evaluate, to gain new maturity and understanding; otherwise our civilization will stagnate and die.

"Equally manifest as a fundamental principle of a democratic society is political freedom of the individual. Our form of government is built on the premise that every citizen shall have the right to engage in political expression and association. * * * All political ideas cannot and should not be channeled into the programs of our two parties. History has amply proved the virtue of political activity by minority, dissident groups, who innumerable times have been in the vanguard of democratic thought and whose programs were ultimately accepted. Mere unorthodoxy of dissent from the prevailing mores is not to be condemned. The absence of such voices would be a symptom of grave illness in our society. * * *

"We do not conceive of any circumstance where a State interest would justify infringement of rights in these fields."

The last of the four historic decisions to draw venomous criticism from the professional patriots was the case of *Yates* v. *United States*, involving 14 second-string Communists convicted on the west coast for violation of the Smith Act. This law, passed in 1940, makes it a crime to (1) advocate overthrowing any government in the United States, by force or violence; (2) organize or help to organize any group that advocates the violent overthrow of the Government, and (3) belong to any such group knowing the purpose thereof.

The major issue in Yates strikes at the very heart of what the Smith Act prohibits. In the initial test of the law, the trial of 11 top Communist leaders in 1949, Judge Medina instructed the jury that in order to find the defendants guilty, it must find not merely that defendants had advocated and taught forcible overthrow of the Government, but must find as well that defendants had sought to incite action toward that end. That charge to the jury was upheld in the famous Dennis case.

But the trial judge in the Yates case delivered no such charge to the jury, and did not require it to find the defendants were actually trying to incite action. The Supreme Court held that the failure to include the element of incitement in the charge was a reversible error. Writing for the majority, Justice John M. Harlan drew the fundamental distinction between "advocacy of abstract doctrine" and "advocacy directed at promoting unlawful action." The Smith Act, he pointed out, does not prohibit mere "teaching of forcible overthrow as an abstract principle, divorced from any effort to instigate action to that end." The Court resolved no constitutional issue, for it said that reversal of the lower court was required merely by the meaning of the statute. The Court found that in the case of five of the defendants there was a complete absence of evidence from which a jury, properly charged, could find any attempt at incitement. It ordered these five discharged. In the case of the other nine a new trial was ordered because the Court found there was some evidence which a jury should weigh as to incitement.

The four cases analyzed here were not the only ones resolved in favor of freedom by the Supreme Court during its recent term. There were a number of others ranging over a wide variety of issues. Altogether they added up to far and away the most hopeful development in the field of civil liberties since the wave of hysterical repression swept the Nation more than a decade ago. For the most part the Supreme Court charted no new course; it merely reaffirmed the principles of the Bill of Rights from which we had strayed for so long.

Senator THOMAS C. HENNINGS, JR., Missouri Democrat and the highly respected chairman of the Senate Constitutional Rights Subcommittee, put it this way: "It is not the Supreme Court that should be criticized in the present circumstances. It is the unconstitutional and unlawful procedures which have been permitted to develop in this country that should be criticized." Senator HENNINGS, one of the few liberal Members of Congress to speak up in support of the Court's decisions, declared that the Supreme Court "should be praised for fulfilling its function as the ultimate guardian of human rights and freedom in our society."

The Supreme Court has paved the way for a rebirth of freedom in the United States. It performed a memorable achievement in nourishing and enriching the very soul of American society—individual liberty. It has helped immeasurably to sustain and strengthen the institutions of democracy for the great ideological struggle with communism. At this moment in history when materialism rampantly dominates our lives, when results, and only results seem to count, it is heartening to have our Supreme Court beckon us back to the spiritual values of first principles by counseling us that means are at least as important as ends, and that those who would fight fire with fire run the terrible risk of burning the book they live by.

Courteous, Considerate, Efficient Service

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mrs. GRANAHAN. Mr. Speaker, as we come to the final hours of this session of Congress, I want to take this opportunity to express my personal appreciation to the fine group of young men who serve us here in the House as page boys, doorkeepers, messengers, and in a variety of other capacities.

They are uniformly courteous, considerate, helpful in a million ways, and provide us with very efficient service. When one considers that there are 435 Members of the House of Representatives, and that we are all on constant call when the House is in session—with messages from our offices, visits to the floor with friends and constituents who have come to see the House in action, and the constant summoning of the telephone—it is a wonder these House employees I mentioned can find the energy to carry back and forth all of the many messages and to run all of the many errands which are their duty during a day when the House meets.

I would like to pay particular tribute to the fine work of C. H. "Colonel" Emerson, and "Charlie" Hackney, in directing the work of the telephone pages in the Cloakroom, and "Art" Cameron, overseer of the group, as well as the boys themselves—particularly "Ken" Harding, "Dan" Corcoran, "Bob" Gandel, "Joe" Saunders, "Bill" Grotefeld, and John Larkin. They have been wonderful to me.

Mr. Turner Robertson, chief page, is one of the outstanding employees of the House, and I know I speak for all of the Members when I say how much we appreciate the fine way he directs the bench pages, the door pages, the phone pages—the entire group.

Conflict in Immunity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter to the editor of the New York Herald Tribune, written by one of our very distinguished New York State Supreme Court justices, the Honorable Samuel H. Hofstadter.

Judge Hofstadter's letter appeared in the New York Herald Tribune of August 29, 1957, and reads as follows:

CONFLICT IN IMMUNITY

To the NEW YORK HERALD TRIBUNE.

To obtain the testimony of witnesses who take the fifth amendment, immunity sometimes is granted to them, pursuant to State and Federal laws—whereupon they are compelled to testify. Congress passed the first such Federal law 100 years ago.

These laws exchange amnesty for protection under the fifth amendment. To be constitutional, they must afford freedom from penalty as broad as the privilege for transactions about which the witness is compelled to testify. The immunity must be coextensive with the protection of the fifth amendment.

If the act of immunization meets this requirement, it is valid legally—and morally.

For, in the give-and-take of our society, these are the guidelines: no man may be forced to help convict himself of crime, but when he is fully freed of potential danger, the community may compel him to speak.

There is a flaw in this otherwise excellent accommodation between private privilege and public need. Some acts are crimes both under Federal and State laws. A witness may not refuse to testify because the immunity granted in one of these jurisdictions does not extend to possible prosecution in the other.

An exception arises when Congress enacts legislation of national concern—such as security or defense, for example—and in exercising its power to preempt that area of legislation, confers immunity against State as well as Federal prosecution. Its intention when manifested becomes "the supreme law of the land."

But, except for this, immunity to Federal prosecution will not prevent possible prosecution in a State jurisdiction. Conversely, State immunity does not protect the witness from prosecution in the Federal courts.

In view of the ever-expanding areas and multiplying subjects affected by the criminal law of both State and Federal governments, we must take cognizance of this gap. The residual danger of nonimmunized compulsory incrimination can be eliminated by a simple expedient. Congress and the several States should enact reciprocal immunity laws.

The Federal law would grant immunity where a State agency has granted immunity. Such automatic amnesty would only apply, however, where the State in question had a reciprocal law to the effect that it would not prosecute for the same matter where a Federal agency has already conferred immunity.

Such an arrangement is pragmatically and morally correct. It will eliminate contention—however ill-founded legally—by recalcitrant witnesses to whom immunity is offered. It perfects the otherwise plenary protection against compulsory self-incrimination enjoined by the Bill of Rights. For ordered liberty to persevere, it is the duty of each generation to fashion fresh forms for its ancient freedoms.

SAMUEL H. HOFSTADTER.

NEW YORK, *August 26, 1957.*

Gen. O. P. Weyland—The TAC and Limited War

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial which appeared in the Christian Monitor, Tuesday, August 20, 1957:

TAC AND LIMITED WAR

(By Robert R. Brunn)

(The Tactical Air Command (TAC) was built up during the Korean war to carry the burden of air war there. Now it has been trained up to fight if necessary on the other side of the world in so-called brush fires, a type of war which seems more likely than global war because of the mutually deterrent nature of nuclear weapons. TAC's mission is discussed and its commanding officer's thinking about the limited use of nuclear weapons is reported.)

LANGLEY FIELD, VA.—Gen. O. P. Weyland leans back in his chair. "The next brushfire problem may be more remote than Korea, any place where the Communists think a quick move would be successful. If quick help is needed, Tactical Air Command could provide great striking power with a few planes if small nuclear weapons are used in a strictly military sense."

In that brief statement by the commanding officer of TAC you have its principal preoccupation today: limited war. Tactical Air Command has the fighter-bombers that might fly across an ocean in a hurry to contain an action until ground troops could be brought to bear. Its specialty is antipersonnel bombing, the taking out of bridges and roadblocks, cutting communications generally.

TAC is building what it calls a composite air striking force, one that would try to contain ground action. Last fall a complete air strike force was flown to Europe by TAC. There were 40 combat aircraft plus aerial tankers and transports. The idea is that a force of this kind could find itself a forward base and attack from there.

For example, suppose there was a war condition somewhere in southeast Asia. TAC tankers might refuel back in Arabia and continue to support the forward fighter-bombers. This striking force in all would include tactical bombers, fighter-bombers, reconnaissance planes, carriers for supplies, and tankers.

REVERSED ROLES FORECAST

Air Force thinking is that very often in the future the roles of the Army and the Air Force may be reversed. Rather than planes supporting troops right from the beginning, the Air Force may move in first with bombers and knock out an enemy swiftly, with the troops coming in later to mop up. The argument is that the Air Force has a much simpler logistic problem.

What is Tactical Air Command anyhow? TAC had its great buildup during the Korean war. It carried the real brunt of the air war there, giving close support to the ground troops. Today it has units scattered across the United States in training and on readiness, to carry out its basic missions of holding air superiority over an area, interdiction of communication lines, close air support of ground troops, tactical reconnaissance, and airlift.

Its mission is much more complicated in some ways and broader than that of the Strategic Air Command, which exists, in effect, to drop bombs on the critical centers of any aggressor. TAC must be more flexible, ready to go in many directions and to fight many different kinds of engagements and engage in many different types of missions.

One typical unit of TAC this writer visited is the 366th Fighter-Bomber Wing. Stationed in central Louisiana at England Air Force Base, it has its eyes on the world, for, as it commanding officer, Col. William A. Daniel, says, "The 366th is ready to strike anywhere in the world."

The 366th always maintains one squadron in Europe on a rotation basis. A few months ago each squadron in the wing had rotated once for a 6-month tour and its 391st squadron was in Abiano, Italy. The 366th squadrons have been cut way down in housekeeping facilities and administration so that they are ready to go at a moment's notice from its homes in and near Alexandria, La..

The 366th is about the size of an Army division. It uses up about $16 million of supplies yearly and has a payroll of $2 million. Its members live in their own little "city" at England Air Force Base and are now busy building a large housing project to better house their personnel.

This business of having combat-ready units actually based in central Louisiana makes sense. This way they can go either way, east or west; they are assured of almost compete protection from surprise attacks; they can cut down on the large cost of transporting families, supplies, and replacements across ocean and continents.

Behind Air Force tactical units such as that in Louisiana there lies a very hot military question: Will they be able to use nuclear weapons in limited wars without this spreading to total war?

AIR WAR IN EUROPE

Let's have a visit with General Weyland who knows as much as anyone in the Air Force about tactical-aid-power use. His XIX Tactical Air Command gave Gen. George S. Patton, Jr., classic air support when the Third Army made its historic dash across France in 1945. General Weyland participated in six major campaigns in tactical air in World War II.

Then in the Korean war he played the largest air-command role as commander of the Far East Air Forces and of the United Nations Air Force. It was a tactical air war primarily.

So when you ask General Weyland about the use of nuclear weapons in a limited way you are talking to someone whose opinion is valuable. He is not unequivocal and uncompromising in his position, but generally speaking he believes that nuclear weapons can be used in a limited engagement. A large school of thought holds this is impossible, but let's hear his thinking on it.

Without placing his opinions in direct quotations, what follows is the burden of his thinking about nuclear weapons and the shape of possible limited conflict:

A nuclear war does not necessarily mean total obliteration as some people believe. The nuclear weapons have been refined and the Air Force now has them in quite small sizes—not only in the size of explosion but also in physical size so that they can be carried by smaller airplanes.

For example, he believes a fighter-bomber can destroy a bridge without unduly destroying the surrounding territory. What this means is that there would be less need to destroy than in Korea, and no need to make hundreds of sorties as in Europe.

Big weapons are weapons of desperation, but at the same time the Strategic Air Command with its big bombers is essential for deterrent power alone. Because of the mutual unwillingness to use large weapons first, a new global pattern is emerging.

General Weyland agrees that it is as much a political as a military struggle. Fearing total war, the Soviets are looking to political and economic attrition for their gains. But Korea proved that the Soviets are willing to use limited military action, especially if they can use someone else.

The next brush fire problem may be much more remote than Korea—any place where the Communists think a quick move would be successful. General Weyland says this is the reason for the TAC striking force. If quick help is needed, TAC could provide great striking power with a few planes and small nuclear weapons used in a strictly military sense. Nuclear bombs can get much closer to their targets because of their power and so there will be more assurance of destroying targets, too.

Meanwhile the vast fear and adverse propaganda made following the atom bombing of Hiroshima and Nagasaki is a problem in Asia. In fact, there may be a rising clamor for the abolition of all nuclear weapons in the future.

General Weyland holds that the general world opinion that nuclear weapons are weapons of mass destruction must be corrected. Why shouldn't the United States hold a public nuclear bombing show which would make the point quite clear to global thought that these weapons may well be used in a limited way?

TACIT AGREEMENT SEEN

He says that there is a tacit agreement on both sides in any conflict not to use the larger weapons. But then, what will be the dividing line between larger and smaller weapons? No one is sure. At times a fairly large weapon might be needed.

For example, in Korea his forces never obliterated a village until Pyongyang, the capital of North Korea, became a target. Not only was it a communications center but it housed an arsenal. In Pyongyang the Communists kept shifting the headquarters and supply centers. This brought continued bombing, which eventually wore away the city, progressively eliminated it. General Weyland's planes did drop warning leaflets before widespread bombing.

An example of what can be done: In Korea to knock out 1 arsenal he remembers it took 30 big B-29's 2 missions, each dropping between 10 and 15 tons of TNT from each plane. One nuclear weapon would have taken care of this. Despite this great power, it probably would be kept under control, if for self-preservation alone. We did not bomb Peiping.

Having said all this, General Weyland says he does not believe that the United Nations forces should have used the nuclear bomb in Korea. From the strictly military point of view, only nuclear bombing of China might have been useful. A bomb on a military target in Mukden or anywhere in Manchuria would have been a warning. Having said this, he agrees that the United States did not realize the full moral impact of the act when Hiroshima and Nagasaki were bombed.

So that is General Weyland's case for the limited use of nuclear bombing. As the commander of the United State Air Force's arm designed to use limited bombing, he is naturally interested in it.

With all this airplane talk, TAC need not look far to see missiles on its horizon. Already TAC is organizing Matador missile units and is going through the interesting process of sorting out fighter-bomber and missile missions, setting up a hybrid organization that will utilize both. But missiles or bombers, the Tactical Air Command is a body of highly trained men ready to go anywhere in an unstable world where more and more people are looking away from total war to limited war as the stronger possibility.

Control of Signboards on the Interstate Highway System

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a vigorous and effective editorial from the St. Louis Post-Dispatch of August 26, 1957, entitled "Victory for Ugliness."

This same editorial page of a great daily newspaper also contained a cartoon by the gifted cartoonist, Daniel R. Fitzpatrick, along the same theme. That theme is the backward and mistaken action of the Senate Public Works Committee, by a vote of 7 to 6, in shelving our bill to control signboards along the interstate highway system of 41,000 miles.

Regrettably, the dramatic cartoon by Mr. Fitzpatrick, who is one of America's illustrious cartoonists, cannot under our rules be included in the pages of the RECORD, but the editorial from the St. Louis Post-Dispatch will help to make evident the general approach of the drawing by this talented artist.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY FOR UGLINESS

Senator NEUBERGER of Oregon says the 7-to-6 vote of the Senate Public Works Committee killing the billboard-control bill was a "victory for ugliness," and there is no better description. The closeness of the vote, however, encourages hope that the victory will be temporary.

Mr. NEUBERGER introduced the first bill to control roadside advertising along the newly planned Federal Interstate Highway System. His argument was that the people would pay for these highways, and thus would create an advertising opportunity which could enrich the advertisers at the expense of the scenery. The people, he said, were entitled to some protection.

So far they have not got protection. The original Neuberger bill provided that the Federal Government would pay the States up to 90 percent of the cost of buying roadside advertising rights. This was watered down in committee to a plan to pay the State just three-fourths of 1 percent of the cost of a highway project for regulating (not abolishing) advertising. Now that has been killed.

The seven Senators who voted for the billboards were Republicans MARTIN of Pennsylvania, HRUSKA of Nebraska, KUCHEL of California, and REVERCOMB of West Virginia, and Democrats KERR of Oklahoma, SCOTT of North Carolina, and MCNAMARA of Michigan.

Here was a measure of the power of a lobby. The public has no lobby. But arrayed against the control bill were the outdoor advertising interests, backed by motel and restaurant and oil interests and the sign-painters union. From this group came arguments that billboards make the landscape more beautiful and driving safer.

It is a commentary on the Senate that such nonsense could justify the growing blight on public roads. For the billboard blight is growing. According to the Kiplinger magazine, Changing Times, advertisers spent $44 million on billboards back in 1940, but this year are spending more than $200 million. The interstate highways yet to be built could support a far more expensive clutter.

But the fact that the Interstate System has not yet been built offers some hope. The Neuberger bill should be revived in the next session of Congress. There is still time to defend the beauty of the land along the new road network, if the taxpayers who pay for roads will let their Senators know how they feel.

Federal Aid for School Construction

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. RHODES of Arizona. Mr. Speaker, everyone wants to build schools. The Members of this body, and indeed the citizens of our country, do not all agree on the proper method of building schools, nor on the responsibility for their construction. One segment of our population believes that only local authorities should build the schools. Another segment believes that it should be a combination of local and State authorities. Still another group feels that there is a Federal responsibility involved, and that the Federal Government should assume part of the responsibility for school construction.

As a member of the Education and Labor Committee, I have always maintained that provided the Federal Government does not control education, it is immaterial as to who builds the schools. The only material factor is that they actually be constructed, and that no American child receive a substandard education because of lack of facilities.

The records will show that the local authorities, in almost every section of the country, are doing their utmost to build schools. Only in very rare instances do we have a school district which is not ready and willing to tax its last resources to provide schools. However, try as they will, the local authorities have not in all cases been able to provide schools needed to educate an increasing school age population.

In many States, the State itself has stepped into the breach and has helped the local school districts in the construction of schools. In almost every instance in which this has occurred, the problem of providing schools has been solved. In fact, I am satisfied that the problem can be solved by any State if it desires to render substantial financial aid to the local school districts.

If the States would face up to their responsibilities, we would not need to even discuss the possibility of Federal aid to school construction. Or, if more builders, or just plain citizens, would feel that it was their responsibility to help provide schools, there would be no need for Federal aid to school construction.

A fine example of a builder facing up to what he deems to be his responsibility is set forth in the following editorial from the Arizona Republic. In this editorial is recounted the story of how the Cartwright School District, as hard pressed a school district as there is in this country, was helped by a progressive builder, John F. Long, of Phoenix, to meet its existing classroom shortage. The editorial follows:

EXAMPLE AT CARTWRIGHT

Now that Congress has killed the Federal school aid bill, local communities are faced with the necessity of meeting their own classroom shortages. A lot of them could take a lesson from the Cartwright School District in Phoenix. Like a few other districts in Arizona, Cartwright is in serious straits because it has bonded itself to the legal limit and still faces a classroom shortage. It has been caught on the merry-go-round of a population growing so fast that increases in assessed valuation can't keep pace.

Cartwright is fortunate in one respect. It counts a progressive home builder among its greatest assets. He is John F. Long, who has turned the farms out on West Indian School Road into modern housing developments with hundreds of homes.

Appreciating the school problem to which his developments have contributed, Mr. Long has started construction of a 12-classroom school for the Cartwright district. He has provided the land, and has even furnished the architectural work. He says the final bill

ill be about half of the standard price. The chool building will be turned over to the istrict on a lease-purchase agreement, thus emoving the need for a bond issue (which he district can't issue) and permitting for ayment in the form of rent (which the dis-ict can pay because it will receive State d based on the increased average daily at-ndance).

The only place where Federal school aid er made sense was in such population-mpacted areas as the Cartwright district. ut the district's school board, with the help f Mr. Long, is showing how even the most apidly growing areas can overcome the class-oom shortage if they quit sitting around and aiting for Uncle Sam to do it. The lease-urchase scheme should be widely adopted hrough the country, thus ending for all ime the annual request for a handout from ashington, a handout that local taxpayers ill have to pay in the long run anyway.

If more builders would face up to this esponsibility, and more States would ce up to their responsibility, there ould be no school problem. Realizing at the States need to enter this field, e Republican Party of the State of rizona included the following plank in s 1956 platform:

EDUCATION

The future of our State rests with our ildren; therefore, their education is of ime importance. The tremendous expense volved dictates efficiency and economy. e pledge our support to the highest stand-ds of education with equal opportunity for l children.

Many rapidly growing school districts in e State have reached the limit of their nded indebtedness, and yet are unable to ild adequate school facilities. We recom-end the establishment of a State school ilding authority to render financial assist-ce through lease-purchase agreements to stricts currently unable to provide essen-l school buildings.

The ever-increasing needs of higher edu-tion are so important and their cost so eat, we believe that Arizona must ap-oach the problem without sectional bias. e shall seek to provide for such needs, ilizing all available resources within a tewide framework.

Mr. Speaker, my own private platform r building schools is set forth in this tension of remarks. First, let every hool district do its utmost to solve its n problem; second, let responsible ivate individuals realize that they are part of the problem, and do what they n to help solve it; third, let the States emselves, through school building au-orities or other means, help the school stricts; fourth, if all of these measures ll do not build sufficient schools, then e responsibility must in the end rest on the Federal Government.

Can the Federal Government afford help build schools? There is only e thing which we cannot afford in this untry. We cannot afford to raise even e generation of uneducated or par-ally educated children. In this 20th ntury world with its complexities, its veiling of scientific mysteries hereto-re undreamed, its competition between eologies, its deadly threat of an end to e in the shadow of a mushroom cloud, educated population is our last, best apon. To allow this mighty sword to rrode, or to lose its luster, would be to ndemn the world to death, or to gen-ations of Communist slavery. These ings must not happen.

Segregation in the Field of Sports

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. FULTON. Mr. Speaker, I am submitting the enclosed letter, two articles, and my reply for the consideration of Congress and the American people:

SUN-TELEGRAPH,
Pittsburgh, Pa., August 23, 1957.
Representative JAMES G. FULTON,
House of Representatives,
Washington, D. C.

Mr. FULTON: I am enclosing a couple articles I've written on a situation I find annoying. If it annoys you as it does me, you may be able to get the Defense Department to advise the United States Military Academy to withdraw from this football game.

It is my feeling that the United States Military Academy should represent all the people, that the United States Military Academy has no business participating in a segregated sports event.

I concede that the contract for this game was signed 4 years ago, but other northern colleges have canceled contracted games since Louisiana last year passed its distasteful jim crow sports law (Negroes and whites cannot compete together or sit together at public events). Unofficially, a boycott exists. The United States Military Academy is about to break that boycott and become the first northern college to go into Louisiana since the law went into effect.

GEORGE J. P. KISEDA.

[From the Pittsburgh Sun-Telegraph of Saturday, August 24, 1957]

ARMY DEFIES THE BOYCOTT

(By George Kiseda)

The United States Military Academy is going ahead with plans to play a segregated football game with Tulane University in New Orleans November 16. Lt. Gen. Garrison H. Davidson, Superintendent at West Point, told the Sun-Telegraph yesterday that "we made our contract 4 years ago and we're going to honor it."

It will be the first breakthrough in an unofficial boycott that has existed among northern colleges since the Louisiana State Legislature last year passed a law barring interracial sports competition and integrated seating. No northern colleges have sent their football and basketball teams into Louisiana since then.

The University of Pittsburgh was the first to announce its position, withdrawing as a possible candidate for the Sugar Bowl football game. Then the University of Wisconsin canceled a 2-year football contract with Louisiana State University.

Subsequently, Notre Dame, Dayton, and St. Louis asked to be relieved of their contracts to appear in the Sugar Bowl basketball tournament. In some cases there were no Negroes on the college teams involved, but the colleges withdrew on principle and also because they had Negro students and alumni who would not be able to sit with white students and alumni.

There are no Negroes on the Army football team, but there are seven Negroes in the Academy.

According to General Davidson, himself, an old Army football star and coach, the Tulane game was scheduled 4 years ago by Col. Earl Blaik, who is coach and athletic director at West Point. A telephone interview with General Davidson went like this:

"Question. Are you going ahead with plans to play Tulane in New Orleans?

"Answer. Sure.

"Question. Are you aware of the year-old Louisiana law barring interracial competition and requiring segregated seating?

"Answer. Yes. We entered this contract 4 years ago, you know.

"Question. Are you aware that no northern college has played down there since the law went into effect, that, in other words, there has been a boycott?

"Answer. Well, we made our contract 4 years ago and we're going to honor it.

"Question. Some of the northern schools have broken contracts since the law went into effect.

"Answer. Our responsibility is to play the game. Our policies, insofar as the corps of cadets is concerned, are equal opportunity for everybody.

"Question. Suppose 1 of the 7 Negroes in the academy wants to go to the game. What will you do?

"Answer. Nobody from the corps of cadets is going. It's too far—it's a matter of economy.

"Question. What about Negro alumni? What if they want to go to the game?

"Answer. I wouldn't guess at a proposition like that. I'd have to wait and see what develops.

"Question. How will you sell your allotment of tickets?

"Answer. We won't place restrictions on our tickets.

"Question. But Negroes won't be admitted to white sections.

"Answer. I'm not so sure about that. I don't know.

"Question. What is your position on the United States Military Academy participating in segregated sports events?

"Answer. Our laws are the national laws. We follow a policy of equality of opportunity for everybody in the corps of cadets.

"Question. But what is your policy on the United States Military Academy participating in a segregated sports event such as this?

"Answer. I don't think I'd want to comment on a hypothetical question that hasn't arisen yet. I just know that we're going through with the game. I think that should answer it.

"Question. Aren't you embarrassed somewhat that the United States Military Academy will be the first northern college to play there since the law went into effect?

"Answer. Oh, no. Not a bit. We contracted this game with the university and we're going to honor our contract."

[From the Pittsburgh Sun-Telegraph of August 26, 1957]

SPEAKING OUT ON SPORTS

(By George Kiseda)

When Louisiana's odious Jim Crow sports law passed in the State legislature last year, there was some speculation that it would hurt New Orleans' Sugar Bowl promotion. But the lowercase democrat who introduced the bill into the legislature assured everybody that no such thing would happen.

"Sugar Bowl teams," said Louisiana State Representative Lawrence Gibbs, "will put first things first when they get an opportunity to play in the annual classic. They get $120,000 (sic) for appearing in the Sugar Bowl and don't think they overlook the prestige either."

Northern colleges did put first things first but not the way Representative Gibbs expected. Putting principle before principal, Pitt said it wants no part of the Sugar Bowl until Louisiana decides to rejoin the Union. Notre Dame, Dayton, and St. Louis pulled out of the Sugar Bowl basketball tournament, Wisconsin canceled a 2-year football contract with LSU.

Since Gibbs' gibberish became law, no northern colleges have sent their football

or basketball teams into Louisiana. Now, though, the boycott is about to be broken in the last place you would expect it to be broken—West Point.

Lt. Gen. Garrison H. Davidson, Superintendent of the United States Military Academy, told the Sun-Telegraph last week that Army will play Tulane in New Orleans November 16 as scheduled.

General Davidson's explanation was that the game was contracted 4 years ago and Army was dutybound to honor its contract. Other colleges have felt differently.

General Davidson was cordial throughout the telephone interview but seemed not to be aware of the significance of the United States Military Academy participating in a segregated sports event.

The United States Military Academy presumably represents all the people. It seems to me that the Academy is under no obligation to honor a contract that was legally conceived but now can be honored only by violating the Constitution.

The last thing I asked General Davidson was, "Aren't you embarrassed that the United States Military Academy will be the first northern college to play there since the law went into effect?"

"Oh, no," he replied. "Not a bit. We contracted this game with the university and we're going to honor our contract."

I, for one, am embarrassed that General Davidson is not embarrassed.

WASHINGTON, D. C., *August 29, 1957.*

Mr. GEORGE KISEDA,
The Pittsburgh Sun-Telegraph,
Pittsburgh, Pa.

DEAR GEORGE: Received your articles. Certainly admire your courage and think they are wonderful. Am placing them in the CONGRESSIONAL RECORD today and will send you copies. Am also contacting White House immediately protesting football game in New Orleans on November 16, and strongly urging its cancellation. What is use of civil-rights law by Congress if Army disregards civil-rights law by Congress if Army disregards civil-rights and cooperates in their repression. Wil lbe glad to follow up on this matter strongly. Count on my full coperation.

Congressman JIM FULTON.

Address by Petras Dauzvardis, Consul of Lithuania

EXTENSION OF REMARKS
OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine speech which was delivered by Petras Dauzvardis, consul of Lithuania, at the observance of the anniversary of New York-Kaunas flight of Darius and Girenas, in Chicago on July 21, 1957.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, AT OBSERVANCE OF ANNIVERSARY OF NEW YORK-KAUNAS FLIGHT OF DARIUS AND GIRENAS, JULY 21, 1957, MARQUETTE PARK, CHICAGO

Capt. Stephen Darius and Lt. Stanley Girenas are symbols of the close friendship of the United States and Lithuania. Born in Lithuania, they came here as youngsters, studied, and were volunteers in the United States Army, then fighting for the freedom of all nations. Lithuania regained her freedom and became an independent state as a result of the war and the determination of the Lithuanian nation. Darius returned to Lithuania to help her rebuild.

After Darius' return to this country he brought along the idea of a nonstop flight to Lithuania to strengthen American-Lithuanian ties. Girenas joined him in carrying out the plan. They accomplished their mission, even though they did not reach Lithuania alive. Their heroic sacrifice was highly esteemed by both countries. Eloquent testimony of this is this imposing monument in Marquette Park, this and other patriotic observances, and the sincere and ardent expressions by people of both nations.

These expressions touch upon America and Lithuania as well as on Darius and Girenas. The flight and death of Darius and Girenas occured in the month of July. This month is replete with significant historical events: America's Declaration of Independence, the legal recognition of the State of Lithuania, and the Soviet treachery against Lithuania and the community of nations.

The Soviet Russian-Lithuanian Peace Treaty, by which Lithuania was recognized as a sovereign and independent state, was signed on July 12, 1920. On July 28, 1922, 35 years ago, America recognized Lithuania as a full-fledged state. The Lithuanian Legation at Washington and the Consulates at New York and Chicago were opened after this recognition and continue their functions to this day.

The American Legation and Consulate in Lithuania, however, no longer function. They were closed by the imperialistic Soviet occupant of Lithuania, who seized Lithuania in June 1940, deposed the lawful Lithuanian Government and substituted its illegal puppet agency, which still rules Lithuania and annihilates its people, although the Stalin-Molotov regime has been damned and condemned by the present Soviet bosses for its many iniquities.

Lithuania, as I said, was seized by the Soviets in June of 1940. On July 14 and 15, 1940 the occupants, in violation of the Hague Convention, enacted the tragicomedy of elections—actually the appointment—of a so-called peoples parliament. By order of Stalin-Molotov this body (illegal by international as well as Lithuanian law, and even by the doctrine of the father of Russia's Communists, Lenin), on July 21, exactly 17 years ago, voted to Sovietize Lithuania and incorporate it into the Soviet Union.

All free Lithuanian representatives and freedom-loving Lithuanian people denounced this illegal act by the Soviets. Lithuanian Minister in Washington, P. Zadeikis, lodged his protest with the Department of State on July 22, and the Department of State published its condemnation on July 23, 1940.

So the month of July is a month of triumph and of tragedy for Lithuania. Triumph, because in that month Lithuania was recognized de jure by America and Russia, and because America continues to recognize her as an existing state—and is making every effort to free her. Tragedy, because Russia violated her pledge and throttled Lithuania's independence—enslaved her people and is mercilessly torturing and exploiting them.

However, just as every tragedy teaches a lesson, so Lithuania's tragedy teaches a lesson to the nation and to the world. The nation steels itself for the struggle for freedom: the people become more freedom-conscious and feel that like all other cherished possessions, freedom must be guarded and defended, otherwise it can be lost.

The tragedy of Lithuania teaches the world that the leaders of the United States are honorable men, while the rulers of the Soviet Union are hypocrites. America does what it says, while the Soviet Union says one thing—but does another.

Here is an example of Soviet fraud: After the Soviet Union imposed mutual-aid pacts upon the Baltic States, citing the treaties of peace and nonaggression, and inserting an article about the noninterference of one state in the affairs of another, Commissar of Foreign Affairs V. Molotov declared (on October 31, 1939) to the Supreme Soviet and the world:

"These pacts are based on mutual respect for the political, social, and economic structure of the contracting parties, and are designed to strengthten the basis for peaceful, neighborly cooperation between our peoples. We stand for the scrupulous observance of pacts on a basis of complete reciprocity and we declare that all nonsense about sovietizing the Baltic countries is only to the interest of our common enemies and of all anti-Soviet provocateurs."

Less than a year after the signing of the pacts and the solemn declarations, the Soviet Union seized and sovietized Lithuania and the other Baltic States—in flagrant violation of agreements and pledges. This is clearly a crime against international law and morality.

The present rulers of the Kremlin accuse Stalin and Molotov of all kinds of crimes—Khrushchev and Bulganin also swear allegiance to Lenin, but break their word and violate even Lenin's doctrine.

If Stalin and Molotov offended peace, friendship and coexistence—and they did this by seizing Lithuania and other countries—then Khrushchev-Bulganin-Zhukov must right these wrongs, by restoring freedom and independence to Lithuania and the other enslaved states.

Khruschev, Bulganin, and their cohorts say that the Lithuanians, Latvians and Estonians joined the Soviet Union "freely" that their "parliaments voted" this move. This is a bald-faced lie, the alibi of culprits. They do not mention the illegality of these "parliaments," or their lack of any right to convert independent states into colonies of a foreign power. They also refrain from mentioning the doctrine of their "father" Lenin, which plainly states:

"Any incorporation of a small or weak nation into a large or strong state without the definite, clear and voluntary desire of that effect of that nation * * *" and especially "* * * if this nation is not accorded the right to decide the problem of the form of its political existence by a free vote—implying the complete withdrawal of the troops of the incorporating or strong nation—then the incorporation is an annexation, i. e., an arbitrary appropriation of a foreign country, an act of violence."

The Lithuanian nation had no say regarding the incorporation of Lithuania. The country was arbitrarily and violently annexed to the Soviet Union, with the Soviet Army and Molotov's deputy Dekanozov present and operating in Lithuania.

All evidence shows that Lithuania was occupied by force, illegally incorporated into the Soviet Union, and is illegally restrained by the Soviets.

The Lithuanian nation wants to be free and act freely, and to have its own independent state, in which it could govern itself.

The Lithuanian nation demands that the occupants get out of Lithuania and restore sovereign rights and self-government to her as set forth in the Lithuanian-Soviet Peace Treaty, the Atlantic Charter, and the Charter and Declaration of the United Nations.

One-fifth of the United States of America

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. LONG. Mr. President, some time ago I introduced a bill to create a commission to provide for Federal-State commissions and a National Land Study Board of Review to study problems of land ownership and to propose disposition of land in excess of Federal needs.

I ask unanimous consent to insert in the Appendix of the RECORD a thoughtful editorial supporting my bill, which appeared in the Winston-Salem Journal of August 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE-FIFTH OF THE UNITED STATES OF AMERICA

The history of the North American continent is in large measure a story of unplanned land exploitation without regard for the consequences. We are paying the penalty today for our ancestors' lack of foresight in land use.

Because of the emphasis placed on conservation in the 20th century, much has been done toward reversing the trend toward depletion of the soil and forests. The old policy of giving away land or selling it for a song has been replaced by various programs of Federal land acquisition. As a result, the Federal Government now owns more than one-fifth of the continental United States, nearly 90 percent of which lies in 11 Western States.

It is only natural, therefore, to ask the question: Where do we go from here? Should the Federal Government continue to acquire land? Or should it dispose of some of its holdings to the States and private owners?

To help provide an answer to those questions, Senator RUSSELL LONG, of Louisiana, has proposed creation of individual Federal-State commissions and a National Land Study Board of Review to study the problems of public land ownership. To answer critisisms that he proposed a giveaway of Federal lands, Senator LONG would set up an elaborate system of checks and balances. In the final analysis, each House of Congress would hold the veto power over any recommendations for disposal or acquisition of lands that might result from the study.

The Long bill seems generally in line with recommendations of the Commission on Intergovernmental Relations, which proposed in 1955 a working board to consider resources policy, including land policy. The Hoover Commission also has recommended creation of a committee to study Federal lands so that a uniform policy of management could be developed. Nothing has come of either of these recommendations. In fact, says Senator LONG, no overall congressional land policy has been set forth since the Homestead Act of 1862.

Answers to the questions posed above do not come easily. For one thing, the issue of Federal land policy is packed with emotion. Some conservationists view with alarm any disposal of Federal lands. Other citizens argue vehemently that a free-enterprise system demands the reestablishment of private ownership as the ultimate objective in Government land policy. The wise solution probably lies somewhere between these extremes.

The sale of some Federal lands, especially those set aside as national parks and national monuments, would be tragic in the extreme. Indeed, prudence suggests that the Federal Government should act quickly to acquire the few areas of shoreline that remain undeveloped. Many, perhaps most, Federal coast holdings should be preserved intact, especially where watershed protection and erosion control are vital. Some grazing lands in the West might be sold to private interests, while others probably should be kept in the public domain.

But there is no virtue in Federal land ownership for its own sake. Where large areas are tax-free, local and State governments may be hard pressed for tax sources, even though some Federal lands yield payments in lieu of taxes. Thus there is no reason to shy away from the sale of Federal lands, if it can be accomplished without harm to the national interest and without showing favoritism among prospective purchasers.

Senator LONG's stated purpose in introducing the bill is not to have the Federal Government sell lands it is more desirable that they own and manage, but rather to dispose of those lands that it is more desirable to have in private, State, or other public ownership. If his bill would help to accomplish that purpose, it should get favorable consideration in Congress.

A Common Market for the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the Honorable Eric Johnston, president of the Motion Picture Association of America, before the American Chamber of Commerce for Brazil, in Rio de Janeiro, on August 7, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A COMMON MARKET FOR THE WESTERN HEMISPHERE

(Address delivered by Eric Johnston, president of the Motion Picture Association of America, before the American Chamber of Commerce for Brazil, in Rio de Janeiro, August 7, 1957)

There are moments in history when mankind is offered the opportunity for greatness. These moments occur only infrequently. Often they are missed, escape into oblivion.

There is, I think, such a moment now. There is an opportunity beckoning to the peoples of all the Americas—from Canada to Cape Horn. It is a moment for greatness. We stand on the threshold.

What is this opportunity before us? It is the opportunity to demonstrate to all the world the capacity, the capability, of our hemisphere to develop an economic and social system that can be man's best hope for progress, for security, for peace.

And what is the pattern that I have in mind?

It is nothing less than the development of a common market for the whole Western Hemisphere.

Now this prospect may be unprecedented and it may be dazzling. Some will say it is downright impossible.

It is true that the idea of a common market for the Western Hemisphere has elements of a dream. But it is a dream that I think we can turn into reality. The components of the dream are the regional groupings now under discussion.

What great idea did not start as a dream? Think of all the dreams that mankind has put into practical use—for his advancement, for his common welfare.

I don't come to offer you the idea of a common market, complete, packaged, and wrapped up overnight. It won't come quickly. It won't come easily. It will be a long pull and a hard one.

I don't propose that overnight we dismiss tariffs and sovereignty, pride and self-protection, as if we were shucking an ear of corn.

What I propose is something much simpler. I propose that we be receptive to the idea of a common market on a hemisphere basis; that we discuss it and talk about it; that we hold conferences about it; and that we consider what steps we might take together to achieve this ultimate goal.

There is one thing that the common market must never be and can never be. It must not be dominated by any country or any group of countries. It must not be dominated by colossus America or colossus anything or anybody.

It must show at every step of the way that it is based on mutual trust, mutual equality, mutual benefits.

Now how do we go about creating this common market? There are innumerable ways. As a matter of fact, we already have an advanced pattern of economic cooperation between our nations. In addition, a good many organizations throughout our hemisphere are devoting attention to it. As you all know, there are also encouraging beginnings of regional groupings in Central and South America.

What we need above all is to continue our self-questioning, our self-examination, to seek constantly for things that we can do to improve the economy of the hemisphere.

In my opinion, the inevitable pattern of the future will be large-scale regional economic development—the common market among nations.

As we look around the world, we see two significant developments in this respect. One is occurring in the Soviet orbit. The other is taking place in Western Europe.

What is the Soviet pattern? It is an imperial system as old as Rome. It makes vassals of the satellite states, drawing out their wealth and substance for the benefit of the Soviet Union. The Communists speak of a common market. What they have achieved in reality is a slave market.

In Western Europe, there is the true beginning of a common market based on the voluntary energies and dedication of the countries involved. This common market is being created because the people themselves see in it a new development that offers greater promises and rewards than they have known before.

Now I don't propose a Western Hemisphere common market from either negative or defensive reasons—though these are compelling enough in their own right. I propose it consciously and affirmatively for the great benefits it can bring to us all.

The blueprints can, and I believe, will be drawn. They will come from the leaders of industry and labor, agriculture and the professions in all our countries, and from the inter-American organizations even now pursuing studies on how to accelerate our economic and social development in the Americas.

It is just this belief in our opportunity for economic development and our eagerness to get on with the job that has already brought together a number of distinguished citizens of Canada, of the United States, of the Latin American States.

Through the National Planning Association, we have formed the Inter-American

Research Committee. I happen to be chairman of this committee and Galo Plaza of Ecuador is vice chairman.

Here in Brazil, your great country is greatly represented by Fausto Rivera Cardoso, one of the leading union leaders in this hemisphere, head of the National Confederation of Commercial Workers, a man of boundless energy and vision.

All of you, I am sure, are familiar with the committee. But I should like for a moment to tell you a few things that are on our mind. We shall have our first meeting in Washington this October.

On our committee, we've found a great deal in common—which, of course, is always useful in a committee seeking common objectives. All of us speak the same language and in much the same accent—the language is optimism—and the accent is private initiative.

But while we commune in optimism, we are also sensible enough to expect no miracles and to expect plenty of problems. We have certain beliefs in common. They are these:

We believe, first, that the Western Hemisphere is potentially the best area to achieve the expansion and growth of private enterprise for all segments of society.

We believe, second, that all nations of this hemisphere can benefit by more extensive mutual use of our mutual resources—raw materials, capital, know-how, skills, educational facilities.

We believe, third, that the Americas—with an old and durable concept of international cooperation—must develop a new and practical approach to our economic destiny.

In seeking this approach, we have plenty of home work to do. Our schedule calls for us to explore several large topics in breadth and depth. We will look into the projected growth rates of population, income and purchasing power in the hemisphere.

We will study the effects of inflation on economic development, trade and investment. We will explore how the various economies can complement each other for our mutual benefit. We will look into means for increasing capital formation and for speeding economic development. And we will make case studies of the growth of private enterprise in the Americas—in order to get more and better of the same.

We shall make these studies—and others to come—with a high sense of purpose. We know that in order to move the world, we must first learn how to construct a lever. And in order to build a mutual free economy, we must first fully understand the economies of each of us.

It is, I submit, high time for all this inter-American self-examination—and for practical, workable programs that will come from it.

If the nations of Europe—after centuries of internal conflict—can find their way to mutual economic ties, how can we in our Western Hemisphere—with our tradition of cooperation—how can we think of failing in our endeavor? Are there any differences between us today that can stand against the flowering of our hemisphere tomorrow?

The promise we seek cannot come from economics alone. To build this tomorrow we will need to know each other better so that we can get along better together. In this respect, I hope you'll forgive me if I speak for a moment about my own private enterprise—the motion picture business.

Motion pictures are, I believe, one of the most powerful levers for bringing men and nations together. The films, of course, don't set out to be a lever, or even to be an influence—they merely aim to entertain. In entertaining, however, they help us to bridge the difference between us and to strengthen our common goals.

To my mind, one of the most welcome developments in Latin America would be the steady growth of the Latin American motion picture industry. Your development of great actors, writers, directors, has already made itself felt in our industry as well as in yours. Our market in the United States is free and wide open to your future productions. Our welcome mat is permanently at our front door.

And this is so because the films of Latin America and the films of the United States—like the people of our countries—have certain bonds in common. North and south of the border, our films reflect not just the life and living in our countries, but the vital concepts of our Western World. The concepts, I believe, are these three:

Our films reflect the concept that man is an individual, not a mass.

They reflect the concept that man can be and is meant to be free.

They reflect the concept that man can remake his society—or his hemisphere—as he wishes it to be.

Through our movies—and through our exchange of music, and painting, and literature, all the arts—we are getting to know each other, to build ever stronger foundations for our common future.

As I said earlier, I came to talk to you today about an opportunity for greatness, a time and a place for greatness.

The time is now. The place is our Western Hemisphere.

And the opportunity is to develop a common market for all our nations, all our peoples.

Little men and little minds will be afraid of this large prospect. They will draw away from it. They will dismiss it with the curt words: "It can't be done."

Little men and little minds always prefer to travel the old and cautious ways. The goal to which they beckon us is little and small.

But big men and big minds will relish the prospects before us. The goal toward which they beckon us is unlimited. It can be as broad and wide as our hearts, our spirits, and our mutual hopes. They will say it can be done, despite the problems, and will set about to find ways to accomplish it.

So today I make this appeal:

Let us all think big, act big; let us think and act as big as our whole hemisphere.

The task before us is worthy of our talents and our faith. We can be worthy of our moment in history.

If we succeed in this task—to build a common market among our nations—we shall achieve not merely a flowering Western Hemisphere for ourselves and our children.

We shall also achieve a bastion of freedom and security for all mankind.

The Proud and the Complex

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Pilot, Boston, Mass., on Saturday, July 13, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PROUD AND THE COMPLEX

Algeria was once a word that meant no more to most people than a far-away exotic land of turrets and veils and Arab mystery. Today it means trouble, violence, bloodshed and grave international distress. Senator KENNEDY last week entered this strange world with strong words questioning American policy on Algeria and at least by implication suggesting that France reevaluate its present strategy there. It was a forthright and deliberate spech and the Senator, we can be sure, was aware of the storm that would follow upon its delivery.

The President and the Secretary of State in public statements quite understandably soft-pedaled the whole business, but it is likely that they will give the Senator's suggestions some serious consideration. The issue which centers about the matter of Algerian independence is full of complexity. It is not simply a question of French intransigence on one side, nor of nationalistic local autonomy on the other. There are many issues involved which are so mutually conflicting that one almost despairs of a solution without large compromises all around. Senator KENNEDY plainly understands all this but he argues forcefully that the present hands-off attitude of our own country is costing us dearly in the world opinion of the newer peoples. These nations just now moving toward national self-determination, and often prematurely, should feel friendly toward America with its long record of anticolonialism but they are distressed by our policy of silence and inaction on Algeria.

It is convenient of course to say that this is primarily a French question and that it can be best solved by France, so long familiar with North African complexities as in Tunisia and Morocco. While French opinion is surely not unanimous on the wisdom of present French policy in Africa, President Coty has just announced that full Algerian independence will never be granted. Certainly no solution will be acceptable that does not give consideration to the Communist influence in Algeria, the unreliable character of the rebels and the presence of more than a million Europeans there. There just is no easy solution for Algeria, as indeed everyone admits.

At the same time Senator KENNEDY's basic concern is a legitimate one and also one to which Americans must give immediate attention. Without judging the French position we know that it is interpreted in Asia and Africa as an imperialistic one, since there Algerian rebel action is seen as totally legitimate and French retaliation as fully vindictive and repressive. This is a ridiculous oversimplification but like all such it sells easily among simple people and it allies us with those who are classified as the enemies of freedom. This is actually both unhappy and unnecessary.

We can sympathize with the incredible difficulties facing the French policymakers in Algeria and we can also show an understanding of the legitimate aspirations of the Algerians for self-determination. Up until now we have emphasized the first at the expense of the second and we have as a consequence lost the confidence of those vast areas of the world in ferment for the future. We are judged as a people ready to sacrifice our traditional principles rather than embarrass our allies, as opportunists shifting to suit the wind in the changing world.

Senator KENNEDY does well to call this to the attention of America and the administration, for we neglect it at a very real peril indeed. It is appropriate, too, that true friends of France make the point plain for it is one that should not be misunderstood. None of us meanwhile forgets that in modern times it is to France that we may look in the Western World for the most resounding declaration of the ideals of free men and free nations.

Appendix

Speech of Dr. Emerson Schmidt Before American Institute of Architects

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. MARTIN of Pennsylvania. Mr. President, in the recent Finance Committee hearings on the financial condition of the United States, considerable criticism has been directed at the policies of the Federal Reserve Board in its efforts to restrain the expansion of bank credit and thus to check inflationary pressures in the economy. Almost everyone seems to agree that continued inflation is the greatest internal threat to the very existence of our national life. With inflationary pressures continuing over the past 18 months, there are those who urge that Federal Reserve policies should be reversed, the supply of money and credit increased and the interest rates reduced. It is argued that the so-called tight-money policy and higher interest rates are the cause of inflation, rather than the effect of efforts to check and stop what otherwise could be a continuous spiral of higher prices. As a people we must accept and even encourage the monetary and credit policies of restraint necessary to curb this inflation, even though these may temporarily defer or diminish some expenditures or activity, or else be prepared to accept the consequence of continuous creeping inflation.

Mr. President, I am very favorably impressed by a speech of Dr. Emerson Schmidt, director of the economic research department of the United States Chamber of Commerce, given before the American Institute of Architects, which discusses clearly and objectively the necessity of monetary controls imposed by the Federal Reserve. I ask unanimous consent that excerpts of this speech be printed as part of my remarks in the Appendix of the RECORD.

There being no objection, the excerpts from the speech were ordered to be printed in the RECORD, as follows:

CREDIT RESTRAINT DELUSIONS

Criticisms of the alleged tight money policy have emanated almost on a daily basis from politicians, leftists, and even some businessmen. Here we see a basic organized drive against the free market system. Few see the implications for a free economy. There is good reason to believe that a free economy and, indeed, human freedom are impossible unless we also have a flexible money market. This is an idea almost never discussed in the economic literature or the popular press.

If the interest rate is driven downward by artificial forces, it drives the demand for capital ever upward. It generates pressures for government intervention on a geometric scale.

Lord Keynes, the most influential economist of our generation, during the depression of the 1930's wanted to drive the interest rate to zero—the euthanasia of the rentier class. He has had many followers in Washington and elsewhere. They are regimenters and totalitarians—whether consciously or not. To make the point clear: Interest-free perpetual loans, for example, would be the equivalent of making capital a free gift. When things are free, there is no possible limit to the demand for them. Then rationing and detailed government planning replace the free choice of the citizen.

Similarly, government guaranties of loans, easier and easier borrowing arrangements with interest rates forcibly depressed below market levels by law or by fiscal and monetary policy as prior to March 1951, likewise drive the demand for capital through the roof. This puts the economy under constant inflationary pressures and creates political pressures for direct government lending, direct controls, and regimentation. It must finally lead to capital investment rationing, compulsory saving, price and wage controls, profit controls, the allocation of labor to specific assignments—in other words, a regimented economy.

This set of ideas on economic interrelationships has been inadequately discussed in the United States by those who favor human freedom, a free economy and mass human welfare.

Unless we can get more individuals all across the land, individuals in whom the people have confidence, to understand the anatomy of money, credit, commercial and central banking, and the function of a flexible interest rate, we may drift by default into the regimentation and controls which have gripped and weakened other nations.

Several members of the Joint Congressional Committee on the President's Economic Report in the Joint Economic Report of 1955 argued:

"Instead of being used to promote full employment, maximum production and purchasing power, fiscal and monetary policies have been, and are being, used to promote the interest of the lending and investment classes and a handful of giant corporations at the expense of the farmer, small-business men, and employees."

A number of Members of Congress have continued to reiterate the same idea.

It is clear from this that the foundations of sound-money-maximum-employment policies are imperfectly understood, even in high places. Since the United States Treasury-Federal Reserve accord of 1951, the Federal Reserve has been striving to protect the purchasing power of the dollar. The mechanics at its disposal are not perfect. But when everyone is trying to borrow the maximum and when our economy is apparently trying to do too much and we have overfull employment, something has to give. During inflation, credit restraint means that some potential borrowers or would-be borrowers are not only to pay somewhat higher interest rates, but, perhaps, borrow somewhat less than they had intended. Again, something has to give.

At the same time, as the purchasing power of the dollar is preserved, all dollar savings, such as mortgages, bonds, life insurance, savings deposits, have their values preserved.

It is inevitable that lenders in such a period will get a better return. But contrary to demagogues, this is not the objective of a sound money policy. It is an incidental effect. Increases in interest rates tend to raise the income of savers and other moneylenders. Critics of flexible interest rates are making a mockery of one of the essential functions of the Government, namely, to maintain an honest currency.

The average person can never be expected to take the time and trouble to master these intricacies. But urgently needed are informed leaders in every community, whose judgment and public spirit is unquestioned, who will lead in the struggle for freedom—including the flexible money market.

The power to prevent inflation (and to some extent, deflation) unquestionably is now at hand in the United States Treasury and the Federal Reserve System. Enlightened public support on the side of reasonable price stability and sustained high employment is indispensable to strengthen the hand of these monetary authorities.

While the Federal Reserve or, even more carelessly, the administration is blamed for tight money, actually, the Federal Reserve has followed the money market far more than it has led it. In the overwhelming majority of loans, the borrower and lender are perfectly free to negotiate whatever rate is mutually satisfactory. The Federal Reserve has no legal or direct control over such transactions whatsoever. The tail does not yet wag the dog.

Because of the alleged tight-money policy, innumerable efforts are made by politicians, Government bureaus and pressure groups to get around this alleged credit restraint, via direct loans, via taking on State and local responsibilities and in other devious fashions.

C. Canby Balderston, Vice Chairman of the Federal Reserve Board, made it clear that every attempt to create a perferred position for any group concentrates, in a full-employment economy, the stringencies on the balance of the economy that much more fiercely. He put it this way:

"The alternative to free markets is to resort to Government subsidies, guaranties, and tax benefits. These may shelter preferred groups and meet apparent social needs, but we must not forget that each time we use them we substract from the credit, materials, and labor available to others who must rely upon the free market. The greater the amount of special shelter provided by Government, the more difficult becomes the situation of those not so protected. In a free society, it is axiomatic that not everyone can be sheltered. It is understandable, therefore, that free markets should be looked upon as the central feature of our private enterprise system."

Germany in the South American Market

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an article written by Hendrik J. Berns, relating to Germany's efforts in the South American market.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANY GRABBING SOUTH AMERICA—BEING SWEPT FROM UNDER OUR NOSES

(By Hendrik J. Berns)

The busy broom of German efficiency is sweeping the South American market.

Refurbished by United States postwar dollars, it is penetrating every region and all corners.

The United States bolstered Western Europe to stem the Communist tide. It neglected its hemispheric brothers to the south for that reason—and because of hesitation induced by lack of faith in political and economic conditions in the principal Latin American nations.

Once revived and moving ahead full speed, the Europeans had no such hesitations.

Under the leadership of West Germany they plunged right into all of South America.

South America is taking what it can get and where it can get it. The United States is rarely among the offering.

In textiles, machinery, communications, transportation; in chemicals, equipment, glass; in locomotives, trucks, and automobiles—the story is always the same:

First come the Germans; next come other European nations; then comes the United States.

On avenidas, streets and plazas; in hotels, restaurants and bars—the voices are always the same:

Loudest is German; next come other European lingos; then comes that of the United States.

But it would be wrong to deduce that Latins want it that way. In fact, they would much rather be tied to the United States than to West Germany or other European nations. In fact, they regret this estrangement of the wartime marriage by which they contributed to victory.

They believe it is due to the North American attitude rather than to South American behavior.

They point out, too, that our attitude is not quite logical. Because, they say, Western Europe no longer needs our products and our economic help while South America does.

Yet we have not turned the other cheek. So, West Germany, France, Italy and even Poland are doing all they can.

In Argentina, Brazil, and Peru the argument heard runs somewhat like this:

"You either want to come here with money and take over or you want to come here with know-how only. We don't want anyone to take over. And we cannot get along with know-how alone.

"What we need is the combination of money and know-how. That combination you are not willing to give because you do not trust us completely.

"The Germans do. Not only are they willing to give it—they throw it at us.

"So, of course, we are delighted to get what we need. But, seen long range, it would be better for you and us if we could get together."

Evidently we can't.

Still more evidently we don't.

Thus, the broom of German efficiency keeps on sweeping the South American market.

Reciprocal Interchange of Students With European-Soviet Bloc

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. JAVITS. Mr. President, on August 5 I introduced Senate Concurrent Resolution 44 to express the sense of Congress relative to interchange on a reciprocal basis of persons with the Soviet European bloc under the United States Information and Educational Exchange Act. This proposal is in line with State Department policy. In addition, section 8 of S. 2792, which passed the Senate on August 21st and is pending before the other body today, provides that the Secretary of State and the Attorney General may waive the fingerprinting requirement for alien visitors, thus facilitating the exchange program contemplated by Senate Concurrent Resolution 44.

I have received, Mr. President, from Dr. George B. Lieberman, rabbi of the Central Synagogue of Nassau County, Long Island, N. Y., an interesting letter in support of this interchange program, based upon his own personal experiences during a visit last summer to the Soviet Union. I ask unanimous consent to have printed in the RECORD Rabbi Lieberman's letter and an accompanying story from the August 26, 1956, New York Times.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

CENTRAL SYNAGOGUE OF
NASSAU COUNTY,
Rockville Centre, Long Island, N. Y.,
August 16, 1957.

Hon. JACOB K. JAVITS,
Senator of the State of New York,
Senate Building, Washington, D. C.

DEAR SENATOR JAVITS: The New York Times of August 4, 1957, carried an item that you were initiating action for the waiving of fingerprinting of visitors from behind the Iron Curtain.

It so happens that I was in Soviet Russia last summer on an official visit with the delegation of the New York Board of Rabbis. I speak the Russian language, which enabled me to converse with many Russians.

As a graduate of the Hebrew Union College, in Cincinnati, and in behalf of the American Jewish Archives, I had the additional assignment to investigate some scholarly material in the libraries of Moscow and Leningrad. During my search I held conferences with a number of Russian scholars and intellectuals. Repeatedly they taunted me about the problem of fingerprinting. To them it was a very sensitive subject and they made clear that as intellectuals they did not want to be placed on the level of criminals. Many of them are eager to come to the United States for scholarly research in our libraries. The government would probably send them. If given the opportunity, I feel that they would return to their students and fellow-intellectuals as friends of American democracy and as exponents of our way of life. Even though I did not discuss political problems with those academicians, I somehow feel that some of them are non-Communist. The men and women I interviewed with reference to ancient manuscripts and rare books gave me that impression. Your proposal is in the right direction and I commend you for it.

Upon my return from Soviet Russia, in an interview with newspapermen, I shared my experience with reference to the issue of fingerprinting. Enclosed you will find a report in the New York Times.

Sincerely yours,

GEORGE B. LIEBERMAN.

[From the New York Times of August 26, 1957]

RUSSIA REPORTED IN FAVOR OF VISITS—OFFICIALS SEEK EXCHANGES OF SCHOLARS, RABBI SAYS ON RETURN FROM TOUR

Some officials of the Soviet Union strongly favor an exchange of United States and Russian scholars and scientists, according to a Long Island rabbi.

The Soviet view was reported this week by Rabbi George B. Lieberman, Reform spiritual leader of the Central Synagogue of Nassau County, Rockville Centre, Long Island. Dr. Lieberman, 1 of 7 rabbis who recently visited the Soviet Union, arrived home on Wednesday. Rabbi Lieberman was the only one of the group who was able to speak fluent Russian.

He said Stepan Gavrilovitsh Karneyev, Chief of the Foreign Department of the Academy of Sciences, had expressed sharp disappointment that he had had too little contact in recent years with foreign scholars interested in research.

Mr. Karneyev and other officials, Rabbi Lieberman asserted, indicated a strong willingness to accept an exchange program of United States and Russian scholars and scientists.

In this connection, Rabbi Lieberman quoted Mr. Karneyev as saying to him: "When you came here, were you fingerprinted?" Mr. Karneyev stressed that no Russian scholar "would like to go through such an indignity."

Under United States law, Russians visiting here would have to be fingerprinted.

OTHERS FAVOR EXCHANGE

The criticism of United States policy of fingerprinting Soviet personalities, Rabbi Lieberman said, was shared by university professors and students with whom he came in contact. They also favored an exchange program, he said.

Speaking at a press conference at the Union of American Hebrew Congregations, 838 Fifth Avenue, Rabbi Lieberman underscored the existence in the Soviet Union of a wealth of rare Jewish and Hebrew historical documents, books and manuscripts dating back before the 10th century.

This collection, he said, is being cataloged by Soviet scholars. Rabbi Lieberman said that extensive research was being conducted in Jewish antiquities at the Institute of Oriental Studies of the Academy of Sciences. He said there were valuable documents at the Saltykov-Schedrin Library, the former Imperial Public Library in Leningrad and the Lenin Library of Moscow, which he visited.

He reported that he had been assured by Mrs. F. S. Abrekosava, associate director of the Lenin Library, and other Soviet officials that not only bibliographies but photocopies and microfilms would be made available to foreign scholars.

Rabbi Lieberman said that scholars affiliated with the Institute of Oriental Studies were studying Hebrew, a language that he pointed out was not recognized in the Soviet Union "and even considered subversive."

Turing to the subject of the religious life of Jews in the Soviet Union, Rabbi Lieberman said that while the Government does not bar freedom of worship, its leaders continue to frown on religious observances. He stressed that there were no facilities such as training schools for rabbis and religious schools, which could strengthen Jewish religious life.

Address by Senator Lister Hill, of Alabama, at Dedication of Alben W. Barkley Room, Mary I. King Library, University of Kentucky

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on May 27, 1957, at the dedication of the Alben W. Barkley room in the Mary I. King Library at the University of Kentucky.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE LISTER HILL, UNITED STATES SENATOR FROM ALABAMA, AT THE DEDICATION OF THE ALBEN W. BARKLEY ROOM, MARY I. KING LIBRARY, UNIVERSITY OF KENTUCKY, MAY 27, 1957

How fitting it is that we should dedicate this room in your beautiful library of the University of Kentucky as the Alben W. Barkley room, and place here for our benefit and for the benefit of those who come after us the papers, letters, and memorials of Alben Barkley.

Alben Barkley was my cherished friend, and for 6 years as Democratic whip of the Senate it was my privilege to serve as his assistant when he was majority leader of the Senate.

How well I remember the many times we worked together. I recall the many times we had lunch in the office of the Secretary of the Senate, and planned our strategy, our work to be taken up in the Senate.

Alben Barkley worked hard; he always worked hard. But he knew how to relax. And he could relax those with him. With his stories and his humor, Alben Barkley could relax the mind and refresh the spirit. It was good to be with him.

His fund of stories was inexhaustible. They flowed like the refreshing waters of one of your fine Kentucky springs. Alben Barkley had a story for each situation. And always there was an underlying wisdom in his stories. They were founded in his folklore.

The great thing about Alben Barkley was his love of everything around him. He loved Kentucky, her history, her traditions, and her people. He was proud that he was her son, and his first loyalty was to her people—his people. He was flesh of their flesh and bone of their bone. Their strength was his strength.

In his papers and letters is written so much of the history of our country, of the epic story of America. As I said this morning, Alben Barkley's life overlapped four historic periods in the development of our Nation.

First, America's coming of age with Woodrow Wilson, when a people became conscious of their destiny and their leadership in the family of nations;

Second, the days of the great depression which demonstrated that in time of domestic crisis a vigorous, determined Government can act to protect the people from stagnation and despair and needless suffering;

Third, were the years of World War II and after, when America used her might to beat down the totalitarian enemies of the free world and then to hold back those who sought world domination by infiltration and subversion and cold war;

And finally, he lived into the age of nuclear energy, of flight faster than sound, of man's first tentative thrust into outer space with the building of the earth satellite.

And, as I said this morning, Alben Barkley was at home in all these times. He retained always the resilience of youth, the zest for new things, the willingness to try uncharted paths. He looked always to the future.

Those who come here will find not only the written words, the revealing facts, the interesting and delightful stories and anecdotes, the discussion of great issues and the events of history, but more than this—they will be challenged and inspired by the shining example of the life and character and services of Alben Barkley.

This great Kentuckian stands today beside the immortal Henry Clay who by his heroic efforts to save our country from fratricidal war sacrificed his bright chances to be President; beside the martyred Lincoln who admonished us to have courage, for only brave men and women can preserve freedom and the blessings of freedom.

Alben Barkley was majority leader of the Senate longer than any man in American history. In his autobiography he tells us that when he was first elected majority leader in the extremely close contest between him and another great American, the late Pat Harrison, of Mississippi, he solicited no votes. Alben Barkley did not solicit votes. Alben Barkley led men by the force of his genius. He led them by the example of his life, by the influence of his character and his courage, by his devotion to principle and his steadfast adherence to his convictions, and by his discerning and masterful presentation of the issues.

He was the militant leader, the captain of teamwork, with rare capacity to persuade and cooperate with men, without abandonment of principle, leading them in the vital service of our country and of humanity.

Alben Barkley was a partisan—a partisan for his friends, a partisan for his party, a partisan for the convictions he held and the things he believed to be right. He was a partisan in the cause of the people. But he bore no malice. There was no vanity in him; there was no retribution in his spirit; there was no littleness in this man.

In the heart and soul of Alben Barkley there were so tempered the elements of tolerance, patience, and sympathy that he drew to him the ungrudging regard and affection of all who came within the radius of his genial influence. Always his life brought home to us the admonition of the Master to His disciples: "That ye love one another, as I have loved you, that ye also love one another."

It was in an hour of joy and zest that Alben Barkley passed out of the company of living men. For nothing pleased him more than to stand before his fellow men, to speak to them, to expound the gospel of the Democratic Party which he loved so well, and to proclaim the faith by which he lived. We know how powerful, how persuasive, how compelling was his logic and his eloquence, how withering his sarcasm, how devastating his wit—all combining to make him the Nation's foremost political orator. Who that heard him can ever forget his memorable speech in the late evening at the 1948 Democratic convention in Philadelphia—the speech that lifted the discouraged and disheartened delegates, moved and inspired them, and sent them forth with fire and resolution to win the victory. After the speech there was no longer any question as to who would be the convention's nominee for Vice President. All eyes and all hearts had turned to Alben Barkley.

Vice Presidents have come and gone, many of them, but we have had only one so outstanding in personality, in leadership, and in service to our country, so strong in the appreciation and affection of the American people as to become "Mr. Veep."

Alben Barkley as a young man attended for a short time Thomas Jefferson's university, the University of Virginia. There he breathed deep the air of Jefferson's philosophy. There he found and nurtured his spiritual kinship with the author of the Declaration of Independence. There he became the disciple and the prophet of Jeffersonian democracy.

Alben Barkley recognized that great forces were at work in America and that great changes were taking place. He knew that when a nation grows rich and powerful it can become careless and forget its ideals. He worked always for the preservation and the perfecting of American democracy. He fought against special privilege, monopoly, the mastery of the many by the few. He fought to keep wide the door of economic opportunity, to redress social wrongs, to correct political abuses. He was on the side of the underprivileged and less fortunate—the little folks. He sought to break down the barriers of bigotry and intolerance and hatred. He taught the brotherhood of man. He was the champion of the people—a mighty warrior for peace for ourselves and for all nations.

As a Member of the House of Representatives and as the majority leader of the Senate, Alben Barkley gave leadership—more than any man in the history of the American Congress—to legislation for the advancement of economic strength and social gains for the American people, for human welfare and equal justice for all.

In the closing words of his autobiography Alben Barkley declares:

"I believe there are certain things which are still crying for accomplishment in this country. I shall continue to raise my voice for them."

And then he concludes:

"I should like to live to see every American family living in a comfortable home, and every American child born and reared in an atmosphere sufficiently wholesome to guaranty an even chance for health and intellectual and moral development consonant with the responsibilities of American citizenship. I should like to live to see the world at peace, where the inventive genius of man would be utilized to improve the conditions of life throughout the world. I should like to live to see the pledge of every nation respected by every other nation because it was made in good faith and observed to the letter."

It is not surprising that the last words to fall from the lips of such a man were the words: "I would rather be a servant in the house of the Lord than sit in the seats of the mighty." Alben Barkley sat in the seats of the mighty, and he served nobly and well in the house of the Lord.

So long as America shall stand, the example of the life and character and services of Alben Barkley will be remembered—will challenge and inspire men and women to carry on, to fight for the ideals and the principles that have made our America great. It can be said of Alben Barkley, as it was said of that other

native son of Kentucky, that towering figure, Abraham Lincoln:

"He held his place—
Held the long purpose like a growing tree
Held on through blame and faltered not at praise
And when he fell in whirlwind, he went down
As when a lordly cedar, green with boughs,
Goes down with a great shout upon the hills
And leaves a lonesome place against the sky."

Essay on Rembrandt

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. MARTIN of Pennsylvania. Mr. President, in the closing days of this important session of Congress, we should give some attention to the cultural side of life. Therefore I wish to invite the attention of my colleagues and others to an essay on Rembrandt, written by Miss Roma Harlan, of the State of Indiana. Miss Harlan is a most talented artist.

Mr. President, I ask unanimous consent that the essay may be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

REMBRANDT

(By Roma Harlan)

Recently I was asked to copy one of Rembrandt's most powerful self-portraits in the National Gallery of Art. To me this was a real opportunity, as I am a portrait painter and this is my favorite portrait. This self-portrait combines tremendous power with a subtlety of expression, and reveals Rembrandt's steady courage during a difficult period of his life. We know at the time it was painted in 1659 Rembrandt was 56 years old and had recently gone through bankruptcy, losing all his property.

To attempt to accurately copy this portrait made my heart sink, for painters and scholars have been debating for years exactly how he achieved his magnificent effects. Many painters who have copied Rembrandt have differed in their opinions of his technique.

Finally I took my courage and my brush and faced the portrait. The painting showed such life, the personality of the Dutchman seemed all around me; he almost seemed to speak. I had a great desire for him to come to life and discuss the painting with me. I was positive, if he did, I would meet a man of character—a strong, direct, intelligent gentleman—though I knew I would have difficulty understanding him, for he would be speaking Dutch.

When I first looked at the painting it was a dark day, and I saw a dark picture, and I knew I did not fully understand all I saw. The portrait was so subtle, so strong. How did he get that subtlety? The cloudy day made the light bad—very bad—the painting could hardly be seen, and this made me feel quite helpless. The thought kept occurring and recurring to me that only Providence could help me now.

I stood on a raised stand to be on a level with the portrait, with people all around me—interested, nice people, but distracting. I could not concentrate because my thoughts kept wandering to the people and the movements about me. Finally, I scumbled in the underpainting. This was fairly simple. Rembrandt could have done it in several ways, his brushwork was not of a uniform pattern. The scumble was only the beginning; now for the painting.

I laid in a line drawing as exactly as possible; accuracy was of prime importance. I could see places where Rembrandt had drawn thickly, the paint had dried—then he had redrawn parts, changing some and overpainting others.

I forgot what I had read in art books, the advice of friends, the council of experts, and even the people around me—and I really looked at the painting—studying every part, every stroke, every detail. What had he painted first, second, third—how had he built it up. Actually—what had he done? This was what I wanted to know, because it would effect my painting from now on.

The more I looked the bolder I became. Sight is a wonderful thing; slowly, I began to see the Rembrandt. After a desperate 2 or 3 days, my vision became more penetrating, and I began observing more and more. Then on the third or fourth day—almost as if by a miracle—the sun broke through the skylight and shone directly on the portrait, penetrating the heavy, yellow surface varnish. In a flash appeared a vision of startling vividness, and the picture lay before me as clear as a bell. It was like seeing a magnificent sunset, and my heart leaped to my throat. There it was; stroke by stroke, color by color, every minute particle of it. All shadows vanished, and I experienced one of the greatest thrills of my life. It was so amazing, so beautiful, that I wanted to shout and tell everyone around me to "Look at this"—but my good sense told me it had taken several days of careful observation before I was able to see it with such clarity—and that the chances were slight that an untrained person could see it. An artist might.

At that moment I realized what a powerful perception Rembrandt had, and how marvelously he had recorded his vision for generations to come.

I was so excited I wanted to paint it all out immediately, but there was too much—much too much. Look at all the different ways he had laid on the paint. What variety of colors, brush strokes, expression lines, he had used—with a delicacy which Laurie described as "the point of his brush, as sensitive as the antennae of an insect, drawing, drawing all the time," and I can think of no better description.

Art critics had recommended that I paint the portrait in big, bold strokes, yet I saw no big, bold strokes, and knew they had completely overlooked his subtlety. They truly did not see it. They grossly oversimplified what was really highly complex in Rembrandt's painting technique. For what seems to be big strokes are often large masses of paint laid in, then modeled, refined, feathered, worked in until the means to the end has disappeared. The casual observer might easily misread this and conclude it was all achieved with big strokes. Certainly, in some places where Rembrandt wanted the shock of an accent he occasionally applied bold brush marks to secure strength when seen from a distance. To say these strokes were broad or rugged would be inaccurate, because they were subtly adapted by tone and emphasis to the whole portrait. He changed techniques many times from one side of the portrait to the other, manipulating his strokes in so many ways that it is difficult to describe what occurred on the canvas. The belief that it was painted according to a simple formula, from start to finish, was just the opposite of what appeared to have actually taken place. If Rembrandt were to come to life today he might well be amused at people who think they have figured out his technique in a simple manner.

I have never seen any painter who can paint as subtly, when he wants to, as Rembrandt. In places he seems to breathe on the paint, as if to almost paint air rolling over the top of the forehead, down into and under the hair. With what absolute accuracy he places his surfaces, so that the hair seems so well defined that we know it stands out perhaps an inch above the head. How could I, technically, get on canvas such subtlety?

Rembrandt used every variation imaginable; bold strokes, heavy impasto—thin, delicate strokes, light impasto—scumbling only—palette knife—paint so thin the canvas showed through, then suddenly thick paint, even modeled in low relief. There were places where the paint was thrown on with a palette knife to produce a powerful effect, and others of delicate modeling. There was glazing, and glazing on top of glazing—some places in small areas, others broadly done. His technique—if you can call it that—was unpredictable, varying to suit the impression he desired. His wide mastery of every type of painting was amazing—thin—thick—semithick—transparent—opaque—delicate to a hair's breadth, and abruptly strong and bold.

When I left the portrait after that first clear glimpse, I thought to myself, "They will never believe me"; "Perhaps I was wrong"; "Why should I see this portrait and not the others?" Then I recalled what I had read in Laurie, who described what I had seen; I was not alone.

With many misgivings I thought, "Maybe I shall never see it again this way, and I shall believe this vision was a mistake—not true—a sort of dream—perhaps wishful thinking." So with fear and excitement I approached the portrait again, praying for the sun to come. Finally it came—and there it was again. It was not my imagination. The portrait lay before me exactly the same as before; every little brush stroke, every expression line, dot, and color.

Actually, it was extremely difficult to see unless the sun came directly down on the head and penetrated the varnish. Then the gorgeous coloring—the magnificent drawing—the jewel-like effect—could be observed, testifying to the ingenious technical ability and the superb visual perception of the unmatchable Dutchman.

Inflation in South America

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Hendrik J. Berns entitled "Inflation Is Choking South America."

There being no objection, the article was ordered to be printed in the RECORD as follows:

INFLATION IS CHOKING SOUTH AMERICA

(By Hendrik J. Berns)

The difference between life in North America and life in South America is the difference of day and night.

Neither the elegance of shops in Buenos Aires, nor the beauty of Copacabana in Rio de Janeiro, nor the gold and diamond sparkle of Lima or Caracas clubs can hide that fact.

The multitude of the begging, the homeless, the illiterate—the unclad and the unsheltered is always too evident.

The unbelievably poor live side-by-side with the unbelievably rich.

The educated live side-by-side with the innumerable who can neither read nor write.

That is the stark reality of the scene in South America.

Some say: "It is due to economic conditions. Nothing has been done to stop the ever-rising tide of inflation."

Others say: "It is due to political conditions. Here, a dictator has impoverished the country. There, a clique is constantly seeing to it that the spoils remain always for the few and the same few."

Still others say: "It is due to the fact that tremendous natural resources have remained unexploited and huge regions unexplored."

But all agree that while the present looks dark, the future looks bright. Yet no one knows when the future will start.

"We cannot foretell what the next 6 months will bring. But even you can see what will be 5 or 10 years from now," is everybody's favorite slogan. And basically that slogan is correct.

So are the arguments that inflation, political upheaval, political corruption and underdevelopment have retarded progress and pushed some of the people sky-high while keeping most of the people way down.

For, it is true—from Buenos Aires north to Caracas and from Bahia west to Lima—that the future does belong to South America.

Simply, because some day a nation with vision or enterprising individuals with millions will open the unopened regions and bring to life the slumberng colossus of gold, iron, oil, coal, zinc, lead, manganese, uranium, aluminum, copper, and silver buried in the mountains and in the valleys.

In the meantime, inflation continues to choke the lifeline of the millions who earn 10 percent less than North Americans and must pay living costs as high as ours if not higher.

In the meantime, governments keep on tottering and cliques remain in power, visibly or in the background.

In the meantime, most of the entire continent, from north to south and east to west, remains underdeveloped and unexplored.

Because, in spite of accelerated industrializing here and more roadbuilding there and better air transportation everywhere, no one is really attempting to solve the problem.

Everyone is just talking about it. Nothing is ever done about it.

Thus the rich get richer and the poor get poorer and the vacuum between grows larger and larger.

Even finance ministers and industrialists, politicians and newspapermen admit it. Even they agree that the situation grows more precarious daily. But they, too, seem to think that one can reach the future by simply waiting for the present to pass.

It is not clear to them that the future cannot be reached safely unless the present is bridged properly.

Envy of North America, mingled with resentment is the South American way of compensating for those shortcomings.

Yet there is no compensation.

And the demand for outside help is raised forever.

Yet, no decisive effort is ever made at self-help.

Convention of United States Army Ambulance Service Association

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. MARTIN of Pennsylvania. Mr. President, this year marks the 40th anniversary of the opening of Camp Crane, at the fairgrounds of Allentown, Pa., which was the training site of the United States Army Ambulance Service.

At this camp were trained many of those who were to participate in the heroic work of this service overseas during World War I.

Most of the members of this service were volunteers and some joined various field medical organizations and were in action even before the organization of the United States Army Ambulance Service, with which they subsequently affiliated themselves.

By the end of the war approximately 5,000 Americans participated in ambulance work with the French and 1,200 with the Italians.

Last July 11, the 38th reunion and convention of the veterans of this organization, now known as the United States Army Ambulance Service Association, was celebrated at the site of Camp Crane.

I am indebted for the report on this 38th annual convention to Past National Commander Albert E. Herrmann, of the United States Army Ambulance Service Association, who is also executive officer of the Old Guard, City of Philadelphia.

I ask unanimous consent that the names of those attending this 1957 reunion be printed in the Appendix of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

MEMBERS ATTENDING 38TH ANNUAL CONVENTION

Elmer Austin, Kingston, Pa.; Donald L. Atwater, Newark Valley, N. Y.; Percy W. Atkinson, Roseland, N. J.; Charles R. Ashford, Elkins Park, Pa.; Harvey S. Adams, Belleville, N. J.; Robert Ware Allison, Sherborn, Mass., past national commander; Eddie Adam; Matthew D. Arnold, Long Meadow, Mass.; R. Kenneth Braunsdorff, East Orange, N. J., past national commander; William E. Boyle, Providence, R. I.; Rev. Guy A. Bensinger, Dutch Neck, N. J., past national commander; Elwood L. Burton, Yardley, Pa.; James M. E. Boes, Philadelphia, Pa., past national commander; Von H. Byrd, Wallingford, Pa.; Harvey R. Bowman, Bridgeport, Conn.; Charles W. Bradfield, Pittsburgh, Pa.; Howard S. Byerman, Springfield, Ohio; Sol. Buck, Philadelphia, Pa.; Charles F. Bustard, Cheltenham, Pa.; Albert R. Beck, Havertown, Pa.; Dr. William W. Baumgartner, Leeminister, Mass.; George M. Conrad, Allentown, Pa.; Vincent F. Coleman, Chicago, Ill.; William H. Clifford, Lenox, Mass.; James J. Cummings, Philadelphia, Pa.; R. H. Clapp, Knoxville, Tenn.; Leo G. Cadden, Bethlehem, Pa.; James F. Collins, Boston, Mass.; Leslie J. Craigen, Seattle, Wash.; Walter G. Camobell, Reinerton, Pa.; Ralph B. Creamer, Allentown, Pa.

Gordon C. Camp, Westmont, N. J.; Edward Cook, St. Petersburg, Fla.; Harry Cosiett, North East, Md., past national commander; T. E. Dohoe, Attica, N. Y.; Alan J. Dufield; Wylie B. David; R. E. Ditterline, Bethlehem, Pa.; Claude Diefenbach, Niagara Falls, N. Y.; Horace E. Dunstan, Havertown, Pa.; Frank C. Dietz, Erie, Pa.; J. Harry Davie, Philadelphia, Pa.; Walter Davidson, Allentown, Pa., past national commander; Donald E. Delbridge, Batavia, N. Y.; Eugene B. d'Oronzio, Florence, S. C.; M. L. Ettinger, New York, N. Y.; Thomas H. Ellis, Merchantville, N. J.; Harry Eisner, Brooklyn, N. Y.; George A. Engelhart, Sr., Westmont, N. J.; Royal H. Eckert, Allentown, Pa.; W. Glenn Elliott, Fort Story, Vt.; Kenneth Fuessle, New York, N. Y.; Robert W. Faulkner, Elkins Park, Pa.; B. Fridholm, Boone, Iowa; Dana S. Felton, Brooklyn, N. Y.; Ralph R. Flower, Buffalo, N. Y.; Allen C. Fuller, Rochester, N. Y.; George R. Gilbert, Allentown, Pa.; Leslie Grove, Richmond, Va.

Oliver C. George; Donald B. Gould, Johnstown, Pa.; Joseph H. Goldstein; F. Herman, Wilkinsburg, Pa.; Philip L. Hilbish, Ansonia, Conn.; John H. Hodges, Philadelphia, Pa.; Fullwood P. Hayes, Philadelphia, Pa.; Dr. Frank E. Hruby, Berwyn, Ill.; Joseph L. Hendel, Reading, Pa.; Albert E. Herrmann, Philadelphia, Pa., past national commander; Joseph L. Hackenberg, Shamokin, Pa.; Fred B. Huebenthal, Maywood, Ill.; Ted. Hissey, Philadelphia, Pa.; Clinton Hannaford, Manchester, Conn.; Elmert Hemberger; Henry W. Holman, Hackensack, N. J.; William Herbits, Boston, Mass.; Louis L. Hirschkorn, Lawrence, Long Island, N. Y., past national commander; Clifford Hoag, Collindale, Pa.; Joseph E. Haefling, Wilkes-Barre, Pa.; J. W. Hauser; Ted. Jarlemski, Decatur, Ill.; James T. Jones, Sarasota, Fla.; Roscoe Jarrett, Allentown, Pa.; Thomas Johnson, Havertown, Pa.; J. Cory Johnson, Bloomfield, N. J.; William Jamison, Washington, D. C.; William W. Johnston, New York, N. Y.

John Kaufman, Reading, Pa.; Michael J. Kane, Sunbury, Pa.; F. Warren King, Upper Darby, Pa.; Chester G. Kaseman, Shunk, Pa.; Clarence E. Keifrider, Philadelphia, Pa.; Van Kirk, Line Lexington, Pa.; Henry L. Kalbach, Reading, Pa.; Thomas C. Kern, Johnstown, Pa.; George Kisling, Washington, D. C.; Louis W. Kaner, Long Island City, N. Y.; George A. Lawrence, Allentown, Pa.; Walter R. Lumsden, Allentown, Pa.; George T. Love, West Chester, Pa.; Michael Lee, Milford, Mich.; John Lovell, Allentown, Pa.; Sidney Lavine, Yonkers, N. Y.; P. Alban Licourt, Ridgewood, N. J.; Sabatino LaNoce, Philadelphia, Pa.; Russell E. Maintain, Newtonville, Mass.; J. R. McCarthy, Duluth, Minn.; D. L. Mackay, North East, Pa.; Guy H. Moyer, Freeburg, Pa.; John J. McKenna, Allentown, Pa.; Neil A. Mosteller, Wilkes-Barre, Pa.; Kenneth R. Moore, Philadelphia, Pa.; Robert C. McLaughlin, Collingswood, N. J.; Arthur R. Markley, Allentown, Pa., past national commander; Edgar R. McClain, Belle Vernon, Pa.

Pasqualino A. Meglio, Philadelphia, Pa.; Willard C. MacLean, Jr., Batavia, N. Y.; Francis V. Nixon, Pacific Palisades, Calif.; William B. O'Brien, Milton, Mass.; S. Peon, Allentown, Pa.; James Parris, Philadelphia, Pa.; Thomas A. Porter, Roxbury, N. Y., past national commander; Robert P. Patterson, Catasauqua, Pa.; Roland L. Peters, Bethesda, Md.; John O. Parcell, Philadelphia, Pa.; George A. Peyton, Johnstown, Pa.; Harold B. Rutledge, Roslindale, N. Y.; C. A. Robinson, Cleveland, Ohio; Robert Ritter, Allentown, Pa.; Robert W. Rhoades, Euclid, Ohio; William J. Raudenbush, Hatfield, Pa.; past national commander; E. W. Reilley, Philadelphia, Pa.; John S. Rotex, Cortland, N. Y.; Walter B. Shore, Batavia, N. Y.; Harold

Shuster, Lancaster, Pa.; Richard H. Short, Allentown, Pa.; past national commander; George A. Stryker, New Brunswick, N. J.; W. G. Siler, Morristown, Tenn.; Louis H. Schoenly, Upper Darby, Pa.; Murray B. Schroeder, Camp Hill, Pa.

William D. Sullivan, Los Angeles, Calif.; Bert P. Swanson, Los Angeles, Calif.; Percy E. Stover, Portland, Maine; Alfred E. Sommers, Montgomery, Ala.; Russell Stetler; Herbert Sattler, Philadelphia, Pa.; Edward R. Simmons, Somerset, Mass.; William A. Stoeltzing, Pittsburgh, Pa., past national commander; Dr. Hy A. Schnirring, Long Island, N. Y., William F. Short, Penns Neck, N. J.; Albert E. Smith, Camden, N. J.; R. A. Twomey, Bradenton, Fla.; Rev. Alvin E. Teichart, Pittsburgh, Pa.; Charles L. Winkler, Philadelphia, Pa.; Frank J. Williams, Buffalo, N. Y.; F. D. Wells, Huntington, Pa.; Charles L. Wood, Jr., Penn Wyne, Pa., Warren E. Ward, Lewiston, Pa., national commander; Bernard H. Wood, Owego, N. Y.; Horace Wood, Milton, Mass.; Wallace P. Wetzel; Rudolph L. Wilhelm, Bloomfield, N. J.; Ray Wolloff, Dedham, Mass.; George E. Wilson, Philadelphia, Pa.; E. H. Yeagley, Alliance, Ohio.

Women's Increasingly Important Role in American Life

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. WILEY. Mr. President, as we all know, women in the United States are assuming an increasingly important role in the affairs of our Nation.

As I have had occasion to point out several times in the RECORD, women are commendably performing tasks in every walk of American life—in public office, teaching, law, science, the arts, sports, and almost every other field.

This fact might be noted, too, on this the final day of the 1st session of the 85th Congress: Since the first woman was elected to Congress in 1916, they have made tremendous strides in taking on important roles in municipal, county, State, and Federal Governments.

In our overall economy, the 22 million women in the working force today, also, obviously are a great contribution.

Let no one erroneously assume, however, that women, in becoming members of the Nation's working force, have become automatons—without feeling—in this technological age. To the contrary, the wife and mother is still the center of our homes—the basic foundation of American life and the American family.

However, a great many of the ladies are doing a tremendous job of combining constructive, creative careers outside the home, with homemaking.

I request unanimous consent to have printed in the Appendix of the RECORD, a further brief statement on the increasingly important role of women in Wisconsin and American public life, including a list of Wisconsin women in State administration.

There being no objection, the statement and list were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

Especially noteworthy is the role which women are occupying in public service.

For example, now, there are nearly 576,000 in the Federal service. There are 16 women—a Senator and 15 Congresswomen—in the 1st session of the 85th Congress. In 1957, a total of 321 women are serving in State and Territorial legislatures—an alltime high.

In addition, at least 10,000 women have been elected to municipal office, and 18,000 to county office.

Too, women are coming closer to the 50 percent mark in the number of postmasters. Back in 1786, the first two women were appointed postmistresses. Now there are about 15,600 women postmasters out of a total of 37,400 in the United States.

WOMEN IN JUDICIAL SERVICE

Recognition of women jurists throughout the United States and its territories is increasing steadily. Nineteen hundred and fifty-seven finds as many as 114 women lawyers serving as justices in Federal, State, county, and municipal courts throughout the United States. They are prominent also on the bench of circuit courts, probate, domestic relations, criminal district courts, and in Federal courts of appeal, tax, and customs.

WISCONSIN WOMEN IN PUBLIC SERVICE

In my own State of Wisconsin, women have established an especially fine record of playing important roles in public service.

There follows now a list of some of these prominent women in State administration. Although far from complete, this list illustrates a cross section of the many, many women in public service in Wisconsin.

WISCONSIN WOMEN IN STATE ADMINISTRATION

Director, Governor's commission on human rights, Mrs. Rebecca C. Barton.

Secretary, free library commission, Janice Kee.

Director of nursing education, department of nurses, Adele G. Stahl.

Members, food standards advisory committee, department of agriculture, Mary Agnes Bergin, Dr. Flora Hanning, Dr. Anne Marshall.

Member, fine arts commission, Mrs. D. B. Dana.

Member, grain and warehouse commission, Mrs. Lillian Crandall.

Members, Governor's commission on human rights, Mrs. Ernest H. Anderson, Mrs. Melvin Brown, Mrs. Harry Hamilton, Mrs. Harmon Hull, Mrs. William M. O'Donnell, Mrs. Louis A. Weisfeldt.

Members, free library commission, Hilda Cavanaugh, Ella M. Veslok, Mrs. Jean Wulling.

Members, State board of nursing, Ruth Coe, Sylvia Haubrich, Janet Jennings, Evelyn Mercer, Sister M. Regula.

Member, board of personnel, Mrs. Jane Harvey.

Members, board of public welfare, Mrs. C. R. Beck, Mrs. H. L. Garner, Mrs. Karl Kleinpell.

Member, joint committee on county institution standards, Ellen Hempstreet.

Member, State radio council, Lulu Radlund.

Member, State retirement fund board of trustees, Margaret L. Clash.

Member, board of regents of State colleges, Mary M. Walter, Mrs. Anita V. Webster.

Regent of the University of Wisconsin, Mrs. Helen C. Laird.

Member, State board of vocational and adult education, Mrs. Erna Cartwright.

Members, cosmetology examining board, Mrs. Nora Dalton, Mrs. Lelia Raynes, Mrs. Charlotte Toellner.

Members, advisory hospital council, Mrs. Otto Falk, Mrs. John Ramsey, Alice Topsant.

Members, committee of examiners for nurses, department of nurses, Helen Brunelik, Alice D. Schmitt, Sister M. Concepta, Sister St. Barbara, Adele Stahl (ex officio).

Members, nursing home advisory committee, board of health, Sister M. Clarine, Margaret Healy, Mrs. Frances Jellen, Mrs. Mollie Rahr, Theda L. Waterman.

Members, committee of examiners for trained practical nurses, Sister M. Aquin, Marie Arnold, Mrs. Florence Byrne, Mrs. Gertrude Neuman, Mrs. Ethel F. Straw, Adele G. Stahl (ex officio).

Member, certification committee for public health nurses, Ruth C. Adams.

Director, maternal and child health section, department of health, Dr. Amy Hunter.

Chief, research division, State historical society, Alice E. Smith.

Administrative assistant, fair employment practice division, industrial commission, Virginia Huebner.

Executive secretary, State judicial council, Mrs. Marygold Melli.

Administrator, traveling library and extension, free library commission, Mrs. Orrilla T. Blackshear.

Superintendent, Wisconsin home for women, department of public welfare, Mrs. Marcia Simpson.

Assistant reviser of statutes, Mrs. Dolores T. Thimke.

Administrative assistant, department of taxation, Jan Ahern.

Director, Library School, University of Wisconsin, Rachel Schenk.

Associate dead and director, School of Nursing, University of Wisconsin, Margery J. McLachlan.

The Problem of South American Education

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Hendrick J. Berns, published in the Miami Herald of August 27, 1957, relating to the education problem in South America.

There being no objection, the article was ordered to be printed in the RECORD as follows:

EDUCATION: SOUTH AMERICA'S GREAT PROBLEM

(By Hendrick J. Berns)

South America needs help and self-help.

It is only partly true that economic and political conditions and the terrible gap between wealth and poverty are caused by:

Inflation, underdevelopment, dictatorships, political corruption or the self-interests of ruling cliques.

The root of the evil lies deeper. It lies in these facts:

Lack of education of huge masses has made it easy in South America for dictators to take over; for cliques to perpetuate themselves; for corruption to continue unabated; and those who enjoy having so much, they prefer to keep it that way.

Those who have not are so accustomed to have not, for centuries, and so uneducated, also for centuries, they cannot and do not make the effort to have.

Financial, professional, political and social success of the few is based on the inability to succeed of the many.

In other words, the root of the evil lies in:

Lack of education and lack of opportunity. This is essentially a financial problem. You cannot build public schools without public money.

Many South American nations lack such money. Others misappropriate theirs. Some for military purposes which experts call superfluous. Others for long-range projects which experts call untimely.

But these circumstances do not alter the fact that the solution of the fundamental problem of South America is still education and opportunity for those millions who have neither.

Now, someone might argue that the financial debacle of the South American countries is a matter of national self-help. True enough.

Yet in a world as interdependent as ours it is also a matter of international help. Particularly when it comes to continents as huge as South America and as prosperous as the United States.

In this case international help is, in reality, inter-American help and thus a matter of enlightened self-interest. For, the United States can ill afford to neglect South America for economic, political and even human reasons.

Yet we are. And this in spite of the fact that we should know how much more of the world—and right at our very doorstep—this might leave to Moscow and to communism.

And why are we neglecting South America?

Simply, because, over the years, we have not been able to agree with our South American neighbors on what should come first: the horse or the cart; self-help or help.

In theory, this is a wonderful argument. In practice, it is an idle one.

For obviously, if a solution is to be found—and it surely must be found—it can lie only in the simultaneous approach:

Self-help and help must go hand in hand. The horse and the cart can well come together.

Today we are pouring millions of foreign-aid dollars into South American countries. They are spent aimlessly by the few with disregard of the many.

This method does not help the mass of the people nor does it help us. In fact, because it does not help the masses it defeats the purposes of foreign aid and creates animosity rather than friendship.

We could well spend less tomorrow if we spent it wisely. If we ourselves administered the money and defined its purposes.

If we did that, we would produce, automatically and simultaneously, that type of self-help needed on the part of these nations. For they would help themselves. Not, as in the past, just to our money, but to our cooperation and advice, too.

And South America needs nothing else and nothing more urgently than help and self-help. Only then can the nations of South America move from their crisis-ridden present into the golden future promised by their natural resources.

And only then can the United States reweld the solidarity that has been lost, exert the leadership that has been lacking and lock the door of this hemisphere on Moscow and communism.

New Horizons for Agriculture

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, because it was necessary for me to remain in Washington, Tuesday, August 27, to vote on important legislation, I was compelled to cancel a scheduled address before the annual convention of the American Soybean Association, meeting jointly with the National Soybean Processors Association.

Because it contains a message I feel needs to be emphasized, Mr. President, I ask unanimous consent to have printed in the RECORD the text of the address I had prepared for delivery to the Nation's soybean producers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW HORIZONS FOR AMERICAN AGRICULTURE

(Address by Senator HUBERT H. HUMPHREY, of Minnesota, before the 37th annual convention of the American Soybean Association, Hotel Leamington, Minneapolis, Minn., August 27, 1957)

It is indeed a pleasure for me to have this opportunity to meet with the American Soybean Association. You represent a dramatic and still unfolding chapter in our country's agricultural history.

We in Minnesota are proud to be hosts to this national convention, because soybean production is now a well-established hundred-million-dollar crop to farmers in our State. In addition, the annual soybean crop in Minnesota is providing hundreds of thousands of man-hours of employment in the marketing, transportation, and processing fields. I am pleased to know that the National Soybean Processors Association is holding its convention simultaneously with the American Soybean Association, as the close working relationships between soybean processors and soybean producers has been one of the healthy factors in successful advancement of your industry. You need to work together. You have much in common. Your destinies are linked together. Too often that fact is overlooked.

Soybeans have become a billion-dollar crop in the United States. This commodity represents a vitally important segment of our agricultural economy.

Perhaps nowhere has the rapid rise in soybean production been more graphically exemplified than right here in Minnesota, where soybean acreage has grown from 2,000 acres in 1934 to 2.8 million acres planted this year. In other words, the acreage devoted to soybeans in Minnesota has increased 1,400 times in 24 years. Minnesota has now risen to be the second most important soybean producing State in the Nation, second only to Illinois. Last year, we produced 12 percent of the total national output. And I want to serve notice on our friends in Illinois: we do not stand still in Minnesota. Our soybean producing area is still growing. Our increase in total soybean acreage has resulted from increases in both the number of producers growing soybeans, and the number of acres planted per farm. In 1934, only 4 percent of the Minnesota farmers planted soybeans. This grew to 10 percent by 1944, 20 percent by 1949, and approximately 40 percent by 1956. It will be higher this year and next. Already, soybeans provide 1 out of every 4 dollars of cash income from the sale of crops in Minnesota.

You cannot look into the dramatic story of soybean production in Minnesota without wanting to pay deserved tribute to such men of vision as R. E. Hodgson, superintendent of the Southeast Experiment Station in Waseca, who began working with soybean crops in the early 1920's, and John Evans of Montevideo, who was a real pioneer in the growing of soybeans in Minnesota, as early as 1917. Of course, there are many, many others who occupied a vital role in development of this great agricultural industry.

This $100 million Minnesota crop represents an outstanding success in the large scale introduction of a new cash crop into the well established cropping systems of our State. It reflects great credit on the coordinated efforts of our farmers, merchandisers, experiment stations, technicians, processors, machinery manufacturers, and many other groups. Minnesota is proud of this contribution to the Nation's well-being, for that is what our expansion of soybean production has been.

Because it relates to a theme I wish to develop later, I think it is fair to say that the greatest spur to this vast expansion of soybean acreage, in Minnesota and elsewhere, was patriotic response of our farmers to Government requests to help meet our own Nation's food and fiber needs.

Soybean acreage in Minnesota and in the Nation was relatively small until the start of World War II. Prior to the war, we were net importers of edible oils. When some offshore sources were shut off, the Government called for an expansion in soybean acreage. You producers met that demand, just as you have historically met every demand for our Nation's needs.

It is well for the public to remember that. It is sometimes too easy for urban residents to forget how dependent they are upon the Nation's farmers—and how well our dwindling farm population has always provided abundantly for the needs of all our people.

The experience gained in producing the crop required to meet the Nation's needs in time of emergency was the basis for the further expansion in the postwar period.

Today, instead of a net importer, we are the world's greatest exporters of edible oils and soybeans.

It took courage, and vision, for you in the soybean producing and processing industry to keep your sights on the future, instead of retreating to standards of the past. You have shown that courage and vision, and it is paying off. You are going to need more of it, in order to prove to some skeptics that agriculture and agricultural thinking does not have to be geared to the past.

At a time when most spokesmen for agriculture were talking about cutting back production, about adjusting backward from wartime peaks, about trimming our sails to prewar standards, you soybean producers proved you could not only hold your wartime gains, but could still move ahead. You did it by working together toward seeking out and capturing new markets. You did it by keeping your eyes on the lookout for new and broader horizons, instead of retreating to the past.

Of course, you had a unique commodity to work with—a commodity combining two of the world's greatest nutritional needs: edible oils, and protein.

In a real sense, therefore, your markets are worldwide and expanding, limited only by your own imagination and enterprise in going after them—and by the living standards of the world.

We are investing huge foreign aid funds in trying to raise living standards in underdeveloped areas of the world—and your potential markets improve as those living standards improve. Meanwhile, it is important that eating habits be cultivated as part of your market development.

For that purpose, I am convinced that even relief feeding operations making use of both oil and protein are important to the future of your industry. The demand for both is virtually unlimited. Every voluntary agency working in this field has appealed for our Government to find ways to make more fats and oils available, and I have seen in my own observations that they are needed for balanced diets.

I am sure many of you are also aware of the wonderful work being done by the Meals for Millions Foundation, seeking to fight

starvation in the world by providing high protein diet supplements financed entirely by voluntary donations—a penny-a-meal project that is worthy of your support. I hope your organization will get behind such efforts, as part of your market development work.

Domestically, your markets have been divided between production of a high value protein animal feed, soybean meal, and a versatile human food ingredient, soybean oil.

As producers, it has been to your own self-interest to seek a greater share of your return from the oil ingredient of your beans. It has also been to the best interest of your fellow farmers, as it is farmers themselves who buy the soybean meal in one form or another.

The soybean meal pouring out of our great processing plants is the foundation stone of the mixed feed industry as we know it today. Eighty-eight percent of the farmers in Minnesota buy at least part of their feed. Many of you soybean producers also buy mixed feed for your cattle, hogs, or chickens.

With your soybean production, you are helping to provide yourselves and others with highly desirable feed ingredients. And the more you develop substantial outlets for your oil, the more you can afford to encourage an expanded livestock economy by making a high value protein feed available at reasonable prices for yourself and others.

There are other sound reasons, from the standpoint of balance in the overall picture of American agriculture, to continue encouraging the shift that has been underway to soybean production.

Additional acres going into soybeans mean fewer acres in other commodities with which we face greater problems.

In Minnesota, for example, while soybean acreage increased from 767,000 acres in 1949 to 2.6 million acres in 1956, the acreage of feed grains and wheat was reduced by 1.5 million acres in 1956 compared with the total in 1949.

I know the question that must be arising in the minds of some. If we continue to encourage this shift, are we just setting the stage for transferring the surplus problem of some of these other commodities onto the shoulders of soybean producers?

Let me just say this—it does not have to happen, and I do not think it will. With the vision and enterprise shown by the soybean industry in its research and market development program, with the kind of cooperation that has been maintained between soybean producers and processors, with the vast backlog of need that exists in the world for both the oil and protein ingredients of your product, a bright vista of future opportunity still exists for the soybean industry.

Whether or not you achieve the full potential of that future opportunity, however, will depend upon the sympathetic understanding, and the vision or lack of vision, of your Government. Make no mistake about it: Regardless of what farm legislation is on the statute books, Government attitude and policy—and the attitude and policies of those making vital administrative decisions within Government—have now and will continue to have a profound effect upon your economic opportunity.

To the extent that your Government has the foresight to look deeply into the future, and work hand-in-hand with you and with the private trade toward creating a helpful economic climate for your continued expansion, there is no reason why the future should not be bright for soybean producers.

But to the extent that your Government is timid and blind, afraid to lift its eyes to new horizons, unimaginative in planning ahead, and unwilling to take full advantage of the experience and guidance of the private trade, your path could become a rocky one.

It is not my intention tonight to engage in a controversial discussion of farm legislation, as important as that may be. Time would not permit fully developing the justifiable case for greater economic protection for agriculture as being truly in the public's interest.

But I do express serious concern, without partisanship, over some of the administration attitudes toward whatever legislation exists.

I am convinced that much of the depressed plight of American agriculture today is directly traceable to administrative decisions and policies within the Department of Agriculture, regardless of what laws are on the books. Timid, fumbling, bungling, short-sighted decisions that deprive you of fair income, and at the same time take more out of the pockets of other taxpayers, characterizes the farm policy of the administration.

And, I might add, more and more people are coming to the same conclusion—people with years of valuable experience in the handling of farm commodities, and people to whom this administration would normally look for all-out support.

I am equally convinced that the present Secretary of Agriculture has at his disposal ample authority, in way of legislative and economic tools to bolster or depress farm prices and farm income almost at will.

Let me give you some examples.

While giving lipservice to the free market the Commodity Credit Corporation (the CCC) has made it impossible for any semblance of a free market to operate on many of our commodities. It has dumped corn to undersell the free market, in competition with the growers, driving prices down below the support levels so that in turn more corn must be taken over by the Government. By its own sales policies it has forced more and more of the grain business to go through Government hands, rather than less and less as it should be.

You have been more fortunate in soybeans, but you too are to a great extent at the mercy of Department of Agriculture administrative decisions. Until the recent takeover, CCC had not lost any money in supporting the price of soybeans. As a matter of fact, the Government's operations to bolster soybean prices had resulted in a $4 million profit.

With a little courage and foresight, the Department of Agriculture could have avoided any takeover of beans from producers this year. Just a few more export sales of oil at the right time would have bolstered the free market sufficiently to attract beans out of growers' hands and into the private trade. Producers' prices would have been bolstered and the Government takeover limited.

Timing is of the essence. Too often the CCC has withdrawn from export operations just before harvest season, moving back in to bolster the market only after most of the beans are out of producers' hands and owned by speculators.

This year is no exception. We need export commitments soon, to bolster the market while beans are in the hands of the producers. I hope our friends here from the Department of Agriculture will heed that advice.

Now, don't misunderstand me. The soybean industry has some good friends in the Department of Agriculture. Some of them are here with you, like Gwynn Garnett and Martin Sorkin. Yet, I am sure even they would concede privately that they are often overruled by men of lesser knowledge and understanding in the hierarchy of agricultural bureaucracy. Your task as organized producers is to insist that the interests of growers comes foremost in the highest decision making levels of the Department. Fortunately, you have had the support of the processors as well in urging the Department of Agriculture to give more attention to the proper timing of its export commitments, for maximum beneficial effect on the market before beans are all acquired by speculators.

Perhaps I have talked too much tonigh about soybeans—and I know you have plent of experts meeting with you far more fami liar than I could hope to be with your ow particular problems. But if I have devote considerable time to discussing your ow commodity, it is primarily because your soy bean industry is symbolic of the major point I want to make tonight—points that con cern all agriculture, and the entire Nation attitude toward agriculture.

Your own growth is the result largely o response to the Nation's needs in one perio of emergency, and your future is closely in terwoven with another emergency—the en tire free world's struggle for survival.

That same thing is true about most o American agriculture.

Your destiny cannot be determined by yo alone, in a period when survival of freedo in the world must transcend even the mos pressing domestic problems.

That is also true about the rest of Ameri can agriculture.

Its destiny is linked inseparably with ou struggle against the cunning, imperialist forces of communism threatening to engu the world—and with the degree of recogni tion we receive as to the vital importance o agriculture's role in that struggle.

You have had the vision and enterpris to seek new horizons for your markets rathe than be satisfied with the past, and all agri culture needs to raise its sights to th broader concept of meeting the needs of th world in which we live, under condition that exist in the world today.

But if agriculture needs to broaden it horizons, even more so is that need eviden in the highest levels of our Government.

If, in fact, that need is recognized at som levels within the Department of Agricultur today, it is not being adequately reflected i its current policies—nor is it being aggres sively pursued and championed beyond th realm of the Department of Agriculture int the State Department, the National Securit Council, and the White House.

The greatest hope for American agricul ture today rests in building markets abroa both for the present and for the future.

The greatest hope for strengthening th bonds linking our allies of the free world i an all-out stand against the onward marc of communism is solidifying our economi and cultural ties.

These two objectives are too interlocke for either to be considered alone.

As a result, agriculture's future rests to great degree upon the extent to which w recognize its vital role in international trad and make wiser use of our abundance t supply the needs of other people who migh otherwise be compelled by necessity o naivete to turn to the Soviet orbit for foo and fiber to survive.

We as a nation are blind indeed if we a willing to rest our hopes entirely upon gun planes, and bombs.

As vital as adequate defense forces remai for our protection, all they can buy us i time. How we use that time is up to us but our fate hangs in the balance.

Russia is making shrewd use of its time The cunning rulers in the Kremlin hav shifted at least for a time, from militar warfare to economic warfare—and are mak ing more progress with trade than they wer able to achieve with guns. They have move their tentacles into country after country in part or in whole, under the guise of eco nomic agreements and expanded foreig trade operations.

Make no mistake about it: countries be coming more and more dependent upon th Iron Curtain area of the world for food manufactured goods are enmeshed more an more into the Soviet web, and slowly bu surely are being weaned away from the rem nants of the free world.

The greatest weakness that has confronted Russia in this calculated economic penetration of neutral areas has been its own shortage of food and fiber. Yet Russia has been shrewd enough to recognize that fact, and has given top priority to expanding its food output. Not for its own people, but as an economic weapon in a world which above all else must have food.

What have we been doing, in this same period? We have been asking our farm people to lower their sights, to trim their sails, to cut their production to pre-war standards. We have been told downward adjustment is necessary. We have been guided into looking backward, instead of looking ahead.

Regretfully, the highest policymakers in our Government fail to appreciate the greatest weapon for peace in our hands—our abundance of food and fiber, and our potential to produce in still greater abundance.

We are going into a fight for our lives, with one hand tied behind our backs. We are failing to mobilize and fully use our greatest asset.

Timidity and hesitancy still lead our Government officials to look upon our food export programs as merely emergency surplus disposal legislation—a way to get out of a domestic problem, instead of the most effective way at our command of building economic ties for the future.

Remember one thing: the instinct for human survival is stronger than any conviction about ideology. People are going to eat. If we don't fill the food needs of the world, Russia will set out to fill them. She has already chartered her course in that direction.

The country upon which the greater part of the world is dependent for food, fiber, and other trade will eventually wield the balance of power in the world. We are losing, today, on this economic front.

What good is it for us to build bigger H-bombs, if we let the rest of the world become slowly linked to the Iron Curtain countries by economic and trade policies?

Where in this Government today do you see full realization of that fact?

Where do you see any aggressive leadership toward assuming the role we Americans are best equipped to fill in the current ideological struggle—best equipped by productive resources and humanitarian instincts?

We are far from a militaristic people, yet we seem to rest too much of our hope on weapons.

Are we ready to choose the battlefield as our best grounds to meet Soviet Russia? Remember, Russia is outdoing us in the training of scientists and engineers. Remember, Russia has H-bombs, too. Remember, Russia has less respect for human life than we do, and might more readily welcome a military showdown.

The real material advantage we have over Russia today is our abundance of food. All of us would rather see it put to good use, rather than just be piled up in storage. And we Americans are naturally traders and merchandisers; the role of finding ways to feed the world fits us a lot more naturally than the role of warriors.

Why, then, are we hesitant about challenging Russia on the economic front? Why shouldn't we, instead of Russia, be aggressively seeking to become the world's supplier of the material wants of less-developed countries?

I will give you my conclusions.

First, we are blinded by the almighty dollar. It has become almost a fetish for timid Government officials to worry about doing business anywhere in the world for anything but American dollars.

My friends, let me remind you of something: we are in a struggle for international survival of freedom, not just haggling about the price of a cow over the fence with a neighbor on the back 40.

We are spending billions of good, hard American dollars for weapons, dollars you pay for in taxes—and dollars that can never do any constructive good in the world after they have been turned into tanks and H-bombs. If the international situation is serious enough to justify such vast defense expenditures—and our military leaders assure us it is—we are certainly silly to be quibbling over the loss of a few American dollars through the export sale of farm products for foreign currencies.

If we expect to compete with Russia for international trade in the world of today, we must be ready to trade in whatever currencies are available. We cannot hoard all the dollars ourselves, then be willing to sell or trade only for dollars that others do not have.

It is something like being in a poker game, and getting all the chips back in the hands of the dealer. The rest may decide to go on playing with matches or buttons. If we want to stay in the game, we will have to find ways to adapt to matches or buttons too.

We are in the international game to the finish, whether we like it or not. If we insist on sitting on the sidelines as spectators, we have no right to complain about the outcome. But if we want to protect and strengthen our ties with other freedom loving people, we are going to have to trade with them—whether it is for lire, pesos, pounds, francs, or marks.

It is not as though we did not have good uses for foreign currencies. We are engaged in Government operations all over the world. We have defense bases all over the world. We have private American business interests all over the world. We certainly can use constructively the foreign currencies we obtain through sale of our farm products abroad—and official records of our Government prove it.

But there is still a second reason why we are failing to meet the Soviet challenge on the economic front.

It is the timidity of our Government officials, and their lack of vision, imagination, and daring. They fail to understand what a powerful force for freedom our abundance of food and fiber could be, both in economic relationships and as humanitarian evidence of our concern for hungry people everywhere.

To most of the officials in our Government at Washington today, our food abundance is just some kind of a domestic headache they would like to wish away. They simply fail to appreciate what an asset it really is. Perhaps the greatest disservice done to our country—not just to farm people, but to our entire country—has been the propaganda role of the Secretary of Agriculture in creating the impression that there is something bad about having more than enough food to go around. Apparently, to try to win a political argument, Secretary Benson stands guilty of bringing American agriculture in disrepute.

Far more is at stake than any political argument over farm policy. Our country's entire future is involved. Instead of criticizing farmers, the American people should be thanking God for our abundance, and insisting upon its wise use as a weapon of freedom, a potent force for peace.

Instead of quibbling about his personal philosophy on farm legislation Secretary Benson should have the courage to stand up to the President and the rest of the Cabinet and defend our farmers as being one segment of our economy fully prepared to serve our country in this emergency.

We need a Secretary of Agriculture today who can convince the President, the Secretary of State, and the National Security Council of the great asset you farm people have put at the country's disposal—and one who will fight to see that our abundance is fully used internationally to turn the tide for freedom.

We need a Secretary of Agriculture who will stand up and tell the truth to the American people—that every cent invested in protecting our farm producers is an investment in our Nation's security, just as much as the money spent for tanks and guns.

We need a Secretary of Agriculture with the vision to realize that whatever costs are involved in aggressively seeking out and gaining foreign markets for farm products today not only serves the best interest of our international relations, but actually is a sound investment toward building future markets for American farmers in the years of peace we seek ahead.

I have not come to these conclusions lightly. Many of you know that I spent a month overseas this year to see for myself whether real opportunities existed for the kind of food utilization I have long envisioned. I have talked with our military commanders abroad. I have talked with our diplomatic representatives. I have talked with highest officials of other governments. I have talked with American businessmen abroad. I have talked with our church-workers and representatives of CARE carrying on such a valuable people-to-people relief work abroad.

On every hand the answer was the same. It is a national disgrace that our country fails to realize the potential asset it has in an abundance of food and fiber, in the midst of a world of hunger and need.

Since my return, I have devoted long hours to conducting weeks of hearings before the Senate Committee on Agriculture into operations of Public Law 480, under which our farm export programs are conducted. From witness after witness before our committee, from every agency of our Government and from producers as well as the private trade, the evidence has been conclusively the same.

Yet our Secretary of Agriculture, as late as last week, reiterated his belief that Public Law 480 was just emergency surplus disposal legislation. The same view has been echoed by spokesmen in the White House.

They fail to lift their eyes, to the broader horizons involved. They lack the comprehension that even you farm people have that food can be a greater asset than guns, at a time when peace of the world is at stake.

They lack the vision that your own American Soybean Association has displayed, in gearing your goals to the future.

We can argue forever about farm policy, but we can have little basis for agreement as to what legislation is needed until we first arrive at some appreciation of the role American agriculture can and should play in our international relations.

We cannot solve problems of the present, based on thinking of the past.

We cannot adequately meet challenges of the future, guided only by standards of even the present.

We cannot solve agriculture's problems by thinking of agriculture as just an isolated, minority segment of our economy. We must have a broader view, and realize that we are no longer confronted just with a problem of surpluses and depressed farm income. We must fully realize that our agriculture can and should be an integral part of winning freedom in the world. In that context, we need abundant production as a vital part of our defense arsenal, and we can certainly afford, in the Nation's interests, seeing that our producers are properly and fairly regarded for fulfilling our Nation's needs.

We urgently need to lift our eyes, and raise our sights. We need to broaden our concepts. We need to look for new horizons and we need to be thankful that America's farmers have always been ready to fulfill our Nation's needs, however they may be neg-

lected and abused between national awakenings to our dependence upon them.

We need such a national awakening today.

My personal crusade has been to stir such an awakening, such a realization of the real importance of our abundance of food and fiber. Your help is needed. Between now and the first of the year, every effort should be made to get our country's top policymakers to take a more serious look at the role our food abundance can play in bolstering the free world and strengthening our economic and trade ties all over the globe.

When Congress reconvenes in January, it is my intention to submit a series of recommendations for improvement and expansion of Public Law 480 along those lines. You can rest assured we are going to ask for more than just a 1-year extension of this authority. We are going to ask that it be recognized as a foreign-trade policy of our Government, not just as a tool for getting rid of surpluses.

Let me leave you with another thought. In time of war, we recognized the importance of food and fiber went far beyond just farm people. We created a War Food Administration, to mobilize our food resources for victory. Perhaps today, in time of a shaky and uncertain peace in the world, it is time to think about a similar role for a special "Peace Food Administrator" to guide more effective use of our food resources for another victory.

It is just as important to mobilize and use our resources for winning on the trade and economic front today, as it was to help win on the battlefront a few years ago. It is even more important to use our food abundance as a constructive force for peace on the humanitarian front, in the ideological struggle now dividing the world.

If we fail to get the leadership we need in that direction from the Department of Agriculture, we must turn to the White House. If we fail to gain the full understanding we need anywhere in the executive branch, Congress itself must intervene and show the way.

I urge your support in that effort. For only then can you and others in agriculture reach the new horizons that beckon from all over the world.

Tito: Moscow's Trojan Horse

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. SHEEHAN. Mr. Speaker, Dr. Slobodan Draskovich, formerly of the University of Belgrade, now residing in Chicago, has written a book entitled "Tito: Moscow's Trojan Horse"—Regnery, Chicago, 1957—which I would like to bring to the attention of the Congress and the American public because of Dr. Draskovich's interesting observations in light of the political developments in Eastern Europe over the last decade.

Dr. Draskovich, son of Milorad Draskovich, was born in 1910. His father was Minister of the Interior in Yugoslavia, and was assassinated by the Communists in 1921. Slobodan received his law degree from the University of Belgrade. Later, he received his doctor of philosophy in economics from the University of Munich. During World War II he was a prisoner of war in Italy and Germany. He came to the United States in 1947. An author of many articles and several pamphlets pertaining to political economy, in February 1949 he testified before a Senate Judiciary subcommittee on how official representatives—probably referring to Yugoslav diplomats in United States—had aided Yugoslav propaganda activities in the United States. Tito: Moscow's Trojan Horse, is his first book published in English.

The author's thesis is that the tragic and glaring disparities between facts and Western opinion about Tito and "Titoism" compel him to expose to the world the realities of the Moscow-Belgrade entente. At length, he develops this facet of his report. He says, in part:

In the 7 years which had elapsed since the Kremlin-Tito break of June 28, 1948, both the Soviet leaders and Tito had had enough time to study the nature, causes and consequences of their conflict, to determine a line of action and to pursue a policy which would lead to the liquidation of the rift.

During all that time neither side had done anything to harm any fundamental interest of the other. There had been mutual accusations, insults and recriminations. But they were devoid of any serious political meaning and intent. What Moscow held against Tito were either arbitrary inventions (such as the subordination of the CPY to the People's Front, or the subordination of the workers to the peasants in Yugoslavia) or carbon copies of the Kremlin policies (acceptance of aid from Western democracies; capitalist reforms in the economic section, such as decollectivization of agriculture or free market for some products; liberalization of the regime and Communist self-criticism). What Tito held against Moscow was equally untenable. The Soviet Union was notoriously an imperialistic power, but since its very foundation in 1917, not only since 1948. And all Yugoslav Communists had known it and approved it. Without Soviet imperialism there would have been no Communist Yugoslavia, as Tito openly admitted. As for the accusations of "police state," lack of democracy, bureaucratic rule, Tito was shouting in a mirror. The Soviet Union was a police state, a ruthless bureaucratic dictatorship, but so was Yugoslavia. The Kremlin had its secret police NKVD; Tito had his secret police UBDA.

So in the whole Communist world, after the initial surprise and shock, nobody paid any attention to the reciprocal mudslinging and shadowboxing, which were keeping the Western wishful thinkers busy and happy.

But the Soviet-Yugoslav relations were not only devoid of mutual hostility. They were never strained beyond mutual irritations and they never for a single moment affected their dedication to the one and only ultimate aim of Communist world conquest, nor did they affect their basic relationship of anti-democratic allies. Within the Communist camp, they were disputing. On the world plane, they were both unchangeably dedicated to the subversion and destruction of the free world.

No longer defined as a mere provincial—Yugoslavia—ideology, the Communists have artfully amplified the Titoist concept to represent independent national communism wherever it is possible to establish it. But this national idea, observes Dr. Draskovich, is an intrinsically Communist scheme concocted by Moscow and Tito, with full mutual understanding, to confuse and ultimately conquer the West.

Dr. Draskovich emphasizes that Titoism is not an anti-Soviet drive, but Moscow's weapon against the West. Tito's current policy of peaceful conviviality between the East and West camps is but a facade for the scheme mapped out by the Communists. Communists, as we have seen, have the greatest interest in keeping complex political issues as confused as possible.

The author devotes a great deal of space to the Belgrade-Moscow rift of 1948 and suggests that Moscow has done great services to Tito by attacking and denouncing him just enough to feed "the West's delusion about Tito's resistance to and political warfare against Soviet imperialism."

In an engaging though somewhat repetitive style, the author has indicated what he recognizes of the strategy of the Kremlin to penetrate and annihilate the very spiritual and political fiber of the free world with Yugoslavia's Tito as their Trojan horse. As in the case of Troy's fateful legacy—the gift of the Greek wooden horse—subversion, espionage and sabotage are the disruptive goals of the Communist international conspiracy. It is deduced from Dr. Draskovich's book that Moscow has set Yugoslavia as an experimental camp for its Machiavellian intents to follow throughout the satellite bloc.

Bitterly deploring what he terms the West's "criminal folly" of assisting Tito morally and materially, Draskovich argues that in no other important issue has the West lost its political equilibrium and its acumen for political analysis and sound judgment to such an appalling degree as in the case of Tito and Titoism. At this point, we should recall our grand giveaway program which has funneled $734,304,000 to Yugoslavia since June 30, 1945. For good measure, in wheat alone, for the period January–April 1957, 19,567,000 bushels of wheat valued at $33,615,000 were given to Tito. How distant is the day when our country will come to the realization that to receive capitalist assistance is no Communist sin, that it will make easier the achievement of Communist objectives?

Of the book's many enlightening subsections, to quote a few: "Is the downfall or communism imminent?" "Tito's different foreign policy," "The pitfalls of Yugoslav 'different' communism," "Tito and Communist world monolithism," one arrested my attention which I would like to cite in part. It concerns the pirating of democratic words by the Communist camp for the obvious purpose of confusing the people. So great has been the impact of the war of words in our century that in World War II the identity of democratic-Communist vocabulary facilitated the capitulation of 10 European states to the Red camp. We remember Albania, Bulgaria, Latvia, Lithuania, Estonia, Eastern Germany, Hungary, Yugoslavia, Poland, and Rumania. Says Dr. Draskovich:

The thorough confusion which reigns in the realms of terminology and semantics in the cold war, is unfortunately a source of weakness for the democracies, and a source of strength for communism. Most of the terms are used by both sides: freedom, justice, peace, civil and human rights, progress, humanity, welfare of the people. They ob-

viously belong to the democratic vocabulary. However, the democracies have allowed their vocabulary to be used by the Communists, who have adulterated their contents and adapted them to Communist ends. And since the democratic side did not fight back to protect the original meaning of its own vocabulary, the U. S. S. R. and Communists everywhere were able to promote communism by using democratic concepts and terms. And so, for example, at Yalta, the Soviets violated the democratic sense of the agreements, but not the Communist sense. The tragedy of the West is that the difference between the two was not raised in Yalta. Since Yalta, little has been done to retrieve from the Communist vocabulary the stolen concepts and slogans of democracy. In any study of communism it is indispensable to clarify the democratic terms they use to destroy democracy and to expose the Communist semantics; that is, the meaning which Communists give to various political terms.

Dr. Draskovich's book is a challenging treatise which speaks of his love of freedom.

Since all men do not draw the same conclusions from the same facts—

He tells his readers—

I have made clear the values and yardsticks on which my considerations and conclusions are based: The preeminence of spiritual values in the life of human society, the absolute importance of individual and national freedom and human dignity, the rights and interests of all free people and of all the oppressed who fought to preserve their freedom and who are fighting to regain it.

Lewis E. Hoffman

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relative to an old friend of mine, Lewis E. Hoffman, who served the United States in an official capacity, first in the Bureau of Land Management, and earlier in the General Land Office, for a period of 44 years.

He is a dedicated public servant, and I am sorry he has reached an age at which it is necessary for him to retire from the Government service.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BARRETT

On August 1 of this year, the Federal Government lost an extremely able, and extremely dedicated, public servant in the retirement of Lewis E. Hoffman from the Department of the Interior. For nearly 44 years, Lew Hoffman has been associated with with Bureau of Land Management and its predecessor agencies dealing with the public domain of the United States, and at the time of his retirement was its Chief Minerals Staff Officer. He will practice law in Washington.

Mr. Hoffman is widely recognized throughout the minerals industry as perhaps the topmost authority in the United States on the oil and gas leasing laws. His book Oil and Gas Leasing on the Public Domain, has been a "bible" of the oil and gas industry since its original publication in 1951, and this year he brought out a revised edition to cover new developments in oil and gas leasing, including the laws and regulations covering submerged lands, among other things.

Lew Hoffman has appeared before the committees of Congress many, many times, and has always proved a most competent, and most cooperative witness. In addition, he was always available to any Member of the Senate or the House for private consultation on legislative and administrative matters affecting the development of the mineral resources of the public domain.

His Federal Government service dates back to 1913 when he was with the old Patent Office, then a bureau in the Department of the Interior and 7 months later he began his life work in public lands and their mineral development. He served in the American Expeditionary Forces in World War I, and then, upon the passage of the Mineral Leasing Act on February 25, 1920, he was designated by the Commissioner of the General Land Office to organize a division to administer the oil and gas provisions of that act. The task was a tremendous one as the change from the right to prospect for oil and gas, from making mining locations under the United States mining laws to the issuance of permits and leases under the Mineral Leasing Act was a revolutionary departure from the then existing practice and procedure.

On September 9, 1943, the Secretary of the Interior awarded Mr. Hoffman a meritorious promotion for "the interest and initiative you have shown in improving work methods within the Minerals Division which have resulted in more efficient management with a noticeable improvement in the morale of the employees under your supervision. I am glad that it is possible to give this evidence of the Department's appreciation of this service."

In 1953 Mr. Hoffman was appointed chairman of a task force of the President's Cabinet Committee for the establishment of a national policy relating to the production and utilization of minerals and metals. The task force was established to effect a comprehensive review of legislation, Executive orders, directives, and other components of the existing Federal mineral policy. The task force report received the highest praise from officials of the Department.

I am certain that all of Mr. Hoffman's host of friends on both sides of the aisle join me in wishing Lew Hoffman good fortune in the years that lie ahead.

Address by Hon. Lister Hill, of Alabama, Before the Alabama Library Association

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on April 12, 1957, before the Alabama Library Association, at Tuscaloosa, Ala.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR LISTER HILL BEFORE THE ALABAMA LIBRARY ASSOCIATION, TUSCALOOSA, ALA., APRIL 12, 1957

Mr. Chairman, librarians, trustees, and friends, I am honored and happy to be with you, who know so much about the past and present, to discuss with you the library of the future. It is altogether fitting that our theme, the library of the future, be considered at this trustees luncheon, for I know that all librarians will agree that without a firm reliance on the interest, the support, the sacrifice and the leadership of the trustees of our libraries, we could not hopefully contemplate the library of the future or have and cherish the blessings that flow from the library of today. We congratulate you and thank you, our library trustees, for your selfless devotion to the cause of enriching the lives of our people by giving of your time and your efforts to bring knowledge and culture to our towns and cities, to our rural communities and to the very hearthstone of our homes throughout the land.

We live in an era so remarkable for its contrasts that we can talk of the library of the future—which is now actually in the making—at the very time when, in many parts of the United States, the library of the present is nonexistent. While I speak about the library of tomorrow I am just as interested in the librarian of today.

Of all the varied impacts on man's progress by the forces that have influenced it—religion, education, politics, war, and man's quest for peace and freedom—the institution that contributed mightily and affirmatively along with the others, and received the minimum of the plaudits of history, is the library. The library seems to have assigned to itself the role of doing its job and saying nothing about it.

Emerson said: "Meek young men grow up in libraries"—but I think Emerson was wrong. We cannot read the library bill of rights adopted by the Council of the American Library Association in Atlantic City in 1948 without being impressed with the courage and forthrightness of the American librarian.

This document is important not only for that which is in it, but more significantly for that which is not in it. We might have anticipated that librarians were demanding their rights; that librarians were raising justifiable protests against the indifference of a society that ignored their services and paid them poorly. Instead they were putting themselves, their reputations, their means of livelihood, at stake for the basic American freedoms: Freedom of speech, freedom from censorship of books, freedom of thought, freedom from cultural suppression, freedom to use libraries for purposes of assembly. The document was in its way like a pronouncement from Mount Sinai or an echo of the Continental Congress.

Some of the figures on library systems in the United States must sound distressing to a proud American presented with the administration's budget for 1958 totalling $71.8 billion. As chairman of the Senate Committee on Labor, Health, Education, and Welfare I cannot begin to tell you of my astonishment at certain data on the public library in America. I found myself obliged to report in connection with my then proposed Library Services Act, that of the 7,500 public-library systems in the Nation, 60 percent have less than $4,000 per year for operating expenses; 15 States have available for library services less than 50 cents per capita annually; 15 States have available for this purpose less than $1; 15 States have available less than $1.50; and only 3 States have available $1.50 or more annually. Recent studies by the American Library Association conclude that $3 in annual per capita expenditure is necessary for minimum library serv-

ices, and not a single State has thus far even approached this figure.

The people and our democracy suffer from this wholly inadequate support. Librarians suffer, especially those in the lower range of library administration and those in charge of the smaller and inadequate libraries.

We must raise the level of the librarian's salary from its present rank among the lowest in all employed groups in America to a level in keeping with the librarian's professional responsibilities. Counted into the budget scheme in estimating salaries, should be the 5 years of formal education beyond high school called for by your profession. The salary should reflect moreover, the constant necessity in this fast-moving age for keeping informed on library changes and developments. It should reflect also the increasingly difficult task of making the initial salary high enough to attract professional people who meet your progressively higher standards. In 1956 there were 12 jobs for every graduate of a library school.

The hour demands that we give the librarian a salary which will enable him to enjoy a good standard of living, to permit recreation and travel, continued study and educational growth, and provide security in old age. We must recognize the essential worth and dignity of the librarian and assure full opportunity to take part in the life of the community.

How can simple justice be more elementary than this.

Why should a librarian be expected to take anything less?

It is evident that libraries—like our schools—raise the level of democracy by educating, by inspiring democracy's thinking and developing its leadership. History convinces us that the library is not only a highly desirable supplement to the school, but often a substitute for it. The galaxy of the world's great men contains the portraits of many whose formal schooling was extremely meager, but whose scholarship was profound because their education came from books somehow made available to them. Benjamin Franklin, one of the wisest and most versatile of all Americans, had little formal education. John Marshall, who took the skeleton of the Constitution of the United States and clothed it with flesh and blood, had less than a year of formal schooling. Of what university was Shakespeare a graduate? Lincoln's school was mostly a handful of books, and Thomas A. Edison went to school less than 3 months. Could it not then be said that the library, in one form or another, public or private, pathetically small or larger and prouder, made possible the contributions of these giants of history? And how many thousands, how many millions whose collective contribution to life and progress is immense, but who individually were less noted, have in the same way contributed to the fruits of man's progress?

Education such as the library affords constitutes the bread and wine of life for a democracy. It is thus that we were appalled at the spectacle of 27 million Americans in a population of 168 million without public library services and 53 million people with inadequate library services. So much of this cultural deprivation of so many Americans occurs in the rural areas. Here there are either no libraries at all or only the most inadequate library service. In the Congress, therefore, we passed what we are proud to call the Library Services Act.

This act, which I sponsored for 10 years before it was finally passed by the 84th Congress in the spring of 1956 will bring books and learning to the 27 million Americans. Under the terms of the act, Congress authorized $7½ million to be appropriated in each of the next 5 years beginning in 1956–57, on a matching basis, to the States. The administration of the act will conform, as you know, with State and local conditions. Funds are to be granted based on the rural population of the State as compared to the rural population of the United States. And the money is matched by the State on the basis of the per capita income of the State as compared to the national per capita income.

The State, of course, determines its personnel, books, and materials, without interference from the Federal Government. The State plan is administered under the authority of the State library agency, and in my judgment, the autonomy of the States in the matter of library policy is complete.

The act follows a well-established formula in general Federal-State relationships. There is one aspect that is new: The establishment of library facilities where they were formerly lacking so that no American can ever again be said to have been kept out of the reach of books, the culture they bring, and the self-improvement they inspire.

A democracy like ours in its own enlightened self-interest should do no less.

I share your gratification over the fact that the Office of Education approved the Alabama State library plan on March 15 last and the funds for Alabama were made available as of March 1.

Alabama, we learned from the December 1956 Library Journal, proposes to use the funds to be made available under the act (1) to strengthen the State public library service division; (2) to make development grants to already established regional libraries; and (3) to provide establishment grants to new regional libraries, bringing together present smaller units and unserved areas.

Alabama will be a principal beneficiary of the Library Services Act, for in addition to the educational and cultural enrichment that it will bring to our State, the act will provide a powerful and persuasive inducement to new industries, new jobs and, therefore, a higher standard of living for our people. We know that when new industries consider locating in Alabama, they almost invariably inquire of the facilities and services available with respect to schools, churches and libraries—which, as you see, makes you a part of a vital triumvirate. When the 1,131,000 citizens of Alabama, who now have no free public library service, are emancipated from the darkness which the dearth of books imposes, we can then envision the day when Alabama shall no longer be only a part of the Nation's new economic frontier, but rather an economic fountainhead for the Nation.

All that I have discussed with you up to this moment constitutes the public library of today that is the foundation of the public library of the future. Those of us who have examined the fantastically new electronic library equipment see nothing in it, I am sure, that is frightening in any way, or threatening to the future status of the librarian. If anything, these basically mechanical devices, marvelous as they are, represent only the bringing of a type of automation into library service, and in my judgment, they add scope and opportunity to the librarian as well as to the library. Before and after the drudgery is done by the machines there are still the imagination, the memory, the skills and aptitudes of the creative librarian which no machine can ever replace. And as the machines amplify the services of the library they draw within the orbit of the librarian a new set of demands from veteran library users on the one hand, and a whole new library audience on the other. That is the history of the machine since man first conceived the uses of the wheel.

The library of the future will not be an isolated collection of books. It will, on the contrary, be a unit in a great network. Any book in any library anywhere will be available to the most remote reader in the farthermost ends of the country. The system of communicating the book will probably be electronic, so that the microreader will be the instrument by which the student, using a microfilm, will peruse the book, document, or monograph.

The library of the future will make a very special response to the increasing demands of science and technology. New-found knowledge may be quickly disseminated to special activities and assimilated to avoid duplication of the original effort. Many of the electronic devices are in the laboratory stage so far, but their practical use is certainly in the offing. We know it is quite possible to get a full bibliography by IBM. The book ejector by the same process may soon furnish the reader in an instant with a whole armful of the books pertinent to his needs. The revered storehouse of man's knowledge that has made the great libraries of all time so precious since the days of ancient Alexandria is now enormously multiplied. It has been estimated that with modern methods and devices all the 10 million or more volumes in the Library of Congress can now be stored on microfilm in an average-size reading room. The value of our scientific advances for preserving the chronicle of civilization is beyond any price estimate.

We can now envision the day when we have rare manuscripts, for example, projected to the ends of the earth by telegraphic facsimile machines; when the library of today, emerging into the library of the future, is capable of distributing musical and dramatic recordings, as well as books; when the library becomes more and more a community meeting place for cultural pursuits, where recorded performances, on film or tape, are made available for groups, clubs, and societies.

It seems to me almost impossible that we can misread the facts or fail to see the results of our experiments. If they show anything it is that a new horizon is opening up for the librarian in the library of the future. The challenge and the opportunities seem to be almost unlimited. The values for civilization and for man's cultural progress are significant in a sense that has never prevailed before. New dimensions in the diffusion of our convictions, our faith, our literature, our knowledge, are presented us. With these instruments how can democracy fail? In this enrichment of life, in this strengthening of democracy, one of the key figures is inevitably the librarian. The librarian is the mentor, the guide, the custodian, the teacher, in many instances the inspiration, at the heart of the modern public library in the modern community, urban or rural. We may know that this highly skilled, distinctly professional and strategic guardian of our culture will measure up fully to his opportunity in the future as he certainly has in the past. On this cultural front the safety of American democracy is assured the American people and the free world.

We can look forward with high hopes to the day when ignorance and every form of tyranny over the mind of man shall be supplanted by the knowledge and culture that come with books and the wisdom and understanding that come with knowledge and culture. I salute you, librarians and trustees, as you build the library of the future and render your mighty service to your fellow man and to generations yet unborn—the beneficiaries of the priceless legacy that you will preserve.

Together: Midmonth Magazine for Methodist Families

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HICKENLOOPER. Mr. President, a member of the publishing board of a new magazine to be published by the Methodist Church, called Together, has sent me a statement of this new venture in religious publication, which will be, apparently, a very significant addition to religious literature periodically published in this country.

There is a significant note of interest in connection with this new magazine, in the fact that the editor is the brother of our distinguished and esteemed colleague, Senator CASE of South Dakota. His brother is Mr. Leland D. Case, former editor of the Rotarian, and new editor, as I said a moment ago, of the new magazine.

I ask unanimous consent that a statement which has been forwarded to me for information be printed in the Appendix of the RECORD, along with the remarks I have just made.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The general conference of the Methodist Church voted endorsement at Minneapolis in May 1956 to firm up plans which the Methodist Board of Publication had approved in October 1955. Usually, when new magazines are launched, either they start simply and evolve gradually or they are preceded by many months of policy incubation, depth and motivation surveys, staff recruitment and training, and expensive dry-run issues. The circumstances backgrounding the bold venture precluded birth of Together and the New Christian Advocate from such a matrix.

Despite these obstacles, the editorial and business operations have been integrated at 740 North Rush Street, Chicago, as a unit of the Methodist publishing house. The business department operates under Mr. Warren P. Clark, whose personal fitness has been seasoned by many years of experience with the old Advocate. More than 600 people work under his direction in carrying on circulation, business, and advertising activities. Their task has been especially heavy as the two-hundred-thousand-odd addresses of persons receiving the Advocate have been merged into the 900,000 subscribers on Together's rolls.

Any degree of editorial success attending the bold venture is surely to be attributed to the competent individuals who comprise the staff. From the office boy up the scale, each is progressing in his or her job not only with the satisfaction that goes with a craftsman's pride in achievement, but with the inner glow of awareness that the job is especially well worth the doing.

The experimental factor present in the whole bold venture is evident in the New Christian Advocate. Methodism's 130-year-old Advocate tradition is thrust into the ongoing present through the title. But the format and content represent a fresh concept in professional periodical literature for the clergyman, who is a busy man. His working hours may have remained unchanged, but into them he must cram response to more demands, in greater variety than were known to his predecessor. Such facts account for the format of the New Christian Advocate—a pocket-sized book with clean typography. It is tailored to the habits and convenience of the pastor who must do some of his reading at odd times, such as waiting at hospitals or riding trains or planes.

Planning of Together started a review of the purpose comprehended in the subtitle, "the magazine for Methodist families." This was to be a magazine to promote Methodism's meaning and mission among the families comprising the public created by membership in Methodist churches.

So practical planning began with a study of the prospective reader—the children, the teen-agers, and the other age groups comprising Methodist families, A. D. 1956. In common with other typical American families, they are known to be more prosperous, more mobile, and more informal than their forebears. They have more leisure time but they also have more competitive demands upon it. And they have a proper pride that organized causes with which they are identified should be well presented to themselves and to their neighbors.

Together seeks to inform and inspire the individual member. It tries to reach not alone those self-selected members who attend church the Sunday after Easter, but many who otherwise would never be exposed to a church publication—yet are on the rolls of a Methodist church. Together is Christian and ecumenical—but it is also unabashedly Methodist. It seeks to become a welcome visitor within Methodist homes.

Together becomes a new local church emphasis tool to draw the congregations together on a new level of mutuality. The pastor can, for example, refer to Together in sermons, knowing it is the one magazine each member of his congregation sees. Twelve times a year it is a visitor from the church getting attention at especially impressionable leisure moments.

Together can also become a unifying element in Methodist diversity. This is achieved not alone by developing or reawakening a church awareness among members at the local level, but also by reiterated stress on the many-phased program of the Methodist church. Together tills the soil of interest out of which action can spring.

It was conceived as a church-family magazine to be exposed to all families of all Methodist churches. The only practicable way to gain this goal is through the all-family plan in churches. When it succeeds in Methodism as well as its counterpart has with Presbyterian Life in a sister denomination, Together will have 3 million circulation. Such achievement is of the essence of Together's purpose—carrying forward through a journalistic medium the evangelistic outreach of John Wesley.

Together achieves attention with its illustration, especially color pictures, starting with the cover and climaxing in the 8-page midsection. Subject matter ranges church-related topics including the quadrennial emphases on the local church, education, and the lands of decision—Korea, Bolivia, Belgian Congo, and Sarawak.

Similarly, articles are planned to enrich the reader-member's understanding and appreciation of his church. These range from reader-participation to big-name authorship, from artists' sketches to full-color pictorials, from controversial powwows to lyrical personal testimony. And parables drawn from modern life, features that journalists call human interest stories, are often used to teach profound lessons.

The editorial position is that within the people called Methodists lie deep desires, high dedication, and outreaching fervor, but also rich in diversity, remarkable vitality, and great talent. Together's role is to discover, develop and interpret these.

My Place in the World of 1976

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. BIBLE. Mr. President, as long as history has been recorded, man has often written and spoken disparagingly of the younger generation. I have recently received a copy of a speech, written by a Nevada high school graduate.

This speech with its title, "My Place in the World of 1976," denotes the high ambitions which this young writer holds for himself and others. It is typical of the ideals held by many American youth of today. It gives hope for mankind, and shows faith in the future. I commend its reading to all and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MY PLACE IN THE WORLD OF 1976
(By Dom Bruzzese)

I believe that in 20 years we will be living in an era known as the atomic age. By then, the peaceful uses of atomic energy will have surpassed its uses for war, and the results will benefit all mankind.

Before this new age comes to pass, however, a climate of peace must be established in the world. At present, the world is made up primarily of two armed camps—the democracies and the Communists. The are spending money like water in a mad race for military supremacy. Nations are hurling charges and countercharges at one another that grow worse by the day. The cold war might well break into a hot war at the slightest provocation. Prospects for peace at present look black indeed.

Despite these disturbing facts, I have complete faith in the future. As Adm. Lewis Strauss, of the AEC once put it: "My faith tells me that the Creator did not intend man to evolve through the ages to this stage of civilization only now to devise something that would destroy life on this earth."

For a while, we must continue to maintain a vigorous and sustained atomic weapons program, in order to prove conclusively that war is rapidly becoming obsolete. Within the next few years, however, I believe that the Communist half of the world will realize that an atomic war will destroy all civilization, including theirs. They will have seen the wisdom of competitive coexistence—of living together in a peaceful world. The conquest of science will replace their past goal of the conquest of man. When that day comes, the nations of the world can go forward with full speed toward the development of the atom for constructive, rather than destructive, purposes. At that time we will begin the atomic age.

Based on predictions by the AEC and countless scientists, nuclear power will have a tremendous impact upon our future economy. By 1976, it may make it possible to undertake large new industrial activities at sites that would otherwise be uneconomic due to high transportation costs or the absence of transport facilities for conventional fuels.

Nuclear power may solve the problem of providing additional cheap electric energy in locations where the demand is expected to outrun the availability of hydroelectric power.

Nuclear power may permit and perhaps encourage the development of strategically decentralized areas of industrial production requiring low-cost electric energy.

Nuclear power may provide blocks of electric energy for Government and military installations where the cost of power is important, but not controlling in site selection.

Nuclear power may help electric utility systems in metropolitan areas to adjust to such limiting factors as rail transportation and smoke nuisance arising from a major increase in electric energy generation from coal.

Nuclear power may contribute in some measure to the introduction of new production techniques in electroprocess industries.

Nuclear power may become technically feasible and economic for commercial propulsion purposes, such as the powering of merchant ships, planes, and locomotives.

I am confident that these and other miracles of atomic energy will be a part of our way of life by 1976.

Further, it has been predicted by leading scientists that energy may be obtained within 20 years from harnessing the H–bomb. If this comes to pass, and I think it will, the vistas are unlimited, for the very waters of the sea can then be utilized as fuel. The limitless energy thus produced, virtually without cost, could, for example, reclaim most of the world's deserts, including that in southern California and my own State of Nevada. Realizing that most anything can be grown in the desert if properly irrigated, it is not beyond the realm of possibility that these lands will become as fertile as the richest valleys here in California.

In this atomic age, I believe that my home town of Las Vegas would be a natural setting for a large institute for atomic research in medicine.

Physically, if the desert becomes irrigated, that area should be ideal by 1976. Our wonderful sunshine would be a great drawing card for the ill to go there for observation and treatment at the medical center that I visualize. The bothersome dust that we have there at present, and which could be a deterrent to a medical research institute, should be pretty much eliminated by the grass, the crops, and the trees that will cover the land. Some of this same foliage will also act as a bulwark against the winds that presently plague our community on occasion.

Scientifically, a research center located in Las Vegas for the purpose of utilizing the atom for medical uses would be extremely practical. With Las Vegas and the surrounding area already established as a most vital test site for atomic development, and with recent announcements by the AEC that their installations there are going to be greatly expanded, that area, by 1976, could well be the most important atomic energy center in the country—or the world for that matter. The probable availability to this research institute of the facilities and scientific brains of the AEC there would be of invaluable aid to the cause of medical advancement.

If my present plans materialize, I hope that my place in the world of 1976 will be as a staff member of this institute. By then, I will have graduated from Georgetown Medical School in Washington, D. C., and served my internship. In addition, I ought to have had 9 or 10 years of experience as a physician in a large research institute. While there, I'll attempt to specialize in developing the use of the atom for medical purposes. I should like to think, in fact, that I will have played a part in promoting this research center in Las Vegas, by convincing interested persons that the advantages of establishing such an institute there would be many.

I visualize my role in this medical center as the coordinator of research. In that capacity, I would be responsible for seeing that the various research projects were directed toward the proper goals.

It is extremely difficult at this time to predict what these goals would be in 1976. I do strongly feel, nevertheless, that based on the progress already made in utilizing the atom for medical purposes, the results of such research will have far-reaching effects in the field of medicine.

For example, the atomic reactor can already be tapped directly for radiating neutrons. These neutrons are used experimentally to treat cancer patients. They are also used to make radioactive isotopes, which are used as tracers to follow the spread of medicines through the body and as a source of rays to diagnose and treat tumors. Already they have saved more lives than were destroyed at Hiroshima and Nagasaki.

In experiments reported at the University of California at Berkeley, human cancer is being attacked with protons, which are the hearts of hydrogen atoms. Leprosy is being treated with radioactive sulfur by India's Department of Atomic Energy and Indian Research Center. An atomic method for speedy, accurate measurement of the heart's pumping efficiency and the state of its action has been developed at the Bronx Veterans' Administration Hospital in New York.

These are just a few examples of what has already been done in nuclear medicine. With the type of clinic that I envisage in Las Vegas by 1976, many dread diseases as we know them today will be completely conquered. The health of the world could be vastly improved by what might be done in a research center in my city.

This, then, is what I hope my place will be in the world of 1976. I will be doing what was phrased by a Japanese sage many centuries ago when he wrote: "Do not try to do what your predecessors did; rather, seek what they sought."

Depressed Economic Conditions in Cumberland, Md.

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. John G. Thomas, president of Local 1874 of the Textile Workers Union of America, on the depressed economic conditions in Cumberland, Md. Mr. Thomas' statement was originally prepared for a committee hearing on this problem which had to be deferred until the next session of Congress. He urges affirmative action on S. 964, which I introduced in the Senate earlier this year, and presents another persuasive picture of the serious needs of communities with prolonged high-level unemployment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY ON CUMBERLAND (AND ALLEGHENY COUNTY), MD.

(By John G. Thomas, president and business agent for Local 1874, Textile Workers Union of America, AFL–CIO, Cumberland, Md.)

Allegheny County, Md., despite all protestations to the contrary, continues to be a depressed area.

This condition has persisted for almost a decade now. The human suffering and economic loss involved in this long, dreary period of unemployment and underemployment is not apparent to the person who walks up and down our principal business streets of Cumberland—our principal city. Nor do official statistics give anything like a complete or revealing picture of what has been happening to the human beings in our community as a result of the prolonged economic illness from which we have been suffering. No amount of glib self-deluding sales talk can cover up the hard fact that people have suffered, continued to suffer, and that business has been seriously hurt by the curtailment of employment in our biggest local plants.

Certainly, there have been some ups and downs in our employment and business life in these years; but the fundamental fact is that the deficit of jobs persists and the community shrinks instead of enjoying a reasonably normal growth.

If any of us thought that this situation would correct itself or that purely local action would bring about a genuine cure, surely those ideas should have changed by now.

If there are those who profess to believe that this depressed condition of our local economy can be remedied without Federal legislation along the lines of the Douglas bill, these persons must be suffering from a severe form of mental astigmatism.

The bare fact that Allegany and Garrett Counties are the only two counties in Maryland which have declined in population since 1950 should by itself demonstrate that there is something radically wrong in these areas. And when the situation persists for over 10 years it is not just a passing phase or some slight difficulty that can be easily thrown off or remedied.

There has been a fluctuating outmigration of people from the county for some years now. It must be pointed out, however, that some of those who leave to get jobs in the automobile or aircraft plants have been forced to return to their old homes here every so often because these persons having little or no seniority in the plants to which they go are invariably the first to be caught in the periodical layoffs which occur in the automobile or related factories.

There is a local joke in Cumberland about the fact that so many families or breadwinners from the Cumberland area have happened to locate in Pontiac, Mich. Because so many of these individuals were originally from Lonaconing in Allegany County that the particular neighborhood in Pontiac where this group have settled is now known as Little Lonaconing.

According to data obtained from the local office of the Maryland Department of Employment Security, these are the essential facts of our local situation.

A year ago (July 1956) the total labor force in Allegany County was estimated to be 41,300.

At that time the unemployed were estimated to be 5,500 or about 13.6 percent.

The total of those actually employed (including the nonseasonal agricultural workers) was estimated to be 35,800.

Today there are more persons unemployed than there were a year ago. Exact figures on current unemployment are not immediately available but we can point to the fact that there has been a sharp dropoff in employment at the celanese plant. The normal current payroll at celanese is around 2,360. At present less than 2,000 are working.

The Lonaconing plant of the General Textile Co. (a commission yarn mill) has closed down altogether. This plant employed at one time between 250 and 300 people, but it has gradually decreased its employment rolls in the last 10 years to a mere number which fluctuated between 40 and 50 employees and when it closed down completely the first week of this month (July) it had 30 employees on its payroll. We are not certain

whether this shutdown will be permanent or not. But nobody is now working at this mill.

Also there is some decrease is employment at the Kelly-Springfield tire plant.

The Baltimore & Ohio Railroad just announced further furloughs among those employed in its shops here.

The number of persons in the county in covered employment as of 1956 was 19,474 or 216 less than in 1950. This represents a decline of 1.1 percent between roughly equivalent dates in 1950 and 1956.

Employment in mining and manufacturing jobs decreased by 13.2 percent in the decade. Miscellaneous and service employment dropped by 9.3 percent in the same period.

The number of persons employed in construction increased by 97.4 percent as against 1950.

On this last figure it should be pointed out however, that the bulk of those engaged in construction jobs are working on the new $34 million Pittsburgh Plate Glass plant which will be completed within very few months with a consequent layoff of about 1,000 men on that one operation.

It is a fact that between 400 and 500 new employees will be hired at the new glass plant when the construction job is finished, but in terms of net employment there will be 500 fewer people drawing paychecks in this area when the plant goes into full operation.

In this connection the Members of Congress should be apprised of the fact that none of the older furloughed workers from Celanese or the other plants in the area are eligible for these new jobs at the glass plant. No matter how skillful or experienced or steady they may be, the hiring policy of Pittsburgh Plate Glass is to exclude persons above 35 years of age.

There are some hopeful factors in the local situation which should, in fairness, also be cited. For instance, the Baltimore & Ohio Railroad has announced the expenditure of some $10 million on a new marshaling yard. Certainly that will mean some additional construction work but there is no knowing at this time whether on the completion of this improved facility there will be fewer regular employees or somewhat more.

The West Virginia Pulp & Paper Co., while maintaining stable employment, has announced a slowing down of its plant expansion program. Certain mechanical modernization projects at the Luke plant are being postponed for at least another year.

The Allegheny Ballistics Laboratory, operated by the Hercules Powder Co. for the United States Navy Department, now employs some 856 persons and has been taking on some additional persons and is expected to continue to do so in the coming months.

The other side of the picture is this:

It should be recalled that in 1946 employment at the Celanese plant was over 10,000. Today some 2,000 people at this same establishment produce probably 3 times the amount of rayon that was made by the large work force in 1946.

Take this figure for instance: the spinning department at the plant today is producing over twice as much with a work force of 450 as it did previously with a complement of 1,000.

In cellulose acetate department the figures are roughly a 300-percent increase in output.

What has happened to all the people who used to have jobs at Celanese? Many, of course, have left the community permanently.

One thing that this long depression in Cumberland has proven to us is that it is exceedingly difficult, and sometimes practically impossible, for families to just pick up and leave a place where they have lived most or all of their lives. People have family connections and responsibilities which tie them down; they may own houses or some other other property which cannot be readily disposed of. Children cannot be taken out of schools overnight. Whatever the immediate reason, families can't pull up stakes without the greatest of difficulty no matter what happens to their jobs.

By obtaining an old work roster from Celanese recently and doing a lot of checking, we have been able to establish the fact that some 1,500 of the furloughed or dismissed employees are now making their livings in a variety of miscellaneous jobs in and around Cumberland. Several of the men I know are working in gasoline stations for wages of around $5 a day and frequently put in a 7-day week to take home less than $35. Quite a few women who formerly were members of the Textile Workers Union of America now work in retail stores in Cumberland for wages of less than half they earned while in the factory. The wife of one of our local union officers is working in a shoe store in town for 67 cents per hour.

These are typical instances and not isolated cases. We could cite many others of this kind if anyone would be interested.

Cumberland is probably one of the oldest and most repeatedly studied depressed areas in the country. It has been spotlighted in several national surveys; its plight has been featured in headlines and then promptly forgotten for the next several years.

The unions and other progressive elements in the community have made serious, determined and patient efforts to relieve the chronic unemployment which has dogged us for so long. We have contributed money as long as we had any surplus funds in our treasuries to aid local efforts to attract new industries or to otherwise improve our economic prospects.

The problem has not been solved. And while we hesitate to engage in controversies with those in our community who attempt to say that things are getting better, we must emphasize that the facts give the lie to the optimistic kind of publicity which is used to minimize the rather ugly situation which persists year after year. Some businessmen have insisted that all must be well because certain stores have done a large volume of business. We are happy to know that some stores or other local business concerns are doing all right. Against these few success stories we could offer dozens of cases where business has been hurt badly and continues to feel the harmful effects of unemployment and underemployment.

What we do know is that heads of families come into our office every day with undeniable stories of distress and privation—of the difficulty of living decently on insufficient and uncertain wages. The overall outlook is not bright.

Cumberland is a depressed area—that is the undeniable fact. To get us out of this situation, we need and must have outside assistance such as long and bitter experience proves can only be had through congressional action. We urgently recommend adoption of the Douglas bill (S. 964).

Firearms Regulations

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. HICKENLOOPER. Mr. President, the Treasury Department has recently been holding hearings on the question of the promulgation of a new and extensively revised firearms act, which a great many people—sportsmen and others—not only feel is a great incursion into the liberty and freedom of the American people to keep and bear arms, but will inhibit the activities of sportsmen and sporting organizations who deal in firearms.

I have gone through these regulations. I feel they go away beyond any need, and I believe that they are not only not essential, but that they will be harmful to the literally millions of people in the United States who get their recreation from hunting and the use of firearms.

In that connection, Mr. President, I have in my hand a copy of testimony given by a Washington lawyer whom I know, who represents some of the firearms dealers who would be directly affected by the promulgation of these new orders. It expresses at least one view of a segment of the people who would be affected. It is very short, and I ask unanimous consent that the testimony by Mr. Fred B. Rhodes, Jr., at the hearing on August 27, 1957, on this subject, before the Internal Revenue Service Alcohol and Tobacco Tax Division of the Treasury Department, be printed in the Appendix of the RECORD along with my remarks in connection with it.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF FRED B. RHODES, JR., ATTORNEY, REPRESENTING PASADENA FIREARMS CO., AND GOLDEN STATE ARMS CORP., WASHINGTON, D. C.

Mr. RHODES. Mr. Chairman, in the interest of brevity I would like to submit as a part of the record, and to have the stenographic record show that the detailed comments of my clients are contained in these statements which I give in the appropriate number of copies.

Let me first state that I represent the Pasadena Firearms Co., of Pasadena, Calif.; the Golden State Arms Corp., of Pasadena, Calif.; and approximately 1,500 other dealers of their dealer chains in 47 of the 48 States of the Union, Alaska, and the District of Columbia. We consider ourselves truly small business. And I would like to address what I say to that particular viewpoint. Therefore, I would like to disassociate myself from those who have spoken as manufacturers, and most particularly, I would like to disassociate myself from the gentleman who spoke here yesterday, Mr. Shutt.

Mr. Shutt, you will recall, represented certain retail sporting goods firms in the United States. And he indicated a rather conciliatory attitude on the part of those people toward these regulations. I would like to say here, for the record, my clients give me no such latitude in discussing these regulations.

They are opposed to them from section 177.50 on. And I wouldn't want anything that I might say in jest or otherwise to indicate any lack of seriousness on the part of those that I represent.

I am proud to state here that the warning bell was rung by the vice president and general manager of the Golden State Arms Corp., Mr. Walter Anderson, who was here in Washington on business for the company on May 8 of this year. At that time he came into possession of a copy of the proposed regulations, and immediately saw in them the danger to the Golden State Arms Corp. in regard to its mail-order business, which is large.

He, of course, communicated that to others who were similarly situated. He communicated it to the dealers for whom I speak here today.

As a result of this warning, there have been angry protests arising from every corner of the United States.

I believe you gentlemen are witnesses to that fact, because you have been advised, as have some of the rest of us, of their interest in this matter.

One of the witnesses in support of these changes decried yesterday the fact that the police of the Nation were not better informed or better organized concerning this matter. He did say one reassuring thing to you. He said that regardless of the way this decision went, that his people wouldn't carry on the fight beyond the decision that you gentlemen make.

Let me say for the record, that my people aren't so charitable, and they will carry on the fight beyond this forum. And if these proposals are enacted and given the force and effect of law, they will carry the fight to the Congress of the United States and to the courts of this country.

Now, since most of the beneficiaries of this action are stated to be the police of this Nation, and since we have already had quotations from their magazine, the Police Chief, let me quote also from the August 1957 issue of their publication:

"Police administrators who cannot attend or send a representative to this hearing"—speaking of the hearing we are now attending—

"should either fill out or return to the IACP headquarters the questionnaire appearing on page 10 of this issue, or send their suggestions and comments in duplicate to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington 25, D. C. This should be done without delay. It is expected that firearms manufacturers and sportsmen and other organizations will be very vocal in presenting their views, views which do not always coincide with crime prevention and law enforcement."

Let me repeat that for the record—"views which do not always coincide with the best interest of crime prevention and law enforcement."

Gentlemen, let me brand that statement as worse than a lie for the impression it attempts to create.

Let me go on and read further from this journal:

"The Alcohol and Tobacco Tax Division of the Internal Revenue Service now serves as a national clearinghouse on firearms registration and identification. These new regulations would permit a more complete and effective service to law enforcement officials who are seeking such information. This service is available by mail, telephone, telegraph. If records of the clearinghouse reveal no information on a specific firearm or ammunition, then the internal-revenue officers will investigate for violation of the Firearms Act. In many instances such investigations have enabled State and local police to solve a case." In the light of this sales approach let us now turn to the questionnaire which appears at the end of the article. There is there, under the caption "Three," a very revealing statement:

"If in your opinion such records would be of little or no value, please be frank and so state, since such records do involve time-consuming work and expense."

It was heartening and refreshing today to hear the head of this organization admit that he wasn't clear in his own mind as to the full benefit to be derived from these regulations. Apparently they had not received the results of the poll they proposed to take.

Let me go on.

These have been unusual hearings in many regards, first, because they were not originally planned as a part of this rulemaking action; secondly, they are unusual because Members of Congress came here in the busy closing days of this session to testify in answer to requests of angry constituents.

The witness here yesterday, for the Metropolitan Police Department of this city attempted, in a rather strained way, to create the impression that these men were inarticulate, and that they did not express the sentiment of the Congress.

I think his attempt to convince us was both weak and ineffective. There are angry protests arising over this from all over the land. In fact, our people are fighting mad about these regulations. They look on them as a bureaucratic maneuver; another interference from Washington in the conduct of their business.

Now, let me say this is not a new problem that they face. They have been dealing with Washington for years. And, gentlemen, it is not a case of attempting to resolve a major point which creates the trouble at all; it is the matter of getting someone who has final authority to speak on interpretations of technical matters. And these things have a habit of dragging on, as your files well reflect, for long periods of time, and which only result in cost to these people who are honestly trying to make a living.

It is for this reason that these people resent all of this being put upon them by officials here in Washington. And they look on it this way.

Gentlemen, if the situation here in this country with regard to crime and its detection is so serious as to warrant these sweeping changes, then I believe we are before the wrong forum, for indeed the people of this country should be advised as to the danger in which they find themselves.

And they should, on the other hand, be encouraged to bear arms and certainly to become proficient in their use. If this is the case; if the Nation's welfare is endangered, certainly we should be before the committees of Congress competent to handle such a question. It results in a change of the law, rather than a change in the regulations.

I am pleased to appear here before you on behalf of these people for whom I speak.

Again, let me say, these small-business men throughout the United States, who are honestly trying to make a living, approach this thing in a 212 degree cold rage.

Thank you. [Applause.]

Mr. AVIS. Thank you, Mr. RHODES.

Proposal Covering Creation of Governmental Agency for Financing Railroad Equipment

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WOLVERTON. Mr. Speaker, the following is a summary of legislation I have introduced at this time so that it may have consideration and study prior to the next session of Congress.

PLAN

First. A new Government agency shall be created, to be known as the Railway Equipment Agency, or with some similar nomenclature, with initial capital of $500 million, with the understanding that more will be advanced by the Government from time to time as may be needed.

Second. The railroads shall have the right to apply to this equipment Agency for long-term net leases for such new equipment as they may desire. The exact length of such leases shall be on the same basis for all companies, but shall be varied in term, taking into consideration the true economic life of the type of equipment in question. For example, diesels probably should be leased for 15 years and freight cars for 20 years, and passenger equipment perhaps on a 10-year basis.

Third. The basic rental shall be determined in accordance with the following principles:

(a) During the term of the lease, the rental shall be sufficient to completely amortize the cost of the equipment, less the estimated scrap value of the equipment at present-day prices.

(b) The interest factor shall be one-fourth of 1 percent above the estimated cost of money to the Agency for the length of period involved.

(c) Interest shall be calculated on the declining balance with respect to that portion of the cost which is amortized, and on a straight line basis with respect to the portion that is not amortized, that is, estimated scrap value.

(d) The rental shall be absolutely net and all repairs of whatsoever nature shall be made by the leasing railroad.

Fourth. The Agency shall have the right to borrow up to four times its capital; in other words, up to 80 percent of the cost of the equipment. At the end of the lease for any equipment, the governmental body having control over the stock piling of strategic materials for national defense purposes shall have the option of purchasing any equipment it desires from the transportation Agency at the fair value of the equipment, to be determined at that time. Any equipment not thus purchased for stock piling for defense purposes shall be sold for scrap by the transportation Agency, with the proceeds recaptured by the transportation agency.

Fifth. Any lessee, subject to the approval of the equipment Agency, may assign its lease to any other railroad in the event it no longer has a demand for the equipment, but in no event shall the new lessee receive a lease other than for the balance of the period remaining to the original lessee. Also, in the event that any lessee defaults under the terms of its lease, the equipment Agency may recapture the equipment and re-lease it to another railroad for the remaining balance of the term, but in no event for a longer period.

Sixth. In the event there are more applications for equipment than can be handled expeditiously—this is particularly likely to be true not only at the outset but in the event of emergencies or in periods of an upsurge in traffic—the principle of allocation shall apply.

ADVANTAGE OF PLAN

A. From the standpoint of the Government:

First. The plan as outlined will not cost the Government anything, as contrasted to the subsidies handed out to other segments of the transportation industry. In addition, it is probable

that the one-fourth-of-1-percent-interest differential, plus the differential between the current estimated scrap value and the ultimate scrap value or proceeds realized from sale to the Government stockpiling agency, should be sufficient to pay the costs of administration, give the Government a return on its funds, and ultimately the return of its initial capital.

Second. The Government will be assured that the railroad industry will be maintained in first-class condition, prepared for any emergency, and with adequate capacity.

Third. The Government will have an opportunity to stockpile a substantial amount of equipment against a war emergency at a relatively low cost.

Fourth. The Government will be assured of protection of the capacity of the railway-equipment industry, so vital in the event of an emergency.

Fifth. Maintenance of the physical condition of the railroads at a high level will serve as a stimulant to the peacetime economy and should bring in additional revenues in the form of income.

B. From the standpoint of the railroad industry:

First. It should be possible for the railroad industry to put its entire plant in first-class condition without damaging its credit. This is true not only with respect to rolling stock but road as well, since funds thus released from the equipment budget will be available for modernization of yards, signal control, and the roadway generally.

Second. Such a program should make it possible for the industry to expand its capacity, thus insuring its participation in the expanding economy and stimulating the latter by providing a modern, efficient, low-cost transportation system to serve its needs properly, and also further aiding the economy through its increased purchases, and on a more regularized basis, from the whole railroad-equipment industry.

Third. With a modernized efficient plant, the industry should operate more efficiently, thereby keeping costs of transportation at the lowest practicable level and at the same time earning greater profits.

Fourth. As a result of the Government agency placing the orders for much of the equipment, a far greater degree of standardization of equipment should be possible, thus reducing the overall cost of equipment and thus holding down the cost of transportation.

Fifth. Through the program outlined, the railway equipment industry should be able to put its production on much more of a mass-production basis, expand its capacity and strengthen its position.

Sixth. If the Government finds itself in the position of leasing equipment to the railroads, then obviously, because of its financial stake in the railroad industry, it will naturally have an interest in the railroads' welfare.

Seventh. This plan embodies the principle of the user paying full cost for Government services rendered. Therefore, if it goes through, it should strikingly point up by comparison the fact that certain other segments of the transportation industry are not paying their way.

Eighth. By virtue of the fact that the proposed lease arrangement would be with a Government agency rather than a private corporation, all tax questions are automatically resolved. The lease arrangement would provide what is tantamount to realistic depreciation geared to the actual economic life of the equipment. Of course in this connection we would get the depreciation in the form of tax deductible rental.

Ninth. An additional objection to the present pattern of leasing equipment from a private corporation is that it is costly by reason of the loss of the residual value. Under this plan the railroad at least gets credit for the estimated scrap value of the equipment.

C. From the standpoint of the public:

First. The public in general, both individually and through industries, will thus be assured of the finest in low-cost mass transportation at the lowest possible cost.

Second. This is adopting one hundred percent the Eisenhower administration policy that industry should pay as it goes for services rendered by the Government.

Overall, the simplicity of the plan itself has much to recommend it, together with one other important fact, namely, that it is possible to work it out on a completely voluntary basis. It is not necessary for all railroads in the industry to approve of the plan or to participate in it, but it would be available to all, and over a period of time it would appear almost a certainty that the industry as a whole would utilize it.

Railway equipment agency—Schedule of rentals

[Interest factor, 3¾ percent plus ¼ percent (4 percent)]

Type of equipment	Cost of equipment	Present-day scrap value [1]	Cost to be amortized	Term of lease (years)	Annual return on scrap value	Annual amortization	Annual rental due under lease	Total rental due under lease
Freight cars	$70,000,000	$10,300,000	$59,700,000	20	$412,000	$4,341,243	$4,753,243	$95,064,860
Diesels	20,000,000	700,000	19,300,000	15	28,000	1,713,117	1,741,117	26,116,755
Passenger cars	10,000,000	325,000	9,675,000	10	13,000	1,175,456	1,188,456	11,884,560
Total	100,000,000							133,066,175
Annual rental:								
1st to 10th year							7,682,816	
11th to 15th year							6,494,360	
16th to 20th year							4,753,243	

[1] Government would be the beneficiary of difference between present-day scrap value and value at the end of the lease.

UNIT RENTAL

Type of equipment	Unit cost	Present-day scrap value	Cost to be amortized	Term of lease (years)	Annual return on scrap value	Annual amortization	Annual rental due under lease	Rental	
								Monthly	Daily
Freight cars	$8,500	$1,250	$7,250	20	$50	$527.20	$577.20	$48.10	$1.60
Diesels	200,000	7,000	193,000	15	280	17,131.16	17,411.16	1,450.93	48.37
Passenger cars	140,000	4,500	135,500	10	180	16,462.46	16,642.46	1,386.87	46.23

Legislation Resulting From the Banking and Currency Committee's Illinois Investigation

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of my regular radio-television report of August 24, 1957, with Robert A. Wallace, staff director of the Senate Banking and Currency Committee. The subject of the report was a review of legislation resulting from the Banking Committee's Illinois investigation last fall.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Senator DOUGLAS. We have with us Mr. Robert Wallace, the staff director of the Senate Banking and Currency Committee. Mr. Wallace, won't you come in and sit down and we'll discuss the handling of State and local funds.

Now, Bob, you directed the Senate Banking Committee's Illinois investigation of the Hodge scandal and found out that the Illinois State Auditor, Orville Hodge, had stolen some $2½ million from State funds. As a result of that investigation, we have passed some legislation in the Senate which is now before the House. Before we get into the specifics of handling State and local funds would you summarize briefly what our Senate bill provides and why?

Mr. WALLACE. Well, PAUL, as a result of the Hodge investigation the Senate passed the bill you mentioned making some basic technical changes in our banking laws. These changes will make our bank deposits safer, when they are insured by the Federal Deposit Insurance Corporation, and protect us all from unsound banking practices. They will guard us against abuse of authority by Federal officials. They will make it impossible for anyone to own a large block of a bank's stock secretly, as in the case of Orville Hodge's secret ownership of stock in the Elmwood Park Bank.

Senator DOUGLAS. What about the abuses which occur when public officials such as State and local treasurers shake down banks for contributions because they have money on deposit there? And what about abuses where banks give money to these officials in return for interest-free deposits of State and local government funds?

Mr. WALLACE. I think one of the most important reforms to come from our Hodge investigation is the provision in the Senate bill which would prohibit payoffs by bankers to public officials who have the power to grant or withhold favors to a bank.

Senator DOUGLAS. That formerly was true of national banks, and our bill would apply it not merely to national banks but also to State banks that are in the Federal Reserve System or are insured in the FDIC.

Mr. WALLACE. Yes, but we went beyond that. Our reform would prohibit not only banks from making gifts to these public officials but it would also make it illegal for the bankers themselves to do it.

Senator DOUGLAS. That is very necessary, because we ought to control the left-hand pocket as well as the right-hand pocket.

Mr. WALLACE. Yes. We found that the two banks involved in our investigation were up to their ears in politics. The millions of dollars of State and county money had to be kept somewhere, and these banks found they could get the use of it at bargain interest rates, or even free, when they made contributions for the benefit of State and county treasurers and public administrators.

One public official deposited a million dollars of publicly controlled money in one of the banks in an interest-free account, which means that the bank got free use of the million dollars. The bank could turn around and loan that money out for 6 percent. That meant an extra $60,000 earnings every year for the bank. The main stockholder in the bank, Mr. Leon Marcus, who has since been murdered, gave $4,600 to this public official for his personal or political use. He swore he paid this money in order to get these deposits. That is the type of thing that the Senate bill would outlaw.

Senator DOUGLAS. Let me ask you this—don't you think a much larger proportion of the public funds which are deposited in banks should bear interest?

Mr. WALLACE. They certainly should. We found in our investigation that the State treasurer of Illinois controls over $200 million of State funds deposited in banks over the State. The interest payments amounted to $1,500,000, less than 1 percent. Proper management of this money ought to bring in at least 3 percent at a minimum. That would mean an extra $3 million to Illinois taxpayers on these deposits alone.

Senator DOUGLAS. Now, this is true not merely of State funds, but of county funds, too, is it not?

Mr. WALLACE. Yes, that is true of county funds, too.

It seems that all through the history of the Illinois offices of State treasurer, county treasurer, and public administrator, the handling of taxpayers' money and other publicly controlled funds has been sloppy and slipshod. We can legislate against shakedowns and payoffs, but unless we citizens of Illinois get more interested in how our money is handled, we are going to lose millions of dollars. These millions could help reduce taxes, or build schools, or any number of things. But this money certainly should not be permitted to slip through the fingers of our public officials and go to people who don't need it, especially on the basis of gifts to the public officials who allocate it.

Senator DOUGLAS. And, in some municipalities, though I believe not in Chicago, city funds are also involved.

Mr. WALLACE. Yes, city funds. Then there are the other funds such as the proceeds from the sale of toll road bonds, school bonds, and other trust funds. The Illinois State treasurer manages over a billion dollars of our money.

Senator DOUGLAS. I understand on the Illinois toll bond issues, we are paying interest before the money is being used, and that we are losing around $17 million a year.

Mr. WALLACE. That was the $400 million issue and they haven't started using all of it yet. Normally such huge bond issues are issued as the money is needed, saving a great deal in interest charges.

This problem of management of our tax money is truly serious. During the Hodge investigation, we found that there were over 500 banks in which State treasurers would deposit money. I went through case after case where State deposits in a particular bank had been increased, saying to different State treasurers who had allocated such funds "Now why did you increase this bank's deposits?" The answer would be, "Well, Joe Smith, this friend of mine, has a hand in that bank, and I wanted to do old Joe a favor." Now that is a bad way to manage the public funds of Illinois taxpayers and it is terribly wasteful.

Senator DOUGLAS. The Senate bill, if passed by the House, will help, but you think what is needed is a greater sense of responsibility by depositing officials and by the general public and by the bankers themselves. Is that correct?

Mr. WALLACE. Absolutely. But let me make one point clear in this regard. I talked to a lot of bankers, too. I think most bankers would favor outlawing gifts which smack of payoffs. At the moment, some politician can come around and demand that the bankers give contributions and it amounts to a shakedown. In fact, it smells of bribery. Now if the Senate bill goes through the House and becomes law, it will protect the bankers from these unscrupulous politicians who come around demanding money.

Senator DOUGLAS. Well, Bob, I think you did a fine piece of work in that investigation, and your results bore fruit in the Senate bill. Now I hope that the people of Illinois may become concerned about this matter and move on their end to clean up the situation. Thank you very much, Bob.

Bonneville Power Administration Observes 20th Birthday

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article prepared by Mr. Gus Norwood, executive secretary, Northwest Public Power Association, Inc., for the September 1957 issue of the Association's Bulletin in observance of the 20th birthday of the Bonneville Power Administration on August 20, 1957.

There being no objection the article was ordered to be printed in the RECORD, as follows:

BONNEVILLE POWER ADMINISTRATION OBSERVES 20TH BIRTHDAY

On August 20, 1957, the Bonneville Power Administration quietly observed its 20th birthday. Power revenues for the day were about $200,000, running over $5 million per month or $60 million per year paid into the United States Treasury.

For the oldtimers the day brought reminiscences of the long and continuing struggle to harness the Columbia River for the good of man.

These pages are dedicated to those who have battled so the Pacific Northwest might have low cost electricity.

A good starting point is a noteworthy letter of July 9, 1935, from Secretary of the Interior Harold L. Ickes as Chairman of the National Resources Committee addressed to the Pacific Northwest Regional Planning Commission:

"The National Resources Committee has been requested by the President to submit a report on the future of the Columbia Basin, which he is hoping will be helpful in determining the type of organization which should be set up for the planning, construction, and operation of certain public works in that area.

"The committee desires the assistance of the Pacific Northwest Regional Planning Commission for this work and requests your cooperation in securing a report for action by the advisory committee in Washington not later than November 1, 1935."

On April 21, 1936, there was placed in the President's hands the report calling for creation of a regional public electric corporation

to build a transmission system and power pool to market at wholesale the power from Grand Coulee, Bonneville, and future Federal dams under a postage stamp rate and with preference to public and cooperative agencies so the benefits from the public development might be passed along to the people.

As a compromise Congress passed a temporary or provisional law creating the Bonneville Power Administration. President Franklin D. Roosevelt signed the Bonneville Project Act August 20, 1937.

THE FIRST BONNEVILLE ADMINISTRATOR

On November 1, 1937, President Roosevelt appointed as first Administrator of the Bonneville Power Administration his good friend Mr. James Delmadge Ross, for 36 years the able superintendent of lighting for the city of Seattle. In 1931, while Mr. F. D. Roosevelt was Governor of New York, Mr. Ross served as a consultant to the New York Power Authority.

J. D., as he was affectionately known by thousands of civic leaders throughout the Pacific Northwest, got BPA off to a good start. He hired a staff, built the first transmission facilities, and established the famous postage stamp $17.50 per kilowatt year rate.

In the first annual BPA report Administrator J. D. Ross set forth many of the policies and much of the philosophy as he interpreted the Bonneville Act.

He showed the inadequacy of previous electric load forecasts and urged Congress to speed up installation of generators. He urged the new public utility districts and city distribution systems to adopt promotional resale rate schedules based on a model "objective" rate averaging three-fourths cent per kilowatt hour for home use. He prepared a master plan for future growth of the BPA system.

All this was initiated in a brief 1½ years. Following the untimely death of J. D. Ross on March 14, 1939, Mr. Charles E. Carey was appointed Acting Administrator until the appointment temporarily of Mr. Frank A. Banks on May 4, 1939, who served until September 16, 1939, when Dr. Raver took office.

IN MEMORIAM J. D. ROSS, 1872–1939

President F. D. Roosevelt paid tribute to J. D. Ross in these words: "It is fitting that every American should know of the passing of one of the greatest Americans of our generation. Mr. J. D. Ross, fighting against illness, built for himself a strong body and a brilliant mind in the building of Alaska and later of the Pacific Northwest. An outstanding mathematician and an equally great engineer, he combined with this the practical ability to make things work in the sphere of public opinion and successful business. More than that he was a philosopher and a lover and a student of trees and flowers. His successful career and especially his long service in behalf of the public interest are worthy of study by every American boy. My personal affection for him grew with the years, and because so many people leaned on him for so much of inspiration and advice, his place in our country will be almost impossible to fill."

INTEGRITY OF THE TRANSMISSION SYSTEM ESTABLISHED

The appointment in August 1939 of Dr. Paul J. Raver as BPA Administrator came none too soon. Within the month Poland was invaded. When the new Administrator took office September 16, 1939, the war clouds were gathering.

By December 20, 1939, the Alcoa contract was signed keynoting the tremendous defense buildup and the bringing in of the electroprocess industries.

New generators were installed on a crash-program basis and thousands of miles of tranmission lines stretched to the far corners of the region to bring low cost power.

The third annual BPA report issued December 30, 1940, refers significantly to substantial progress in improvement in management. With emphasis on construction the new orders established faster procedures, instituted the 6-year advance program, and fixed responsibility to insure that transmission facilities would always be ready ahead of generator installations.

In 1944 in recommending construction of Hungry Horse Dam BPA had urged the concept of integrated development of the Columbia River. Congress authorized the project. Five years later in 10 days of Senate debate August 15–25, 1949, BPA in a signal victory won the right by a Senate vote of 45 to 35 to build the Spokane—Hungry Horse—Anaconda 230,000-volt transmission line and thus insure electrical and hydraulic integration of Hungry Horse Dam as part of the Columbia River power system. It was a crucial test for the integrity of the grid system and of the quality of the BPA staff.

During Dr. Raver's tenure 1939–54 rural electrification in the BPA area was substantially completed. Residential power use in Oregon and Washington quadrupled while average rates were cut in half.

On November 30, 1951, Secretary of the Interior Oscar Chapman conferred upon Dr. Paul J. Raver the highest award, a citation and gold medal for distinguished service. The citation reads:

"The basis for this award to Mr. Raver is for outstanding service in the public interest through development of the Columbia River power system as part of the comprehensive multipurpose basin development program and for his contribution to national power policies, nationally recognized labor-management cooperation and collective bargaining agreements, and high qualities of leadership as an administrator."

DR. PEARL BECOMES ADMINISTRATOR

Dr. William A. Pearl became the third BPA Administrator on January 15, 1954. Dr. Raver became superintendent, Seattle City Light.

The Columbia River power system has reached 4,700,000 and will pass the 5,000,000 kilowatt mark before the end of 1957. With the decision of Congress to start construction of John Day Dam the region has over 3,000,000 kilowatts of additional Federal capacity under construction. Ultimately with adequate upstream storage these projects will exceed 10,000,000-kilowatt capacity.

Bonneville Power Administration markets power for: Grand Coulee, Bonneville, Hungry Horse, McNary, the Dalles, Chandler, Detroit, Big Cliff, Lookout Point, Dexter, Albeni Falls, and Chief Joseph. Bonneville Power Administration will market power from John Day, Ice Harbor, Cougar, Strube, and Hills Creek, which are under construction. Plans are progressing on the authorized Green Peter, White Bridge, and lower Monumental Dams. Other projects authorized are Little Goose, Libby, and lower Granite. The corps has recommended Bruces Eddy and Penny Cliff and has under preparation the 308 review report on future projects for the next phase in the development of the Columbia River power system.

A major new function of Bonneville Power Administration is the wheeling of power from non-Federal dams. Arrangements have been concluded for Box Canyon Dam and Pelton Dam. This insures maintaining the integrity of the Bonneville Power Administration grid and facilitates construction of non-Federal dams.

As of June 30, 1957, Bonneville Power Administration had turned into the United States Treasury $518 million. By 1963 Bonneville Power Administration will reach the billion-dollar mark in revenues. Repayment of Federal investment in all dams is ahead of schedule.

During the last fiscal year 28 billion kilowatt-hours had been sold bringing the accumulated total to 219 billion kilowatt-hours.

The Bonneville Project Act of August 20, 1937, on balance is one of the greatest laws passed by Congress for the development and conservation of Pacific Northwest resources, being on a par with the Reclamation Act, Rural Electrification Act, homestead law, and the creation of the Forest Service. The Bonneville Act has done much for the people of the Pacific Northwest and for the Nation.

Paying for Higher Education

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a very able editorial from the St. Petersburg (Fla.) Times for Thursday, August 29, 1957, which recommends that Government-guaranteed loans be provided to finance the higher education of able men and women whose private resources would not be sufficient to permit them to go through a college or university on their own funds, but whose future earning power will be increased by such higher training, so that the loans, on the whole, ought to be very good investments.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAYING FOR HIGHER EDUCATION

Without charity or government gifts, it ought to be possible for every youngster who wants to to be able to go to college.

They can't now, according to the second report of the President's Committee on Education Beyond the High School.

We have a suggestion for Congress on a possible partial solution for this problem and some of the other economic difficulties of higher education.

Like everything else, the cost of going to college has been rapidly climbing in recent years.

The impact of this increase is multiplied by the fact that no longer is a higher education thought of as something only for those in the higher income brackets.

It is only a slight exaggeration to say that every high-school graduate now wishes to go on to college. A substantial percentage of these hope to go to professional graduate schools.

This means an expenditure of between $5,000 and $10,000, a huge burden on low-income families, or even on well-to-do families, if 2 or 3 children overlap in college.

Present scholarship and loan facilities cannot accommodate more than 10 percent of absolute minimum needs. And prospects of that condition materially improving are not bright.

Therefore, we make this suggestion:

Let Congress establish and finance what we shall call the Federal Students' Loan Insurance Agency—FSLI for short.

This would function just as FHA does. Students with satisfactory high-school records and good reputations, would apply for loans for the first year at college from a local bank. FSLI would guaranty the bank against loss. Each year the student would apply for another year's loan, predicated upon his maintaining a satisfactory scholastic standing.

Interest rates should be kept low, possibly through some special discount arrangement, either by Federal Reserve or the loan agency itself.

Repayment should be long-term—10 or 15 years—commencing 1 year after the student graduates or drops out of school, with payments starting low and gradually increasing over 4 or 5 years as the borrower's earning power increases.

Such an arrangement would be fully within our tradition of free enterprise. It would leave the student with complete freedom to choose his own school, and no "Federal interference" would be involved.

Credit losses, we are confident, would be almost nonexistent.

In addition to easing the burden on parents, if the loans are realistically geared to needs this plan could ease the pinch on colleges and State institutions. They could raise tuition fees to more nearly cover expenses. And the price would be paid by those who benefit—the students themselves.

Election of Mel Ruder as President of the Montana State Press Association

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MANSFIELD. Mr. President, I had the honor of addressing the Montana State Press Association in Great Falls, Mont., on August 17. On that occasion one of my closest friends in the State of Montana, Mel Ruder, the publisher of the Hungry Horse News at Columbia Falls, Mont., was elected president for the forthcoming year.

Mel has only been in the State of Montana about 12 years, but already he is one of Montana's great citizens. We expect great things of him.

Mel edits and publishes one of the greatest weekly newspapers in the country.

Mr. President, I ask unanimous consent that an editorial appearing in the Billings Gazette of August 21, 1957, written by my old friend and farmer colleague, Tom Stout, who used to be a Member of the House of Representatives, entitled "Deserved Honor," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DESERVED HONOR

The election of Mel Ruder, publisher of the Hungry Horse News at Columbia Falls, Flathead County, as president of the Montana State Press Association at that organization's 72d annual convention, held last week in Great Falls, was a deserved honor bestowed upon a young man who has already won national recognition as an outstanding weekly newspaperman. He is one of a number of publishers of weekly papers in Montana who are serving the best interests of their progressive communities in most effective fashion and establishing a high standard of excellence for the weekly press of the State.

Established in 1885, the Montana State Press Association is one of the oldest organizations of business and professional people in the State. So far as this writer knows, none of the founding members is still alive and there are very few of those who were active in the newspaper business as far back as 50 years ago. But the roll of members, kept, we assume, in the files of the secretary, will be found to contain the names of men whose fame as editors and publishers extended far beyond the bounds of Montana. Many of the others with whom the writer was personally acquainted, played active parts in the dramatic political and industrial history of the State.

The writer's first contact with many of the members of the Montana State Press Association was in the midwinter of 1906 when former United States Senator W. A. Clark gave some 40 or 50 of those members and their wives a free trip from Butte to southern California by way of celebrating the completion of his railroad from Salt Lake City, Utah, to San Diego, Calif. It was a highly enjoyable journey for all members of the party, especially since all expenses were paid by the Senator, including refreshments of every kind. Incidentally, and this is not intended as any reflection upon the convivial habits of the members of Montana's press in those times, when someone rang a bell for service down in the middle of the desert a few hundred miles south of the Mormon capital, the porter came in and said: "Gem'ans, there ain't no use in you axing for any more liquor 'cause it's been all used up an' that's the firs' time that has happened since this 'ere railroad wuz built."

The annual business meeting that year was held on the wharf at San Diego where Col. Sam Gordon, famous publisher and editor of the Yellowstone Journal, Miles City, was elected president. For some reason or another, the colonel had lost his voice and had to deliver his acceptance address in a whisper. None of us heard anything the doughty colonel said but the close of his whispered talk was, nevertheless, greeted with thunderous applause.

Business was of secondary consideration at the annual conventions of the Montana State Press Association in those early times. Members attended to enjoy the fine spirit of warmhearted fellowship with other members of their craft. As Dan Whetstone has related in his book, Frontier Editor, there were some pretty lusty battles waged by rival editors, or editors belonging to rival parties and factions in the stirring political contests that were held in those times. But when the members of the press met at their organization's annual convention, all rivalry, most of it synthetic, was forgotten and men who, only a short time before, were accusing each other of every crime in the book, were to be seen greeting each other as if they were long-lost brothers.

They still have some fun at these annual meetings, but the accent is on matters of business in which the members are chiefly interested. A speaker of national prominence in the world of business or Government service is usually invited to speak at the banquet which ends the meeting. Last year at Livingston, Roy Glover, chairman of the board of the Anaconda Co., was the speaker. At the recent meeting, MIKE MANSFIELD, Montana's junior Senator, delivered an interesting address on the administration's foreign policy.

There are a few elderly members who continue to attend the annual conventions but a majority of the members and most of the active ones are men, and a few woman publishers, who are on the sunny side of the half century mark. They are carrying on the fine traditions of Montana journalism in splendid fashion. Nothing in that respect will be missed with Mel Ruder serving as head of the organization until the close of the next annual meeting in Glacier Park in 1958.

Cotton Shows the Way to Farm Prosperity

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HOLLAND. Mr. President, there appears in the Reader's Digest of September 1957, an article entitled "Cotton Shows the Way to Farm Prosperity," which was condensed from the Christian Science Monitor of August 2, 1957.

This article concerns itself with the subject of how a good product can sell itself in a free market without Government price supports—the product being extra-long staple cotton—and it mentions prominently our distinguished colleague, the junior Senator from New Mexico [Mr. ANDERSON].

I commend this article to all Senators and in order that each might have an opportunity to read it, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COTTON SHOWS THE WAY TO FARM PROSPERITY

(By James Daniel)

Three years ago Senator CLINTON ANDERSON, of New Mexico, was leaving his office to attend a Senate Agriculture Committee meeting when he got a phone call that in recent months has deflected the course of American farm policy by several degrees and may well play a role in giving it an altogether new direction—away from Federal price supports.

The caller was Mitchell Landers, a young cotton farmer who lives near Berino, N. Mex. He insisted on seeing ANDERSON right away and the Senator agreed, a little grumpily. Five minutes later Landers was standing in ANDERSON's office.

"Sir," he said, "I represent 3,000 farmers down my way who grow extra-long-staple cotton. We're wondering if you could get the Government to lower the price support on it."

Telling of the moment later, Landers said, "He looked at me as if he thought I had been out in the sun too long. He said he'd seldom heard such a request and asked me to explain."

Landers came quickly to the point. "What we want," he said, "is for the Government to stop setting our cotton price so high nobody can buy it. Last year 9 out of every 10 pounds we grew went into Government storage, while cheaper foreign cotton supplied almost our entire market. If you will lower our price support $50 a bale, we think we can get our costs down to where we can treble or quadruple our market."

Mitchell Landers could not have picked a more sympathetic listener. As Secretary of Agriculture after World War II, Senator ANDERSON had foreseen and warned against the dangers of high rigid price supports. But vote-conscious Congressmen had drowned out his voice, promising farmers even higher supports. Most of them really believed that high price supports helped farmers. Here was a farmer who disagreed.

"Young man," said ANDERSON, "there are some other Senators here I want to meet you." Before Landers knew what was happening he was facing the Senate Agriculture Committee, repeating his request to an amazed group of lawmakers.

The upshot was that by the time this boyish, diffident young man left Washington a bill had been drafted giving him exactly what he wanted. Soon the Landers amendment was through the Congress and signed by President Eisenhower. One Senator later confided, "When I heard him I thought anybody as foolish as that deserved to get his wish granted."

Landers was not daft. Born in north Texas, he had beat around in business, sold brushes, then operated a war plant in El Paso. In 1946 his wife's father, a cotton farmer, fell ill, and Landers moved to Berino in the Rio Grande Valley to take the farm over. After 2 good years the market for cotton collapsed, and Landers and thousands of other cotton farmers found themselves staggering under mountainous debts as the Government, in a futile attempt to maintain high cotton prices, slashed back allowable acreages.

Landers' area was especially hard hit. At vast expense farmers had leveled the desert floor, sunk deep wells and created irrigated farms that were worth $2,000 an acre if they could grow cotton. Already some of the best land was going back to cactus and jackrabbits. This was a national shame, for the Government, by penalizing efficient cotton growers, was hurting the average citizen twice—once in high taxes to pay the subsidies and again in excessive costs for cotton goods made necessary by rigged cotton prices.

One day Landers found a slip of paper in his mailbox informing him that for the next year his allowable cotton acreage had been cut back by one-third. "I owed the bank $10,000 on equipment and I couldn't make my payments," he recalls. "And I wasn't alone."

At the crossroads store where farmers gathered there was soon a small knot of men, Landers among them, angrily discussing the way Washington was mangling the cotton farmer. In 25 years of regulation, United States cotton acreage had been cut from 43 million to 17.4 million. United States attempts to peg the world price of cotton had succeeded only in raising foreign cotton production from 12 million to 23 million bales, while United States exports declined from 7 million to 2 million bales. Meanwhile, American consumption of cotton substitutes rose to the equivalent of 4 million bales. With all this the United States cotton carryover was pushing toward 15 million bales, nearly 2 years' supply.

"What do you think, Mitch?" said one of Landers' neighbors. "They've been electing you to those Farm Bureau cotton committees. How do you see it?"

"Well," said Landers, "if you were running normal business and found yourself losing customers, you'd cut your costs and cut your price and try to rebuild your market. We've been growing extra-long-staple cotton as a sideline for years and insisting on the Government's guaranteeing us a fancy price. Now I hear Dr. W. E. Bryan at the University of Arizona has bred a new variety that has so high a yield that it could compete with the synthetic fibers. But to be competitive we'd have to lower the price and assure the mills of a steady supply. And we can't do that unless the Government lowers our support and lets us increase our acreage."

Some of Landers' neighbors labeled him a crackpot. But there were men on his side, too. Among them was Bob Banta, a grower near La Union, N. Mex., who said, "I figure we farmers have to grow something that will sell. If it won't sell we have to quit growing it." Said another grower: "If the cotton industry can't stand on its own feet it doesn't have a place in our economy."

To be sure he was on the right track, Landers asked the National Cotton Council to make a survey to find out how much extra-long-staple cotton could be sold at any given price. The council reported that if extra-long-staple cotton came down only 10 cents a pound (then from 67 cents to 57), its market would be far greater, estimated on the basis of price alone.

In July 1954 Landers called a meeting of representative growers from the Southwest. They voted to ask Congress to lower their price support to the minimum permitted by law and pledged to contribute $3 for every bale of extra-long-staple cotton they grew, to finance a marketing campaign. Within a month Landers paid his call on Senator Anderson, and shortly thereafter he and his friends founded the SuPima Association of America (Superior plus Pima, plant breeder's term for the strain).

The rest is agricultural history. After Congress dropped the price support the market price of SuPima fell to 57 cents, but demand increased so fast that soon SuPima was selling for more than it had before. For the past 2 years SuPima has fought chiefly to keep its price down. When growers were asked if they wanted to get into the soil bank's system of payments for nonproduction, they wired back: "No."

This year when the price-support formula, which goes up and down according to supply, would have allowed them to get the peak supports permitted by law, they persuaded Congress to exempt them from strict application of the formula. Many of them even want to go off parity altogether, believing that any pricing system so erratic encourages mills to depend on synthetic fibers, whose costs are fixed and predictable.

In the past 2 years the Government has cleared out virtually its entire surplus of extra-long-staple cotton, and total consumption has risen to 240,000 bales, an increase of 600 percent. With no surplus, the Government increased the 1957 SuPima acreage from 45,000 to 89,000. Already SuPima growers have added $9 million to the farm income of the Southwest. Said an El Paso banker recently: "Without this, I can tell you, a lot of our borrowers would not have made it."

Since Mitchell Landers presented his case before the Senate Agriculture Committee, attitudes on farm legislation have altered considerably in Washington—and also through the Cotton Belt. Seeing what SuPima has accomplished, some cotton growers are asking a like program for other staple lengths of cotton.

Secretary of Agriculture Ezra Taft Benson, who misses no opportunity to praise SuPima as a shining example of the way to farm prosperity, said recently: "In our free American economy, the greatest and most lasting gains attained by any segment of the population have always been through their own efforts rather than through Government controls or aids. What these 3,000 cotton farmers of west Texas, New Mexico, and Arizona have done is in keeping with the best American traditions. Their program and philosophy are worthy of study and emulation by all agriculture."

Consumption of Alcoholic Beverages Aboard Aircraft

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the August 25, 1957, issue of the Charleston (S. C.) News and Courier, which supports the provisions of my bill, S. 4. This legislation is designed to prevent the serving or consumption of alcoholic beverages aboard airplanes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIQUOR IN PLANES

In a report to his constituents, Senator STROM THURMOND says he has been unable to get a satisfactory reply to the question why liquor should be served aboard passenger airplanes. Senator THURMOND has introduced a bill to prevent either serving or drinking alcohol aboard planes.

While we defend the right of a man to take a drink under most circumstances, we agree with Senator THURMOND when he points out that the cramped cabin of a plane is close quarters for drinking. Nondrinking passengers may well find themselves very uncomfortable in a crowd of imbibers.

We also agree with Senator THURMOND when he points out that children aboard planes where liquor is served are in what amounts to a flying bar.

Children are not allowed in saloons on the ground. Why shouldn't they be given the same protection in the air?

Crisis in Red China Grows—Increasing Flood of Refugees Pressing To Escape Into Hong Kong

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report from Hong Kong in the Worldgram column of the U. S. News & World Report of August 23, 1957:

For a cable report on Red China's crisis, as it looks in Hong Kong:

"The British in Hong Kong are finally convinced that Red China is in real trouble. They measure trouble by the number of Chinese trying to escape into this crown colony. And right now, the British say, pressure on the border is greater than at any time within the last 19 years.

"The only comparable period was in 1938, when the Japanese invaded south China and the Chinese fled to Hong Kong to escape air attacks. But in 1938 the British had no barriers around Hong Kong. The Chinese could enter freely.

"Now, with Hong Kong flooded with refugees, the British permit a Chinese refugee to enter only when another Chinese leaves. So the refugees hide out in swampy inlets near Hong Kong waiting a chance to smuggle themselves in."

This Hong Kong report on Red China continues:

"Pressure on the border is so great now that the British believe Red China may be threatened by mass starvation. The Communists themselves admit widespread destruction by floods in Manchuria as well as in north, central, and south China.

"Millions of peasants have been mobilized to strengthen river dikes. The order is out to plant late, quick-growing crops as flood waters recede.

"Students are being ordered into the countryside to help the peasants. Even university graduates, who normally step right into government jobs, are for the first time being told to get into the fields until the crisis is over.

"The typhoon season is just getting underway. One hard blow hitting the mainland could bring starvation to millions. Three of the last four years have been poor crop years. The Reds have very little fat left for an emergency."

Democracy's Great Institution: Baseball

EXTENSION OF REMARKS
OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. ROGERS of Colorado. Mr. Speaker, knowing of the great interest the American public has in baseball, I have asked unanimous consent to have inserted in the Appendix of the RECORD an address by Robert L. Howsam, general manager of the Denver Baseball Club, before the United States Air Force Academy Sports Council:

DEMOCRACY'S GREAT INSTITUTION: BASEBALL

(Delivered by Robert L. Howsam, general manager of the Denver Baseball Club, before the United States Air Force Academy Sports Council)

The greatest honor ever to be accorded me is this invitation by the assistant dean of faculty and president of the United States Air Force Academy Sports Council, Colonel Schweiger, to address the banquet of the Great Plains Conference baseball tournament. I am overwhelmed by this audience of high officials and distinguished airmen. Since baseball is my life's work, I presume you want me to discuss America's great game. If so, the theme of my address will not disappoint you.

Morale is the vital factor in military training and effectiveness on the field of battle. Our highest military officers, from the President down, comprehend fully the advantages to be found in competitive athletic sports. It is my firm conviction that the staggering success of American soldiers in combat is due in no small part to the skills, strategies, prowess, inspirations and challenges acquired in competitive athletics.

One of the great inspirational events of America is the ceremony celebrating the opening of the baseball season each spring in the Nation's Capital. On that great day, the President of the United States leaves his desk, joins the throng and throws out the first ball at Griffith Stadium. The Supreme Court and the two Houses of Congress recess and join him. The Cabinet officers are there, too, as are the department heads. The Ambassadors and Ministers of all the nations of the world occupy the box seats. The Pentagon comes in full force. Little wonder that baseball is recognized throughout the world as our great national game.

Baseball is as much a part of America as the freedoms we cherish and the liberties we defend. If one understands baseball, he understands America.

The Congress has just ended another historic debate over civil rights, lasting for many weeks. American courts, schools, yes, and the military, have been struggling with the knotty problems of racial prejudice for generations. Yet baseball, under the leadership of its keen and revered statesman, the one and only Branch Rickey, has achieved more in the solution of this stubborn problem than all the other agencies combined.

There is no racial or religious or economic distinction on the baseball diamond today. Baseball does not ask the color of your skin, the identity of the God you worship, or the side of the track on which you were born. Proof of your baseball skills is its only question.

Yet professional baseball has its problems. Strangely enough, most of them are generated within its own framework. The Supreme Court has urged Congress to clarify baseball's relationship to the antimonopoly laws and so a House committee is examining its operation and its structure. A former baseball star and a few sportswriters, who owe much to America's great institution of baseball for their fame and fortune, are pecking away at its pillars.

I mention sportswriters because sportswriters are as much a part of professional baseball as the man in the pitcher's box or the gentleman on first base. At least 50 million Americans read the sport pages every day.

Professional baseball stands on solid ground and needs no defense by anyone. Most folks realize that it is making a tremendous contribution to America and its welfare. Yet the press is asking questions; and while I realize this is not a forum in which to indulge in controversy, I want to keep the record straight.

The other day, Jack Carberry, sports editor of the Denver Post, a lifetime personal friend for whom I have deep affection, asked this pertinent question in his sports column, "What is wrong with baseball?" In a speech a few days later, Carberry said, "Baseball is withering and dying on the vine and I don't know why." These are honest questions and require honest, straight-from-the-shoulder answers.

Tremendous changes in entertainment opportunities and habits have taken place in the past 10 years. Couple them with the ravages of inflation and it is easy to understand why all entertainment, including baseball, is facing serious difficulties.

Today, it costs over 5 times as much to stage a professional baseball game as it did just 10 years ago, with little or no advance in the admission price.

The magic of television brings baseball games and the theater right into peoples homes scot-free with no snarled traffic which worries the ball park visitor. Fans demand more and more in the way of ball park attractiveness and comfort. The players have to put on a better performance, too.

But, even so, there is nothing wrong with baseball that a few more fans through the turnstiles will not cure. Please, Jack, help us keep them interested.

Very severe former Federal Judge Kenesaw Mountain Landis, as the first commissioner of baseball, achieved at least two remarkable results of far-reaching importance. He restored public confidence in professional baseball by eliminating completely every hint of crookedness on the field of play and he compelled the shortsighted owners to place the employment of baseball talent on a fair and equitable basis. He reconstructed the reserve clause into a fair and equitable document, in spite of its very necessary, restrictive nature. Under these reforms, the players, almost to a man, today swear by the reserve clause. They realize it stabilizes professional baseball and thereby benefits them.

It will be a sad day for professional baseball should clubs be able to bid for players on the open market. On that day, pennants and super-talent will go to wealthy owners and the poorer clubs will take what is left and be helpless so far as competition is concerned. Then, professional baseball will be the most monopolistic business known to man.

In his role as self-annointed agitator, Bob Feller is socking baseball management these days with wicked bean balls. His is a sad case. "Rapid Robert," with extraordinary baseball talent, had built for himself a spectacular career and a modest fortune out of America's great game. For him to be throwing rocks these days rather than baseballs is a tragedy.

Fans, the solid rock upon which baseball is built, have dug deep in their jeans through the years to make him big box office with a salary greater than was paid to the President of the United States. In these circumstances, fans, players, and sport enthusiasts, generally, regret that now at the end of his illustrious pitching career this Van Meter, Iowa, farm boy who never had it so good, has turned upon his benefactors with a series of reckless and bitter tirades, wherever three or more sports writers gather to listen. He held one in Denver the other day and I think baseball should not remain silent but should point out the inaccuracies of his charges.

The facts are that Bob Feller has goofed. His new fast one, delivered by way of overworked tonsils is a gopher ball. The cures he urges would surely send professional baseball to the showers for keeps. Under his plan, after 5 years every ballplayer would become a free agent to chase "pie in the sky" just as a lost soul on the desert staggers after but not quite catches up with the tricky mirage. Under Feller's open baseball market formula, the well-heeled clubs would be loaded to their ears with talent and their struggling competitors, unable to compete in the market places, wouldn't draw flies. To spell sports with a dollar sign would prove fatal, and Mr. Feller must realize that.

The fabulous and universal appeal of baseball in this country provides the safety valve this great Nation must have to keep everything in proper perspective. The divergence it provides aids Americans in solving or living with life's serious problems. It helps them to laugh at themselves and puts them in the frame of mind to accept the bad breaks in life philosophically. That explains why the official opening of the baseball season each spring is made a gala occasion by the President, the Congress, and the Supreme Court. On that day, all of them amble out to the ball park to eat peanuts and pour it on the umpires and cheer the spectacular plays. A government that can set aside its tremendous problems for a few hours to pay tribute to the Nation's supersport cannot and will not fail.

But professional baseball simply must have stability to attract the huge capital outlay necessary to provide the expensive facilities and to operate it as the fans want it operated. Somebody has to put up that immense capital. Would the wealthy Bob Feller or any other capitalist invest a thin dime in baseball if it had no stability? Of course not.

The American and National Leagues each employ 200 ballplayers at an average salary of $14,000 and a total salary expenditure of nearly $6 million annually. This operation requires more than $50 million for facilities alone. To bring this form of entertainment to the American people, someone must invest $100,000 to provide baseball grounds and stadiums for each and every ballplayer in the major leagues.

In Denver, there is an investment of $40,000 in facilities for each ballplayer employed by the Bears. Without unquestioned stability, no one could or would make such an investment.

There are other sizable investments in equipment and player contracts that must be made, too. All of these things have to be kept in mind when reforms are considered. It takes a lot of faith and courage to assume the difficult task of management in baseball.

Organized baseball today is living under a very serious threat on the part of people who do not understand its composition, its potential in Americanism, and its problems. This is no time for its own people to be running around stirring up trouble and confusing the Supreme Court and Congress with wild and ill-considered statements. This is a time to rally behind America's No. 1 sport and insure it the stability it must have. Corrections of some of its practices are in order, but the Bob Feller meatax approach is not the way. The reserve clause and territorial rights, among other things, must be preserved or utter chaos is inevitable.

Let's meet the challenge forthrightly and constructively and prove to Congress and the Supreme Court that professional baseball is not managed by evil men bent on wangling bright young ballplayers out of their birthright. To the contrary—it is a much-loved and respected American institution that provides wholesome entertainment and basic lessons in sportsmanship. It trains bright young athletes regardless of race or station in life to become so adept with a baseball, a glove, and a bat that millions follow every move they make and everything they say or do.

In the field of better international relations, professional baseball is making a tremendous contribution. In Japan, the Philippines, Canada, Mexico, Caribbean areas, and the Latin Republics generally, baseball is very popular. The exchange of players among these countries and between them and us has performed miracles in better understanding and good fellowship everywhere. When the people of the world exchange their contests of war for contests on the baseball diamond, there will be world peace.

In closing, I want to pay further tribute to the Air Force Academy Sports Council for what they have done and what they are doing to promote and encourage the game of baseball. The baseball tournaments which they hold each year not only provide wholesome entertainment for the Armed Forces but they build interest in America's great game. The Great Plains Conference is divided into four districts: the northern, southern, eastern, and western. In the series of tournaments you will hold among them, considerable baseball talent and thousands of enthusiastic fans will be developed. Everyone in professional baseball is grateful to you.

China's Sorrows Pile Up Under Its Red Conquerors

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the London Economist of June 8, 1957. It is highly significant that this highly respected journal is now reversing itself after going along for some years with the optimism with respect to communism in China that prevailed in many Western circles for a time.

It knows that in the end facts always impose themselves. Would that the British Government would be as realistic before it contributes further to building up a regime that is as much an enemy of Britain as it is of ourselves and the whole free world, and the long-suffering people of China.

CHINA'S SORROWS—TO THE OUTSIDE WORLD, MAO TSE-TUNG'S REGIME MAY LOOK STRONG AND SURE OF ITS SUCCESS AS PACEMAKER FOR ALL ASIA, BUT BEHIND ITS BAMBOO CURTAIN THERE IS BRUTAL FRANKNESS ABOUT ITS LOSS OF POPULARITY AND ECONOMIC SETBACKS

At first glance, the Far Eastern tide would seem to be running strongly in China's favor. May was a merry month for Mao Tse-tung in three respects. Anti-American violence in Formosa and Angio-American rifts over trade embargoes have been fully exploited by the Communists as evidence that the "imperialists" are retreating in disorder. India's economic difficulties and austerity budget have evoked more tactful comment in Peiping, but a note of quiet satisfaction pervades it. To uphold its claim to be Asia's "wave of the future," China has to discredit not only America and its friends, but also the idea that Asian poverty can be conquered without loss of liberty.

It is no fire-breathing dragon that looms over the Far East today. Since 1955 China has taken on the look of a suavely implacable python awaiting the dinner gong. It is content to swamp Asia with propaganda and to mesmerise its neighbors by its aura of inevitable triumph. It proclaims its confidence that Formosa and all its other objectives are coming to it in Mr. Mao's good time. The world is politely invited to draw its own conclusions from the contrast between other Asian countries, struggling with disunity, discontent, and stagnation, and the picture of new China, marching with giant strides to wealth and power.

This picture, as it is usually presented to the outsider's eye, is radiant with news of bumper crops and overfulfilled plan targets; with the grateful smiles of collectivised peasants, and of reformed capitalists too; even with the claim that, since a year ago, freedom of speech has been added to the other blessings of Peiping's benevolent rules. Protests from Formosa or Hong Kong that all is not so fair in Mr. Mao's garden are easily dismissed as propagandist slanders. Peiping's claims are as rich in corroborative detail as in artistic verisimilitude.

But a world seeking the truth need only contrast the tale it is told with what the Chinese Communist leaders say within their own Bamboo Curtain. Without any material other than their speeches and the columns of their controlled press, new China's sorrows can be clearly observed. Instead of a great, well-oiled economic and political machine rolling irresistibly forward, the eye sees a pattern of lurches, checks, and plunges, of sharp frictions, suffering, unrest, and repression.

A general wage freeze is now being imposed. Some wages are being cut, and managers have been warned not to take on additional hands. Unemployment is so far from a memory of the past that the workless have now been told not to expect labor exchanges to help them, but to go out and find jobs for themselves. Inflation, another unsolved problem, has eaten away earlier wage increases. Higher prices for such essentials as salt, pork, vegetables, cooking oil, tea, textiles, and shoes have lately been announced.

Bedrock rations of rice, wheat and other grains, and cotton cloth are often not honored, and for cloth they have been halved. The housing program has come to a dead stop. Overcrowding in towns is made worse by the continuing blind flooding-in of penniless peasants, although as many of them as possible are rounded up and shipped back. Famine still recurs, and relief funds are frequently misappropriated. Production of pigs has fallen in 2 years from 100 million to 80 million. Among the Government farms which were supposed to set an example of efficiency for all China, 1 in 3 is running at a loss.

The planned economy, that cynosure of Asian eyes, is proving to be a boon-and-bust affair, a matter of plunging rather than planning. When things looked good a year ago, targets were set higher with scant regard for the obvious risks; now the planners have hastily lowered them again behind a smokescreen of jargon. This has cost China dear. The state planning commission itself confessed last month that its methods were "too inflexible * * * waste has been very serious." Not till late 1956 did the commission think of sending out inspectors to check its blueprints against reality, and by then it was too late to correct many mistakes. It is a common practice for local bosses to falsify reports of production, stocks, and manpower. How real can planning based on such dubious data be?

Even in heavy industry, the Communists' favorite field, the picture is one of muddle, waste, costly and cumbrous administration, and drastic checks caused by lack of materials or by plain bad planning. The latest cutbacks affect even the much heralded steel centers to be built at Wuhan and Paotou. Many new industrial projects are being left half built. Plans for railway extensions are being pigeonholed. Orders are to drop ambitious projects and concentrate on cheap, quick-return operations such as opencast coal mining and the repairing of old blast furnaces. As part of the new economy drive, even safety standards, already inadequate, must be revised downward.

Outwardly monolithic, the Communist state is yet riven by the new "contradictions among us" which Mr. Mao lamented in his speeches of 3 months ago (the full texts are still unpublished). The newly collectivised peasants resent the townsmen's privileges, and hold back their produce, feeling that in any case there is little they can buy in exchange for it. Their unwillingness to grow enough cotton has half starved the textile industry. They have already quit the collectives in such large (but unrevealed) numbers that the Government innocently boasts of the many thousands who have come back in, while admitting that this is only a fraction of the total who withdrew. The urban workers, for their part, resent the way the trade unions operate as Government organs interested only in collecting dues and resort to harsh measures when dissatisfied workers start trouble. They resent, too, the extremely high wage differential and the fat pay packets of the managers; while the managers in turn are sick of being supervised by incompetent Communist officials.

The workers' discontent has been shown in illegal strikes, go-slow action, and absenteeism; that of the peasants, and of students indignant at being drafted into unsuitable jobs, in rowdy demonstrations. The managers and technicians are mostly too afraid of being purged to act so openly, but their very prudence makes for inefficiency, for they have often not dared to question orders which they knew to be stupid. Much the same applies to scientists and other intellectuals. Although the all-flowers-blooming-together doctrine has theoretically been in force for a full year, few intellectuals have been rash enough to speak their minds, and some who rashly did so suffered for it.

It is not surprising that Mr. Mao himself should have singled out contradictions between the people and their rulers as China's worst problem. He has warned his hierarchs that to continue treating discontented people as the enemy will turn them into really dangerous enemies. His new call for less harsh repression of popular unrest may at the least give many Chinese a sensation of relief, even if the Communists clamp down again when they think enough steam has been let off to avert a full-scale explosion.

Meanwhile, some oddly un-Communist palliatives are being adopted. Free markets have been revived for farm produce such as vegetables. The new price increases for scarce foods are frankly explained as a form of rationing by the purse. Dividends of 8 percent and guaranteed permanent ownership of their shares are offered to Chinese living abroad who invest in enterprises in the Communist homeland. The newly emancipated women of China have been told to get back into the kitchen and thus ease unemployment among a male labor force which is increasing by 6 million each year. They are also being urged to use cut-price contraceptives (the only product output of which is being steeply stepped up this year).

This is not the picture that Peking likes to present to the world; but every detail here given is derived from official Communist pronouncements. These little-known realities should be kept in mind in any assessment of the Far Eastern problem, which is essentially the problem of China. They suggest that Mr. Mao has good reason to move slowly on the international stage—but less reason to be sure of ultimate triumph. They indicate that fraternal aid from Russia falls off sharply when the beneficiary can no longer pay for it; sharp cuts in China's exports to Russia have been accompanied by a general switch to the more modest kind of industrial project which we can carry out with our own resources. Russia may not be overly keen to help China through its difficulties—or it may not be able to. Neither the mystique of the plan, nor the supposed dynamism of Communist society, nor the vaunted support of the Soviet block has saved China from its new sorrows.

Those Asians tempted to think that to sacrifice one's freedom to the Marxist gods is a sure way of propitiating the demon of poverty may do well to ponder these facts, and think again. Those, in both Asia and the West, who look with fear at a China apparently united under an ambitious and tyrannical regime, may feel some relief at the discovery that it is less monolithic than they thought, and welcome the possibility that its rulers may be forced to become less tyrannical. But they would be unwise to let their new knowledge induce complacency. There is no sign of Peking moderating its ambitions. At present Mr. Mao evidently hopes to solve by suaver means some of the problems which Stalin tackled with the iron fist. But his failure in this attempt would lead almost inevitably to a reversion to open ruthlessness—and perhaps to a bid to rally a discontented people, and divert its attention from its domestic woes, by embarking on some foreign adventure. Whatever else is being cut back in China's hard-pressed economy, its rulers have emphasized that its arms program is going ahead.

Dr. Herman Wells To Be United States Delegate to United Nations—His Qualifications for the Job Are Many and Varied

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Castle (Ind.) Courier-Times of August 26, 1957:

DR. HERMAN WELLS TO BE UNITED STATES DELEGATE TO UNITED NATIONS—HIS QUALIFICATIONS FOR THE JOB ARE MANY AND VARIED

We, of Indiana, take special pride in the confirmation of Dr. Herman B. Wells, president of Indiana University, to be one of the five United States delegates to the United Nations.

This is not the first time that our national Government has called upon Dr. Wells for important and significant service; such calls have been numerous. We recall his distinguished performance as director of cultural affairs in postwar Germany, heading one of the five divisions of occupational authority under General Clay.

In this capacity he had direction over the schools, press, radio, libraries, museums—all of the institutions and occupations in Germany primarily concerned with the development and expression of ideas and opinion. Above everything else, the West hoped at that time that the German people might be guided to embrace the democratic spirit and thought patterns, and to repudiate the old Prussian traditions and ideas. Under Dr. Wells' guidance, this was accomplished with an effectiveness that few thought possible. Moreover, it was done with the approbation, the cooperation, and the good will of the people of Germany.

As Dr. Wells enters upon his duties as delegate to the United Nations, his qualifications are many:

His position as head of a great university is a twofold asset. One is the kinship which exists between himself and the heads of other such institutions the world around. Another is that he goes to the U. N. known primarily as a man of learning rather than a politician, a fact which assumes additional importance when we reflect that the peoples of many parts of the world reserve a special respect for teachers.

There are his international friendships resulting from previous experiences such as that in Germany. In this connection we might add his familiarity with the operations of the governments of other nations.

Back of every political problem in the world today is an economic problem, and this field is Dr. Wells' specialty of specialties.

His thought processes always reveal the capacity to see a situation in its larger context—in all of its involvements—and likewise the vision to see it in the circumstances of tomorrow's world.

Finally, nothing so equips Dr. Wells for the work at the U. N. as his disposition.

He will always be found taking the heat out of situations, and leading toward compromise rather than conflict.

Instinctively, he seeks adequate solutions. When the news that university enrollments would double in the next decade or so set educators discussing whether they would raise requirements to restrict enrollment or seek some other route around the problem, he faced it squarely with the announcement that Indiana University expects to provide educational opportunity for these larger enrollments, and to build and otherwise to prepare to do the job.

Dr. Wells is a man of genuine humility. His accomplishments are many, but he is always ready to give the credit to somebody else. It is his disposition to be utterly self-effacing. If this strikes many of our friends from the Orient as rare in an American, it can scarcely be less welcome.

Indiana is proud not just to have a Hoosier as a member of the United States U. N. delegation, but that we have a man of the caliber and character of Dr. Wells to do the job.

Round Trip From Denver Is Rich in History

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Marshall Sprague entitled "Round Trip From Denver Is Rich in History." The article deals with the history of the surrounding area of Denver, Colo., and was published in the New York Times of August 25, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROUND TRIP FROM DENVER IS RICH IN HISTORY

(By Marshall Sprague)

FORT GARLAND, COLO.—Euthusiasm for regional history is rife hereabouts, with multitudes of people combing the country for old bones or leafing through popular booklets on local heroines like Baby Doe Tabor, about whom an opera has been written.

Recorded history goes really far back, out here, thanks to the dry climate which has preserved a tree-ring chronology dating natural events—fossilized for the most part—almost to Christ's time. This is for the geologists.

A second preservative is the State Historical Society of Colorado, founded in 1879 and running today on an annual State budget of $130,000. This is for the State's human history.

The society owns 5 historical sites, the 1,000-mile circuit of which, in this reporter's view, is as romantic, as illuminating, and as indescribably beautiful as any other motor tour in the West. Besides, the trout fishing is superb in spots.

ON THE GREAT PLAINS

Five days from Denver and back again will do it nicely. One can spend the first day on the Great Plains which almost nobody looks at hard enough to see their unique charms—a 250-mile trip southeast to the site of Bent's Fort, by way of U. S. 287 through Limon and Eads, to U. S. 50 on the Arkansas River, and then west to the railroad town of La Junta. En route to Bent's Fort is Bijou Basin where Plains Indians found buffalo even as late as 1880. At Eads, intrepid historians can detour 11 miles east to Chivington where Miss Mary Marble, the postmistress, will describe the unmarked road running 9 miles to the spot where the Sand Creek Massacre occurred on November 29, 1864. It was a sad day in western annals.

Bent's Fort, a short side trip out of La Junta, was a great adobe trading post on the north bank of the Arkansas, a union station of the western world, focal point of American expansion and of trade with Mexico and the Indians. The Bent brothers built it in 1834 and for a decade the West's immortals gathered there—Kit Carson and Tom Fitzpatrick, Ceran St. Vrain and John Charles Fremont.

The commercial value waned by 1849. William Bent abandoned it and it became a stage stop until the Civil War, and then a community corral, until its mud walls melted into the ground. The historical society acquired the site in 1953. Today, the vast original foundations, excavated by students of Trinidad State Junior College, can be viewed.

La Junta has good accommodations for a first night with Colorado history. Next morning the car should be pointed at the blue Spanish Peaks on State Route 10 which veers from the Ratan Pass-bound Santa Fe Trail. At Walsenburg, one takes U. S. 160, crossing the lovely Sangre de Cristos.

Beyond La Veta Pass, one is stunned suddenly by the incredible gray-green landocean of the San Luis Valley below, with the Continental Divide rising snowily far on the other side, and Fort Garland in the foreground sprawled at the foot of mighty Mt. Blanca.

Garland was built in 1858 (replacing nearby Fort Massachusetts) to guard San Luis Valley settlers against the Ute Indians. Its whitewashed adobe barracks and officers' quarters, its shady parade ground and flagpole, have been wonderfully restored by the Historical Society.

From June to October, the 37-star flag which Col. Kit Carson flew as fort commander there can be seen, and also the place where the two heads of the famous Espinosa boys are said to be buried. The Espinosas tried to continue the Mexican War indefinitely by killing 30-odd Americans over the years. Tom Tobin finally bagged them near La Veta Pass and turned in their heads for the bounty.

ENCHILADAS FOR LUNCH

One can lunch on enchiladas here at Garland and drive south on State Route 159 to San Luis, and west to Romeo on State Route 142 through the Mormon town of Manassa, birthplace of the Manassa Mauler, Jack Dempsey. North briefly on U. S. 285 to La Jara leads to Pike's Stockade, a short detour of immense complication, but worth making.

In 1806, Lt. Zebulon Pike and a few soldiers were sent up the Arkansas River to see if the Rockies were really there. Pike discovered Pikes Peak, wandered into San Luis Valley, then Spanish territory, and built a small log stockade on the Conejos River to rest up in. Before he and his men got much rest, Spanish officials from Santa arrived and arrested the whole party. They spent 3 months in the Chihuahua jail for trespassing.

The historical society has restored Pike's 36-foot-square stockade and the spot's enchantment is enhanced by the difficulty of finding it. Pheasants, doves, ducks, and deer make loud noises in the underbrush and it is time to toss a fly in the Conejos, a splendid trout stream. Toward evening, there is time to continue north on U. S. 285 to Alamosa on the Rio Grande for the night. There, at Kit Carson Trading Post on Main Street, flourishes the valley's genial celebrity, Kit Carson 3d, grandson of the greatest of mountain men.

Heading west through Durango and north to see the Chief Ouray Historical Monument near Montrose, the drive involves 310 miles of continuous Alpine splendor, including the heart-moving Wolf Creek Pass over the Continental Divide and then the northward stretch through the San Juan Mountains, the most precipitous pyramid in North America. This million-dollar highway (built of gold-bearing gravel) goes through Silverton and Ouray where the flying jeeps are full of uranium hunters and western movie stars on location.

Chief Ouray was Colorado's great Indian leader and his monument memorializes also the Ute Indian bands who held these mountains for centuries against all comers until 1881 when the irresistible pressure of white immigration forced them to give up most of their homeland. The historical society has just created a Ute Indian Museum of exhibits and dioramas at the monument. Near it is the tomb of Ouray's wife Chipeta, Colorado's equivalent of Pocahontas.

SILVER TOWN

The monument is on the banks of the Uncompahgre River where the fishing is good, but it is better on the Gunnison, along which a fourth historical day can be spent, after a night at Montrose. U. S. 50 runs east through Gunnison town and over Monarch Pass for 127 miles to U. S. 285 and north for 60 miles on U. S. 24 to Leadville. This town, at 10,150 feet, is the highest settlement of town size in the United States. It has also been the world's richest producer of silver since 1878.

The historical society maintains in Leadville a period piece called the Healey House, filled with relics of the 1880's and run by the timeless Mrs. Marian (Poppy) Smith who knows more about the old camp than anyone else. Adjoining is the Dexter Cabin where Leadville tycoons played draw poker with fabulous silver mines at stake. Other Leadville sights are the old home of H. A. W. Tabor, Colorado's best-known nabob, the Tabor Grand Hotel (now the Vendome) and the Matchless Mine which figured in Douglas Moore's opera, The Ballad of Baby Doe.

The last night can be spent out a Dillon, 34 miles from Leadville on State Route 91 over Fremont Pass. The trip into Denver next day is only 78 miles, but it includes Loveland Pass, one of the State's most spectacular. A detour at Idaho Springs off the Denver Road leads to Central City, Colorado's first mining metropolis, but Central's history requires another 5 days at least, and might be saved for another visit out here.

Department of State Historical Division

EXTENSION OF REMARKS
OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. HENDERSON. Mr. Speaker, before this session ends, I wish to comment upon a matter which has been of long-standing concern to me—the operation of the Department of State Historical Division, particularly as it relates to the publication of the records of our recent diplomatic history. The place of Dr. Donald Dozer in the controversy which has arisen over this question is well known. For those who are not aware of his part in the argument, I believe it can be stated fairly and briefly that this gentleman was summarily fired, without a hearing, from the Historical Division as a result of his honest belief that it is the proper function of a historian and scholar to insist that the people be apprised of such facts as exist when the divulgence of such information does not compromise our national security.

Dr. Dozer is an Ohioan and a native of the 15th Congressional District which I have the honor to represent here. His career as a scholar has been a most distinguished one and, through my friendship with him, I know that his integrity is beyond reproach. He has a long and brilliant record as a teacher of American diplomatic history, inter-American relations and other subjects in the historical field at Boston University, the University of Maryland, the American University, and the strategic Intelligence School of our Armed Forces. He has achieved membership in Phi Beta Kappa and other societies as a result of his outstanding scholarship.

After wartime service in several Federal agencies, Dr. Dozer joined the Latin American Division of the Department of State. For that position, he was recommended by Dr. James P. Baxter III, formerly of Harvard University and now president of Williams College, and by Mr. John C. Dreier, who is now our ambassador to the Organization of American States. From 1944 through 1947, Dr. Dozer's high competence was rewarded by steady advancement. In 1947, he was placed in charge of the Division of Research for American Republics in the intelligence organization of the State Department. Four years later, Dr. Dozer transferred to the Historical Division as assistant to the Chief of the Division, Mr. G. Bernard Noble. In this position his duties were defined as follows:

Under general supervision, serves as adviser to the Chief of the Division of Historical Policy Research, GS–170–15–4476, on new historical research problems and projects which initially require consideration by the Chief of the Division. In this connection, provides technical advice and assistance in studying and analyzing such projects, particularly those which cut across branch lines.

Deals with assignments involving the planning and assimilation by the Division of projects arising as a result of recent developments and happenings in our foreign relations such as the war in Korea, our relationships with the countries of Europe under the Atlantic Pact and the historical issues leading up to its establishment, and similar events in our foreign relations, as well as special historical background papers which require special and expeditious handling. Advises and assists the Chief of the Division in regard to the planning, objectives, approach, content, analysis and conclusions to be developed with respect to such problems and projects as they relate to the historical aspects of our foreign relations.

As an expert in the field of intelligence research, reviews completed projects and studies for the purpose of assuring the proper treatment and integration of both historical and intelligence aspects; and assures that top policy officials of the Department are apprised of any problems which require special treatment and interpretation because of the unique and complex intelligence and historical issues involved in our foreign relations.

During Dr. Dozer's more than 15 years of Government service, including more than 11 years in the State Department, all of his performance ratings were either very good, satisfactory, or excellent. They commended him particularly for his industry, cooperativeness, and subject competence. These commendations were signed by all his supervisors including Dr. Roland D. Hussey, now professor of Latin American history at the University of California at Los Angeles, Mr. Ellis O. Briggs, now American Ambassador to Brazil, and Dr. Allan Evans, Director of the Office of Intelligence Research.

Dr. Evans, who knows Dr. Dozer well, has praised him as a meticulous scholar by training, anxious to avoid any danger of falling into prejudiced or distorted judgment, and abiding carefully by established evidence.

Prof. William L. Langer, Coolidge professor of history at Harvard University, who became well acquainted professionally with Dr. Dozer while he was serving as Chief of the Research and Analysis Branch of the Office of Strategic Serv-

ices and later as special assistant to the Secretary of State in charge of intelligence work, says that he formed a high regard for Dr. Dozer both as a man and as a scholar. He adds that Dr. Dozer was highly esteemed by his colleagues as an able, hard-working, and devoted analyst. Col. William A. Eddy, who replaced Professor Langer as special assistant to the Secretary of State for intelligence in 1946 and who, like Dr. Dozer, was a former student at Wooster College, knows Dr. Dozer well as a friend and former colleague and has indicated his high opinion of his work and his administrative activities. Mr. Park Armstrong, Colonel Eddy's successor as special assistant to the Secretary of State for intelligence from 1947 until his resignation early this year, has written that Dr. Dozer is, in his opinion, an outstanding figure in the Latin American field:

He possesses a profound knowledge of the historical, sociological, and economic background of the area and, as well, a thorough understanding of the current scene. He has a unique intellectual aptitude for the interpretation of present conditions and developments and a decided facility for its expression.

Dr. Dozer, as assistant to the Chief of the Historical Division, Mr. Noble, was commended by his chief in November 1951 as follows:

Performance very satisfactory in all assignments thus far undertaken. Has shown great interest, initiative, competence, and cooperative spirit in work.

In his performance rating a year later in December 1952 Dr. Dozer was commended as follows by the same chief:

Overall work performance is very satisfactory in all assignments within the range of his interest. This applies particularly to the field of United States relations with Latin America in which he has special competence.

All of Dr. Dozer's performance ratings up to the last one, dated May 22, 1955, were similarly laudatory.

In his State Department work Dr. Dozer, while still in the intelligence organization, qualified for and received civil-service status on the GS–15 register. Throughout his State Department service he possessed top-secret clearance; that is, he was authorized to see all documents having the highest security classifications "top secret" and "eyes only" needed for his work. He was designated as the sole representative of the State Department in Washington to attend the second Latin American Intelligence Conference at Quarry Heights in the Panama Canal Zone in 1948. In the same year he was included as a member of the United States delegation to the Ninth International Conference of American States and attended that conference at Bogotá, Colombia, as assistant technical secretary of the American delegation.

Dr. Dozer's association with the State Department ended in January 1956 as a result of differences precipitated by his insistence upon the prompt, careful, and unexpurgated publication of diplomatic papers in fulfillment of the commitments publicly assumed by the Department in 1953 and 1954.

I believe it is advisable to recapitulate the record of events which led to this disagreement. In 1953 when the Eisenhower administration came into office the Historical Division in the State Department, which was responsible for the publication of the diplomatic papers of this Government, had allowed them to fall 18 years in arrears. These papers had been published only through 1934 and thus covered only the first 2 years of the Roosevelt administration.

In May 1953 the State Department under a new administration proposed to expedite the publication of these records. Assistant Secretary of State Mr. Carl McArdle promised in a letter which was published in the Supplemental Hearing on Departments of State, Justice, and Commerce appropriations for 1954, first, that the Department of State would bring the publication of these volumes as up to date as possible; second, that if additional funds could be made available the State Department would give priority to the full story of the United States relations with China, 1941–50; and, third, that the documents on the wartime conferences among the heads of the Allied Governments in World War II would be ready for publication within a year; that is, by June 30, 1954. The Department of State thus offered to break the long silence of the previous 18 years and inform the American people of the negotiations that had been carried on with foreign nations in their name by their responsible officials during the crucial periods before, during, and immediately after World War II.

This broad program of publication was entrusted to the Historical Division, which had been headed by Mr. G. Bernard Noble since 1946. His assistant was Dr. Donald M. Dozer. Dr. Dozer has publicly asserted that from the beginning this program of publication was subjected there to delays, sabotage, and expurgation of records. In fact, Dr. Dozer and other members of the division were not even assigned to the compilation of the wartime conferences until nearly 6 months later although those records had been promised to be ready for publication within a year. The assignment of one member of the division to this urgent project was postponed because priority was given to three other projects: These so-called priority projects were the great seal of the United States, buildings occupied by the Department of State, and portraits of the Secretaries of State.

Leads to material indispensable for the completion of the project, as, for example, the John Paton Davies notes of the Cairo Conference, papers in the Franklin D. Roosevelt Library at Hyde Park, and papers of Alger Hiss and Secretary Stettinius, were either not followed up or were followed up ineffectually by the responsible officials of the Division. After Dr. Bozer was finally given responsibility in October 1953 for compiling the records of the Cairo-Teheran Conferences of 1943, he met his deadline and had his compilation ready for publication by June 30, 1954.

Meanwhile at the congressional hearings on the State Department in April 1954, the Deputy Assistant Secretary of State for Public Affairs reiterated the commitments made a year earlier that the historical division would finish the compilation of papers of all 12 of the wartime conferences by June 30, 1954. In addition, he promised specifically that the Malta-Yalta, Potsdam, and Cairo-Teheran volumes would be published by June 30, 1955. He promised also that within 4 years, that is by June 30, 1957, the Historical Division would publish a total of 41 volumes, including the annual volumes of foreign relations, at the rate of 8 volumes for fiscal 1954, 11 volumes for fiscal 1955, 11 volumes for fiscal 1956, and 11 volumes for fiscal 1957. Congress thereupon appropriated a quarter of a million dollars for this specific purpose, during the fiscal year 1955.

In the 4 years 1953–57 Congress has appropriated close to a million dollars to the Historical Division of the State Department for this program. What has been accomplished? Where are the diplomatic papers that the State Department explicitly promised to lay before the American people? Most of them still remain hidden behind the iron curtain of the Historical Division. Of the five volumes of papers on the wartime conferences which were promised, only one—the Malta-Yalta volume, compiled originally in uncensored form by Mr. Bryton Barron and later censored prior to publication—has been published. Four years and a million dollars after the launching of this speedup program the Historical Division is still 18 years in arrears in the publication of the annual volumes of the diplomatic papers of this Government.

If a decision was ever made at top levels in the Government to kill this program and to continue to withhold from the American people the secret diplomatic record of their Government during the war and postwar periods, that decision was never made known either to Dr. Dozer or to the Congress, which has continued for 4 years to appropriate all the money requested for it by the State Department.

On the contrary, the Historical Division was told officially in 1953 that this program was strongly backed by the White House. President Eisenhower himself publicly endorsed it in a press conference in April 1955.

It seems apparent that the forces in the State Department which have succeeded in delaying the overdue publication of these diplomatic papers have fully succeeded in ridding the Historical Division of both Dr. Dozer and Mr. Bryton Barron. These gentlemen were the two spokesmen within the Department whose insistence upon full and honest reporting caused an internal argument which culminated in their dismissal.

I believe that my colleagues here will agree that it is a most anomalous situation when trained, professional men such as Dr. Dozer and Mr. Barron are pilloried for their insistence that a department of Government carry out its stated commitments. We find such developments hard to imagine when they occur in Government. When such arbitrary action takes place, it is possible that the Department

has discharged the wrong men. Although harmony may now prevail in the State Department's Historical Division, the problems which this incident discloses lead only to the conclusion that overhauling of the Division is needed and is, in fact, very long overdue.

The release of Dr. Dozer under the guise of inefficiency is a transparent ruse which hardly needs comment here in view of his services to the Department over many years. The unfortunate aspect of this affair is that it casts a cloud over the professional ability and standing of this fine and able gentleman. It is ironic indeed that this should occur to a fine scholar whose only fault was to pursue too diligently the ethics of his profession—namely, the objective reporting of facts. If the Historical Division wishes to rewrite history or to suppress information for narrowly political reasons, I feel certain that no scholar wishes to be associated with this process of "doublethink."

In this sense, Dr. Dozer's experience has been a service to the Nation. The fact that the unfortunate conditions it showed to exist in an important agency of Government are uncorrected is tragic indeed. Although objective scholarship is obviously persona non grata in the State Department, we can rejoice that Dr. Dozer's refusal to distort the truth about the conduct of our foreign affairs represents the kind of scholarship which is in the best tradition of American principles. I congratulate this gentleman and I feel certain that my feelings in this regard are shared throughout his profession and by those many public figures and newspapers who have spoken out in Dr. Dozer's cause.

Congressman Moore To Visit Citizens in Each County in First District of West Virginia

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MOORE. Mr. Speaker, it is my belief that a Congressman should be in his district to confer with his constituents and assist with problems whenever official duties do not require his presence in Washington. Accordingly, during the session, I have returned to my district each weekend to consult with my constituents and attend to their needs. In all, I have made over 100 speeches and personal appearances in the district during the past 8 months.

Upon the adjournment of Congress, I plan to return home and be available for conferences with the residents of the First Congressional District either at the courthouse or post office in each county seat. Following is the schedule I have arranged:

Monday, September 16, Hancock County: 9 a. m. to 12, courthouse, New Cumberland; 2 p. m. to 6 p. m., post office building, Weirton.

Tuesday, September 17, Brooke County: 9 a. m. to 6 p. m., courthouse, Wellsburg.

Wednesday, September 18, Ohio County: 9 a. m. to 6 p. m., post office, Wheeling.

Thursday, September 19, Marshall County: 9 a m. to 6 p. m., courthouse, Moundsville.

Friday, September 20, Wetzel County: 9 a. m. to 12, courthouse, New Martinsville; 2 p. m. to 6 p. m., town hall, Hundred.

Monday, September 23, Marion County: 9 a. m. to 6 p. m., courthouse, Fairmont.

Tuesday, September 24, Taylor County: 9 a. m. to 6 p m., courthouse, Grafton.

No appointment will be necessary for anyone who desires to come by on any of these dates and discuss any problem or give me an opinion on governmental matters. In addition to the above schedule, I will maintain a district congressional office throughout the year in the Mercantile Bank Building in Moundsville, and will always welcome visits from the people in the First Congressional District.

Attempt To Capture and Control TVA by Budget Bureau Threatens Independence of This Great Agency of Our Government

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. EVINS. Mr. Speaker, in connection with the nomination by the President of Mr. Arnold R. Jones, Deputy Director of the Budget Bureau, to a vacancy on the Board of the TVA, I recently appeared before the Senate Public Works Committee to express the concern of my constitutents about this appointment. In my view there is an issue involved in this matter which goes beyond the TVA and should concern every Member of Congress—an issue of attempting to control by the Executive our independent agencies—which are arms of the Congress. To bring this issue to the attention of my colleagues I ask unanimous consent to have reproduced in the RECORD a portion of the transcript of the hearings before that committee. My statement follows:

STATEMENT OF THE HONORABLE JOE L. EVINS, UNITED STATES CONGRESSMAN, FOURTH DISTRICT, TENNESSEE

Thank you, Mr. Chairman, and may I say that I am complimented by your generous remarks and those of my own Senator—Senator GORE, of Tennessee. I want to say with regard to Mr. Jones, who is here with us before the committee, that I have had the pleasure of meeting him, and following meeting Mr. Jones some time back, I sent him a copy of a statement which I had made in the Congress on the TVA. I don't think it was any outstanding statement, but at least it expressed my point of view. My statement has been called an answer to some of the charges of misrepresentation made against the TVA, the continuing tirade of misrepresentation.

I said, "If you become our TVA Director, I want you to know of the point of view of the people in the Valley."

Mr. Jones very courteously responded to my letter and said, "Thank you for providing me with another point of view on TVA. I am interested in all points of view."

I appreciated his letter, but the fact that he would say "another point of view" would indicate to me that he had certainly a point of view other than that of the TVA. It is well that he should have all points of view. That letter was not intended for any later use, but it does indicate to me he has been indoctrinated with an anti-TVA point of view.

It seems that in the Budget Bureau he has one point of view, and I was able in some limited measure to provide him with another. I hope that if he does become our TVA Chairman down there, he will be guided by this other point of view and some of the things that have been brought out in this hearing before this great committee by the known friends of TVA.

Mr. Chairman, I have always been reluctant to appear before a committee of the Senate concerned with the confirmation of Presidential appointees. I have been through three of these nominations. I am compelled to do so on this occasion because this appointment is of tremendous importance to the people whom I represent. They are not able to come here and express their opinions, and as their Representative I feel dutybound to speak in their behalf.

The Fourth District of Tennessee, as Senator GORE has indicated, is a great district. It consists of 23 of the 95 counties in Tennessee. It was formerly two congressional districts. It is entirely dependent upon TVA for its source of power supply. I do not have the actual count, but I believe at least 10 percent of the 150 municipalities and REA co-ops which obtain their power from TVA are within the district I represent, or partially in it—more than 10 percent of the 150.

I cannot overestimate the importance of the TVA to the people I have the honor to represent. You would have to experience with us the difference which nearly 25 years with TVA has made in our lives to really appreciate how we feel about it.

I would say, too, that to us the TVA is not just a utility, it is a symbol of our progress. To us the TVA is not an agency in Knoxville, it is a partnership in which everyone in the Valley participates. If we obtain our power from the REA co-ops, we feel that we own a share of it. If we obtain our power from the municipal system, we own the municipal system—the people in the Valley.

But this has been a rather peculiar one-sided partnership. Although our investment is more than 25 percent in total investments, and although the people of the district I represent, and the people of the 7-State area are completely dependent upon TVA for its source of power supply, they have no voice in the policies of the TVA. Only through a representative of the people can the voice of the people be heard. Indeed, many of late have come to feel that they have little or no voice at all; they feel that the office of the Budget Bureau has become the policymaker for TVA. And I might add, they feel that it has been a destructive one; that the Budget Bureau and not the TVA or not even the Congress has become the policy maker for our region. That is the feeling of our people.

Gentlemen, we are all aware of the powers of the Budget Bureau, its growing and ever increasing powers. It is a matter, Senator, in which the entire Congress is concerned. This power can be doubly painful and destructure to a people when the power of the Bureau is so great that it can affect the lives and well-being of 5 million people.

Policies of the TVA are supposed to be determined by its board of directors, whose members are chosen by the President and confirmed by the Senate. The TVA Act does not require the board of directors to consult with the Budget Bureau in making its decisions, but for the past 5 years the Bureau has been attempting to control policy. The past 5 years have been the hardest in the 24-year life of the TVA.

Why do I say this? Mr. Chairman and members of this great committee, I think I can prove that to you. Here are some of the facts of the enmity and hostility of the TVA emanating from the Budget Bureau.

As I indicated earlier I received a letter from Mr. Jones in which he expressed appreciation for another point of view. This indicated that the Budget Bureau is indoctrinated with a different point of view from the TVA philosophy.

The members of the Appropriations Committee of the House on which I serve—and we know that hearsay evidence is not legally acceptable, Mr. Chairman, but it has its probative if not evidentiary value—the clerks who deal with the Corps of Engineers and who deal with the Bureau of Reclamation, and with public works projects, the staff who are in daily contact with them on all of these great public works projects throughout the country—in the Northwest, in California and elsewhere—said to me that Mr. Jones is prejudiced against TVA. I said, "Why do you say that?" They said, "The Budget Bureau is prejudiced against all public power projects." You know that. It has been demonstrated.

I want to point out that I called upon the President, President Eisenhower, in the early part of his administration. This was in connection with the reappointment of Mr. Gordon Clapp. Mr. Gordon Clapp as a young man was an able public official. He was a splendid administrator. He was dedicated and devoted to the TVA. He was a young man interested in the career service, not a politician. He had grown up in the TVA. Some 15 or 20 Members, Senators or Representatives, went to see the President and to urge upon him the reappointment of Mr. Clapp. Although this man was dedicated to the philosophy of the TVA and everyone recognized that he was a fine administrator; he was thrown overboard and another man appointed in his place.

That was the President's privilege, but he did not reappoint a career man dedicated to the TVA.

The last major addition, Mr. Chairman, to the power capacity of TVA came in the latter days of the Truman administration. That was the so-called New Johnsonville addition. It was recomemnded by the President, former President Truman, and approved.

The next major addition was proposed in the early days of President Eisenhower's administration, and that was the so-called Fulton addition. The Board of the TVA unanimously recommended the Fulton addition, but the Budget Bureau opposed it. That was fought out twice in the Congress and twice defeated. The Congress did not adopt it, but certainly the Budget Bureau was opposed to it, and although the Board recommended, the Budget Bureau refused to recommend the Fulton addition.

So I say that the last major addition to the TVA system was in the latter days of the Truman administration, and there have been no major additions since that time.

This committee is all too familiar with the Dixon-Yates scheme that was hatched in the nest of the Budget Bureau. I believe it was conceived in iniquity to weaken and subvert TVA to the private power interests, to their great financial gain.

You are familiar with the connection of the First Boston Corp. with this plan and that the private utilities would have profited under this scheme. This committee is familiar with what was disclosed about this scheme by committees of the Senate. Both Senator HILL and Senator KEFAUVER had a great part in disclosing the presence in the Budget Bureau of one Adolph Wenzel and his conflict of interest. He was a paid consultant of the First Boston Corp., and he was consulting on TVA. He was brought in by the late Mr. Rowland Hughes, the former Director of the Budget Bureau.

Not only these acts, Mr. Chairman, of the appropriation for the Fulton plant being denied, TVA's growth therefore limited, the Dixon-Yates sabotage plan advanced, but I should cite that in the past 5 years, as I have said, there have been no major starts. Furthermore, the Budget Bureau has cut and reduced TVA's Board of Directors recommendation for appropriations for its other activities.

The Budget Bureau opposed the use of the corporate funds by the TVA. We of the Congress and friends of the TVA in both the House and the Senate have won for the TVA the right to use surplus corporate funds after it has paid its statutory obligations into the Treasury, and as to accumulated funds, the Congress reaffirmed their right to use these funds, but the Budget Bureau opposed the use of these surplus funds.

The Budget Bureau has recommended most stringent self-financing plans. The distinguished chairman of this committee, Senator KERR, knows full well the Budget Bureau's plans for self-financingn and opposition to his own work of constructive legislation in this field.

The Budget Bureau has been the agency, I repeat, that has been trying and largely succeeding in setting the policy for the past 5 years for the TVA, writing its ticket, if you please, where it could go. It has gone nowhere. Its progress has been very limited. It has been virtually halted. And what progress has been made has been over opposition and with restrictions.

Gentlemen, the Budget Bureau has been like a coach to the TVA, a coach tying weights and chains around a great youth, shall we say, a track star.

I repeat, in summary, that the Budget Bureau has cut appropriations for the TVA, it has opposed the use of corporate funds, it has hatched the Dixon-Yates scheme, it has tried to impose restrictive self-financing plans, and at every turn and at every step the Budget Bureau has opposed the TVA. This to my mind, Mr. Chairman, is crystal clear; a blind man could see it.

I cite this history of the past 5 years as the hardest years in TVA's history. I express the concern of the people I have the honor to represent against Mr. Jones, who comes as a ranking member, a ranking star of the Budget Bureau, as its deputy director. Their apprehensions and fears are that Mr. Jones will continue the policies of the Budget Bureau for he has been an official of the Bureau.

I should point out one further factor with regard to corporate financing. The TVA Board proposed the plan a few years ago to build plants with accumulated profits, and this is significant: The action of the Board was unanimous in its decision. That was since Chairman Vogel has been a member. But the Budget Bureau vetoed this proposal and substituted its own plan and authorization for one generator to be paid for from the sale of bonds which TVA could obtain after the authority was passed.

In other words, they saw a need, the unanimous Board, for additional capacity. The Budget Bureau rejected that plan and said, "You can have one addition, provided you get self-financing passed through the Congress," knowing the self-financing bill was having difficult sledding in the Congress.

This is an important fact: Although Chairman Vogel, as you may have heard, was for this before the Board, when the Budget Bureau proposed the other plan, he immediately retracted his previous position and voted to go down the line with the Budget Bureau. Fortunately the two other Directors stuck with their determination, and with the approval of the 84th Congress they went ahead with these additional units.

About three years ago the President had the opportunity to fill a vacancy on the TVA Board about which you have heard a great deal. He filled it with Mr. Vogel instead of reappointing Mr. Clapp. At that time Mr. Vogel appeared before this Committee in this very room and professed his belief in the TVA. I was told that there could not have been a stronger advocate than Mr. Vogel. He not only believed in the TVA Act, he believed in the yardstick, he was enthusiastic about its flood control and navigation function. He assured the Committee that he would act independently. He went further. He said that he would more or less consult with the people of the Valley and determine how they felt about things, for the President said he wanted things worked out as the people in the area wanted them that way. He said he would do the best job he could to serve the people and serve them well.

Disillusioned, the people of the Valley have made plain their feelings before this Committee.

I have heard Mr. Vogel before the Appropriations Committee of the House, and it is most strange to observe his position of wanting to be for the TVA and still follow the philosophy of the Budget Bureau. Here is a minor example, Mr. Chairman.

There was a little item in their appropriation for some small markers up in the bayous and bays of the lakes. Mr. Vogel said, "Gentlemen, I am opposed to this. My colleagues are for it. I want to cut it out." Someone said, "Mr. Chairman, why are you against it? You know people can get lost on these lakes and lives can be lost. Why are you opposing a little appropriation to put markers up to tell the direction?" He said, "It is an expensive matter and the Corps of Engineers does not have this authority, and I don't see why we shouldn't follow the Corps of Engineers' practice."

That was his reason for opposition to it. It illustrates his difficulty, in doing what the Budget Bureau wants him to do, rather than going along with the philosophy of the TVA.

Here is another experience with the TVA and the Budget Bureau shortly after Mr. Vogel came to the TVA, they submitted its plan for self-financing. Although originally all three members of the Board agreed to it unanimously, the Budget Bureau made certain suggestions for changes, which are well known to this committee. Mr. Vogel didn't go along with his colleagues on the Board. He went along with the Budget Bureau. His position on this, as expressed before this committee, has been somewhat similar to that of Mr. Jones. He said "he thought the TVA could live with the Budget Bureau recommendations." In any event, the committee is aware that as late as April 29, Mr. Jones signed a letter to the Budget Bureau along these same lines. The recommendations in that letter would have given the President and the Budget Bureau and the Secretary of the Treasury more and more control over the TVA.

Mr. Chairman, this grasp for more and and more power, more and more control by the Budget Bureau, is an alarming thing.

I am sure that you gentlemen can appreciate, and do appreciate, the apprehensions of the people concerning this new nominee of the Board to the TVA Board, largely because of the fact that he has been an official of the Budget Bureau. Nothing personal against Mr. Jones, but it is the Budget Bureau that the people have great concern about.

The Budget Bureau has from the beginning of this administration led the fight against TVA. They are concerned, naturally, can any good come out of the Budget Bureau? I agree with what the chairman said earlier. We know that someone said, can any good come out of Nazareth, and certainly some good did come out of Nazareth. But people are apprehensive. That good cannot come out of the Budget Bureau for TVA. This is the question which this great committee must decide.

Remember, gentleman, that the future of 5 million people will be affected by the course that you men determine, and yet these 5 million people are dependent upon you for your decision. This is why, as I say, although I am reluctant to appear before this committee concerned with the confirmation of a Presidential appointee, I feel it would be a dereliction of my duty if I did not.

As I pointed out, there is a statutory requirement concerning the qualifications of the TVA Board Director. In this respect the appointment differs from that of others you consider.

I was certainly astonished to learn that a few days ago Mr. Jones testified that the President had never made any attempt, so far as Mr. Jones was aware, to determine his point of view on the TVA, and thus to determine whether Mr. Jones did in fact meet the statutory requirements.

Senator KERR. May I ask you a question there? Knowing the attitude of the President about the TVA, would you rather risk the actions of a man appointed by the President that the President didn't know what he would do, than the actions of a man with reference to whom the President had talked to and did know what he would do?

Mr. EVINS. Mr. Chairman, I have followed some of the hearings of this Committee. There has been a general statement that the President has directed this: The President has advised that this be done. I think the Budget Bureau has been telling the President what to do. I won't put the blame entirely on the President of the United States. I think the Budget Bureau formulates the policy; they go in to the President and say, "Mr. President, this is it," and he says, "All right, boys, take it." The President I don't think has any enmity. How could he when he twice came to our State and carried it, once, and made strong statements for the TVA.

Senator KERR. Is he making as strong statements for the TVA as he did for 90 percent of parity for the farmers?

Mr. EVINS. Mr. Chairman, he came to Memphis and there was a tremendous crowd there. He said that TVA is a great experiment in agricultural development and conservation. He praised it. When he flew over to Knoxville some of our colleagues flew with him, Congressman HOWARD BAKER, I believe—and I do not wish to misquote my Republican colleague—he said, "Mr. President, you made a strong statement. You didn't make it strong enough. Make a strong statement in Knoxville." There he said: "My friends, I pledge to you under my administration TVA will be maintained at maximum efficiency." He didn't just praise it as a conservation bill.

Senator KERR. He praised the farmers at Brookings, S. Dak. He said, "I guarantee you 90 percent of parity, and we will work for 100-percent of parity."

Mr. EVINS. Mr. Chairman, that emphasizes what I said before. The Presidency is a great assignment, the greatest job in the world, and he must have lieutenants and assistants around him. I don't think the President is directing it. I reverse the situation and say the Budget Bureau has been formulating the policy, laying it before the President, and selling him, and the President has been taking it. I don't think the President has really had any enmity, although he did, after being irked one day, refer to TVA as creeping socialism.

Senator KERR. He referred to the expansion of TVA as creeping socialism.

Mr. EVINS. I don't think that is a very endearing term, Mr. Chairman.

Senator KERR. Do you think he knew what kind of a term it was? In view of your great tolerance that you have professed here for him, after criticizing the situation because he hadn't talked with this man, I would feel that in justice to him you should be fairly certain in your mind that he knew even what was said as to its meaning, before you became too critical of him.

The Senator quoted from his press conference the other day, after he had been in office something over 4 years, and after he had made his second appointment to the Board of Directors, that in view of the requirement that it be a bipartisan Board, that he thought the next one would have to be a Democrat. Do you know of any requirement in the law that there has to be one Republican on that Board?

Mr. EVINS. On many of our independent boards——

Senator KERR. Or one Democrat?

Mr. EVINS (continuing). The law provides that they shall be bipartisan, not more than 1, 2, or 3 of the same political party. That does not apply with respect to the TVA.

Senator KERR. That is my impression. I was telling you that the Senator from Alabama quoted the President at a press conference as indicating that it was his information or opinion that there was such a requirement with reference to TVA, and that he would, therefore, on the next appointment, have to appoint a Democrat.

Mr. EVINS. Mr. Chairman, he wouldn't have to appoint a Democrat, and our people would be satisfied with a Republican if he appointed one on the Board who believed in TVA and who would be its champion. That is what we want in the valley. We want an individual who is on the Board who champions the TVA and who believes in it sincerely with heart and conscience, regardless of partisanship or politics.

Senator GORE. Or where he comes from.

Senator KERR. The point of the remark of the Senator from Oklahoma was calling your attention to the fact that after 4 years in office and making 2 appointments to the Board of Directors, of which the total is 3, that the President still didn't know that it wasn't a requirement that there be a bipartisan board.

Mr. EVINS. I think that affirms our statement, Mr. Chairman, that the President is being improperly advised; that he is not being given all the facts.

Senator KERR. In that situation apparently he was given some that weren't. I mean apparently he had all of them and then some more.

Go ahead.

Mr. EVINS. The President is not directing. The Budget Bureau is directing. It is the reverse, in my humble judgment.

Senator KERR. In other words, you think there is more of the Budget Bureau thinking in what the President does than there is of the President's thinking in what the Budget Bureau does?

Mr. EVINS. Yes, Mr. Chairman; but I cannot reconcile how the President can be so strong against TVA and at the same time he recommended the upper Colorado River storage project.

Senator KERR. You can't understand that?

Mr. EVINS. I voted for it.

Senator KERR. You can't understand it?

Mr. EVINS. He wanted the upper Colorado project. He said this is what I believe in, developing the whole river valley.

Senator KERR. You can't understand that?

Mr. EVINS. I can't understand the inconsistency. I can't reconcile his being for that and opposed to TVA.

Senator KERR. You are assuming, of course, that he recognized the need existed? You are going to get yourself into the same shape as the Senator from Oklahoma got himself into a few days ago when he told the truth about what he thought about what was in the President's mind, if you are not careful. And I hope that you will do as I did, consider it deliberately before you get out onto that platform.

Mr. EVINS. Mr. Chairman, if I could be as esteemed and as great as the distinguished chairman and the able Senator from Oklahoma, I would consider it an achievement and an accomplishment.

Senator KERR. That gives me great comfort, because it overcomes some of the remarks that have been made that were not entirely consistent with it.

Senator GORE. Overcomes or balances?

Senator KERR. Overcomes.

Go ahead.

Mr. EVINS. I placed in the record some time back—to some people—this forum can be a sort of education. They seem to think that TVA is the only public power project in the Nation.

What of the great Columbia River development, the great Missouri River development, and the Pick-Sloan plan which calls for 200 dams, 6 multipurpose dams on the Missouri River—6 of them, 6 major multipurpose dams on the Missouri River and 200 other dams. The Pick-Sloan plan called for an expenditure of $5 billion.

The TVA has been successful. It is most successful in its conservation, in its flood control, in its fertilizer program of bringing reduced fertilizer to the farmers. Its power operation is paying out. I think its main opposition is its success. Yet I can't reconcile the hostility to the TVA.

The great St. Lawrence seaway development, when that project came to the Appropriations Committee, with which you are all familiar, they said, "There is nothing controversial here; let's approve it." I said, "Let's talk about it a few minutes, Mr. Chairman. What do you propose to do here?"

"Well, we are going to build a 25-foot channel for 200 miles; another, 500 miles."

"How many power units do you have there at present?"

"Well, there are 5—2 on the American side, owned by private industry, 3 on the Canadian side, owned by the Canadian Government. Five existing power units on the St. Lawrence."

"What do you propose to build there?"

"Thirty-two power units in addition, 16 on the American side, 16 on the Canadian side."

To build 32 additional power units on the St. Lawrence seaway, and the great conservative Chicago Tribune, a paper that opposes everything as socialism, came out with an editorial and said this will be a great development, it will make Chicago the greatest city in the world in 25 years.

One man on the committee from Illinois said no, in less than 10 years. So they voted the St. Lawrence seaway development. And the upper Colorado project. But TVA is bad, and I cannot reconcile it and our people can't understand it. We want a member of the Board there, Mr. Jones or whoever it may be, who believes in TVA. That is our appeal.

There is one other matter I would like to address myself to, and that is that I feel strongly the need and necessity of so-called

independent agencies to be kept independent, free of executive control.

Since our country was adopted, there has been a tremendous trend toward centralizing power and centralizing of power in the Chief Executive and under his direction in the Bureau of the Budget.

The Congress should reverse this trend, the continued increase of power in the Bureau.

I served on the Independent Offices Subcommittee on Appropriations and a few years ago I served as chairman of a subcommittee of the House Small Business Committee, that looked into the problems of the increasing executive power over our independent agencies. These hearings are published and the findings were somewhat startling.

These agencies, as we all know, are supposed to be arms of the Congress. The Constitution gave the Congress the power to regulate commerce. The Congress, in turn, delegated this power to the independent commissions. There has been a shifting of that power over the years, since the establishment of the Interstate Commerce Commission.

We had an illustration a few weeks back—not a few weeks but a few months back—of the chairman testifying that these independent agencies have been quasi-legislative arms of the Congress and quasi-judicial, but he said in his speech, they are shifting, they are now becoming quasi-executive.

That is a situation with which the Congress must be concerned, this constant shifting and centralization of power into the hands of the executive.

May I point out that the President was able to mobilize a combination of some of these independent agencies, AEC, SEC, and FPC, to try to put over the Dixon-Yates deal, to use them all.

In other words, he was able to use them in an attempt to change the TVA without the necessity of going to Congress for legislative action. The process by which Congress granted control of these agencies began with the requirement that these agencies go to the Bureau of the Budget for approval of their budget. That is where it started.

Previous to that they came to the Appropriations Committee of Congress. Furthermore, it gradually developed that these agencies had to obtain the Bureau of the Budget's approval before they could submit proposals for legislation and inquiries for information that they needed. They controlled the type of questionnaire they could send out.

During the war this was necessary in order to cut down on duplication on requests sent out to the industry. Now we know the Bureau of the Budget is using that to control the various agencies.

Finally, by failing to veto one of the Hoover Commission's recommendations, the Congress gave the President the authority to appoint and to remove members of the Commission, to designate the Chairman, and the Chairman the authority to become the administrative officer with right to control the staff, control the appropriated funds, and control the workload. The result is that, at the moment, the Congress now stands in a sort of second- or third-hand role in authority over the independent agencies which were created as arms of Congress. You gentlemen are all too familiar with that.

I want to point out that the House this year has, as you know, passed legislation to set up a special committee on Congressional oversight, to examine more thoroughly the results of the operation of our independent agencies, who are supposed to be deputies of the Congress. This oversight committee is now getting organized.

We witnessed in the past 5 years, I repeat, a similar but thus far unsuccessful attempt by the Executive to capture control of the TVA. I understand, as one of my colleagues has pointed out, that you spent 2 years in writing and passing legislation which gave TVA power to raise bonds, to maintain its independence of the Executive.

They always talk about bureaucracy in Washington; why don't you decentralize? TVA is an example of decentralized government, operating in the field. But now even that, is bad to some; if it is not one thing it is another that they work against.

I believe it was pointed out that if the new Board turns out to be willing to submit to the Bureau of the Budget, you will be surrendering the fruits of your labor on the self-financing legislation. Even if we are not concerned about the TVA, I am concerned about the drifting of our independent agencies to Executive control.

We cannot afford to surrender more, Mr. Chairman. Sometime, somewhere, we in the Congress must put a stop to the continued encroachment of the Executive on constitutional and executive duties and responsibilities, and the recognized worst offender of them all is the Bureau of the Budget. They are determining appropriations, they are writing legislation, they are issuing orders and edicts.

I think, when the Congress passes legislation, when the Congress speaks, the Bureau of the Budget should be responsive to it. What good will it have done to legislate on the TVA or any other independent agency if, through appointments, the Executive achieved control of these agencies and directs their policies?

I wish most strongly, Mr. Chairman, that you and members of the committee would weigh these circumstances which I have attempted to point out. The importance of our regulatory and independent agencies remaining as arms of the Congress and their independence is very important.

Secondly, Mr. Chairman, can a man with Budget Bureau service and the indoctrination Mr. Jones has had as Deputy Director of the Bureau of the Budget, truly and in fact, divorce and disassociate himself from the influences of his work and his association over the years with the Bureau of the Budget which, as I pointed out, has been the principal architect of the destruction of the TVA?

I say, gentlemen, that human nature being what it is, that he cannot. I would hope that he could. But old soldiers remember their previous battles. I think they remember the techniques of their warfare.

I make this appeal not against Mr. Jones personally but for and on behalf of and in the interest of the people whom I am honored to represent. To do otherwise would be a dereliction of my duties.

Thank you, gentlemen.

Passenger Ships for Transpacific Trade

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BONNER. Mr. Speaker, the United States House of Representatives has a long and proud tradition of careful and thoughtful attention to the merchant marine problems of the United States. It has, as my colleagues all know, a committee primarily charged with the responsibility for this phase of our national policy.

Largely as a result of this close attention from this body, it has been possible over the decades to maintain a merchant marine, with all its allied industries and activities, which has provided indispensable strength to the Armed Forces and the commerce of the United States.

As part of its continuing close study of the merchant-marine problems of our country, your committee has, over the years, developed a program of constantly reviewing the effectiveness of our shipbuilding and ship-replacement program with Government departments and private operators. As a result, the House has been able, in past years, to anticipate the needs of the country in times of crisis and to correct abuses and mistakes which may have crept into the merchant-marine program immediately upon their discovery.

A critical problem now appears to exist in one phase of the merchant marine which strongly affects our competitive position with other merchant marines and even more strongly affects our readiness to provide for troop transport needs of the armed services. Your committee will study this problem and will be holding hearings on it as soon as possible.

The problem arises in connection with the ability of private steamship companies to replace their large passenger ships. A large passenger ship is a highly specialized piece of equipment, designed for a particular use and of value only in the particular trade for which it is designed.

To provide a balanced fleet which will include all necessary types of ships for our foreign commerce and national defense, the Federal Maritime Board requires replacement of vessels as they reach a life of 20 years and become, thereby, obsolete for the purposes of commerce and defense.

In accordance with the Merchant Marine Act of 1936, the Federal Maritime Board has required the United States Line to enter into a contract for the replacement of the steamship *America*, which is reaching its obsolescence point, and has equally required the American President Lines to enter into a contract to build a new large passenger vessel to operate between the Pacific coast and Far Eastern ports. Both of these operators have undertaken, in good faith, to comply with the requirement of the Government and to construct the replacement vessel. They have both found that, under the current high costs and high interest rate economy, construction of replacement vessels under the present Federal Government policy is so prohibitive in expense as to be practically impossible.

On August 19 I introduced legislation which would authorize construction of a new passenger ship for the transatlantic trade. On August 23 I introduced a bill to provide for construction of a new fast passenger ship for the transpacific trade. The bill would authorize a 26-knot ship with a capacity of 1,400 passengers to be built by the United States and sold to the operator with a Govern-

ment contract to serve on that route, the American President Lines.

The American merchant marine in the Pacific Ocean is in serious need of new passenger-ship construction. The entire American-flag passenger-ship fleet in the Pacific, including service to the Orient, to Hawaii, to New Zealand and Australia and around the world, includes only 10 vessels of an average age of 15 years, a designed speed of 20½ knots or less and a total passenger capacity of less than 5,000.

If we are to hold our place in the face of the growing Japanese merchant fleet in the Pacific and if we are to provide ships which can serve effectively in time of emergency as troop transports, we must proceed with the building of this passenger liner for the trans-Pacific service.

Recently the Secretary of the Navy appeared before our committee and testified that 89 percent of the United States troop-lift potential is in vessels of 15½ to 20 knots speed and is thereby deficient for the requirements which an emergency will place upon it.

The bill which I have introduced does three things:

First. It recognizes that the sound national policy of the United States calls for construction of a large, fast passenger ship for the Pacific trade.

Second. It follows the provisions of the Merchant Marine Act of 1936 which has so successfully dealt with the major merchant marine problems of the country in the last 20 years.

Third. It specifies a method of financing this construction which is sound and economical both for the Government and the operator of the vessel.

Hallmarks of the Opposition

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PORTER. Mr. Speaker, misinformation, misunderstanding, and a persistent refusal to debate the issues on the floor of the House continue to be the hallmarks of the opposition offered my view on Latin America by the senior and distinguished gentleman from Tennessee [Mr. REECE] and several other Members.

In the Appendix, pages A7166–A7167, for August 28, 1957, the gentleman takes me to task for violating the historical secrecy of the grand jury because the New York Times for August 22, 1957, carried a story about my appearance before the grand jury investigating the Murphy-Galindez cases.

If the gentleman had bothered to check with my office or with the Department of Justice, he would have learned that the Department had informed me that I was at liberty to make any statements I desired about my appearance before the grand jury. I consulted them in advance and I disclosed nothing that would in any way interfere with assignment of the grand jury and the duties of the Justice Department lawyers.

The gentleman takes exception to my suggestions that the grand jury indict Trujillo and invite the Dominican Ambassador to appear just as I did. The gentleman's implication that I recommended subpenaing the Ambassador is unwarranted. Just as I was invited to appear so could Ambassador de Moya be invited. His appearance would give the jury an opportunity to hear Trujillo's leading apologist and if the jury chooses to consider indicting Trujillo, this seems only fair.

As for the gentleman's shock over my suggestion that Trujillo be indicted for the murder of Gerry Murphy, I note the gentleman does not discuss Trujillo's guilt or innocence. The point he raises is that of the propriety of a Member of this body suggesting American legal action against the sovereign of an allied country.

Does not the gentleman know that we are talking about the Dominican Republic? That its president is Hector Trujillo and that it has a legislative body that makes its laws? This fellow, Rafael Trujillo, is only the top general but there is no constitutional basis for calling him the sovereign, and we are, right now, talking about the legal situation; are we not?

American grand juries have often issued indictments where we did not at the time have jurisdiction over the person indicted. If Rafael Trujillo wants this matter settled, let him submit himself to our jurisdiction for the kind of fair trial he could never get in a country like his own.

Whether or not he ever does come within the reach of our legal process is beside the point so far as the grand jury is concerned. Their job is to determine whether any crimes have been committed and to bring indictments against the person or persons they believe, on the basis of evidence, to be responsible.

That he is actually the dictator of an "allied" nation gives him no immunity from indictment. Does the gentleman believe the grand jury owes Trujillo some sort of courtesy to the degree that the grand jury should overlook the overwhelming evidence against him? Perhaps the gentleman would have the grand jury consult the State Department for permission to do its sworn duty?

The principles of international law cited by the gentleman from Tennessee are fine—in their place. They do not apply here.

In conclusion, the gentleman should know, as he could have learned very easily, that I was invited by the grand jury to appear before them. I did in no manner solicit the invitation although I was happy to appear. They wanted my opinion and the basis for it. I told them, as I have said publicly for many months, that Rafael Trujillo was criminally responsible for the murder of my constituent, Gerry Murphy, and that the evidence was already largely established by the FBI and has appeared in notes from our State Department to the so-called Dominican Republic.

But the gentleman, I recall, apparently does not care to discuss the evidence. He prefers to say there is none and to confine himself to matters of "propriety" where, I regret to say, his factual premises are false and his legal principles inapplicable.

It is my hope, perhaps a vain one, that the opposition to my views about our Latin American policy will see fit, in the 2d session of the 85th Congress, to take the trouble to inform itself and to debate these important issues on the floor of the House in keeping with the great tradition of this most eminent of all deliberative assemblies.

One Step Forward

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. EBERHARTER. Mr. Speaker, 2 days ago this House took favorable action on one of the most significant pieces of legislation to come before it in many years—the Civil Rights Act of 1957. For the first time since the Reconstruction era, concrete action has been taken to implement the rights provided for in the Fourteenth and Fifteenth Amendments to the Constitution, and to guarantee that they will not be denied to persons because of race, color, or creed.

I am indeed proud to have been able to vote for this legislation, for it represents a great milestone of progress. And it is action which I have always fought to obtain.

The passage of this measure was not an easy task to accomplish. It has been a long and arduous fight and one which has been constantly uphill. It is a source of great satisfaction to finally see the fruition of our labors.

I am sorry to say that the bill as finally passed by the House contained a number of amendments which I personally did not want to see included, and which I had originally opposed when the bill first came before the House for consideration.

Most important of these amendments was the one providing for a trial by jury in contempt cases. I was adamantly opposed to the adoption of such an amendment for I felt that it would unnecessarily weaken the bill, and also that there was no precedent whatsoever for providing for a trial by jury in criminal contempt cases.

Nevertheless the Senate chose to add a jury trial amendment to the bill, and it was even more unfortunate than the original one proposed in the House, for it provided for jury trials in all criminal contempt cases arising under this act or any other act. This was obviously an ill-considered move, for it would have brought about preposterous results. It would have made completely ineffectual the emergency provisions of our labor

laws. Furthermore, there is no machinery even set up for trials by jury in the appeals courts and the Supreme Court.

Obviously this was unacceptable. Consequently there was proposed an amendment to limit jury trials to those contempt cases arising under this act.

A jury trial amendment of any type was difficult for me to accept, as it was for many of my colleagues: but a compromise was necessary and this was the least objectionable compromise.

The bill in its final form represented concessions from both sides. Neither side has won—neither side has lost. But from this compromise will come a gain for a segment of our society, which has been far too long denied the rights guaranteed by our Constitution.

The Civil Rights Act of 1957 has made it crystal clear that the restrictions on the right to vote because of color, race, or creed are not to be tolerated. This is a most important step, but it is only a step. We have a long way yet to go in meeting the need for legislation in this field. But we have made a start—for the first time—and we shall now renew with increased vigor our efforts to provide complete equality for all our citizens.

We must not assume either that the passage of this bill will automatically accomplish its objective. It will only be successful if it is vigorously administered by the Department of Justice, and the proposed Civil Rights Commission, and of equal importance, if there is cooperation on the part of all sections of our great country in upholding the principles set forth in this measure. To me it is a shameful thing that there have been threats made by some persons that efforts will be made in the South to frustrate the administration of this new act, and that local enforcement officers will refuse to cooperate with Federal officials relative to this measure. I sincerely trust that this will not be the case.

For this is a measure which every American should stand behind and be proud to support. Although it was enacted substantially for the benefit of a minority group, it will not only benefit the Negroes in our country—it will benefit all Americans because it is a step toward the full enjoyment of the democratic privileges we hold so dear.

The Late Morgan Bulkeley Brainard, Sr.

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MAY. Mr. Speaker, one of Hartford's and Connecticut's leading citizens passed away on August 28, 1957. Morgan Bulkeley Brainard, Sr., distinguished insurance executive and philanthropist, died Wednesday morning at 3:45 in Hartford, Conn.

Not only was it a great loss for all the people of his city and State who knew him and respected him so highly, but, as one who has known him and has always looked up to him, especially from the time I first entered the insurance business, I feel that it is, to a great extent, a personal loss also.

His great life and the records of his achievements even transcend the borders of Connecticut, when one considers his prominence in insurance and civic life throughout the Nation. The great growth of the Aetna Life affiliated companies under his leadership has spanned more than 50 years and is a beacon in the insurance industry.

His interest in all phases of our business, cultural and civic life, will represent a void that will not easily be filled.

Mr. Brainard, who in earlier years held numerous political and civic appointments in city government, was born in Hartford Jan. 8, 1879, a son of Leverett and Mary Bulkeley Brainard. His grandfather, Eliphalet Adams Bulkeley was founder of the Aetna Insurance Co.; his uncle Morgan G. Bulkeley, Governor of Connecticut and United States Senator, also was Aetna president.

He received a bachelor of arts degree from Yale University in the class of 1900 and an LL. B. degree three years later. In 1932, Trinity College awarded the insurance leader an honorary master of arts degree.

In 1905, Mr. Brainard started with the Aetna Life Insurance Co., and in 1922 was made president.

In addition to his insurance affiliations, Mr. Brainard had a wide variety of other business interests. In his later years he served as chairman of the board of the New York, New Haven & Hartford Railroad and was a director of, among others, United Aircraft Corp., Cheney Bros., Hartford National Bank & Trust Co., Hartford Steam Boiler Inspection & Insurance Co., Hartfort Electric Light Co., Connecticut Power Co., Underwood Corp., and Hartford County Mutual Fire Insurance Co.

He was also a member of the board of directors of Hartford Hospital and a trustee of the Colt Bequest. His club affiliations were the Hartford Club, and Links and the Yale Club of New York.

Surviving are his wife, Mrs. Eleanor Moffat Brainard; 4 sons, Morgan B. Brainard Jr., Charles E. and Maxwell L. Brainard, all of Hartford, and Edward M. Brainard of Grangeville, Idaho; and a daughter, Mrs. Henry S. Robinson Jr., of West Hartford. There are 8 grandchildren and 2 great-grandchildren.

Statement of Hon. Frank G. Clement, Governor of Tennessee, Opposing Confirmation of Mr. Arnold R. Jones as TVA Board Director

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. EVINS. Mr. Speaker, the Senate Public Works Committee this past week has been holding hearings in regard to President Eisenhower's nomination of Mr. Arnold R. Jones to the vacancy on the Board of Directors of the TVA. The committee has held extensive hearings on this appointment and I want to commend the committee for its patience, thoroughness, and fairness.

In this connection, the Honorable Frank G. Clement, Governor of Tennessee, made a most eloquent presentation of facts before the committee and I have asked unanimous consent that the statement of Governor Clement may be reproduced in the Appendix of the RECORD:

STATEMENT OF HON. FRANK G. CLEMENT, GOVERNOR OF THE STATE OF TENNESSEE, BEFORE SENATE COMMITTEE ON PUBLIC WORKS, CONCERNING NOMINATION OF ARNOLD R. JONES TO BE A MEMBER OF THE BOARD OF DIRECTORS OF THE TENNESSEE VALLEY AUTHORITY, AUGUST 29, 1957

Mr. Chairman and members of the committee, I am grateful to you for the opportunity to appear before you in your hearings on the nomination of Arnold R. Jones for membership on the TVA Board. I count it an honor and a privilege to appear before you.

Some of you gentlemen have seen me here before. Since the advent of the present national administration I have been in Washington many times before congressional committees. At one point I had about established status as a commuter.

As most of you who are concerned with the great conservation enterprise of the Tennessee Valley know, those visits coincided with and were precipitated by periods of crisis for TVA during the past 5 years. These years have been increasingly difficult for the TVA.

This administration and the private power interests have waged both cold and hot war on the TVA, submarine, and aerial attack and also attack by infiltration. With a few exceptions the battle has been going against the TVA.

And one notable exception was the recent action of the United States Senate in approving a workable revenue bond bill by which TVA may continue to finance its vital power services to the valley and the Nation. I wish to congratulate the chairman and members of this committee and other members of the Senate who voted for that bill. The economic future of Tennessee and that of other States of the valley is deeply involved in the TVA's ability to continue to adequately supply us with electricity. The TVA power production is, we believe, a sound low-cost operation that pays its way and can finance itself—if given the opportunity.

But, as I have said, the attack on the TVA has been many sided and so its troubles are compounded.

I have not been before a committee during the present session of Congress, and you may feel inclined to wonder why I come before you on this occasion when I tell you that I am not personally acquainted with the nominee under consideration. My reply, gentlemen, is that I do have knowledge of the sponsorship which has led to Mr. Jones' nomination. Mr. Jones, we all know, comes out of the Bureau of the Budget, and is sponsored by its Director, Mr. Brundage. I also have knowledge of some of the extremely disquieting things Mr. Jones has said about the TVA in his testimony before this committee.

Mr. Jones has testified before your committee that he believes in the feasibility and wisdom of the TVA Act, but that he would be untruthful if he came here and represented that he was enthusiastic about it (transcript, p. 124). Looking at the concrete things which Mr. Jones has said and done about the TVA I raise the question whether he is not one of the most mischie-

vously unenthusiastic men about this institution who has ever appeared before your committee. Imagine what would happen if the President nominated someone for Secretary of Defense who testified that he was not enthusiastic about this country's defense program. I venture to say that not a single Member of the Senate would be willing to vote for his confirmation. Or imagine what would happen if a nominee for membership in the Atomic Energy Commission were to come up here and testify that he was not enthusiastic about the atomic energy program. You can readily see why those of us who over the years have shown by our deeds that we really do believe in the TVA are so troubled by this nomination of Mr. Jones.

Mr. Jones is not the first nominee for the TVA Board to be put forward by this administration.

You gentlemen may recall that the present Chairman of the TVA Board, Gen. Herbert Vogel, had substantially the same sponsors in the administration.

I am sure you are aware of the fact that the Bureau of the Budget—from the first difference over the appropriational needs which Director Joseph M. Dodge developed by using figures given him by the Edison Electric Institute, through the Dixon-Yates deal of unhallowed memory and on to General Vogel—has been the focal point of hostility to the TVA in the present administration.

Now the Bureau would give us Arnold R. Jones, out of their very ranks.

Moreover, gentlemen, not only did the administration propose General Vogel and the Bureau of the Budget sponsor him, but this very subcommittee, as some of you doubtless recall, examined General Vogel and approved him for the job. You examined Vogel—and let me add that he was very closely questioned about what he knew about the TVA act and his attitude toward the institution and the philosophy behind it. You examined him and those of you present for that examination will remember that he professed full sympathy with the philosophy and aims of TVA and professed a discriminating understanding of his responsibilities under the law.

In view of their common sponsorship, in view of your examination of both of them and in view of the general similarity (as I will undertake to show) of the attitudes that Vogel and Jones have taken toward TVA, I believe that the record Vogel has made as Chairman of the TVA Board over the past two years in the Tennessee Valley is of significance to this investigation. In Vogel's case his real attitudes became clear only after his confirmation by the Senate, whereas, in the case of Mr. Jones, warning signals are before you now.

Gentlemen, I am not a technician. But I know what the TVA has been, I know what it is, and I know what it should be in the future if the principles in the act creating it remain unabridged on the statute books of this country. I am one who believes in the feasibility and wisdom of the act. This belief is one that usually engenders a wholehearted enthusiasm for the TVA, its purposes and its accomplishments. I am no exception; I am enthusiastic about it. I am enthusiastic about it because of its fine traditions, its high policies, its sound operation and its great benefits to my State and region—and to this whole Nation.

And I know how the people of my State of Tennessee feel about the TVA. They are enthusiastic for the same reasons that I have given. They are vitally interested in it and they are vitally concerned about it. They are deeply concerned about the appointment now before you. Indeed, I have never before seen the people of my State so generally disturbed over the qualifications of a nominee for the TVA Board as they manifestly are about those of Arnold R. Jones. I might report that the people of Tennessee remember, as I do, that the TVA Board was created nonpartisan, not bipartisan, and that it should remain so.

At least such was the case until the present Chairman of the Board took office. His coming has created conflict and difficulty in the proper functioning of TVA.

Gentlemen, General Vogel's conduct of his office has been so questionable that I, speaking as Governor of the State in an address before the State municipal league more than a year ago, made the following statement:

"I charge, out of a conviction reached with great reluctance, that since he was confirmed in his appointment to the Board of the TVA, Gen. Herbert D. Vogel has pursued a course of conduct in clear violation of the duty in that office. I assert that in the hearings preceding his confirmation he did not inform that committee as to his intentions and thus deceived the Senate of the United States which voted to confirm him. I believe that he threatens the integrity of the great agency he heads, that he has endeavored to destroy its independence, to frustrate its objectives, to suppress the facts in order to abet and aid those who would deliver the TVA to its enemies. I charge that he has violated the oath of office he took in professing 'belief in the feasibility and wisdom' of the TVA idea and in committing himself to the protection and promotion of the institution it represents."

I proceeded to substantiate that indictment from a public record that is equally available to you gentlemen: The hearings before committees of Congress. (As a brief of this evidence, I will be glad to submit a copy of my address for the RECORD.)

It has been the actions on the part of Chairman Vogel that I referred to in that address and his subsequent actions that have alerted the people of Tennessee and the Valley generally to the necessity for scrutinizing most carefully the qualifications and bent and past associations and real intentions of any future nominee. In the course of this scrutiny of Mr. Jones, we have learned some things which leave us with the firm conviction that the Senate ought not to approve this nomination.

I would like to compare with you some of the views of General Vogel and those which I understand Mr. Jones has expressed to this committee. Mr. Jones has said to you that he believes in the feasibility and wisdom of the TVA Act, indeed, if he were not willing to say this, the TVA Act itself would forbid him to be appointed to the Board. General Vogel said the same thing, in emphatic terms, without reservation.

1. Mr. Jones has told you that he agrees with the principles set forth in the letter to Senator CHAVEZ which Mr. Jones signed, as Acting Budget Director, on April 29, 1957 (transcript, p. 46). The first of those principles, as I read it, would give the Budget Bureau control over all TVA bond issues. The letter also proposed to take away from the TVA Board the freedom it now has to use its power revenues to add units at existing steam plants. Mr. Jones has said he agrees with those ideas. General Vogel has made his agreement with those ideas known. Gentlemen, I say to you that if those two amendments to the TVA Act were ever accepted by the Congress, TVA would be in the hands of the Philistines. With the Budget Bureau stopping all TVA appropriation requests for the starting of new generating plants, as it has for 4 years; and with TVA deprived of the right to use its own revenues, where would TVA go for funds to add more power capacity? You may say that it will have the authority to issue bonds, if and when the TVA revenue bond bill passes the House. I say to you that if the Budget Bureau version of the revenue bond bill passes the Congress, the Budget Bureau will have control over all TVA bond issues. And I would express to you my conviction that a Budget Bureau which hatched Dixon-Yates, a Budget Bureau which has stopped TVA appropriations for 4 years, is not likely to approve TVA bond issues with a great deal of pleasure and pride. But Mr. Jones says TVA can "live with" Budget Bureau control over TVA bond issues; he agrees with the principle of Budget Bureau control of TVA's every source of funds.

2. In communications with this committee, General Vogel has said that while he considers the Kerr bill the best for flexibility for TVA, he generally thinks the committee should take the Budget Bureau's bill. Mr. Jones has said virtually the same thing here, I am informed. He has stated that while he prefers the management flexibility of the Kerr bill as passed by the Senate, he feels TVA could live with the Budget Bureau bill (transcript, pp. 63, 263). These men can give lip service to both of the opposing plans.

3. General Vogel has agreed with the Budget Bureau that TVA should not have the freedom to use its own power revenues to add units at existing steam plants. Mr. Jones has told this committee that while he would prefer that TVA keep this right, he again feels that TVA could live with the Budget Bureau proposal which would take that freedom away from the TVA Board (transcript, pp. 101–102).

4. General Vogel has consistently sided with the Bureau of the Budget, aaginst the majority of the TVA Board. Mr. Jones has testified that he feels he can iron out the difficulties between the Budget Bureau and TVA (transcript, p. 252). General Vogel has ironed out these difficulties in a very simple manner: he has agreed with the Budget Bureau. How Mr. Jones might iron out the differences with the Budget Bureau gives us equal concern.

5. General Vogel has gone around the Tennessee Valley making speeches and statements that this administration has added more power generating capacity to the TVA system than any other administration. He does not explain that all the power capacity that has gone into operation during this administration was either approved under the previous administration or was added through TVA's use of its own power revenues—a thing Vogel opposed. We find Mr. Jones offering similar sort of talk, saying that more money has been spent on power in the past 5 years than in any 5 years in TVA's history (transcript, p. 111). It seems evident that Mr. Jones, disregarding the plain fact that the Budget Bureau has recommended no additional generating capacity for the past 4 years, is echoing the same line that General Vogel has taken, and may be influenced by the same people.

So we find that Mr. Jones agrees with General Vogel on major issues involving TVA; we find that Mr. Jones has been subjected to the same Budget Bureau brainwashing that General Vogel so quickly and readily succumbed to; and we find that while Mr. Jones makes some very pleasing generalizations about believing in TVA and wanting to preserve it, his answers to questions on specific and vital TVA policies contradict and pervert the generalizations he makes.

General Vogel and Mr. Jones together on issues would control the TVA Board. And in view of the record, it appears that these men would turn that control over to the Budget Bureau, thus sacrificing the independent-agency concept which the Congress wrote into the TVA Act.

The testimony you have received, according to accounts I have seen, shows two things: That Mr. Jones asked for this job; and that he was promoted for the job, as I have said, by Mr. Brundage, Director of the very Budget Bureau that has been proven

to be most unfriendly to TVA (transcript, pp. 36–37).

Gentlemen, it stretches the imagination to the breaking point to believe that Mr. Brundage would accept and recommend a man for the TVA Board of Directors whom Mr. Brundage felt would not acquiesce in the policies of the Budget Bureau. It seems obvious to me that Mr. Brundage recommended Mr. Jones for one reason—he thought Mr. Jones could do the job the Budget Bureau wanted done, in the same faithful and undeviating manner as General Vogel has fought to do over the opposition of the other two TVA Board members.

This one appointment, if confirmed, would enable the Budget Bureau and the White House to do something they haven't been able to do with the consent of Congress, something which indeed Congress has erected roadblocks to keep the Budget Bureau from doing; namely, shift the real control—the financial control and the control of management functions—from the TVA Board to the Budget Bureau.

Let me say that I hope your deliberations on this matter will be based on the same principles as your consideration of the self-financing bill—that is, that TVA is an independent agency, that it should be subject to the will of Congress, but that within the limits of congressional control the TVA Board should have the authority that logically goes with the responsibility and accountability. I hope you will determine whether you feel Mr. Jones will do his part in making the self-financing bill the instrument for the successful continuation of TVA that you meant it to be. Especially do I call your attention to his expressed views on Budget Bureau control over TVA bond issues, which I understand both this committee and the Senate rejected on bipartisan votes.

Next year TVA will observe its 25th birthday. At the age of 25 this largest Government corporation will be valued at something around $2 billion. It will have made a record that in my opinion is unparalleled in the history of a public enterprise. It will find its pattern of multipurpose development of a region's resources being copied in many parts of the world. It will find itself the sole supplier of electrical energy to a population of nearly 6 million people. It will be engaged in a multiplicity of functions placed in its hands by the Congress. It will have made an enviable record in flood control on the Tennessee River and its tributaries, and incidentally on the Mississippi River, too. It will have wiped out malaria; will have worked with State and local agencies on reforestation, fertilizer experiments, public health, better use of the soil, and in many other ways.

In brief, at the age of 25 TVA will find itself to be a phenomenally successful regional development agency; to be a significant asset to the Nation; and to have been a remarkable example internationally of man's ability to improve his well-being through improved use of his God-given natural resources.

Permit me to add a few words concerning the high duty which the Senate of the United States owes to the people of the United States in this matter. All of us in public office are constantly mindful of our grave responsibilities. I know that this is true of myself as Governor of the State of Tennessee, and I am sure it is equally true of every one of you as Members of the United States Senate. It is the United States Senate, and the Senate alone, in whom the Constitution places the responsibility for advising and consenting to the nominations which the President may make.

Membership on the Board of the Tennessee Valley Authority is a public office of exceptional importance. Your committee now has before you the nomination of Mr. Jones to a vacancy existing on that Board. From the voluminous testimony which has been given before you—including the very strange testimony of Mr. Jones himself—it must be clear that the most serious questions have been raised concerning the fitness of Mr. Jones to occupy this seat on the TVA Board.

The Senate is now in the closing days of this session of Congress. Certainly no Senator ought to be asked to vote upon this most important nomination without having a genuine opportunity to make a full and careful examination of the transcript of testimony which has been taken before your committee.

In my opinion, any man—Mr. Jones or anyone else—who serves on the TVA Board of Directors should be of a caliber to fit the tremendous responsibilities that go with the job. This is one of the biggest things in the country. It is one of the most important. As a matter of fact, one writer has called TVA quite possibly the greatest American invention of this century. In considering this nomination, or any other nomination to the TVA Board, I urge you to assess the heavy and unique responsibilities of a TVA Director, and to weigh the man against the weight and the size of those duties placed upon a TVA Board member by the Congress itself.

Address by Gen. R. McC. Pate, USMC, Commandant of the Marine Corps, to 58th National Encampment, Veterans of Foreign Wars, Tuesday, August 27, 1957, Miami, Fla.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the Members of this House the inspiring speech of Gen. Randolph McCall Pate, Commandant of the Marine Corps, before the VFW 58th annual encampment at Miami, Fla., on August 27, 1957.

In reading this speech I am sure you will recognize the reasons why the VFW encampment was so impressed by this message from General Pate. It is reassuring, indeed, to hear from such an outstanding leader regarding the sound character and combat attributes of the American youth today. There were many comments by VFW listeners to the effect that it is good for parents to realize that they are entrusting their sons to the command of such capable and understanding leaders as General Pate:

Distinguished guests and fellow Americans, again it is my deep personal pleasure to meet with you at another national encampment of your great organization. I always look forward to being with you.

The pleasure of our reunion stems both from the warm comradeship that characterizes your encampments as well as from the serious and constructive objectives and purposes which motivate the Veterans of Foreign Wars.

I have looked forward to this opportunity to be with you on this occasion. It is one of life's richest experiences to be able to meet with comrades in arms who have shared the unforgettable joys and tribulations that come only to those who have had the privilege of helping defend our Nation. I am glad to be with you. I could not feel otherwise, because a person is always happy when he is among old friends.

I, therefore, take real pleasure in making what I consider my annual report to the Veterans of Foreign Wars.

First I can state to you without reservation that your Marine Corps is the combat-ready, hard-hitting, fast-striking, force in readiness that you justifiably expect it to be.

Your Marine Corps is ready to move on a moment's notice. It is ready for whatever assignment may come. It is ready to do its job wherever the need exists.

I would like to outline for you where your marines are today stationed, where they are alertly standing their watch, contributing to the safety and security of our Nation.

The famed 1st Marine Division is now stationed, with the 3d Marine Air Wing, on the west coast of the United States. It is a ready and able-to-go expeditionary force-in-readiness.

Moving out into the central Pacific you have the 1st Marine Provisional Brigade on the Island of Oahu. This is a highly trained, compact, air/ground team, specializing, as do all Marine units, in tactics involving hard punching, highly mobile amphibious forces supported by Marine aviation units which have no peer in the highly important and intricately specialized mission of providing precision close air support to the man with the rifle.

In the western Pacific, looking down the throat of the red dragon of oriental communism, you have elements of the hard and lean 3d Marine Division on Okinawa and near by is the 1st Marine Air Wing. These marines are also in a state of immediate readiness.

Based as they are on this western bastion of the free world's defenses in the western Pacific, the marines of our 3d Division stand as a guardian of our security in this vital strategic area. The presence of these highly mobile and finely trained fighting forces is a powerful and persuasive symbol of our Nation's determination to stand fast against the ruthless aggression of Asiatic communism.

We make no secret of the fact that this powerful and flexible marine striking force is so strategically located. The very knowledge of the presence of such a force cannot help but cause deep second thoughts by even the most fanatic Communist chieftian planning future encroachments upon the liberties, freedom, and vital resources of the nations of southeast Asia.

On the east coast of the United States, facing the troubled Mediterranean world and the Near East, you have the equally famous 2d Marine Division with the 2d Marine Air Wing.

This division and wing are also in a condition of constant readiness.

As a matter of fact, a part of this force is afloat and constantly on station providing indispensible punch to the power of the 6th Fleet, which is playing such a vital role in the preserving of the liberties of the lands bordering on the Mediterranean.

This combat readiness of your marines, combined with the unsurpassed mobility and flexibility of the balanced fleet with which we serve, constitute an indispensible portion of the free world's defenses in these dangerous times.

The strength of the Marine Corps is not one of mathematical manpower alone. The strength of your marines is something far greater because it stems from fervent faith in the beliefs which are those of all Americans—an unshakable conviction that all those things which are part of the American way of life are priceless and must be de-

fended, and as unswerving determination to resist the endless incursions of godless communism.

In addition to these characteristics your marines are strengthened also by a strong sense of discipline based upon mutual respect, confidence in themselves and their fellow marines, and a secure knowledge of their professional competence.

Although these are the moral attributes and the spiritual strengths which characterize your marines today, they are not a recent product or innovation. Such things as are of the spirit and the heart are not readily improvised.

Rather they are the composite result of landings on many shores, of thirst in the deserts, hunger in the jungles, bitter cold, searing heat, endless privation and sacrifices—the common lot and the common heritage of those who have served their country on foreign shores.

The marine of today exercises a stewardship over the history and glories passed on by his predecessors. They realize the trust placed in them. They will not be false to that trust.

You can derive a real sense of satisfaction from the manner in which your marines are doing their job. You are certainly justified in taking this satisfaction because our Nation has given the Marine Corps a wonderful human product with which to work. These alert, courageous, and moral young men who comprise the Marine Corps are not a race apart from the rest of the Nation. They are a typical representation of American youth.

In all candidness I can say to you the Marine Corps is capable of great achievements, but it would be incapable of being the Marine Corps that it is were it not for the typically high caliber young men which come to it from your homes and your communities, your schools, and last but not least, from your churches.

There has been altogether too much criticism of today's young people. When put to the test of sacrifice, bravery, and the responsibilities of military duties they have, in my opinion, fulfilled every demand. I have said it before, and because I believe it so strongly, I will say it again—the young men of America today can whip the pants off anything that the godless rulers of the Kremlin put in the field of battle.

There is another feature of the Marine Corps which I want to include in my report to you at this time. The Marine Corps offers little but tough training, strict discipline, rigorous duty stations and eternal readiness for battle, and the satisfaction of a necessary job well done.

It is to me, and I believe it will be to you, reassuring to know that our Nation produces the kind of young men who continue to volunteer for such service to their Nation. I am glad to report to you that the Marine Corps is continuing its tradition of being a completely volunteer organization. We are not confronted with a scarcity of those who seek to enlist in your Marine Corps. Rather, our problem is of an opposite nature. It is indeed a healthy sign of our times that we have today more youths motivated by the spirit of adventure—the willingness to serve under rigorous conditions—than we can accept for enlistment in the corps.

I have always contended that our Nation will continue to produce strong-spirited, patriotically motivated youths who will prefer the rugged life of the soldier to the easier ways of modern civilization. They follow the example set by you overseas veterans. This is the heritage of patriotism, devotion, and sacrifice which has been the hallmark of the American fighting man.

This is the type of man we seek. This is the type of man we get. This is the type of man who becomes your marine. This is the real strength of the Marine Corps.

There is one additional point that I would like to make in the course of this brief report. While we marines place heavy emphasis upon esprit de corps, we also place great emphasis upon complementing that great intangible strength with the finest, most advanced weapons and leadership that it is possible to provide.

The Marine Corps continues to perform the mission of our Nation's force in readiness and we have, since the end of World War II, made what I consider great technical and material progress.

For instance, amphibious operations based on great armadas of transports packed with troops landing across fire-swept beaches now must take their place in the glorious history of American arms. World War II amphibious tactics have been superseded by a farsighted, versatile, highly mobile type of operations. The troop transport of today and tomorrow is a special type of combined troop transport and helicopter carrier.

The landing craft of today is a huge helicopter capable of taking off with its load of highly trained marines as far as 50 miles from the beach. Thus, this new tactic increases the speed of the assault. The pattern of the attack is over rather than through the deadly beach defenses.

Through the great dispersion between helicopter transports the conduct of amphibious operations is feasible even against the enemy who possesses atomic capabilities. Add to this a whole arsenal of new weapons developed since the end of World War II and you can readily realize that the Marine Corps continues to perform its historic role in a modern way.

To summarize, the Marine Corps is morally and materially strong.

As you can readily see, I am proud of your Marine Corps. You have every right to be proud of your Marine Corps.

The Marine Corps feels that we have justified the faith in us that you have demonstrated by your repeated encampment resolutions urging continued maintenance of three full combat divisions and air wings. We are grateful for your confidence and your support.

We marines pledge that we will continue to justify your faith.

On each occasion that I have the privilege of being here with you like this sitting with you and exchanging stories of our times together in the service—which stories, I must admit, get better with the passing of the years—I am reminded of the many common interests that exist between the Veterans of Foreign Wars and the Marine Corps. That this is so should be no surprise. After all, to be a Veteran of Foreign Wars requires one to achieve the distinction of having served our Nation overseas. Marines share that honorable distinction because overseas duty is the most usual kind of duty for a marine.

It has again been my happy privilege to be with you at another national encampment. Each encampment that I attend, each such opportunity to mingle with my many comrades in your organization, serves to reaffirm my longstanding recognition of the inalienable and abiding bond that exists between the wearers of the globe and anchor and the Cross of Malta.

Committee on Interstate and Foreign Commerce Activity Report

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HARRIS. Mr. Speaker, pursuant to section 136 of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, and House Resolution 99, as amended, 85th Congress, I should like to submit a statement of the activity of the Committee on Interstate and Foreign Commerce for the 85th Congress, 1st session.

The committee has had an extraordinarily large number of bills referred to it during this session and has held lengthy hearings on various and sundry bills to amend the Interstate Commerce Act, Railroad Retirement, Unemployment Insurance, and Taxing Acts, and amendments to the Natural Gas Act. Following lengthy hearings on these and many other bills, the committee held extensive executive sessions and was able to clear some of these extraordinarily important legislative proposals during this session.

The committee had referred to it 71 bills to amend the Railroad Retirement and Unemployment Insurance and Taxing Acts. Extensive hearings were held by the committee on these bills. The bill, H. R. 4353, which I introduced on February 5, 1957, was sponsored by the Railway Labor Executives' Association, and received the attention of the committee. Many of the bills before the committee contained provisions incorporated in this proposed bill. It is a "package" bill involving consideration of not only further adjustments to the act, but consideration of the amendments passed in the last Congress, as well as the tax-exempt features on contributions by employees for income-tax purposes. Due to the overall "package" approach and involvements, further consideration was postponed until the next session of Congress.

Incorporated in the bill, H. R. 8525, which was approved by the committee and which is now pending on the House Union Calendar, were amendments to the Natural Gas Act to exempt producers of natural gas from regulations under the act as public utilities; and to provide for a new method of regulating the price at which natural gas is sold under producer contracts.

In the field of aviation, a bill to establish an Airways Modernization Board to develop, modify, test, and evaluate systems, procedures, facilities, and devices to meet the needs for safe and efficient navigation and traffic was enacted.

The President also signed a bill to authorize permanent certification for certain air carriers operating between the United States and Alaska.

A bill providing for Government guaranty of private loans to certain air carriers for purchase of aircraft and equipment cleared both Houses of the Congress and is awaiting Presidential action.

Another aviation measure relating to the reinvestment by air carriers of the proceeds from the sale and other disposition of certain operating property and equipment, was approved by the House.

To implement the legislative recommendations contained in the 70th Annual Report of the Interstate Commerce Commission, 24 bills to amend the Interstate Commerce and related acts were introduced and referred to this committee. The following recommendations were enacted into law:

Recommendation No. 2, amending section 4 of the Interstate Commerce Act dealing with the long- and short-haul provision.

Recommendation No. 6, revising the definition of a contract motor carrier under section 203 (a) (15) of the Interstate Commerce Act.

Recommendation No. 7, amending section 20b of the Interstate Commerce Act, relating to stock modification plans.

Recommendation No. 15, amending section 218 (a) of the Interstate Commerce Act, requiring contract motor carriers to file actual rates.

Recommendation No. 19, changing the requirements for obtaining freight forwarder permits.

Recommendation No. 23, increasing penalties for safety violations under the Interstate Commerce Act.

Recommendation No. 26, amending the Medals of Honor Act.

Recommendation No. 3, dealing with shipments of Government property under section 22 of the Interstate Commerce Act, has been approved by both Houses and has been sent to the White House.

Recommendation No. 14, amending section 214 of the Interstate Commerce Act, concerning arbitrary stock par values, passed the House and Senate.

Recommendation No. 24, to authorize the Interstate Commerce Commission to prescribe rules, standards, and instructions for the installation, inspection, maintenance, and repair of power or train brakes, has passed the Senate and a companion measure has been reported from this committee and is now awaiting action by the House.

A bill to amend the Interstate Commerce Act to provide for the preservation of competitive through-routes for rail carriers, has been approved by the House and is presently pending before the Senate Committee on Interstate and Foreign Commerce.

In the field of public health, bills providing for the construction of sanitary facilities for the Elko Indians in Nevada, and to assist in the construction of community hospitals which will serve Indians and non-Indians, were enacted into law.

Another proposal extending the authority of the Surgeon General to make certain payments to Bernalillo County, N. Mex., for furnishing hospital care to certain Indians, has been approved by both the House and Senate.

After extensive public hearings and executive consideration, a bill to protect producers and consumers against misbranding and false advertising of the fiber content of textile fiber products (Textile Fiber Products Identification Act) was reported from this committee and approved by the House.

An amendment to section 304 (d) of the Federal Food and Drug Act, with respect to the disposition of certain imported articles which have been seized and condemned, was approved by both Houses of the Congress.

A bill to declare a portion of Back Cove at Portland, Maine, to be nonnavigable water of the United States, also passed both Houses and was signed by the President.

The detailed activity report follows:

ACTIVITY REPORT OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, 85TH CONGRESS, 1ST SESSION

BILLS REPORTED

The committee has considered and reported favorably the following bills:

H. R. 469. To prohibit misbranding and false advertising of fiber content of textile fiber products. Report No. 986, by Mr. MACK, August 5, 1957. Passed House, August 14, 1957.

H. R. 3233. To amend section 22 of Interstate Commerce Act (transportation services for Government, reduced rates). Report No. 677, by Mr. HARRIS, July 1, 1957. S. 939 passed House, amended, in lieu, July 30, 1957.

H. R. 3625. To amend section 214 of Interstate Commerce Act (motor carriers, capital stock). Report No. 391, by Mr. HARRIS, May 7, 1957. Passed House, May 20, 1957.

H. R. 3775. To amend section 20b of Interstate Commerce Act (railroads, stockholders assent to modification or alteration). Report No. 440, by Mr. HARRIS, May 13, 1957. Approved August 16, 1957, Public Law 85–150.

H. R. 4511. To declare certain portion of Back Cove at Portland, Maine, nonnavigable. Report No. 388, by Mr. HARRIS, May 6, 1957. Approved August 13, 1957, Public Law 85–126.

H. R. 4520. Permanent certification for air carriers operating between the United States and Alaska. Report No. 610, by Mr. HARRIS, June 24, 1957. Approved August 26, 1957, Public Law 85–166.

H. R. 5124. Authorizes Interstate Commerce Commission to prescribe rules and regulations for installation and maintenance of power or train brakes. Report No. 1205, by Mr. STAGGERS, August 20, 1957.

H. R. 5328. To amend the Medals of Honor Act. Report No. 392, by Mr. HARRIS, May 7, 1957: Approved June 13, 1957, Public Law 85–50.

H. R. 5384. To amend Interstate Commerce Act (preservation of competitive through routes for rail carriers). Report No. 878, by Mr. HARRIS, July 25, 1957. Passed House, August 19, 1957.

H. R. 5822. To amend section 406 (b) of Civil Aeronautics Act (air carriers, reinvestment of gains). Report No. 980, by Mr. FLYNT, August 2, 1957. Passed House, August 14, 1957.

H. R. 5953. Construction of water and sewer facilities for Elko Indian colony, Nevada. Report No. 554, by Mr. WILLIAMS, June 13, 1957. Approved August 14, 1957, Public Law 85–137.

H. R. 6456. To amend Federal Food, Drug, and Cosmetic Act (reexportation of imported articles seized and condemned). Report No. 933, by Mr. WILLIAMS, July 30, 1957. Passed House, August 5, 1957.

H. R. 7993. Government guaranty of loans to certain air carriers for purchase of aircraft and equipment. Report No. 981, by Mr. ROGERS, August 2, 1957. S. 2229 passed House, amended, in lieu, August 19, 1957.

H. R. 8053. To authorize funds to assist in construction of community hospitals for Indians. Report No. 574, by Mr. WILLIAMS, June 17, 1957. Approved August 16, 1957, Public Law 85–151.

H. R. 8525. To amend Natural Gas Act (exempt producers from utility-type regulation). Report No. 837, by Mr. HARRIS, July 19, 1957.

H. R. 8825. To amend section 203 (a) of Interstate Commerce Act (to revise definition of contract carrier by motor vehicle). Report No. 970, by Mr. HARRIS, August 2, 1957. S. 1384 passed House in lieu, August 14, 1957. S. 1384 approved August 22, 1957, Public Law 85–163.

H. R. 9023. Payment for hospital care for certain Indians to Bernalillo County, N. Mex. Report No. 1052, by Mr. WILLIAMS, August 13, 1957. Passed House, August 14, 1957.

S. 1492. Increase penalties for violations of safety standards administered by Interstate Commerce Commission. Report No. 877, by Mr. HARRIS, July 25, 1957. Approved August 14, 1957, Public Law 85–135.

S. 937. To amend section 4 of Interstate Commerce Act (publication of rates). Report No. 577, by Mr. HARRIS, June 19, 1957. Approved July 11, 1957, Public Law 85–99.

S. 1856. Airways Modernization Act of 1957. Report No. 836, by Mr. HARRIS, July 19, 1957. Approved August 14, 1957, Public Law 85–133.

S. 943. To amend section 218 (a) of Interstate Commerce Act (publication of actual rates for transportation charges). Report No. 895, by Mr. HARRIS, July 29, 1957. Approved August 13, 1957, Public Law 85–124.

S. 1383. To amend section 410 of Interstate Commerce Act (freight forwarders). Report No. 880, by Mr. HARRIS, July 25,1957. Approved August 28, 1957, Public Law 85–176.

NUMBER OF PUBLIC HEARINGS

The committee held public hearings as follows: Entire committee, 75; subcommittees, 74.

Hours of sitting (public hearings): Entire committee, 181½; subcommittees, 152½.

Executive sessions: Entire committee, 32; subcommittees, 14.

Hours of sitting (executive sessions): Entire committee, 58; subcommittees, 14½.

Printed pages of public hearings, 4,214.

Unprinted pages of public hearings, 1,500.

In addition to the above, the committee filed 5 reports and published 2 committee prints, as follows:

House Report No. 314, Petroleum Survey—1957 Outlook—Oil Lift to Europe—Price Increases: The committee early in the first session of this Congress again engaged itself in a comprehensive survey of the Nation's petroleum sources. Accordingly, the committee compiled for the information of the House the results of its study of the recent diversion of petroleum to Europe caused by the closing of the Suez Canal and the shutting down of the Iraq pipelines, and the circumstances attending increases of crude oil prices in the United States. The committee shall continue to keep abreast of the petroleum situation and report its further observations and comments at subsequent dates.

House Report No. 474, A Report on the Organization and Financing and Participation of the United States in International Health Programs: Inasmuch as the committee has legislative jurisdiction in the field of public health, its responsibilities frequently touch upon international health programs in different parts of the world, including the operation of the World Health Organization, as well as health and quarantine problems affecting international air commerce. House Report No. 474 is a summary of the findings developed in hearings held by the committee in the 84th Congress, for the purpose of compiling a résumé of what the United States Government currently is doing in the field of international health.

House Report No. 573, Pulp, Paper, and Board Supply-Demand: Pursuant to the existing authority of the committee, to investigate and study the current and prospective consumption of newsprint and other papers, production and supply of such materials, and possibilities of additional production through use of alternate source materials, the committee last year requested the Department of Commerce to prepare a survey of the competitive demand for these products. The report was submitted by the Department early this year and the committee believed this comprehensive analysis of the subject should be made available for the information and use of the Members of the House. The committee shall con-

tinue its close study of the newsprint and paper and pulp supply-demand situation and shall report periodically to the House its findings.

House Report No. 1275, Automobile Seat Belts: The Special Subcommittee on Traffic Safety established in the 84th Congress, to study the increasing number of traffic deaths and injuries and ways of setting up a long-range program to reduce these highway tragedies, undertook in this first session a study of the crashworthiness of automobile seat belts. A vast amount of testimony was taken in public hearings from experts in the field. As a result of these hearings and a study of the testimony presented, the subcommittee concluded that the use of automobile seat belts would lessen the degree of potential injury to those involved in traffic accidents, and the subcommittee's findings and conclusions have been set forth in House Report No. 1275.

House Report No. 1272, Air Transportation Development and Airspace Use Problems: In executing its legislative jurisdiction in the field of civil aviation policy, the committee has given special attention to airspace use problems and the continued orderly development of air transportation. In connection with its study of these aspects of the subject, it made a thorough investigation, in conjunction with the Federal regulatory agencies administering aviation legislation, of two civil aviation accidents—one the crash of a jet fighter plane and a civil passenger transport on January 31, 1957, in the Los Angeles area, and the other the crash of an airliner on February 1, 1957, following takeoff from LaGuardia Airport, New York. In the course of the committee's study, attention was drawn to the expansion of the Government's Military Air Transport Service and its effect on the sound development of civil aviation. The committee plans to make a study of this particular aspect of the problem.

Transportation policy (committee print): As a result of a study of transport policy and organization, made by an advisory committee established by the President in 1954, there were introduced in the House and referred to the committee in the 84th Congress two identical legislative proposals embodying the recommendations of the Presidential Advisory Committee on transport policy and organization. Extensive hearings were held on these proposals in the 84th Congress, comprising 1,860 printed pages of testimony. Due to the complex nature of the proposals, and the vast amount of information submitted at the hearings, the committee undertook to digest, analyze, and index the testimony, with the thought that such a synopsis would prove useful to the Members of the House in further consideration of transportation legislation.

Medical school inquiry (committee print): Consistent with its legislative responsibility in the field of public health, the committee made an extensive study into the problem of the adequacy of schools of medicine, dentistry, osteopathy, and public health to meet the needs of the constantly increasing number of applicants for admission to the country's medical schools. Since the 81st Congress, legislation has been introduced designed to assist medical schools, and at different times some bills have received active consideration by the Congress. Realizing the increasing importance of the need for additional educational facilities in the field of medicine and related sciences, the committee compiled for the convenience and use of the Members of the House the factual data it gathered on existing medical school facilities.

The More the Soviet Union Appears To Change, the More It Remains the Same

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. George E. Sokolsky from the Washington Post of today. It shows once more, for those who are still so reluctant to learn, that the more the Soviet Union seems to change, the more it remains the same. Every gesture that has appeared to be conciliatory was a device to buy time or divert attention or beguile us into relaxing. It was a step backward in order to take two steps forward. The pattern continues. There will be no conciliation on the Kremlin's part if and when it gets to the point where it can say to us, surrender or die.

Mr. Sokolsky's article follows:

RUSSIA AND AMERICA
(By George E. Sokolsky)

I have been reading an interesting, even an exciting little book entitled "Russia and America—Dangers and Prospects" by Henry L. Roberts, who is director of the Russian Institute at Columbia University. The book is a summary of more than 2 years of conferences in the Council on Foreign Relations, a private organization which devotes itself to such matters.

On the whole, this is undoubtedly the most reasoned and most reasonable statement of our foreign policy that has yet appeared.

That does not necessarily mean that everybody will agree with every paragraph of Roberts' book. Althought it was written before the great changes that Khrushchev ushered in on his march toward supremacy and before the State Department sought to convince the American people that Marshal Zhukov was the really big man, Roberts wrote:

"It has been suggested, too, that (a) the Communist regime might 'regress' to a more traditional Russian pattern, or (b) the bureaucrats and technicians (including the military) might come to outweight the party and produce a managerial or technocratic system. With regard to the former, it is hard to envisage just what this regression would result in, especially since the Soviet regime in the course of its existence has taken over and utilized a number of traditional Russian patterns without having its purposes perceptibly diluted. At most, such traditionalist tendencies are likely to be more of a drag on the regime than an active force for change."

His understanding of the managing elite, the new aristocracy in Soviet Russia, is correct. These people have a vested interest in the continuance of their system and of themselves and their children in the managing elite, with all its privileges. They have therefore become orthodox in their Marxist ways and whoever seeks to weaken the Communist Party imperials them.

It is gratifying to find in a book issued under such auspices as the Council on Foreign Relations such a paragraph as this:

"• • • Recent research on the Soviet system has shown that the presumed reversions to normalcy of the later 1930's and early 1940's—the Popular Front as a form of multiparty cooperation, the 1936 constitution, the fostering of Great Russian nationalism, the announced dropping of the Comintern, the adoption of a new national anthem to replace the Internationale, and so forth—did not affect the basic structure of the state, the party, or the Communist ideology. Soviet foreign policy has remained an instrument of the total system. In 1943 and 1944, well before the postwar chilling of the alliance, the USSR was setting up the conditions for the sold war."

Some of us who so reported at the time were either called Fascists or fanatics, but the facts now stand out and many a reputation for expertness is destroyed a decade later by the inevitable exposure of the truth. What during the war years was regarded as expertness is now known, in many instances, to be little more than propaganda to make an ugly alliance with Soviet Russia palatable to a people who despised the Bolsheviks. This vast Government propaganda to make us love the Russians originated in a document which Harry Hopkins brought to the Quebec Conference in August 1943, and which contained this prophetic opinion:

"Since Russia is the decisive factor in the war, she must be given every assistance and every effort must be made to obtain her friendship. Likewise, since without question she will dominate Europe on the defeat of the Axis, it is even more essential to develop and maintain the most friendly relations with Russia."

The value of this book, which now can be bought in paper covers, is that it hammers out the various arguments, pro and con, and the conclusions reached are generally on the right side. It is a valuable study for those who search for truth.

Mutual Security

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's New York Times entitled "The Foreign-Aid Bill":

THE FOREIGN-AID BILL

After kicking the mutual-security program back and forth between its two Houses and their committees, Congress has finally agreed in conference to appropriate a total of $3,435,810,000 for so-called foreign aid during the current fiscal year. Of this total only $2,768,760,000 is in new money, the rest consisting of unobligated funds voted in previous years and now reappropriated.

This total is more than $1½ billion below President Eisenhower's original request, more than $1 billion below his revised rockbottom figure, and even more than half a billion dollars below the figure previously authorized by Congress. It does represent an improvement over the lethal cuts made by the House of Representatives, but not much. Added to the reductions in both our own Defense Establishment and that of our allies, the congressional cuts in the mutual-se-

curity program can only further impair the safety of both this country and the whole free world confronted by an aggressive Soviet Russia which evades disarmament and boasts of new triumphs in both nuclear armament and political and economic penetration.

The cuts in the mutual security program are all the more regretable because, in contrast to the free world's military defense establishments which are designed to have a deterrent and therefore negative effect on Soviet ambitions, our foreign aid comprises in effect a positive, one might almost say "offensive," weapon in the cold war to counter the Soviet strategy of "peaceful competition" for men's souls to avert a possible arbitrament of nuclear arms. Yet, while the Soviets, with far smaller national resources, make all sorts of tempting offers to needy nations of both arms and economic and technical aid, sometimes with startling succes, Congress has seen fit to appropriate for this purpose only four-fifths of 1 percent of our gross national product, and only 1 percent of the current individual income in the United States. This is a low insurance premium which cannot buy the best insurance that might be had. And economy on insurance can be a false economy indeed.

How serious the cuts might turn out to be is shown by the following considerations. Direct military aid, which serves primarily to bolster NATO's still-lagging nuclear defenses, has been cut from the $1.9 billion asked by the President and the Joint Chiefs of Staff to $1,340,000,000. Defense support, three-quarters of which goes to help Korea, Vietnam, Free China, Turkey and Greece to maintain military establishments beyond their own capacity to carry them, has been cut from the $900 million requested to $725 million, which may mean that these establishments will have to be reduced. And Congress has not only refused President Eisenhower's request to transfer these direct military items to our own defense budget, where they belong, but has also gravely curtailed the development loan fund designed to permit long-term economic planning and make economic aid in time practically self-sustaining.

However, since both houses of Congress have now agreed on the compromise figure, the Eisenhower administration will have to live with it, and it will be up to James Hopkins Smith, Jr., the new director of the International Cooperation Administration, to make the most of it. The $5.5 billion worth of foreign aid still in the pipelines, plus various other assistance measures should facilitate his task. But it will take the most careful administration and avoidance of any waste to stretch the reduced program without irreparable harm to it.

Korea Salutes General MacArthur

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events on the celebration to be held in Korea at the dedication of a statue at Inchon in honor of Gen. Douglas MacArthur. I wish our own Government had given to this truly great general and noble American the honor his long life of brilliant and dedicated service deserves. I hope it may be done in order that he may know how profound is the respect and affection the Americans have for him in their hearts.

KOREA SALUTES GENERAL MACARTHUR

(By Edna Fluegel)

SEOUL, KOREA.—There's a great day coming for Korea—MacArthur Day, Inchon Day, American Day, Korea Day—in fact, several days when a whole nation plans to say "thank you" by giving.

From its poverty and urgent needs Korea has raised money—not a great sum to Americans, perhaps, but touchingly vast as a voluntary contribution from the people of the Republic of Korea. From its officialdom it has drawn a Who's Who of Korea to serve on the various planning and welcoming committees. Every class, every occupation and every business association is represented at some stage of the project. The program encompasses all of Korea, old and new, from classic dances and Mansei (three cheers) to the ROK army and a detailed schedule that reflects the impact of American military procedures on Korean public administration.

The days are September 14–20, 1957. The day of days is September 15, when a statue of General of the Army Douglas MacArthur is to be unveiled high on a hill overlooking Inchon city and the site of his—and the free world's—great victory. The location is breathtaking; the statue, even in the rough clay form in which I saw it, is a masterpiece that will satisfy MacArthur admirers the world over.

This article is being written on June 22 after a day at Inchon and a visit to Manguk to see the statue in its present state. It is one day after America's historic decision to face up to reality by modernizing military equipment here because the Communists have ceaselessly violated the armistice. It is three days after the writer stood in the "security area," on Communist territory, and viewed the bridge of no return, with places that once were news spread out in all directions.

The scars of two Communist occupations are still vivid in Seoul, where the enemy is minutes away by jet-flight—a mere hour and a half by old-fashioned truck transport. Seoul is rebuilding, as is the whole of Korea. Though this is a city and a nation on the alert, where war is expected sooner or later, it is far removed from the fears of Washington and London—the fears that limited victory to South Korea, that deprived us of the chance to reverse the loss of China, and that may have made major war inevitable.

This land will be a military frontier of America for a long time—but it is thanks to Inchon that there is a Republic of Korea on this territory and that a frontier for both America and Korea is here at all. This the Koreans understand, both in terms of Inchon and later. Most of them believe that MacArthur was right in April 1951; many know the role he played on his return to America; some followed his great addresses and know that an aroused public opinion—further informed by such organizations as the American Legion and other patriotic societies—has contributed greatly toward stiffening American policy toward communism in Asia. And so Korea is giving this statue and these days in a tribute to a foreigner, a tribute unique in the long history of an ancient land.

Here is what the Koreans are planning. They want General MacArthur, his wife, his son and his aides to come to Korea on September 14. Everything that the Koreans could jam into the next few days is scheduled—and reportedly a large slice of the Republic will also be squeezed in somewhere between Seoul and Inchon. When a mere American tries to explain here that many American communities have also wanted MacArthur and that invitations from other countries have not been few, the Koreans with whom I have spoken say: "But we love MacArthur. He's ours. He surely will come if he is able."

The statue I saw today is a masterpiece in the making. It is 12 feet high. When finished in bronze it will rest on a 20-foot-high base on the top of a hill overlooking the city, the island on which the initial landing was made and the water far beyond. The statue is the creation of Kyong Sungkim, professor of Hong-ik University. With 10 assistants, he has been at work about a month in a studio that is itself incredible to an American—yet probably very similar to the studios from which the world's greatest art treasures emerged. Approaching through muddy, narrow alleys, surrounded by the din and crowds of swarming Manguk, you go up a precarious flight of wooden stairs to a room barren of modern equipment—but you don't notice the room or its lack of equipment for a long time.

For there, caught by some magic of the artist's skill and devotion, is MacArthur: the strategist who had to gamble because the issues were global and freedom itself was at stake; the commander loaded with honors who risked a great career, because he alone believed it could be done. He has just lowered his field glass and probably has heard the first favorable reports. The jubilation of some of the famous photographs has not yet come—but there is a surcease of tension, an almost calm, though not yet relaxed, feeling. There is motion, realistic appraisal; you almost expect him to turn to a companion and say, "It will work."

To Koreans, this statue and these scheduled days of rejoicing and of giving mean much. Korea has come a long, hard way. It has a long, hard way to go. It must produce and maintain the military might it needs, and the economic strength and social consciousness it must have to develop a sizable middle class—on which alone the democracy to which it aspires can be soundly based. It is weighed down, not only with problems of reconstruction, but with a heritage of decades of occupation. It is short on technical skills, managerial ability, and leadership qualities. Surrounded by Communist enemies and a former conqueror it still distrusts with its northern half still held by the Communists, this nation needs a "breather." Korea needs a chance to "point with pride" and, above all, a chance to give—to shower on a hero it has adopted as its own all its affection and devotion.

To Americans, this statue and these days are not without significance. Americans are not notably popular in many lands. Nor have we been overburdened with gratitude. There are other countries where Americans have fought and died, where American treasure has been freely unloaded, where America stands guard against the common foe. There are those who say that no great power should expect gratitude, and that East and West cannot meet in friendship or in mutual appreciation. But Korea is grateful and it is no small thing for one nation to enshrine as a national hero a man of another allegiance. That a man of the West kept faith with a small nation of the East and that the nation, in turn, remembers and is grateful may be a fact worthy of prayerful reflection by a disillusioned and troubled America.

Congressional Action on the President's Budget

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MAHON. Mr. Speaker, with respect to the overall budget, which was submitted to Congress by the President in January of this year, I wish to make the following observations.

It must be understood that there are two kinds of budgets—an appropriation budget and an expenditure budget. Also the Treasury may be obligated to spend money through legislative acts of Congress not handled by the Appropriations Committee. Typical examples of this are public and military housing. Another example are funds for the big highway construction program.

We reduced the President's appropriation budget for fiscal year 1958 in the sum of $4,914,355,584. In addition, we reduced deficiency budget requests which were presented to Congress during this session by the sum of $134,023,395. These deficiency requests were for the fiscal year ending June 30, 1957. The total budget reductions during this session of Congress have therefore been $5,048,378,979. A portion of these reductions are accounted for by transfers of funds appropriated in prior years and transferred for obligation or expenditure in fiscal year 1958. In the defense budget such transfers in the sum of $590 million were made. This was the chief transfer but there were one or two others which were relatively minor and which I do not have at hand for inclusion at this point. It must be remembered, however, that in transferring these funds we have reduced the overall authority of the Government to obligate and spend money.

While it is true that the appropriation budget was reduced by $5,048,378,979, larger reductions can be appropriately claimed. The specific requests in such instances did not come before the Appropirations Comimttee. A good example of this is the school construction bill. The President included in the budget a request of $450 million for the school construction program, but the request never came before the Appropriations Committee officially because the school construction authorization bill was defeated by Congress. Another case in point is the mutual security bill, in the budget of the President submitted in January which included for appropriations the sum of $4.4 billion for the mutual security program. Although the President withdrew a part of this estimate, Congress also failed to authorize the amount officially requested, therefore, the amount which came before the Appropriations Committee was approximately $1 billion less than the January budget estimated. This $1 billion figure could be appropriately claimed as a reduction in the President's January budget. But the President himself was responsible for withdrawing his request for one-half of the latter sum. Another case in point is military construction.

I would now like to make reference to items requested in the budget which would grant authority to agencies to withdraw money from the Treasury without action of the Appropriations Committees, in other words without direct appropriations. For example, Congress exceeded the President's request for obligating authority for the housing program this year to the extent of about $1.1 billion. But the authority to guarantee housing loans, Commodity Credit Corporation loans and programs of that type are vastly different from regular direct appropriations granting authority to expend money which will not be répaid or recovered. Many of these loan programs represent very little ultimate loss to the Treasury, and this sort of obligational authority, and it is obligational authority, should not be considered in the same light as direct appropriations.

Mr. Speaker, these references have been very brief. As I said in the House earlier today the Gentleman from Missouri, Mr. CANNON, the Chairman of the House Appropriations Committee is preparing a very detailed statement in regard to the 1958 budget which will appear hereafter in the RECORD.

Crackdown on Careless Drivers

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. PFOST. Mr. Speaker, recently there has been a good deal of concern about Asian flu and other dangers to the people of America. I have received a letter from Horace T. Deahl pointing out the much graver problem of our ever-mounting automobile death toll. In my judgment, this letter is most timely when each day the newspapers carry accounts of death and destruction caused by drivers whose licenses long since should have been revoked. Under unanimous consent, I include this letter in the Appendix of the RECORD.

WASHINGTON, D. C., *August 19, 1957.*

Hon. Mrs. GRACIE PFOST,
House Office Building,
Washington, D. C.

DEAR MADAM: There is a subject which too few people write about, but there should be a good deal. I refer to the slaughter on the crosswalks of our city streets.

There are many, many people driving cars who should be in insane asylums or penitentiaries. There are many homicidal maniacs driving cars today who have no more conscience that a rattlesnake.

In the old days when in the West everyone carried a gun there were very few people killed compared to what we kill with autos, and if some gunman did shoot anyone he was hunted down all over the State and other States and so it is today. If anyone poisons or stabs or slashes anyone to death or attempts to kill anyone he is punished if he is apprehended. Or if anyone is killed or injured with a blackjack or club or with any weapon he is hunted down—except one weapon. With that one weapon we are all free to rundown and maim or kill anyone we care to if we have the green light or if we are making a turn at a corner.

A lot of people undergo a transformation when they are behind the wheel of an auto, surrounded with 2,000 pounds of steel, more or less. They feel big and invincible. They feel like gods; and anyone on foot is their lawful prey if they choose to kill. The driver knows he will not get punished much, if at all. All he has to do is stop, appear to be sorry, and say he did not see the man, or woman, or baby. He is allowed to keep his car and go on driving, a menace to other pedestrians.

The auto kills more people than all the wars have in the past put together, and will continue to kill more and more as cars are built with more power and speed each year, and speed limits go up.

And why is this situation allowed to go on? They go on killing each other and their fathers and mothers and children. As time goes on we become more and more callous. In time it will be a common sight to see 5 or 6 corpses piled up on the corners waiting for the meatwagon to come around to gather them up.

If it is unlawful to kill people with any weapon why don't we include the auto? We might as well allow everyone to carry guns and shoot indiscriminately up and down the streets and if he shoots anyone just say, "Well, he got in my way, or I didn't see him," or some other foolish excuse. We don't make laws to punish these homicidal maniacs because we lack intestinal fortitude.

I know that because there are so many auto drivers there will be a lot of opposition to any such laws, but if we can get one good drastic law passed and we see the number of accidents take a big drop then we will see the benefit.

Say, for instance, any driver who kills a pedestrian on a city street crosswalk where the pedestrian has a green light serves 1 year in jail or pays a $5,000 fine or both. If a pedestrian is hit on a crosswalk when the pedestrian has the green light and is injured, even slightly, the motorist has his license suspended for 1 year. Make this mandatory, not up to the judge.

If these callous homicidal maniacs know they are bound to be punished they will be very careful. Then our old people will be able to cross in comparative safety and not have to run like a rabbit, like I saw an old woman about 70 have to do at 15th and New York Avenue to avoid being run down by a truck.

When I used to drive a horse and buggy I had more consideration for a rooster crossing the road than a lot of drivers give us old folks nowadays. Just because some ape sitting in a 2,000-pound steel vehicle is in a little hurry to get home to supper that doesn't give him the right to run over us. It's up to the law to show him different.

After all motorists are pedestrians, too, a times, but they don't seem able to get the pedestrian's view of it.

I have little hope that this letter will do any good or that you will even read it all, but I sincerely hope you will consider it, and remember it, and some day help to get these killers more punishment than they are getting now.

I remain,

Very sincerely and respectfully,

HORACE T. DEAHL.

Daily Digest

HIGHLIGHTS

First session of Eighty-fifth Congress adjourned sine die.

Senate

Chamber Action

Routine Proceedings, pages 15080–15181

Bills Introduced: 24 bills and 8 resolutions were introduced, as follows: S. 2888–S. 2911; S. J. Res. 132; and S. Res. 197–203. **Pages 15081–15082, 15234, 15236**

Bills Reported: Reports were made as follows:

Part II of S. Rept. 1163 accompanying S. 49, Alaska statehood, and Part II of S. Rept. 1164 accompanying S. 50, Hawaii statehood; and

H. R. 7972, providing for the conveyance of certain property to the city of Warner Robins, Ga. (S. Rept. 1165). **Pages 15080, 15207**

Bills Referred: Five House-passed bills were referred to appropriate committees. **Page 15079**

Greetings to Malay: S. Res. 198, extending cordial greetings to legislative assembly of Government of Federation of Malay, was adopted. **Page 15082**

Legislative Accomplishments: Order was entered for printing as a Senate document a statement on the legislative record of the 1st session of the 85th Congress, and as a Senate document minority statement on legislative record of 1st session of 85th Congress with an appendix of laws and treaties of general interest.

Pages 15114–15138, 15142–15151

Call of Calendar: On call of calendar, 56 measures, of which 28 were private, were passed, as follows:

Without amendment and cleared for President:

Michigan land: H. R. 7900, to permit the sale of certain land in Ottawa County, Mich.;

Missouri land: H. R. 580, to authorize exchange of certain land in Missouri;

Texas land: H. R. 7964, to remove limitation on use of certain realty heretofore conveyed to city of Austin, Tex., by U. S.; and

Private bills: 10 private bills, H. R. 8576, 1411, 1474, 1502, 1677, 4174, 7014, 8374, 1315, 4351.

With amendment, to be sent back to House:

Civil War commemoration: H. J. Res. 253, to establish a commission to commemorate the 100th anniversary of the Civil War; and

Private bills: Five private bills, H. R. 1419, 1883, 4544, 5719, 4335.

Without amendment and cleared for House (motions to reconsider passage of the following 16 judgeship bills were tabled):

Kansas judge: S. 264, to provide for the appointment of a district judge for the district of Kansas;

Maryland judge: S. 697, to provide for the appointment of a district judge for the district of Maryland;

North Carolina judge: S. 2700, to provide for the appointment of a district judge for the eastern, middle, and western districts of North Carolina;

Mississippi judge: S. 2701, to provide for the appointment of an additional district judge for the southern district of Mississippi;

Utah judge: S. 2702, to make permanent the temporary judgeship for the district of Utah;

North Dakota district: S. 2703, to provide for the redistricting of the judicial district of North Dakota;

Florida judge: S. 324, providing for appointment of an additional district judge for the southern district of Florida;

Connecticut judges: S. 472, authorizing two additional district judges for the district of Connecticut;

Colorado judge: S. 1060, providing for appointment of a district judge for the district of Colorado;

Nevada judge: S. 2714, authorizing an additional district judge for the district of Nevada;

Pennsylvania judges: S. 2747, providing for the appointment of two additional district judges for the eastern district of Pennsylvania;

South Carolina judge: S. 2773, providing for appointment of a district judge for the eastern and western districts of South Carolina;

Iowa judges: S. 2799, providing for a circuit judgeship for the eighth circuit, and for appointment of a district judge for the northern and southern districts of Iowa;

Massachusetts judge: S. 1224, providing for appointment of a district judge for the district of Massachusetts;

Ohio judges: S. 2832, providing for appointment of one additional district judge each for the northern and southern districts of Ohio;

New York judges: S. 2864, additional judges for Court of Appeals for Second Circuit and district courts for southern and eastern districts of New York;

Appendix

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-fifth Congress will be published not later than Thursday, September 19, 1957. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

Basic Inquiry Into a Baffling Inflation

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of August 25, 1957, by Mr. Edwin L. Dale, Jr., entitled "Basic Inquiry Into a Baffling Inflation." Mr. Dale examines the hearings which the Subcommittee on Monopoly and Antitrust Legislation has been holding into the administered-price field as well as other congressional inquiries into this subject. It is a very thoughtful and well-done article, reporting the views of outstanding economists, among others, that this is not the traditional type of inflation which can be controlled through traditional methods.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BASIC INQUIRY INTO A BAFFLING INFLATION

(By Edwin L. Dale, Jr.)

WASHINGTON.—"Mr. Chairman, this is not the kind of inflation about which we have been reading in our textboooks."

"A rise in prices in these conditions is a most serious situation."

"The contrast between this inflationary movement and those of World War II and the Korean war will be evident."

These are 3 statements made by 3 economists of widely differing viewpoints before congressional committees in the past several months. Needless to say, they were talking about what more than one member of Congress has called America's most serious domestic problem—the renewed surge of inflation.

Is the current inflation so baffling, then? Haven't we always had inflation?

The answers, in order, are "Yes" and "No."

This inflation is baffling because, among other things, most of the classic conditions for inflation do not exist:

1. The Government is running a small surplus, not a deficit. The Government, if anything, is subtracting from total spending power, not adding to it. Yet prices are rising.

2. The Government's tight-money policy is working, in the sense that the Nation's total supply of money—currency plus demand deposits in banks—is hardly expanding at all, as it has almost invariably expanded in past inflations. Yet prices are rising.

3. Most important, not only are there no shortages to speak of in the economy, but there is substantial excess capacity in almost all manufacturing, farming, and mining. In the face of fairly sluggish overall demand, the Nation's industrial output has actually declined a little this year, unheard of in a general inflation. Yet prices are rising.

Perhaps this is all a little different, the ordinary citizen may say, but surely we've always had inflation, haven't we? One way or another, haven't prices risen steadily throughout our history?

Surprisingly, the answer is in the negative. The United States has experienced far more years of steady or declining prices than years of rising prices, and the stable years have included many years of prosperity. If the inevitable inflationary effect of wars is left out, the price level has risen very little over the past century and a half. This point is of crucial importance because it indicates that the built-in bias of our kind of economy is not—or at least has not been in the past—an inflationary bias.

Even in the modern period, since World War II, there has been much more price stability than people realize. Judging by the Consumer Price Index, prices were stable from late 1948, when the war inflation finally ended, until the Korean war, and then again from mid-1952 until the current new inflation broke out early last year.

By inflation we mean here simply rising prices to consumers. There are other definitions, but this one will suffice. What has happened during the new inflation of the past 16 months is that prices to consumers have risen just short of 5 percent—possibly the steepest inflation in history not directly associated with a war. In and after wars there are huge Government deficits, huge increases in the money supply, widespread shortages and, in general, a big excess of demand over supply—conditions which, as has been noted, evidently do not exist today.

The Government, it is important to note, is acting today as if this were a standard inflation caused by standard causes. It is using the classic anti-inflation medicine: tight money and a balanced budget. Men like George Humphrey, the former Secretary of the Treasury, are convinced that these remedies will eventually work, and without causing a bad slump in the process.

This viewpoint is fully shared by a large and respected school of economists who might be called the classicists. These men, too, are certain that the present inflation is not really peculiar, that it is caused by the same thing that has always caused inflation—too much money chasing the available supply of goods and services—and that the cure for it is tight money.

They explain the failure of the old-fashioned medicine to work so far largely in technical terms involving the velocity of turnover of the existing supply of money. The money supply, while not rising much, is turning over much faster, and this has the same effect as a rising supply. But this rise in velocity can go only so far, say the classicists, and if the Government continues to keep the money supply under control the inflation will stop.

The nonclassicists or new inflationists—the men who believe this to be a situation fundamentally new in our history—say the classicists may be theoretically right, but that in practice they are wrong. True, there has to be a large enough money demand to validate price rises brought about for nonmonetary reasons. True, the Federal Reserve could theoretically stop the inflation by squeezing money so tight as to cause severe unemployment. But the real causes of the inflation are nonmonetary causes. Modern America simply will not permit serious unemployment as a solution to anything, even inflation, and monetary restraint cannot succeed short of such serious unemployment.

The puzzling character of the inflation has led these men into many hitherto unexplored channels for an explanation. They have tried to find out why individual prices at wholesale, some up and some steady or even down, have not been behaving at all in the classical pattern; why consumer prices and wholesale prices appear to be reflecting different influences and conditions; why tight money does not appear to be working; and, if new forces are now at work in the economy, what kept them from working during the 4-year period of stability up to last year.

The search has led, among other things, to the discovery that the 4 years of stability were in part an illusion. There was the slump in farm prices from Korean war peaks that went much farther than anyone wanted. There was the 1953–54 recession which, while not serious, created more unemployment than most people wanted and pretty well halted price and wage increases in much of the economy while it lasted. There was the emergence of the discount house and a drastic, one-shot squeeze on retail unit profit margins for consumer durable goods (these prices were declining at retail through most of the 4 years). In short, the basic forces of the new inflation probably were at work all along, but were disguised for a while in the general averages.

Before assessing these basic forces, it is well to take note of three causes of the new inflation that are of considerable importance and are frequently overlooked:

1. The impact of our exploding population, together with the World War and Korean war rises in general wages and prices, on State and local government budgets. These governments finance themselves to a large extent by sales taxes and local property taxes—both of which enter directly into the Federal Government's consumer price index. For example, some of the steepest price rises in recent years have been in cigarettes and gasoline—mainly because of sales taxes.

This is certainly a nonclassic situation, and indeed is not even inflation in any ordinary sense of the term. But consumers pay higher prices because of it.

2. The catch-up in rents. A part of the steady rise in the fairly important rent section of the index is attributable to the gradual dismantling of rent controls, which persisted much longer than other direct controls. Rents were artificially low and were bound to rise as controls came off. Again, this is not a classic, or even a continuing, condition.

3. The turn-around in some key farm prices. Here the issue is not Government price supports, which have an astonishingly slight impact on food prices paid by consumers. The prices in question are prices of things with no price support at all—mainly meats. A combination of steadily rising population, and hence food buying, with some decline in excessive numbers of meat animals, has brought a sharp increase in meat prices from their 1953–54–55 low. This, for once, is a classic supply-and-demand situation, and it need not continue. That is, food prices may not be pulled up continuously from this particular cause.

Granting all these causes, however, the heart of the exploration into the new inflation centers around the powers and practices of business (particularly big business) and labor (particularly organized labor). Whether he blames business or labor or both, the new inflationist arrives, in one sense, at the same answer: This is something relatively new under the sun, and there is little the classic Government weapon of monetary restraint can reasonably do to prevent the resulting inflation.

President Eisenhower is clearly a new inflationist; he says that only statesmanlike action by both business and labor can save the day, and that Government cannot do the whole anti-inflation job. Such a statement would be meaningless if—as in classical theory—no individual unit or group of units in the economy has independent power to influence the total result.

What, then, are the facts of the situation? Fortunately, there will be nearly unanimous agreement on several major ones:

Item: Wages have risen faster than the productivity of labor during most of the past decade. This means that labor costs for each unit of output have risen. They are 28 percent higher today than 10 years ago, according to a recent study by the Bureau of Labor Statistics.

This has nothing to do—for the moment—with union or nonunion wages. It may well be, though statistics on the point are hazy, that wages in unionized industries have exceeded productivity increases less than in nonunionized industries (thought, if so, this merely means that unions are concentrated in industries which, by their nature, are able to mechanize).

In any case, final prices of goods and services must in the end cover higher labor costs, irrespective of the cause of those higher labor costs, unless business profits are to be sharply narrowed. The evidence appears to be that business profits, in the sense of profit margin over costs, have remained remarkably stable or even declined a little over the decade.

Item: The steadiest and, in the aggregate, largest price increases in the past 5 years have been in services and other nongoods. These include personal services, repair services, entertainment, utilities and public transportation, plus the aforementioned rent. Across most of this area, unionized or not, wages are an exceptionally large element in total cost of production, productivity rises slowly if at all, and final prices must quickly reflect higher wage levels.

Item: There is something of a labor shortage, particularly in the prime 25–45 age group, partly caused by low depression birth rates but mainly by the national commitment to, and experience of, full employment. This means that as one wage rises, other wages in a given community tend to rise fairly soon afterward. This is why, although only one-third of the nonfarm labor force is organized in unions, wages have risen across the board in recent years. It is why, for example, wages and hence prices have risen even in the nonunionized small service industries.

This point also explains a most revealing phenomenon of the 1954 recession. Even though many big unions won wage increases that year in the face of partial slumps in their industries, general wages rose very little. There was just enough unemployment, and hence labor surplus, to prevent the spillover of wage increases into the nonunionized sectors. Thus, United States Steel can argue that you could never tell from its wage chart whether the economy was in a boom or a depression, but the Nation's wage chart shows the difference very well.

Item: In many segments of industry there exists a considerable discretion over prices by the seller—called the power to administer prices—without regard to the strength or weakness of demand. This is an extremely subtle, and somewhat controversial, point, but one which is being carefully explored in the context of the new inflation. No one contends that this power is limitless, but it is quite obvious from recent experience that the steel, auto, aluminum, and tire industries, for example, have the power to raise prices even though they are operating at far less than capacity and demand is sluggish.

Price-administering power is said to characterize particularly those industries dominated by a few large firms (the concentrated industries). Whether this is true or not—and some analysts say it exists in many sectors not usually considered concentrated—there is agreement that it can exist only when the number of sellers is relatively small. The point is, it clearly exists in sufficient degree so that business after business is reasonably sure that, if it grants a wage increase, it can recover the cost in higher prices.

Steel is a perfect example of the general proposition. This industry obviously could have raised prices, and increased its profits, in January or April instead of July. It timed the increase in July to coincide with the wage increase, but the key point is that the price-raising power was always there.

Item: The only hope for general price stability is that some prices—in sectors where machinery adds rapidly to productivity—actually decline. Prices in those areas where there is little hope for rising productivity (haircuts are a perfect example) are bound to creep upward over time, as living standards and general wages improve. This means that where productivity is high, as in manufacturing generally, the consumer must get some of the benefits of rising productivity if overall prices are to be stable. Thus, if the wage-price situation in major industries merely prevents price declines, it is inflationary.

Item: There is a built-in political need for the labor union leader to win a wage increase every year, if at all possible, and to win as good increases for his men as the labor leader in the next union.

The pattern of the new inflation begins to emerge from this set of familiar conditions in the modern economy. It can be called a cost-push inflation or a wage inflation—but it is a wage inflation that could not exist but for pricing powers inherent in modern capitalism and a basic national commitment to full employment. This national commitment is something new in our experience.

Another new factor is the existence of strong labor unions in a normal time; this is the first period since labor unions grew powerful in the 1930's that we have not had either a depression or a classic inflation of the wartime type, when wages probably would be sucked up along with everything else whether unions existed or not. Now unions for the first time clearly are capable of exerting their own upward push toward higher wages, which, in full employment, tends to spread to nonunionized sectors.

This portrait of the new inflation has long since been accepted abroad, particularly in Britain. Wage inflation is accepted as a real, new economic force, even though many men who accept it haven't the slightest antipathy to labor unions and fully believe in the value of unions. Irrespective of one's sympathies, the deeply disturbing aspect of the new inflation is that remedies for it are difficult, perhaps impossible, to find.

As an economy, and as a people, we have found ways of insulating ourselves from Adam Smith's classic model, in which the desire of each individual to improve his income worked for the general good. Now our greed works for the general harm—or at least for a general rise in prices. We have, as it were, created a set of institutions by which we can all get a raise each and every year.

If the new inflationists are right in their analysis, is there no escape from a constantly rising price level? The state of the evidence, and of the analysis up to now, is not encouraging. The solutions proposed by a few of the new inflationists are rather tentative and unimpressive. The most common is known as the jawbone attack. With varying ramifications, it really involves just an appeal, by such means as Presidential statements or Presidentially called conferences of business and labor leaders, to people to be less desirous of improving their incomes.

It assumes a sort of noneconomic man and, judging by past efforts of the sort, has dubious prospects. However, this is the approach receiving more and more attention abroad and, given a widespread public acceptance of the concepts of the new inflation and the consequent need for restraint, it conceivably might work. Inasmuch as practically nobody favors direct Government controls, there is a good chance that this method may be tried some time in the next year or two, with much more fanfare than has accompanied appeals for restraint so far.

Several of the more daring new inflationists—men like Leon Keyserling, former chairman of President Truman's Council of Economic Advisers—have proposed the radical solution of measures that are actually inflationary in the classical sense; pumping up the money supply and running Government deficits in an effort to resume the rapid rate of economic growth reached during the early postwar period. It is argued that in this way productivity will rise faster and form more of an offset to the apparently inevitable (even desirable) wage increases. The method, whatever its merits, seems most unlikely to be tried, given the current state of political and economic sentiment.

It must be reported that in their private hearts even those new inflationists who have suggested remedies are pessimistic about the future of prices. The writer has heard more than one of them say that if we can keep the price rise to say 30 percent over the next 20 years, we shall have done extremely well. But it is important to note that many of these men—led by Harvard's Sumner Slichter—are not greatly alarmed about the continuance of creeping inflation. They feel it

can be lived with and that it is, in any case, far preferable to the severe unemployment that would be needed to halt it.

Nonetheless, such a price rise not only destroys or impairs savings, and creates inequities for those groups who have not institutionalized their power to improve their incomes, but creates a potentially far more serious problem as well.

The men currently in charge of the Nation's economic policy—in the Federal Reserve, in the Treasury, and in the Council of Economic Advisers—are convinced with a passion that creeping inflation of this type is inherently unsustainable. They are certain it will so change people's habits and expectations, their decisions to spend and invest and save, that the whole economy will change. We shall then have either a runaway inflation or a bust—probably first one and then the other.

These men, it should be noted, are also classicists. They believe that the current weapons will work and that the inflation will soon end—even though it might take a mild dose of unemployment to do it. And that, in fact, is what might well happen. Certainly the great debate is not yet resolved, and it can be resolved only in the test of time.

Even if the new inflationists are right, the situation need not be considered hopeless. On the assumption that a majority of the community is against inflation—perhaps a debatable assumption—inflation will become one of those problems of urgency for which, in our past, solutions of some kind almost always seem to have been found. Perhaps it will be the jawbone attack, perhaps even controls of some kind, with all their evils.

The fact that no solution is self-evident now does not mean there is none. But one absolute prerequisite to a solution is a genuine conviction by a substantial majority of the society that inflation is bad—a conviction that may not exist today.

One thing, at least, is clear. The next year, possibly two, should tell the story of whether this is, after all, a predominantly new breed of inflation and one not subject to any currently visible remedy. If tight money and fiscal restraint have not worked by then, the classicists will almost have to concede defeat.

In England and in much of Europe there is considerable resignation to the idea that modern capitalism, modern labor, and modern government create a built-in bias toward inflation for the first time in history. By a year from now those Americans who have resisted the idea heretofore may have to reach the same conclusion—and then start looking for remedies based on the discovery that classical impersonal market restraints simply will not work.

Resolution by Members of the Massachusetts Delegation To Continue the Operation of Murphy Army General Hospital in the Best National Security and Economic Interest

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a resolution adopted and signed by Members of the Massachusetts delegation in the House, and transmitted to the Secretary of the Army, requesting his reconsideration and recall of a recent order to completely deactivate this Army general hospital by January 1, 1958.

As revealed by the resolution, it is the combined and conscientious conviction of these Members that a proper and reasonable evaluation of all the factors involved clearly demonstrate it would be in the best national security and economic interest to keep this hospital operating, at least at its current level.

The resolution also reminds the Secretary that such was the express intent of the House when the Mililtary Appropriations Act of 1958 was considered by this body on July 24, 1957.

The resolution follows:

RESOLUTION BY MASSACHUSETTS DELEGATION MEMBERS OF THE UNITED STATES HOUSE OF REPRESENTATIVES PETITIONING DEFENSE DEPARTMENT TO CONTINUE CURRENT OPERATION OF MURPHY ARMY GENERAL HOSPITAL AT WALTHAM, MASS., IN THE NATIONAL AND MILITARY INTEREST

Whereas Murphy General Hospital in origination and intention, for the emergencies of war or national pestilence was designed as a vital unit of the military-hospital network required to adequately fulfill the military obligation; and

Whereas the catastrophes of war and pestilence currently threaten the national security; and

Whereas this general hospital is the only such hospital within the New England area and has been competently serving the whole population of that entire region; and

Whereas incalculable hardship would be inevitably visited upon wide segments of the military personnel and dependents through travel and financial expense, following any deactivation; and

Whereas Murphy General Hospital is ideally accessible by train, plane, and automobile as well as being advantageously located adjacent to one of the greatest and most renowned medical centers of the world; and

Whereas the New England area is among the very highest, if not the highest, potential military recruitment sections of the country; and

Whereas the comparative cost of military hospital care and private hospital care under the so-called Military Dependents Assistance Act demonstrates the economic advantage of treating military dependents at military hospitals; and

Whereas the financial condition and atmosphere of the Nation make it imperative for this Government to exercise the greatest diligence in the expenditure of the American taxpayers' money; and

Whereas the buildings and grounds of Murphy Army General Hospital are in excellent condition; and

Whereas it is conservatively estimated that any planned replacement of Murphy General Hospital would require the expenditure of five times more than the original cost of Murphy General Hospital; and

Whereas one of the highest legal and moral obligations of the Military Establishment is to do everything within reason to maintain and heighten the patriotic morale of military personnel and their dependents and increase the attractiveness of a military career; and

Whereas it is manifestly against the best and wisest national interest to project a dangerous and dubious gamble with military morale and career incentives: Now, therefore, be it

Resolved, That the undersigned members of the Massachusetts delegation in the United States House of Representatives do hereby respectfully petition the Secretary of the Army, and other concerned officials of the Defense Department, to conscientiously reconsider and recall the outstanding directive that Murphy General Hospital be completely deactivated as of January 1, 1958; and be it further

Resolved, That the undersigned do hereby express their most sincere convictions that such rescinding action would be in accord with the expressed intent of the United States House of Representatives as well as the best interest of this Nation.

Signed August 29, 1957.

JOHN W. MCCORMACK, HAROLD D. DONOHUE, PHILIP J. PHILBIN, THOMAS J. LANE, EDWARD P. BOLAND, THOMAS P. O'NEILL, TORBERT H. MACDONALD, JOSEPH W. MARTIN, EDITH NOURSE ROGERS, RICHARD B. WIGGLESWORTH, WILLIAM H. BATES, LAURENCE CURTIS, DONALD W. NICHOLSON, *Members of Congress.*

Report to the People of the Eighth Congressional District of Wisconsin—XI

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a report to the people of the Eighth Congressional District of Wisconsin on my voting and attendance record for the 1st session of the 85th Congress.

No attempt has been made to include votes on all of the numerous bills, motions, and amendments. The report does include all rollcall votes and all quorum calls. The purpose of this report is to collect in one place and in concise form information which is scattered through some 15,000 pages of the CONGRESSIONAL RECORD.

The descriptions of the bills and the amendments or motions as contained in the report are for the purposes of identification only; no attempt is made to describe the legislation completely or to elaborate upon the issues involved. I believe this word of caution is advisable in view of the fact that the descriptions used are, for the most part, taken from the official titles of the bills which unfortunately do not always reflect the nature or true purpose of the legislation. Upon request, I will be pleased to furnish more complete information concerning any particular bill; as well as a summary of the issues involved and the reasons for my vote.

The furnishing of this report continues a service I began in the 1st session of the 80th Congress. This is the 11th report of my voting and attendance record. These 11 reports show how I voted on 1,532 questions in the House of Representatives. Based on quorum calls and the record votes, they also show an attendance record of 95 percent.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (85th Cong., 1st sess.)

Roll-call No.	Date 1957	Measure, question, and result	Vote
1	Jan. 3	Call of the House	Present.
2	Jan. 3	Election of Speaker	Martin.
3	Jan. 29	Quorum call	Present.
		H. Res. 123, providing for the consideration of H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East:	
4	Jan. 29	On ordering the previous question. (Passed 262 to 146)	Yea.
		H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East:	
5	Jan. 30	On passage. (Passed 355 to 61)	Yea.
		H. R. 4249, making a deficiency appropriation for the fiscal year 1957:	
6	Feb. 5	On amendment placing a $15,728,000 limitation on amount to be spent for State and local administration of public assistance grants. (Passed 206 to 167.)	Yea.
		H. R. 2367, providing for payment to ranchers for deferred grazing as part of relief available to drought-stricken areas of the Southwest:	
7	Feb. 6	On passage. (Passed 270 to 108)	Nay.
8	Feb. 19	Quorum call	Present.
9	Feb. 20	Quorum call	Present.
10	Feb. 27	Quorum call	Present.
11	Feb. 27	Quorum call	Present.
12	Mar. 5	Quorum call	Present.
13	Mar. 6	Quorum call	Present.
14	Mar. 7	Quorum call	Present.
		H. Res. 188, providing for House agreement to Senate amendments to H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East:	
15	Mar. 7	On passage. (Passed 350 to 60)	Yea.
16	Mar. 12	Quorum call	Present.
		H. Res. 190, requesting the President to indicate where substantial reductions in the 1958 budget may best be made:	
17	Mar. 12	On passage of H. Res. 192, providing for consideration of H. Res. 190. (Passed 219 to 185)	Nay.
18	Mar. 12	On motion to recommit and substitute resolution commending President for requesting departments to review budget requests to determine where cuts can be made and requesting President make information received available to the House of Representatives. (Rejected 185 to 214).	Yea.
19	Mar. 12	On passage. (Passed 219 to 178)	Nay.
20	Mar. 13	Quorum call	Present.
21	Mar. 13	Quorum call	Present.
		H. R. 4901, establishing a minimum acreage allotment for corn:	
22	Mar. 13	On motion to recommit. (Rejected 168 to 237)	Nay.
23	Mar. 13	On passage. (Defeated 188 to 217)	Yea.
24	Mar. 14	Quorum call	Present.
25	Mar. 14	Quorum call	Present.
26	Mar. 20	Quorum call	Present.
27	Mar. 21	Quorum call	Present.
28	Mar. 25	Quorum call	Present.
29	Mar. 26	Quorum call	Present.
30	Mar. 27	Quorum call	Present.
		H. Res. 85, authorizing the Committee on Banking and Currency to conduct studies and investigations, and to make inquiries relating to operation of the monetary and credit structure of the United States:	
31	Mar. 27	On passage. (Defeated 174 to 225)	Nay.
32	Mar. 28	Quorum call	Present.
33	Mar. 29	Quorum call	Present.
34	Apr. 1	Quorum call	Present.
35	Apr. 2	Quorum call	Present.
36	Apr. 3	Quorum call	Present.
		H. R. 6287, making appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies, for fiscal year 1958:	
37	Apr. 4	On amendment to reduce by $30,000 the appropriation for 3 new positions in the Department of Labor to handle international labor affairs in South America and the Near East. (Passed 286 to 126.)	Yea.
38	Apr. 4	On amendment to reduce by $204,000 the appropriation for new positions in the Office of the Solicitor, Department of Labor. (Passed 241 to 171.)	Yea.
39	Apr. 4	On amendment to reduce by $46,300 the appropriation for new positions in the Bureau of Labor Standards, Department of Labor. (Passed 246 to 169.)	Yea.
40	Apr. 4	On amendment to reduce by $136,000 the appropriation for new positions in the Bureau of Veterans' Reemployment Rights. (Passed 137 to 275.)	Yea.
41	Apr. 4	On amendment to reduce by $442,000 the appropriation for new positions in the Bureau of Employment Security, Department of Labor. (Passed 214 to 206.)	Yea.
42	Apr. 4	On amendment to reduce by $12,186,000 funds for grants to States for unemployment compensation, thus eliminating an increase requested by Bureau of Budget over departmental request and eliminating contingency funds. (Passed 220 to 199.)	Yea.
43	Apr. 4	On amendment to reduce by $1,500,000 funds for unemployment compensation for Federal employees and provide same amount used in 1957. (Passed 253 to 167.)	Yea.
44	Apr. 4	On amendment to reduce by $263,800 the appropriation for new positions in the Mexican farm labor program. (Passed 342 to 167)	Yea.
45	Apr. 4	On amendment to reduce by $346,000 the appropriation for new positions in the Bureau of Labor Statistics. (Passed 217 to 201)	Yea.
46	Apr. 4	On amendment to reduce by $31,000 the appropriation for new positions in the Women's Bureau. (Rejected 206 to 209)	Yea.
47	Apr. 4	On amendment to reduce by $288,000 the appropriation for new positions in the Wage and Hour Division, Department of Labor. (Passed 214 to 206.)	Yea.
48	Apr. 4	On amendment to reduce by $1,327,000 the increase in funds for expansion of the Food and Drug Administration. (Rejected 130 to 285)	Yea.
49	Apr. 4	On amendment to reduce by $1,482,000 the appropriation for new positions in the Office of Education. (Rejected 206 to 207.)	Yea.
50	Apr. 4	On amendment to delete language providing $50,000,000 to municipalities for waste treatment works construction. (Rejected 185 to 231)	Yea.
51	Apr. 8	Quorum call	Present.
		H. R. 6306, increasing the authorized cost for construction of 4-lane bridge to replace the existing 14th Street Bridge across the Potomac River:	
52	Apr. 8	On passage. (Passed 190 to 131)	Yea.
53	Apr. 8	Quorum call	Present.
54	Apr. 8	Quorum call	Present.
55	Apr. 9	Quorum call	Present.
56	Apr. 9	Quorum call	Present.
57	Apr. 10	Quorum call	Present.
58	Apr. 10	Quorum call	Present.
		S. J. Res. 72, approving an agreement amending the Anglo-American Financial Agreement of Dec. 6, 1945, relative to deferment of certain interest payments:	
59	Apr. 10	On passage. (Passed 218 to 167)	Yea.
		H. Res. 191, providing $350,000 (in lieu of $100,000) for purpose of investigating studies by House Committee on Interstate and Foreign Commerce:	
60	Apr. 11	On passage. (Passed 225 to 143)	Nay.
61	Apr. 15	Quorum call	Present.
62	Apr. 16	Quorum call	Present.
63	Apr. 17	Quorum call	Present.
		H. R. 6871, making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for fiscal year 1958:	
64	Apr. 17	On amendment to reduce by $7,039,958 the appropriation for the United States share of the cost of international organizations of which we are a member. (Rejected 166 to 205)	Nay.
65	May 7	Quorum call	Absent.
66	May 8	Quorum call	Present.
67	May 9	Quorum call	Present.
68	May 13	Quorum call	Present.
69	May 13	Quorum call	Present.
70	May 13	Quorum call	Present.
71	May 14	Quorum call	Present.
72	May 14	Quorum call	Present.
73	May 15	Quorum call	Present.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (85th Cong., 1st sess.)—Continued

Roll-call No.	Date 1957	Measure, question, and result	Vote
		H. R. 7441, making appropriations for the Department of Agriculture and Farm Credit Administration for fiscal year 1958:	
74	May 15	On amendment to suspend operation of the soil-bank program at the end of fiscal year 1957 and to delete provision for $500,000,000 for the 1958 program. (Passed 192 to 187.)	Nay.
75	May 21	Quorum call	Present.
76	May 22	Quorum call	Present.
		H. R. 7599, making appropriations for the legislative branch for fiscal year 1958:	
77	May 22	On motion to recommit with instructions to delete $7,500,000 for construction of an additional House Office Building. (Rejected 176 to 206.)	Yea.
78	May 22	On passage. (Passed 278 to 93)	Nay.
		H. R. 2, authorizing the State of Illinois and the Sanitary District of Chicago to divert additional water from Lake Michigan into the Illinois Waterway:	
79	May 22	On passage of H. Res. 254, providing for consideration of H. R. 2. (Passed 267 to 102)	Nay.
80	May 22	On motion to recommit until the bilateral discussions between the United States and the Dominion of Canada with respect to the further diversion of water from Lake Michigan have been concluded. (Rejected 143 to 224.)	Yea.
81	May 22	On passage. (Passed 222 to 143)	Nay.
82	May 23	Quorum call	Present.
		H. R. 985, providing that chief judges of circuit and district courts shall cease to serve as such upon reaching the age of 75:	
83	May 23	On motion to recommit. (Rejected 47 to 293)	Nay.
84	May 24	Quorum call	Present.
85	May 24	Quorum call	Present.
86	May 24	Quorum call	Present.
87	May 27	Quorum call	Present.
88	May 27	Quorum call	Present.
89	May 28	Quorum call	Present.
90	May 29	Quorum call	Present.
		H. R. 7665, making appropriations for the Department of Defense for fiscal year 1958:	
91	May 29	On motion to recommit with instructions to restore $313 million of the committee cut of $2,586,775,000. (Rejected 151 to 242)	Yea.
92	May 29	On passage. (Passed 394 to 1)	Yea.
93	June 3	Quorum call	Present.
94	June 4	Quorum call	Present.
95	June 5	Quorum call	Present.
		H. Res. 259, providing for the consideration of H. R. 6127, providing means of further securing and protecting the civil rights of persons within the jurisdiction of the United States:	
96	June 5	On passage. (Passed 290 to 117)	Yea.
97	June 6	Quorum call	Present.
98	June 6	Quorum call	Present.
99	June 6	Quorum call	Present.
100	June 7	Quorum call	Absent.
101	June 7	Quorum call	Absent.
102	June 7	Quorum call	Absent.
103	June 7	Quorum call	Absent.
104	June 10	Quorum call	Present.
105	June 10	Quorum call	Present.
106	June 10	Quorum call	Absent.
107	June 11	Quorum call	Present.
108	June 13	Quorum call	Present.
109	June 14	Quorum call	Present.
110	June 17	Quorum call	Present.
111	June 18	Quorum call	Present.
		H. R. 6127, providing means of further securing and protecting the civil rights of persons within the jurisdiction of the United States:	
112	June 18	On motion to recommit with instructions to add provision for jury trial in contempt proceedings. (Rejected 158 to 251)	Nay.
113	June 18	On passage. (Passed 286 to 126)	Yea.
114	June 18	Quorum call	Present.
		H. R. 7221, making supplemental appropriations for 1957:	
115	June 18	On motion to agree to Senate amendment providing $14,000,000 for initiation of Federal flood-insurance program. (Rejected 186 to 218)	Nay.
116	June 19	Quorum call	Present.
117	June 20	Quorum call	Present.
118	June 21	Quorum call	Present.
		H. R. 6974, extending for 1 year the Agricultural Trade Development and Assistance Act of 1954:	
119	June 21	On passage. (Passed 344 to 7)	Yea.
120	June 24	Quorum call	Present.
121	June 25	Quorum call	Present.
		H. R. 7963, amending the Small Business Act of 1953, making the Small Business Administration a permanent agency:	
122	June 25	On passage. (Passed 392 to 2)	Yea.
123	June 26	Quorum call	Present.
		H. R. 6287, making appropriations for the Department of Health, Education, and Welfare, and related agencies, for fiscal year 1958:	
124	June 26	On motion to recommit the conference report. (Rejected 73 to 321)	Not voting.[1]
125	June 27	Quorum call	Present.
126	June 27	Quorum call	Present.
		S. 1428, authorizing furniture and furnishings for the additional office building for the U. S. Senate:	
127	June 27	On motion to recommit with instructions that the House Public Works Committee insert specific cost figures. (Rejected 135 to 231)	Nay.
		S. 1429, authorizing the enlargement and remodeling of Senators' suites, and other changes and improvements in the existing Senate Office Building:	
128	June 27	On motion to recommit with instructions that the House Public Works Committee insert specific cost figures. (Rejected 148 to 216)	Yea.
129	July 1	Quorum call	Present.
130	July 1	Quorum call	Present.
131	July 1	Quorum call	Present.
132	July 8	Quorum call	Present.
133	July 8	Quorum call	Present.
134	July 9	Quorum call	Present.
135	July 9	Quorum call	Present.
		H. R. 8240, authorizing certain construction at military installations:	
136	July 10	On amendment deleting from bill section requiring congressional review of action by Defense Department to eliminate activities competing with small businesses. (Rejected 183 to 230.)	Yea.
		H. R. 7390, providing for limitation and regulation of the use of advisory committees within the executive branch:	
137	July 10	On motion to recommit to the Committee on Government Operations with instructions to receive further testimony from the Department of Defense and the Post Office Department. (Rejected 183 to 225.)	Yea.
		H. R. 8364, further amending the Reorganization Act of 1949, so that such act will apply to reorganization plans transmitted to Congress at any time before July 1, 1959:	
138	July 10	On motion to recommit. (Rejected 44 to 330.)	Nay.
139	July 11	Quorum call	Present.
140	July 11	Quorum call	Present.
141	July 12	Quorum call	Present.
		H. R. 72, amending the World War Veterans' Act of 1924 to restrict the transfer of estates of incompetent veterans derived from compensation and pensions:	
142	July 12	On motion to recommit. (Passed 191 to 161)	Nay.
143	July 15	Quorum call	Present[1].
144	July 16	Quorum call	Present.
145	July 16	Quorum call	Present.
146	July 17	Quorum call	Present.
147	July 19	Quorum call	Present.
		S. 2130, the Mutual Security Act of 1957:	
148	July 19	On motion to recommit to delete provisions creating the Development Loan Fund. (Rejected 181 to 227)	Nay.
149	July 19	On passage. (Passed 254 to 154)	Yea.
150	July 22	Quorum call	Present.

[1] Absent. Would have voted "nay" if present.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (85th Cong., 1st sess.)—Continued

Roll-call No.	Date 1957	Measure, question, and result	Vote
		H. R. 2474, providing for a $546 increase in basic salary of employees in the postal field service:	
151	July 23	On passage. (Passed 379 to 38)	Nay.
152	July 23	Quorum call	Present.
153	July 25	Quorum call	Present.
		H. R. 1, providing for Federal assistance to States for school construction:	
154	July 25	On motion to strike the enacting clause (and prevent further consideration of the bill). (Passed 208 to 203)	Nay.
155	July 29	Quorum call	Present.
156	July 30	Quorum call	Present.
157	July 30	Quorum call	Present.
158	July 31	Quorum call	Present.
		S. 1856, establishing the Airways Modernization Board to provide for the development and modernization of navigation and traffic-control facilities:	
159	July 31	On passage. (Passed 375 to 17)	Yea.
160	July 31	Quorum call	Present.
		H. R. 2147, providing for the construction of the San Angelo Federal reclamation project, Texas:	
161	July 31	On motion to recommit. (Rejected 189 to 202)	Yea.
162	July 31	On passage. (Passed 201–190)	Nay.
163	Aug. 1	Quorum call	Present.
		H. R. 8643, authorizing the public construction of certain works of improvement in the Niagara River for power, and for other purposes:	
164	Aug. 1	On passage. (Passed 313 to 75)	Nay.
165	Aug. 1	Quorum call	Present.
		H. R. 6763, providing for the construction of a 4-lane tunnel under the Potomac River in the vicinity of Constitution Ave. in lieu of a bridge previously authorized:	
166	Aug. 1	On motion to consider the bill. (Passed 296 to 76)	Nay.
167	Aug. 1	On motion to strike enacting clause (and prevent further consideration of the bill.) (Rejected 175 to 194)	Yea.
168	Aug. 2	Quorum call	Present.
		H. R. 6763 (continued from Aug. 1):	
169	Aug. 2	On motion to consider the bill. (Passed 275 to 59)	Nay.
170	Aug. 2	On amendment changing the bill to provide for a 6-lane bridge in lieu of a tunnel. (Passed 225 to 107)	Yea.
		H. R. 6709, implementing a treaty and agreement with the Republic of Panama:	
171	Aug. 5	On motion to suspend the rules and pass the bill. (Passed 279 to 91)	Yea.
172	Aug. 5	Quorum call	Present.
173	Aug. 6	Quorum call	Present.
174	Aug. 7	Quorum call	Present.
		H. R. 9131, making supplemental appropriations for fiscal year 1958:	
175	Aug. 7	On motion to recommit with instructions to reduce appropriation of new funds for TVA by $9,784,000. (Rejected 158 to 244)	Yea.
176	Aug. 7	On passage. (Passed 330 to 75)	Nay.
177	Aug. 7	Quorum call	Present.
		H. Res. 362, providing for the consideration of H. R. 7244, amending the Packers and Stockyards Act of 1921, permitting deductions for a self-help meat promotion program:	
178	Aug. 7	On passage. (Defeated 175 to 216)	Yea.
179	Aug. 8	Quorum call	Present.
		H. R. 4813, extending the life of the District of Columbia Auditorium Commission:	
180	Aug. 8	On adoption of conference report authorizing the acquisition of certain land for a District auditorium-cultural center. (Rejected 115 to 284.)	Nay.
181	Aug. 8	Quorum call	Present.
		H. R. 8992, providing for United States participation in the organs of the International Atomic Energy Agency:	
182	Agu. 8	On motion to delete provision for congressional control over distribution of nuclear material and deleting authorization for matching of material with other members. (Passed 298 to 100.)	Yea.
183	Aug. 9	Quorum call	Present.
		H. R. 8996, authorizing appropriation for the Atomic Energy Commission:	
184	Aug. 9	On amendment deleting $3,000,000 for design and construction estimates of a plutonium reactor. (Rejected 197 to 201)	Yea.
185	Aug. 9	On amendment deleting $55,000,000 for construction by the Commission of a natural uranium and a plutonium recycle reactor. (Passed 211 to 188.)	Yea.
186	Aug. 9	On amendment revising cooperative power reactor demonstration program and deleting provision for Government ownership and operation of generating plants. (Passed 213 to 185.)	Yea.
187	Aug. 9	On passage. (Passed 382 to 14)	Yea.
		H. R. 2462, providing an 11 percent across-the-board salary increase for classified Federal employees:	
188	Aug. 9	On motion to recommit. (Rejected 70 to 319)	Yea.
189	Aug. 9	On passage. (Passed 329 to 58)	Nay.
190	Aug. 13	Quorum call	Present.
		H. R. 8090, making appropriations for civil functions administered by the Department of the Army and certain agencies of the Department of the Interior for fiscal year 1958 (conference report):	
191	Aug. 13	On motion to agree to Senate amendment earmarking $500,000 for preparing plans for Bruces Eddy project on Clearwater River, Idaho. (Rejected 23 to 363).	Nay.
		H. R. 5836, increasing certain postal rates:	
192	Aug. 13	On passage. (Passed 256 to 129)	Yea.
193	Aug. 14	Quorum call	Present.
		S. 2130, the Mutual Security Act of 1957:	
194	Aug. 14	On adoption of conference report increasing amount authorized by House by $250,000,000 and extending Development Loan Fund to 1960. (Adopted 226 to 163).	Nay.
		S. 1383, amending the Interstate Commerce Act to change the requirements for obtaining a freight forwarder permit:	
195	Aug. 14	On passage. (Passed 177 to 176)	Yea.
196	Aug. 15	Quorum call	Present.
		H. R. 9302, making appropriations for Mutual Security for fiscal year 1958:	
197	Aug. 15	On motion to recommit with instructions to increase various items by $715,000,000. (Rejected 129 to 254)	Nay.
198	Aug. 15	On passage. (Passed 252 to 130)	Yea.
		H. R. 7993, providing for Government guaranty of private loans to certain air carriers:	
199	Aug. 19	On motion to suspend the rules and pass the bill. (Passed 242 to 94)	Nay.
		H. R. 1937, authorizing the construction, maintenance, and operation by the District of Columbia Armory Board of a stadium in the District of Columbia:	
200	Aug. 20	On adoption of conference report. (Rejected 134 to 234)	Yea.
		S. 1520, providing for the disposal of dam on Little Kanawha River in West Virginia (conference report)	
201	Aug. 20	On motion to recommit to conference with instructions to insist on House provision limiting Federal contribution to $50,000 as recommended by Corps of Engineers instead of $112,000 as provided in report. (Rejected 135 to 232).	Yea.
		H. R. 9131, making supplemental appropriations for the fiscal year 1958 (conference report):	
202	Aug. 21	On motion to recede and concur in Senate amendment striking out funds for construction of an additional airport in or near Washington, D. C. (Rejected 125 to 233).	Nay.
203	Aug. 21	On motion to agree to Senate amendment providing an additional $475,000 for the Columbia River project. (Rejected 140 to 216)	Nay.
		H. R. 9379, making appropriations for the Atomic Energy Commission for fiscal year 1958:	
204	Aug. 21	On amendment restoring $30,000,000 for industry cooperative program. (Passed 214 to 135)	Yea.
		H. Con. Res. 176, authorizing the printing of 500,000 additional copies of an illustrated booklet on the Capitol at cost of $95,000:	
205	Aug. 22	On passage. (Passed 183 to 129)	Nay.
206	Aug. 23	Quorum call	Present.
		H. R. 9131, making supplemental appropriations for the fiscal year 1958 (conference report):	
207	Aug. 23	On motion to recede from disagreement on Senate amendment providing an additional $475,000 for the Columbia River project. (Passed 166 to 121).	Nay.
208	Aug. 23	On motion to agree to amendment providing for $425,000 for Columbia River project. (Passed 165 to 120)	Nay.
		S. 2229, providing for Government guaranty of private loans to certain air carriers:	
209	Aug. 23	On adoption of conference report. (Adopted 203 to 77)	Nay.
		H. Res. 407, citing Louis Earl Hartman for contempt of the House of Representatives by his refusal to answer questions before the Committee on Un-American Activities:	
210	Aug. 23	On passage. (Passed 276 to 0)	Yea.
		H. Res. 409, citing Bernard Silber for contempt of the House of Representatives by his refusal to answer questions before the Committee on Un-American Activities:	
211	Aug. 23	On passage. (Passed 261 to 0)	Yea.
212	Aug. 27	Quorum call	Present.

Voting and attendance record, Representative JOHN W. BYRNES, 8th District, Wisconsin (85th Cong., 1st sess.)—Continued

Roll-call No.	Date 1957	Measure, question, and result	Vote
		H. Res. 410, providing for House agreement to Senate amendments to H. R. 6127 (civil-rights bill) with a further amendment limiting jury trials in criminal contempt proceedings:	
213	Aug. 27	On ordering the previous question. (Passed 274 to 101)	Yea.
214	Aug. 27	On passage. (Passed 279 to 97)	Yea.
		H. R. 7915, clarifying the Supreme Court decision in the Jencks case which opened FBI files to perusal of defendants under certain circumstances in Federal court cases:	
215	Aug. 27	On passage. (Passed 351 to 17)	Yea.
216	Aug. 28	Quorum call	Present.
		S. 2792, amending the immigration laws so as to facilitate the entry into the United States of certain adopted children and other relatives of United States citizens:	
217	Aug. 28	On motion to suspend the rules and pass the bill. (Passed 293 to 58)	Yea.
218	Aug. 30	Quorum call	Present.
219	Aug. 30	H. R. 7915, clarifying the Supreme Court decision in the Jencks case which opened FBI files to perusal of defendants under certain circumstances in Federal court cases: On adoption of the conference report. (Adopted 315 to 0)	Yea.
220	Aug. 30	H. R. 9032, making appropriations for mutual security for fiscal year 1958: On adoption of the conference report. (Adopted 194 to 122)	Yea.

AN EXPLANATION OF TERMS

Of necessity the report contains parliamentary and legislative terms with which the reader may not be familiar. An explanation of some of these terms may, therefore, be helpful:

A. A quorum call consists of a calling of the roll of Members to determine whether or not a quorum—a majority of Members—is present. No business may be conducted when it is found that a quorum is not present.

B. Recommittal: Generally, on all important bills, a motion to recommit the bill to a committee, with or without instructions, is voted upon by the House before it votes upon passage of the bill. If such a motion is adopted, it means that the bill will be changed, delayed, or even killed. However, when a motion to recommit is accompanied by instructions, the vote generally indicates whether the Member is in favor of or opposed to the change in the legislation proposed by the instructions and does not necessarily indicate his position on the bill as a whole. A motion to recommit with instructions, if adopted, does not kill the bill.

C. The type of bill can be determined by the letters which precede its number. All bills that originate in the House are designated by an H; those that originate in the Senate by an S. There are four main types:

First. H. R. (S.) designates a bill which, when passed by both Houses in identical form and signed by the President, becomes law.

Second. H. J. Res. (S. J. Res.) designates a joint resolution which must pass both Houses and be signed by the President before becoming law. It is generally used for continuing the life of an existing law, or in submitting to the States a constitutional amendment, in which case it does not require the signature of the President but must be passed by a two-thirds majority of both Houses.

Third. H. Con. Res. (S. Con. Res.) designates a concurrent resolution. To become effective it must be passed by both the House and Senate but does not require the President's signature. It is used to take joint action which is purely within the jurisdiction of Congress. Many emergency laws carry the provision that they may be terminated by concurrent resolution, thus eliminating the possibility of a Presidental veto.

Fourth. H. Res. (S. Res.) designates a simple resolution of either body. It does not require approval by the other body nor the signature of the President. It is used to deal with matters that concern one House only, such as changing rules, creating special committees, and so forth.

D. Rule: Important bills, after approval of the committee concerned, go to the House Committee on Rules where a rule, in the form of a House resolution (H. Res.), is granted covering the time allowed for debate, consideration of amendments, and other parliamentary questions.

E. Conference: Representatives from both Houses of Congress meet in conference to work out differences existing in the legislation as passed by the two bodies. Upon conclusion of their conference, a report is submitted to each House setting forth the agreements reached. Each House then must act by way of adopting or rejecting the report in whole or in part.

F. Ordering the previous question: A motion to order the previous question, if adopted, shuts off further debate on the question before the House and prevents further amendments to such proposition.

G. A bill may pass, or be defeated, by one of the following kind of votes:

First. Voice vote: The Speaker first asks all in favor to say "aye" then those opposed to say "nay." If there is no question as to the result, this is sufficient.

Second. Division: If the result of the voice vote is in doubt, the Speaker asks those in favor to stand, then those opposed to stand. He counts in each instance and announces the result. If he is in doubt, or if demand is made by one-fifth of a quorum, then—

Third. Tellers are ordered. A Member on each side of the question is appointed as teller, and they take their places at each side of the center aisle. Those in favor walk through and are counted. Those opposed do likewise. The result settles most questions, but any Member, supported by one-fifth of a quorum, can ask for a rollcall. This privilege is guaranteed by the Constitution.

Fourth. Rollcalls place each Member on record on the particular measure involved. Each Member's name is called and his vote recorded. Rollcalls constitute the official voting record of the House.

The outcome of rollcall votes is indicated in parentheses in the record above, and the actual vote is shown—the yeas first and the nays last.

Foreign Aid—People Are Weary of It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including two editorials which relate to foreign-aid spending. The first is from the Janesville (Wis.) Daily Gazette and the other is from the Wall Street Journal. I include both at this point:

[From the Janesville (Wis.) Daily Gazette of August 17, 1957]

TWO VIEWS ON FOREIGN AID

Decisive votes in the House during the past week have cut more than $800 million from the foreign-aid appropriation bill. President Eisenhower and some House Republican leaders are much concerned, and efforts are now centered in the Senate with the hope that House cuts may be restored there.

The President and administration leaders are represented as fearful that the cuts will undermine the whole foreign-relief program and endanger American security. House committeemen who passed on the administration request for about three and a third billion dollars, and the House itself, appeared unconvinced that the country runs any such dangers if some savings are made. Even with the cuts made by the House, the bill provides for more than two and a half billions in new money, a stupendous sum.

While there are variations in figures as to foreign-aid funds already appropriated and in the pipelines, according to which side of the argument is being presented, it is perfectly apparent that money is at hand for months and probably for years into the future. The bill now under consideration probably is important to the administration more as a matter of promise and policy planning for the future than any immediate need.

With due respect to the President's views of what is necessary in the way of foreign aid, there certainly is room for difference as a matter of long-range policy. Essentially,

it is the difference between winding up as soon as possible what started out to be emergency aid following World War II versus the theory that America has been cast in the permanent role of a sort of super-Santa Claus to scatter dollars among almost all of the nations on earth.

Since the need for restoring war damage has been overcome, the money has continued to be spent on the grounds that the United States was thus combating communism. There were indications that this policy has borne fruit in some directions. It is equally true that efforts have been totally ineffective in other cases, and that some of the money has been squandered on projects which have no imaginable application to this objective and for purposes having nothing to do with American security.

It is now entirely clear that the Eisenhower administration has no plans whatever for effectively cutting back on foreign spending, and certainly none for getting the American taxpayer from under the burdens of paying billions into the Treasury every year to be spent for worldwide projects of every kind. It is only necessary to recall the unhappy situation in Egypt which resulted from promises of vast sums for a high dam for irrigation and power to realize that our money has occasionally bought trouble rather than security.

Without going isolationist or relinquishing any practical considerations of national security, it would seem that United States policy as of 1957 should have the objectives of (1) limiting foreign aid now to areas and projects connected directly with American interests; (2) serve notice, perhaps by way of substantial cutbacks in funds, that the Santa Claus era is drawing to a close; and (3) give some positive signs to American taxpayers that their long period of enforced charity round the world will be eased.

At best, taxes will remain at excessive levels to support all of the Federal domestic programs we have going, along with paying interest on our huge debt. It will raise morale, however, to have assurance that taxing will be primarily for our own Nation, and to a much less degree than now, for foreign nations.

It is not so much on the exact amount which should be provided in foreign aid at this time as it is on his seeming inability to find any end to the program that we differ with President Eisenhower on this issue.

[From the Wall Street Journal of August 19, 1957]

INEVITABLE REACTION

The House cuts in foreign aid reflect something more than a revulsion against interminable global handouts. We suspect they reflect an inevitable weariness among the people with this country's involvement in every corner of the world.

Foreign aid is the focus of this feeling, to be sure, because it is tangible. But consider the kind of plea President Eisenhower made and the House ignored; the President spoke of our investment in the casualties of Korea. It was perhaps an unfortunate choice of words, because it calls to mind all the frustrations of our international experiences since 1941.

We defeated Germany and Japan only to make possible the consolidation of Soviet Russia and Red China into a far worse menace. That can scarcely be described as progress. We fought in Korea to no decision only to be confronted by the prospect of fighting in Indochina and the Strait of Formosa. These dangers eased only to give way to commitments to fight in the Middle East.

Every development only gets us in wider and deeper. Meantime the billions have been pouring out without enhancing our prestige but, insteal, encouraging the view abroad that we must be either suckers or imperialists.

One of the minor irritations in all this is that we are supposed to take everything so seriously. The most ridiculous antics of any "pipsqueak" nation can't be laughed at; "vital interests" are at stake. Even the Gilbert-and-Sullivan campaign against the Imam of Oman must be viewed solemnly because of its portentous potentialities.

It is a pity to have to lose our sense of humor about what is, after all, very often a very funny world. But there is nothing funny at all about the possibility of being plunged into war, idiotic or otherwise, anywhere at any time for no better reason than that we are up to our necks everywhere.

The surprising thing is not that Americans are getting fed up but that they have been so patient so long. The surprising thing is not that the President's foreign-aid pleas fall on deaf ears but that Congress has not long since ended the program.

The American people probably aren't going isolationist in the sense of cutting all commitments. But their weariness is understandable. And it might be a mistake for this or any other administration to assume that they will be indefinitely content with letting any nation that chooses lead them by the nose.

The Citizen's Responsibility in International Affairs

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following outstanding address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the biennial convention of the American Association of University Women, Statler Hotel, Boston, Mass., June 27, 1957:

THE CITIZEN'S RESPONSIBILITIES IN INTERNATIONAL AFFAIRS

(Address by Francis O. Wilcox)

In speaking to you this afternoon on the citizen's responsibilities in world affairs, I shall be commenting upon problems to which you give a great deal of attention, individually and as an organization. As graduates of American colleges and universities, you have been educated for leadership in a free society. Those of you here from foreign universities represent no less the training for a life of reason, tolerance, and understanding in societies dedicated to the well-being of the individual rather than the glorification of the state.

The interdependence of the modern world has made internationalists of us all. The world has shrunk so much that we do not have much of a choice in the matter. "We must all hang together, or assuredly we shall hang separately." Out of our political, religious, cultural, and historical diversity we seek, and I believe we are finding, a common denominator of values.

Nearly half a century ago Theodore Roosevelt remarked that "The United States of America has not the option as to whether it will or will not play a great part in the world. It must play a great part. All that it can decide is whether it will play that part well or badly."

Today the choice before us is dictated by the need for human survival. With the threat of nuclear war hanging over our heads we have no alternative but to play our part wisely and well. The best insurance that we will do this is a well-informed public opinion carefully following the course of world events.

AMERICA'S ROLE OF LEADERSHIP

I venture to say that the most remarkable development of this century is the assumption over the last 17 years by the United States of its present role of responsibility and leadership in world affairs. This is a role we did not play during the previous 150 years of our existence as a sovereign state.

Indeed, the United States has been going through a revolutionary period since 1941 in our relations to other countries. In this brief period, we have moved from relative isolationism to internationalism, from a policy of no entangling alliances to a system of complex political, economic, and security alliances with more than 40 nations. We have only to recall our extreme reluctance to participate in some of the meetings of the League of Nations, even in the modest role of observers, to realize how times have changed.

Clearly this dramatic shift has been impelled by considerations of the national interest. It is often forgotten that every important move in foreign policy is based on one overriding consideration—whether it will advance the well-being and security of the American people. The effectiveness of our policies must be judged on how well they accomplish this end.

In no country is foreign policy more constantly under review than in the United States. In no country do the people have a greater voice in foreign affairs. Our budgetary process alone assures such annual review. To be sure, this process often dismays our friends and allies who may not understand our system of checks and balances. Yet it has the great virtue of insuring that our policies, once arrived at, are backed by a majority of the informed leadership in the Congress in the Executive branch, and among the public. This again insures that they will be carried out with vigor and confidence. It also insures, and I think this is of vital importance, that our policy is morally defensible, for our people will tolerate no other.

I should like to say a word here about the unique nature of American leadership in international affairs. Through the centuries other countries have grown in influence, expanded their borders, and carved out empires because of personal ambitions of leaders, for religious reasons, for the advancement of trade and the accumulation of riches, or because of some other compelling sense of mission. Most who succeeded, at least temporarily, in carrying out such policies were able to count on the compliance of disciplined citizens, either because the governments were autocratic or because their people were also imbued with some particular sense of mission in the world. In the process, some of them have brought blessings along with oppression, and have planted the seeds of future self-government and independence.

The new American leadership, on the other hand, was not sought but was largely thrust upon us by a sick and frightened world. Its objective is neither conquest nor territorial aggrandizement, but the preservation of freedom. It identifies the well-being of the world community, under freedom, with the security and welfare of the American people. In essence, it seeks for other peoples the blessings we enjoy at home. The vast resources that we have poured into other countries in support of these convictions are sometimes mistaken as generosity of the do-good variety—or a belief that all problems are susceptible to economic solutions.

This is to misinterpret the deep wellsprings of our belief, tested since the day of our independence, that men are created equal and that life, liberty, and the pursuit of happiness apply to mankind, not just to the people of one land, if we are all to prosper in peace.

Public support for United States leadership has been strong and consistent for a period of years now, despite surface fluctuations. Support has been especially strong for the United Nations which was born of American initiative and continues to receive the approval of the overwhelming majority of our people in both political parties and in all sections of the country. It is based on the increased awareness of the American people that the United Nations has served the interests of the freemen everywhere. It has served the cause of peace, security, and well-being for mankind.

I think we all have a responsibility to help preserve the unique quality, high purpose, and practical application of the American concept of leadership lest it deteriorate into a new isolationism or be tempted to control where it cannot persuade.

RESPONSIBILITIES OF THE CITIZEN

I hope you will not think I am flattering you if I say that the quantity and quality of understanding of our foreign-policy goals at home and abroad depend to a great degree on national organizations such as yours. You represent the educated elite of a highly educated society. A college degree is within the reach of a vastly greater proportion of our people than it was when most of us graduated. As our members increase, so does our responsibility. We must understand better America's new position in the world, how we got there, where we are going and why. The university graduate in his or her public and private life are the parents of ideas and leaders of opinion. For this reason they have a unique responsibility.

I am told that the women of America in the aggregate control most of the wealth of this country. If so, I think it is in good hands. But there is a greater resource at your disposal. You are also the cotrustees—for I think men must be accorded this responsibility also—of the concepts of democracy which made our country great. You are the recipients of an education designed to fit you for life in a free society. These are assets which should be used to enrich not only our national life and culture but to support an informed and enlightened foreign policy as well.

This is a continuing responsibility since foreign relations are in a constant state of flux, and policies require regular review. The attitudes of the American people and of the Congress intimately affect these reviews.

I am reminded of the recent observations of one of the top officers of the Department of State. He pointed out to a group of his colleagues that every day he was obliged to make decisions of major or minor import to our foreign relations. He found it particularly hard, he said, to make these decisions in the absence of the opinions and views, often conflicting, of those around him. These provided him with the perspective and alternatives necessary to form judgments which were soundly based.

His observation, I think, applies equally well to the policy-forming process on the national scene. While the President and the Secertary of State formulate and carry out American foreign policy, the Congress provides or it may refuse to provide the required legislation and funds. When we don't get the funds or legislation, it is my feeling that we have failed in one of two ways. Either we have failed to secure public understanding of our policies or the public understands them but is unwilling to support them. There is, of course, a third possibility—apathy and lack of concern on the part of leadership groups. This, in my opinion, is the most distressing of all.

I am often asked by organizations such as yours whether their formal resolutions and petitions on foreign policy matters have much influence. I can assure you that they do, both on the legislative and executive departments of our Government. While they may not always be translated into the specific actions you recommend, they are an indispensable part of the policy-forming process in a democracy.

ENLARGED MEMBERSHIP OF THE UNITED NATIONS

I have said that some people charge that the United Nations is a superstate or world government. They see cause for alarm in the large number of new nations in Africa and Asia that have recently become members of the United Nations. They fear apparently that they will vote as a solid bloc against the United States on important issues and impose their will on the Western World. This is far from being the case.

In the first place, we ought never to forget that the 28 sovereign countries that represent Africa and Asia have widely divergent traditions and cultures. In many ways their differences outweigh their similarities.

Furthermore, these countries have not voted as a bloc. On the Suez issue, of course, there was wide agreement but even then there was not unanimity among them. With respect to Hungary, their votes were very much divided to begin with, but the later resolutions condemning Soviet action received substantial backing from Asian and African countries. On the Algerian and the Cyprus issues at the last General Assembly, Asian initiatives resulted in compromise resolutions which received broad support. It is important to note that in all these cases they were voting with the United States.

Finally, it should be remembered that the General Assembly can only make recommendations, it cannot impose its wishes even by majority vote. I fail to see, therefore, how the new strength of the African and Asian states in the United Nations is a threat to us. In fact it provides a challenge and a new opportunity for American leadership.

The Government of the United States and the great majority of the American people have wholeheartedly welcomed these states into the United Nations. We sincerely believe in the self-determination of peoples. We have welcomed their independence.

Now that they are members, we must try to understand their points of view, even as we expect them to understand ours. The people of the emergent nations of Asia and Africa want three things. They want freedom and independence. They want recognition as first-class citizens in the world community. They want to develop their countries and improve their lot in life.

We can all recognize these as American concepts. They are ideas that we can all support. If the people of this vast and populous area are given sufficient help and encouragement in attaining these goals, we can count on their remaining on the side of freedom.

Above all, let us not jump to the conclusion in the United Nations that merely because some states don't always reach the same conclusions we do, that they are against us. This would result in giving only lip service to the concept of independence which we hold so dear. There is plenty of room in the United Nations for honest differences of opinion.

FOREIGN AID

Turning to another field, there also exist some serious misconceptions in our thinking about our foreign aid programs.

Most commonly it is argued that in extending assistance to foreign countries we are engaged in a great giveaway program, that we are coddling a group of ungrateful allies, and that we are imposing an unnecessary burden upon the American taxpayer.

Let us look briefly at what you might call the anatomy of our so-called foreign aid. In the first place, the term "aid" is extremely unfortunate. As the President said in an address to the Nation on May 21, "The common label of 'foreign aid' is gravely misleading for it inspires a picture of bounty for foreign countries at the expense of our own. No misconception could be further from reality. These programs serve our own basic national and personal interests." The money we spend abroad for economic and defense assistance is basically an investment designed to pay dividends in greater political, economic, and military security for the United States.

Second, the assistance is mutual or cooperative. In most cases, it requires large outlays of funds, services, and manpower by the recipient country. Some countries with narrow economies literally have to resist American aid because they cannot afford it.

Let us be clear then on one fundamental point. American aid is no one-way street. The United States needs its allies just as much as they need us. They provide us with bases essential to the effective employment of our strategic airpower. They maintain their own military forces for the joint defense of the free world. Without them, many thousands of American soldiers would have to be stationed overseas—and at an annual cost to us of from 7 to 35 times what it requires to maintain a foreign soldier.

On the economic side, our economy would hobble along in low gear if deprived of the strategic materials—tin, rubber, industrial diamonds, manganese, and many more—which our assistance helps to keep flowing to our shores.

AID TO UNCOMMITTED COUNTRIES

There is a misconception that stems from a misunderstanding of the real purpose of mutual assistance. This misconception is based upon the contention that the so-called neutral nations should be called upon to cast their lot solidly with the free world now or else suffer the loss of American aid. They should not be allowed to sit on the fence, the argument runs; they are either for us or against us.

Let us take the case of those States which have a policy of nonalinement. International communism is constantly seeking to convince the people and governments of such "uncommitted" countries that communism is the cheap and quick way for the underdeveloped peoples to secure high living standards and positions of political and economic influence. They are, in many cases, backing up this propaganda with loans and grants and other forms of material assistance.

Our assistance to these newly developing countries, in particular those bordering on the Sino-Soviet bloc, is of the utmost importance. It cannot be sporadic. If it is to be most effective in helping the governments of these countries to maintain their independence, there must be assurance of responsible continuity.

The results of the competitive struggle between the free and Communist world are being watched carefully by the uncommitted peoples. Accomplishments in a country such as India, for example, which is committed to the liberal social and political ideals of the free world, are being compared with those under the ruthless dictatorship existing on the Chinese Communist mainland. The relative degree of prosperity which is achieved over a period of years by the peoples of these two areas may determine the choice between communism and free representative government in countries in the whole of Asia and Africa. Clearly,

American and free world assistance to India and other countries in a like situation can weigh heavily in the balance which may determine this choice.

Moreover, the assistance which the United States has extended to Yugoslavia during the past few critical years has been of inestimable value to the free world. It has helped that strategic country maintain its independence from outside domination from any source.

I believe we are also under something of a misconception that other countries we aid are doing relatively little to help themselves or to help each other. Yet we know that many states have rigorous controls over consumer goods, far beyond anything we are accustomed to, to be able to export more goods and thus earn dollar income to help stabilize their economies. Many spend large amounts annually for the support and welfare of dependent territories under their care. And all states members of the United Nations contribute according to their means to the support of the specialized agencies of which they are members. Others give generously to the various voluntary programs of the United Nations.

We should also keep in mind that every dollar we send abroad under our bilateral program is matched by the recipient country which puts up an equal amount in local currency. These local-currency proceeds thus do double duty in improving the economic strength and the military positions of the countries receiving assistance.

Generosity is a relative thing. A dollar from a poor man may be liberal. Ten from a rich one may be stingy. Now the United States is rich and we are not stingy. But I believe the portrait of the wealthy uncle handing out largess to his indigent neighbors is by no means an accurate one. It is enlightening, for instance, to note the figures for contributions to the United Nations expanded technical assistance program. The United States ranks fifth in per capita contributions. We are exceeded in generosity by Canada, Denmark, Norway, and Sweden in that order.

Lastly, I would observe that through our aid programs we should not expect to buy gratitude or unquestioning compliance with our wishes. Loyalty, from a man or a country, that is for sale is not worth much. It is well known that recipients of charity are inclined to harbor some resentment against their benefactors. I believe it was Mark Twain who said, "I don't know why that man should dislike me, I never did him a favor."

The basic purpose of our foreign assistance program is to strengthen the free world. We are therefore partners in a common enterprise to which all contribute and from which all should benefit.

CONCLUDING COMMENTS

It is our duty as educated women and men to do what we can to remove barriers to a sound understanding of America's role of leadership in international affairs. We have assumed a big and continuing commitment and we must measure up to the responsibility.

We are an impatient, pragmatic people. We want to meet all problems head on and solve them. This may be possible in personal or national life. It is not always possible in international affairs. We must take account of the legitimate and complex interests and rights of other countries whose cooperation, understanding, and resources we need. Real leadership does not mean imposing your will but winning support for your position. It is sometimes said facetiously that diplomacy is "the art of letting the other fellow have your way."

We face a continuing threat in the unswerving determination of the Communists to reform the world in their own image. Their leaders have left no doubt that they are ready for a long struggle on the economic, political, and propaganda levels. It is not sufficient to recognize this threat to defeat it. We must understand its spurious appeal to some. We must avoid shortcomings in our own society and in our own diplomacy which may play into Communist hands. In the atomic age we must make our intentions unmistakably clear; our strength is a shield, not a spear; our dedication is to peace, not war. Miscalculation by the Communists on this score might lead to disaster beyond repair for both the free and Communist world.

The citizen's responsibilities in international affairs are first of all personal. This is a matter of interest, attitudes, and understanding. If each of us would make a determined effort to keep abreast of world developments and take appropriate action either individually or through the various organizations to which we belong, our foreign policy would be greatly benefited.

The American Association of University Women is in the forefront of organizations which recognize this responsibility and do something about it—individually, locally, and on the national level.

In the midtwentieth century, we no longer have a choice about our position in the free world. It is merely a question of how effectively and how well we lead. This depends in no small degree on the insight which you who are trained for leadership bring to bear on the pressing issues of our times.

To sum up:

If we will understand the long-range nature of the Communist threat and do our best to meet it;

If we will continue to support the United Nations and the cause for which it stands;

If we will work closely with our allies and continue to avoid going it alone;

If we will demonstrate to the uncommitted nations of the world the enduring qualities of democracy and freedom;

If we will take our stand always as a nation on high moral grounds—

Then we can face the future with confidence that the cause of freemen will prevail.

The Ghost Ship of the Confederacy

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BOYKIN. Mr. Speaker, on June 21, 1957, I included in the RECORD a letter from one of the greatest and most noble men I have ever known, Hon. S. P. Gaillard, of Mobile, Ala., entitled "A Distinguished Member of the American Bar Looks at the Civil Rights Bill." As I stated then in my introductory remarks, Mr. Gaillard on March 26 of this year celebrated his 101st birthday and I believe he is the oldest living active member of the American bar; that he well remembered the day his father left his fireside to serve the South in its battle for principle; that he well remembered the infamous Reconstruction days when an army of carpetbaggers descended on the South and the poverty and humiliation which he and his family suffered during that period; that Mr. Gaillard is a deeply religious man and lives an ideal Christian life and that he has been an elder in the Presbyterian Church for over 50 years and that even in his 102d year, he attends Sunday school regularly.

On July 18 he has again written me, after reading my kinsman's, Ed Boykin's book Ghost Ship of the Confederacy, and under leave to extend my remarks at this time, I include this thought-provoking letter from this remarkable Christian gentleman, who certainly speaks with the voice of experience, having lived through the Civil War and the Reconstruction era:

GAILLARD & GAILLARD,
Mobile, Ala., July 18, 1957.

Hon. FRANK W. BOYKIN,
House of Representatives,
Washington, D. C.

DEAR FRANK: I am reading with deep interest the Ghost Ship of the Confederacy, and I thank you a lot for it. Ghosts?

Yes, it has quickened and brought back to mind and activity ghosts of innumerable childhood fears during an unrighteous Civil War; of continued fear, brutality, and studied humiliations and hatred pressed upon us by one's own kind, during the experienced but unbelievable era of reconstruction, deliberately made one of devastation and hatred, cast upon us with such force that even a lad could not fail to have it stamped upon the tablets of his memory beyond effacement.

As a young man, I closed the book, set seals upon it, resumed the citizenship into which I was born and learned to revere the Stars and Stripes as the only flag of my life and the country it represents, the only country I ever knew, and for which I would lay down my life, and for which two sons quickly volunteered to defend in World War I, Palmer serving actively as a lieutenant in the Air Service—and becoming a near-casualty in battle—and so officially reported to me.

And what has happened to break those seals and open afresh those old wounds?

A flood of judicial decisions from a court once on the apex of the judiciary of the world, jeopardizing the security of the Nation and violating the constitutional law of the land, so declared and maintained by it for generations when compounded by the highest type of our judiciary, coming as they do, like fallout from some alien cosmic smog emanating from a new psychological theory unknown to the fundamental laws of the Nation, and smacking of a combination of Karl Marxism and the dictatorship of five men who were not placed in power by the voice of the people.

And for what purpose?

I. To put in the United States Constitution by force of a judicial decree the word "integration," although every State of the Union, from the days of Jamestown and Plymouth Rock, naturally lived and preserved the segregation of races.

II. The invasion of the legislative branch of our Government and the assumption of its powers, by the judicial branch, at present dominated by 5 men not put there by the voice of the people, while the legislative branch—the chief cornerstone of the Republic—consisting of 96 Senators and 435 Representatives, are there by direct voice of the people. Has our legislative branch of Government become atrophied? Have our leading politicians become so frantic to get the votes of a Negro minority as to consent to the destruction of our form of government?

As to segregation of the races, I repeat: Every State in the Union has practiced it because it is natural for both white and black races to do so in their social, private, and family relations, the lines being more clearly distinct where the two races are concentrated. Integration is so unnatural that white homeowners in large areas of Chicago, Ill., gave up their homes as incoming Negro residents flowed in among them; and white residents in large sections of Washington, D. C., for the same reason, have taken wings and flown to distant suburbs; and you may live to see Washington, D. C., the Capital of a great nation, a predominantly Negro city—

a most appropriate habitation for Chief Justice Earl Warren, Justice Hugo Black, formerly, I hope, of Alabama, and our honored and respected President Eisenhower. But wings for flight have not been exhausted.

Segregation is not the product of America or any part of it, for in varying degrees segregation of the races is a universal fact; and to find its origin you must turn back the pages of history for some 4,000 to 6,000 years until you sense a submerged world by the flood.

Then when, how, and by whom was it brought about?

You be the judge from the records. Turn to the 11th chapter of Genesis (and the 10), and you will find that after many generations from Noah, the race had but one language and one speech and being integrated—not by any predated decree of Chief Justice Earl Warren—they thought and planned as one race for the last time, for, although the All Wise Creator had assured Noah that they would never be visited by another flood, they had no faith in the assurance, and began to fear and prepare for a great tower that would reach above any flood the Creator might again send upon them.

It is not wise for them to tempt and defy the Almighty Creator, for that record shows that he brought to naught their planning for defiance by destroying their oneness of race and language, and scattering, separating, segregating them into many diverse races, all stamped with permanent racial marks and characteristics.

Those racial marks and characteristics make for segregation, but not for marks of superiority or inferiority, as the record is silent. But there was one characteristic common to them all:

PRIDE OF RACE

And in proportion to the cultivation of that force, like the power of internal combustion in a modern engine, by the several races, to that extent some races made greater advances in civilization than others. And those racial advances varied greatly during different eras.

Toynbee, in A Study of Races, abridged, page 54, in considering racial contributions to civilization, says:

"The black races alone have not contributed positively to any civilization—as yet. The white races hold the lead."

And yet, while the dominant white race of the South is taxing itself to the limit and is binding its wholehearted energy to extend to that black race the same educational opportunities in the same modern buildings that it gives to its own white children—separate though equal—our Government seeks to chain two such civilizations together: Chief Justice Warren, as spokesman, holds in effect, that as some of that race (from an exaggerated inferiority complex) might have their feelings hurt if not permitted to bodily commingle with, touch elbows and associate with members of the white race, their constitutional rights have been abridged and a new era in civilization must be established, backed by every power of the Nation.

As boy, 10 to 15 years old in the era of reconstruction, so-called, Freedman's Bureau and Negro domination of the State through carpetbaggers backed by Federal bayonets, I learned the bitterness of that power.

Have the great majority of the southern white race no feelings to be hurt by the forced integration of two races so far apart in origins?

Is the civil right to vote point centered by the administration in power so politically valuable as to justify the mortal wounding of the spirit of so large and important a section of the Nation?

I cannot believe that the American civilization of 1957 is still animated by the bitter animosity and hatred for the white people of the South that possessed Thaddeus Stevens.

It does not animate the dominant body of our southern Negro citizens. In Mobile, Ala., we are living together in peace and friendship, vote in the same voting machine, have the identical educational advantages in public schools minus the irritation of a forced integration.

Why invoke the hatreds of a dead Thaddeus Stevens?

Even he and his bitter stripes to the inner feelings of my own heart and spirit, has not touched my lifelong friendship and helpfulness for that race, and I view with gratification their advance in civilization since their dormant spirit of racial pride has been vitalized and new opportunities have been opened to them by the white race.

Ghosts? Yes. Not of ships but of men like Thaddeus Stevens to play politics with the unity of a nation.

With best of wishes from your old friend and lawyer turned 101 years of age.

S. P. GAILLARD, Sr.

Battle of the Budget in Defense Program

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MAHON. Mr. Speaker, the battle of the budget has been the highlight of this session of Congress. The appropriations budget which was submitted by the President in January has been reduced by $5 billion. The defense budget, a part of the overall total budget, has been reduced by $2.6 billion. The President, himself, scaled down the defense budget as submitted in January in the sum of $558 million. This does not have reference to recent cutbacks.

The gentleman from Missouri [Mr. CANNON], chairman of the Appropriations Committee, will insert in the RECORD a statement as to the complete budget reduction. I wish to submit a few facts and observations which relate to the defense budget.

There have been many statements reported in the press in recent weeks about cutbacks, stretchouts, and other modifications by the Defense Department in the military program. I should like to try to put the picture in focus. Generally speaking, the slowdowns and modifications have no relation to the reductions made in the defense budget this year by Congress. In connection with these remarks, I shall insert in the RECORD a letter from the Controller of the Defense Department which confirms this assertion.

First I should like to discuss the situation in very broad terms.

Last year the Department of Defense had available to it for expenditure for all purposes including military public works, $74.7 billion. Of this amount $36.2 billion was appropriated by Congress last year, the remaining funds having been carried over from appropriations of previous years. The carryover funds were for such things as ships, aircraft, ballistic missiles, and other long-lead-time items. It was not anticipated, of course, that the Defense Department would spend last year the total sum of $74.7 billion available to it. Vast sums would remain unexpended for previously financed long-range defense items.

For the current fiscal year the Defense Department has available to it for expenditure about $70.8 billion, of which amount $35.9 billion is in new appropriations. However, in this latter sum is $590 million which is not actually a new appropriation, but represents transfers from unneeded funds from previous years to new categories for obligation or expenditure this year.

Out of a total availability of $74.7 billion last year the Department expended $38.4 billion. Out of a total availability of $70.8 billion this year the Defense Department expects to expend $38 billion.

It will be noted that the available funds were greater last year. The Committee on Appropriations realizes that large carryover sums are required but it feels that these sums have been too large and the committee has been hammering away in an effort to reduce these carryover funds. It has been particularly interested in reducing the amount of unobligated carryover funds though it agrees that substantial unobligated carryover funds are necessary under the financial plan of the Defense Department.

Now Congress cut defense appropriation requests for the current 1958 fiscal year by $2.6 billion, yet the total availability for obligation and expenditure remains very great.

The newspapers have carried many stories in recent days of announcements from the Pentagon of cutbacks in personnel and the slowing down of many programs. What does this mean? Does this mean that reductions in the defense budget by Congress is responsible for these cutbacks? The answer is "No."

Here are the significant facts that relate to the cutbacks in the defense programs. Defense spending last year amounted to $38.4 billion. However, during the latter part of the fiscal year defense spending was at the rate of $40.2 billion annually. The previous estimate of the Department and the Budget Bureau had been that defense spending for last year would be $36 billion.

It became apparent to the Defense Department a few months ago that if defense spending took its natural course during this fiscal year, it would range between $40 billion and $42 billion. Abundant funds are in the hands of the Defense Department to finance a defense program this year in the sum of $42 billion, or much more, out of a total availability of $70.8 billion.

Congress did not fix an annual expenditure figure for the Defense Department. This matter is left to the President, the Bureau of the Budget, and the Defense Department. The rate of defense spending is heavily influenced by the rate that aircraft and other expensive defense equipment is delivered and paid for by the Government. Congress approves programs and provides the funds to finance them to completion over periods which extend in long lead time hardware to 2 or 3 years.

The executive branch of the Government concluded that if it did not curb

defense spending from funds available to it, spending would be far in excess of $40 billion this year. This would throw the fiscal plans of the administration out of order and make it necessary to sponsor an increase in the national debt ceiling.

In view of these difficulties, the administration decided to hold in reserve vast sums which might otherwise be spent on the defense program this year in order to hold defense spending for the year at $38 billion, somewhat less than last year.

That, in brief, is the story which needs to be understood. I do not point out the story to be critical but merely to make the facts clear.

The Congress this year took a close look at unexpended and unobligated balances in the Defense Department and concluded that it could wisely and safely make reductions in new money appropriations. It is now crystal clear that Congress did the right thing in cutting the defense budget. To have done otherwise would have just added to unneeded funds available to the Department.

The object of congressional cuts in the defense budget was twofold. They were made to compel more economy and efficiency, better management of money and manpower in the defense program. They were made to bring down the annual unobligated and unexpended funds to more realistic levels. They were made in many instances to deduct amounts requested in the budget in January which the Department advised in July it would not need.

Had the administration realized in January when the budget was submitted that a big cutback would be necessary in order to hold spending in line with previous plans and estimates, the President would have, no doubt, submitted a much-reduced budget. In January the Defense Department was completely unaware that the spending rate would be $2.4 billion higher in fiscal year 1957 than anticipated.

It is true that if Congress continued indefinitely to appropriate about $36 billion for the Defense Department, as it did for this year, defense spending would have to come down to about that annual average figure, but Congress placed no limitation whatever on necessary defense spending for this year or for future years. We were only dealing with appropriations for the fiscal year 1958, the year which began July 1, 1957.

The administration is undertaking a $38 billion defense spending program this year and has plenty of funds for that program and more. Admittedly, as pointed out, if we should continue a $36 billion appropriation from year to year, the spending rate would eventually have to come down to the $36 billion level. But Congress has made no such demand. Yet I would add that if wisely spent, $36 billion ought to buy a fairly adequate defense program. However, the budget for next year will no doubt be considerably above that level.

Mr. Speaker, I have given, generally, the highlights of defense financing for fiscal year 1958. Having given this broad outline a more detailed statement is submitted for those interested in greater detail.

THE DEFENSE BUDGET FOR 1958

The struggle with the defense budget for fiscal year 1958, particularly since the House acted in May on that budget, has been attended with much confusion. There have been many statements and many changes in program. I think it is important that Members of the House understand what has transpired in connection with this budget that started out last January as a bare minimum requirement for the defense needs of the Nation. On January 30, the Secretary of Defense, a very able and devoted official, told the Subcommittee on the Department of Defense Appropriations:

> I cannot foresee, at this time, any justification for a reduction in the Military Establishment, not in the total annual military expenditures of the Department of Defense below the present level, short of a drastic improvement in the international situation. With prudent management, neither do I foresee the need for any important increases in these forces or their costs short of a war.

The next day, on January 31, the Secretary of Defense said:

> I think the budget is just about right. I am willing to take any of you on and argue, if you want to take a dollar off or put a dollar on. Do not do it. We have worked awfully hard on this budget. We think it is about right.

Now that general feeling in connection with the Department of Defense budget for fiscal year 1958 was reflected throughout the hearings by the top civilian officials of the Department and the respective services. We were assured all along the line that the requested budget was a minimum required for the defense needs of the Nation. No doubt, all of these people were absolutely sincere and expressed their honest convictions in support of what they thought at the time was a minimum requirement.

At this point I wish to insert a brief table showing by service the budget appropriation and expenditure estimates for the Department of Defense as presented in January compared with final appropriations and the latest revised expenditure estimates recently announced.

1958 budget, Department of Defense

[In millions of dollars]

	Appropriations			Expenditure estimate		
	Request	Enacted	Change	January estimate	Present estimate	Change
Office of the Secretary of Defense	$705.0	$698.7	−$6.3	$704.0	$750.0	+$46.0
Department of the Army	8,539.0	7,319.6	−1,219.4	9,130.0	8,950.0	−180.0
Department of the Navy	10,517.1	9,866.4	−650.7	10,347.0	10,400.0	+53.0
Department of the Air Force	16,481.0	15,930.2	−550.8	17,472.0	17,900.0	+428.0
Proposed for later transmission	2,257.9	[1] 1,480.5	[2] −777.4	347.0	(3)	−347.0
Total	38,500.0	35,295.4	[2] −3,204.6	38,000.0	38,000.0	

[1] Includes $5,500,000 for Office of Secretary of Defense, $365,000,000 for Department of the Army, $265,000,000 for Department of the Navy, and $900,000,000 for Department of the Air Force.
[2] Reflects $558,200,000 not submitted in the final official appropriation request. Actual congressional reduction was $219,200,000 in items not transmitted with the regular budget and $2,646,400,000 in all budget requests.
[3] Distributed to estimates above.

The President's budget indicated that total appropriation requests for the Department of Defense for the fiscal year 1958 would be $38,500,000,000. Within this figure was $2,257,000,000 for military public works and other military programs which were not submitted as a part of the original budget except on the basis of a single line estimate—just the figures were given. The budget submitted in January also included an estimate of $38 billion for expenditures. It will be noted that we are referring to two types of budgets, the appropriation budget and the expenditure budget.

Now, let us see what happened to that budget submitted in January. I omit for the present military public works and refer to the remainder, $36,128,000,000. After nearly 4 months of hearings and analytical review, on May 21, 1957, the Appropriations Committee of the House reported a bill dealing with the President's January defense budget, excluding military public works. On the basis of the committee review of these requests in what is known as the regular Department of Defense budget, the requests for appropriation were reduced by $2,586,775,000 to $33,541,225,000. With one minor addition not specifically a part of the defense budget the House approved the amounts recommended for the Department of Defense as they were proposed by the committee. By way of explaining what the committee had done I think it would be well to review again at this point a statement in the committee report beginning on page 7, as follows:

REDUCTIONS IN BUDGET

The inescapable conclusion is that so long as present world conditions prevail, a defense program calling for high level expenditures, without costly peaks and valleys, will have to be continued.

The total amount of the estimate $36,193,000,000, contained in the President's budget included $65 million for military construction, Army and Navy reserve forces. This amount is deleted from the bill and comparative tabulations for the reason that the amount requested exceeded the still outstanding authority. It is understood that a bill to increase and extend this authority is now under consideration. The committee will subsequently consider this item on the basis of authority made available.

The budget estimate is reduced by $2,586,775,000, and the recommended appropriation of $33,541,225,000 is $1,157,298,000 below the amount appropriated for 1957. Of this total reduction in new obligational and expenditure authority, the amount of $1,996,775,000 represents a direct reduction in the defense budget, and $590 million is a reduction in funds appropriated in prior years, but currently available to the Department for obligation and expenditure under stock and industrial fund operations. This surplus cash is recommended for transfer to items of appropriation contained in the accompanying bill, and, accordingly, is added to the amount of $33,541,225,000, resulting in total

obligational authority for items in the bill of $34,131,225,000, or a net reduction of $1,996,775,000 in the budget estimates.

Although the above amount of $590 million is recommended for transfer to the regularly budgeted items which were considered by the committee it should not be regarded as a paper cut. It is a reduction in that amount in total obligational and expenditure authority requested by the Department for fiscal year 1958. In explanation, it should be stated that these funds, differing from directly appropriated funds only as to purpose and methods by which they are administered, are just as much a part of the Department's financial resources as all other funds which, on the books on the Treasury, are credited to the Department of Defense.

With respect to the direct reduction of $1,996,775,000 in the budget request, two specific amounts, which are parts of this total, should be mentioned.

The first is the reduction of $516 million in the Army request for procurement and production. The President, in his recent message to the House of Representatives on possible reductions in the Federal budget, suggested that this amount, which is estimated to remain unobligated as of June 30, 1958, could be considered for deletions. As of March 31, the amount available to the Army for procurement and production during 1957 is $3,421,366,000. Obligations against this amount through March 31 total $884,522,000. Fiscal year 1958 obligations are estimated at $1.5 billion. This would indicate that the Army will not only have adequate financing for this item through fiscal year 1958, but that a sizable unobligated balance will remain even with this large reduction in the budgeted amount of $583 million.

The second item is the amount of $126,741,000 which is deleted from the total request on the assumption that the Federal Republic of Germany will continue to render goods and services in the equivalent amount rendered during 1957. It is understood that negotiations on the extent of German Republic contributions are now in progress. The delay experienced in building up the military forces of the West German Republic necessitates continued heavy burdens in that area by our military.

Certain items of reduction in requested new authority are based on additional recoupments, in both 1957 and 1958, resulting from price redeterminations and announced stretchouts of certain programs. Increased unobligated balances over amounts estimated when the 1957 bill was considered, and on the basis of which certain appropriations were recommended for 1957, made further reductions possible.

In effecting these reductions, the committee was particularly cautious in seeking not in the slightest to jeopardize the projected increase in military striking power, in particular, or the national security, in general. It is convinced that even when the more or less uncontrollable cost increases of $576 million in 1958 over 1957, subsequently shown, are included, the total of over $45 billion in carryover and new obligational authority is fully adequate for continuation of the planned buildup of our defense establishment.

Note that the excerpts above from the report refer to the regular defense appropriation bill and do not include military public works which are included generally in these remarks as a part of the overall Department of Defense program. Note also that the excerpt from the committee report does not represent the final version of the legislation.

At about the time that the Appropriations Committee was preparing its recommendations on the Department of Defense appropriation bill, the Department had discovered that expenditures by the Department of Defense, particularly the Air Force and Navy, for fiscal year 1957, were running substantially above the estimates contained in the President's budget submitted in January. I will insert a brief tabulation at this point showing the estimated expenditures for fiscal year 1957 as reflected in the President's January budget submission for the fiscal year 1958 and the expenditures as they have recently been reported after the close of that fiscal year.

1957 expenditures—Department of Defense

[In millions of dollars]

	Actual		
	1957 expenditures as estimated in 1958 budget submitted January 1957	1957 expenditures as reported August 1957	Changes from January 1957 estimates
Office of Secretary of Defense	$650.0	$610.0	−$40.0
Department of the Army	8,580.0	9,021.0	+441.0
Department of the Navy	9,730.0	10,391.0	+661.0
Department of the Air Force	16,890.0	18,347.0	+1,457.0
Proposed for later transmission	150.0	(1)	−150.0
Total	36,000.0	38,369.0	+2,369.0

[1] Distributed to amounts above.

As stated before, in April or May the Department of Defense discovered that expenditures for fiscal year 1957 were running at a much higher rate than had been previously estimated. It was realized at that time that, if expenditures were not reduced and brought under control, the surplus estimated in the President's budget for 1958 may become a deficit. As a result of this the Secretary of Defense issued an order on May 22 freezing $500 million of funds currently available to the three services. This $500 million was made up of $100 million for the Army, $150 million for the Navy, and $250 million for the Air Force. This action came as a considerable surprise because on about the same day the Department of Defense was telling the Senate Appropriations Committee that reductions of the magnitude made by the House in defense appropriations requests would amount to gambling unwisely with the security of the Nation. Clearly, the Defense Department spokesmen were in error, as disclosed by subsequent events.

Now this was, undoubtedly, a period of great confusion and uncertainty, in regard to the true financial needs of the Department of Defense for the fiscal year 1958. Expenditures at that time were running at a rate that indicated that expenditures for fiscal year 1958 would be in excess of $40.2 billion, much higher than the President had estimated in January.

The problem presented to Congress as to what determination should be made with respect to the defense budget was most difficult. For months the Defense Subcommittee of the House Appropriations Committee labored with the problem. The controlling factors with the committee were, first, how can we make reductions that will have the effect of compelling better management and more economy in the operations of the far-flung activities of the Department of Defense. Arbitrary cuts would not get the job done. A painstaking job of pinpointing the soft spots was required. A second consideration which we had was how can we safely reduce the carryover funds to more manageable proportions.

It was testified by departmental witnesses that a carryover of approximately $2 billion less than the carryover from 1956 to 1957 would have no adverse affect on military operations.

Of course, members of the House Appropriations Committee generally were pleased when the House upheld the position of the committee in making the reductions proposed in defense appropriations requests.

Various officials and citizens generally had offered suggestions as to how savings could be accomplished in defense spending. The United States Chamber of Commerce which represents both little business and big business and which has, of course, through many of its individual members a direct stake in defense contracts and defense spending, urged, through its spokesmen, much more drastic cuts in the defense budget than the members of the Appropriations Committee were willing to make. The United States Chamber of Commerce made quite an exhaustive study of the whole problem and made a lengthy presentation to the House and Senate Appropriations Committees.

The suggestions of the United States Chamber of Commerce were most helpful to the committee. Of course, much of the detailed information available to the committee was not available to representatives of the chamber. Consequently, the committee action did not follow the pattern of the chamber's recommendations. A spokesman of the chamber, in appearing before the Senate Appropriations Committee, was kind enough to make the following reference to the work of the House on the defense appropriation bill:

> Now, may I speak for just a moment about the House bill, merely because in our opinion the job done by the House this year, we feel, is one of the most sound and thorough jobs of analysis that has been given the defense budget certainly in this generation. We think the approach was objective and penetrating, and we cannot commend too highly the hours of time spent and the results of that effort which have come out of the House Committee in the bill before you.

The fact that the task of Congress was not easy is evident from a review of what had transpired before. The Committee had been assured that the Defense budget was an austere budget. The Congress had been challenged to find ways to reduce the budget and in March the House of Representatives passed House Resolution 190 requesting the administration to advise the House where substantial reductions could be made in the President's budget request. On April 18 the President responded with a communication to the Speaker which included two items related to the Department of Defense. One stated that by delaying less urgent projects new spend-

ing authority for military public works could be reduced by $200 million. The other said that the House may wish to give attention to an additional item of $516 million requested for Army procurement and production. This was not listed as a specific item proposed for reduction but was merely indicated as a possibility, saying that, "such action would of course increase by $516 million the large amount that will have to be authorized for Army procurement and production in fiscal year 1959." We had already pinpointed this $516 million item as unnecessary for inclusion in the 1958 budget.

Now this $716 million didn't give the committee much to work on from a total request indicated in the budget as $38,500,000,000. Nevertheless the committee continued its efforts to find additional items for reduction, items that in no important way seriously affected the defense posture or the security of the nation.

In connection with military construction the administration also went to work and found additional areas where reductions could reasonably be made. As a matter of fact the administration, instead of requesting $2,257,900,000 for military public works and other military programs as proposed in the President's January budget for later transmission, actually submitted a total request of only $1,699,700,000 including $34,200,00 0for the United States scientific satellite program. Consequently the administration's request for such items was reduced not $200 million as indicated in the President's communication of April 18 in response to the House Resolution 190, but was rather reduced $558,200,000. This reduced request was finalized, of course, sometime after it was determined that defense spending would far exceed what had previously been estimated in the President's budget. It admittedly was an attempt to hold spending in line. This request was subsequently reduced by the Congress by approximately an additional $200 million.

Now I would like to get back to the discussion of congressional action on the regular Defense appropriation requests contained in the President's budget submitted in January. As pointed out above the House had reduced the President's budget request for these items from $36,128,000,000 by some $2.5 billion to $33,562,725,000. In acting on the bill about the 1st of July the Senate restored a net of $971,504,000 to the amount approved for appropriation by the House. In conference this restoration was reduced to $197,125,000, so that the final appropriation bill approved by the Congress was $2,368,150,000 below the President's budget request.

During the Senate-House conference on the bill, or just prior thereto, the Defense Department advised that there was to be a 100,000 reduction in military manpower which conferees should consider in arriving at the necessary appropriations. This altered the picture quite decidedly.

All told the Congress has reduced the appropriation requests for the Department of Defense for the fiscal year 1958 by approximately $2,600,000,000. The Congress has made this much reduction in appropriation requests and yet the estimate for Defense expenditures for fiscal year 1958 have still remained at $38 billion or the same figure as estimated in the President's budget submitted in January. How is this possible? The natural question is, Were the reductions made by the Congress merely ineffective paper cuts in their effect on the United States Treasury? The answer is, "No." There is considerable complexity, but simply stated it can be said that every reduction made by the Congress reduced the amount of money that was or would be available for expenditure by the Department of Defense either during fiscal year 1958 or in subsequent years. Of course, some of the reductions were effected by transferring old available funds to take care of new obligational requirements and some of the reductions were made in procurement funds where the expenditures would only be made as the items to be procured were produced in subsequent years. Nevertheless the reductions made by the Congress would have had a substantial effect on the rate of expenditure for the fiscal year 1958 and these reductions would have had a substantial effect had the estimates contained in the President's budget been valid in the first place.

As previously pointed out, however, even with the congressional cuts in the budget, ample funds were available to the Defense Department, more than $70 billion, from which the expenditure rate could soar far above the $38 billion spending estimate in the President's budget for the current fiscal year. The administration determined to hold defense spending for the current fiscal year to the budget figure of $38 billion, and it set to work to do it. On May 22 a first step was taken in this process. A memorandum freezing $500 million of 1957 funds was issued. This action was followed by a series of orders reducing or curtailing defense procurement programs. None of these administrative actions was the direct result of congressional reductions in the defense appropriations requests. I am sure that I do not have a complete list; however, the major portion of this series of orders to date are as follows:

March 12: Memorandum to Service Secretaries directing a 12 percent reduction in military and civilian personnel in the Washington, D. C., area.

May 22: Memorandum to Service Secretaries freezing $500 million of the 1957 funds available for major procurement and production, research and development, and military construction. This memorandum also directed the military departments to submit a detailed plan by June 12 showing how they propose to stay within the $38 billion 1958 expenditure estimate.

June 19: Department of Defense directive to effect an immediate, continuing, and sharp curtailment in use of overtime in the performance of all kinds and types of Department of Defense procurement contracts, including production, research and development, and construction.

June 26: Announcement by the Department of the Navy curtailing the development and procurement of the W2V–1 long range early warning aircraft and the A4D–3, an improved carrier attack model.

June 28: Classified letter from the Director of the Bureau of the Budget to all Federal agencies, including the Department of Defense, requesting that all agencies in the executive branch keep the rates of commitments, obligations, and expenditures for fiscal year 1958 at or below the level for the fiscal year 1957, to the extent feasible. The letter directed that (1) as a general rule, requests for apportionment and allotments of funds shall be based upon holding obligations to absolute minimum levels; (2) in the case of those appropriations that are for major capital outlay and development—construction, procurement, research, etc.—the requests for apportionment and the allotments should reflect the postponement of a significant part of the obligations planned in the budget for 1958.

June 28: Memorandum from Secretary of Defense to Service Secretaries stating that pending apportionment of funds for fiscal year 1958, obligations may be made for only essential operating expenses on an austere basis and that no obligations or commitments for procurement and construction should be made without specific approval by the Secretary of Defense.

July 11: Announcement by the Air Force that as a result of a review of current projects which might be modified or canceled in the light of present and anticipated budget and expenditure levels, the further development of the Navaho missile was being discontinued.

July 1: Letter from Assistant Secretary of Defense, Properties, and Installations listing military installations and activities which have been programed for deactivation during the period beginning July 1 and ending December 31, 1957.

July 16: Memorandum to Service Secretaries directing a 100,000 reduction in military personnel made up of 50,000 Army, 25,000 Navy and Marine Corps, and 25,000 Air Force.

July 26: Announcement by the Department of the Air Force of planned production stretchouts in Century series fighter aircraft.

August 5: Announcement by the Department of the Navy of plans for inactivation of 60 ships now operating in the Pacific and Atlantic fleets as necessary adjustments within the operating forces to permit the most effective employment of personnel and funds which will be available to the Navy during fiscal year 1958.

August 6: Memorandum from the Secretary of Defense to the three services freezing civilian employment and directing that to accomplish the expenditure objectives for fiscal year 1958 civilian force levels must be reduced.

August 12: Announcement by the Department of the Air Force that it was taking steps to cut back its payroll expenditures for civilian personnel by approximately 5 percent by the end of October, and stating that at the same time it is requesting contractors, except for ballistic missile work, to make corresponding cuts in expenditures.

August 13: Directive issued by the Secretary of Defense reducing established percentages for progress payments for new procurement effected on and after September 1, 1957.

August 14: Announcement by the Department of the Navy that it was taking action to reduce the number of civilian employees by approximately 18,000, the majority by October 31, 1957, and the balance spread over the remainder of the current fiscal year.

August 15: Announcement by the Military Sea Transportation Service of plans to inactivate 15 MSTS tankers made possible by the anticipated decrease in military petroleum shipments resulting from Department of Defense economy measures.

August 16: Announcement by the Department of the Navy stating plans to discontinue male recruit training at the Naval Training Center, Bainbridge, Md., as a necessary ad-

justment to permit the most effective employment of personnel and funds during fiscal year 1958.

August 20: Announcement by Marine Corps suspending the enlistment of men under the 2-by-6 program as a reduction in the recruiting program necessary to meet the lower strength requirement recently ordered by the Secretary of Defense.

August 21: Announcement by the Department of the Air Force of the cancellation of the development of the XF-103 all-weather interceptor aircraft.

August 21: Announcement by the Department of the Navy that it was making certain changes in the future production rates of a large number of new model aircraft and missiles as a result of increasing costs, technological advances and budgetary limitations.

August 23: Announcement by the Department of the Army regarding reductions in civilian personnel and in Army activities, installations and units consistent with the 50,000 reduction in Army military strengths to be effective January 1, 1958, and the limitation on Army expenditures for fiscal year 1958.

To get a proper perspective on the Defense spending problem, it is important to review what happened in fiscal year 1957. Looking over the monthly expenditure rates it is evident that spending began to build up as early as last November. And while the President's budget estimate submitted in January included an expenditure estimate of $36 billion for the Department of Defense for fiscal year 1957, actual expenditures turned out to be approximately $38,400,000,000 or $2,400,000,000 greater than was estimated in January. At the end of June 1957 the Air Force alone was spending at a rate of $18.9 billion or $19 billion a year compared with the amount estimated for the fiscal year 1958 of approximately $17,600,000,000 in the President's January budget. For all the services the expenditure rate was running over $2.25 billion higher than the $38 billion estimated in the President's January budget. Thus it became necessary for the administration to curtail this expenditure rate substantially or face an actual deficit in the budget expenditures for fiscal year 1958. While the Congress had reduced appropriation requests by nearly $2,600,000,000 these reductions were such that they would largely affect expenditures in subsequent years. The direct effect on expenditures for fiscal year 1958 would probably have been in the area of $400 million to $500 million as a maximum. Therefore the administration was faced with the necessity of further reducing the expenditure rate by approximately $2 billion and has proceeded to do so by administrative action resulting in the series of orders and announcements listed above.

It has been recently stated that the programing efforts of the Department of Defense aimed toward curtailing expenditures in fiscal year 1958 are fairly well complete. I believe that this is so. However, should costs continue to rise and if expenditures in future years are not to exceed a $38 billion ceiling, the outlook is for further reductions in the defense program such as the much discussed additional 200,000 reduction in military personnel ceilings. While Congress has succeeded in holding appropriations approximately $2.6 billion below the President's January estimate or at slightly less than $36 billion, it is to be assumed that if a $38 billion spending level is to continue year after year it will require a higher level of appropriations in 1959, or in years immediately following. Along this line I would like to include as a part of the RECORD a letter from the Assistant Secretary of Defense, Comptroller, dated August 14, 1957, as follows:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C.

HON. GEORGE H. MAHON,
Chairman, Department of Defense Subcommittee, House Committee on Appropriations.

DEAR MR. CHAIRMAN: This is in response to your inquiry concerning the effect on the defense program of congressional action on the fiscal year 1958 defense budget request.

The adjustments required in the programs of the Department of Defense for fiscal year 1958 are essentially those necessary to hold expenditures for the current fiscal year to $38 billion, the expenditure estimate contained in the President's budget submitted to the Congress in January.

It is possible that when the final program decisions for the current fiscal year have been made, we may find that congressional action on the Department's requests for new obligational authority for that year may affect certain programs in a minor way. Conversely, we may later find that in a few instances a small amount of the new obligational authority provided by the Congress for fiscal year 1958 in the annual appropriation accounts cannot be utilized effectively. All the funds provided in the no-year accounts, in my judgment, can be properly and advantageously utilized in reestablishing the long lead time programs on a fully funded basis.

The real problem posed by the action of Congress on the 1958 budget is that the appropriation of slightly less than $36 billion, including transfers, in support of a current program of $38 billion requires the utilization of essentially all of the carry-over obligational authority which might otherwise have been available as a credit against the fiscal year 1959 request. While this action does not materially affect defense programs in 1958—it will require a budget request for 1959 of at least $38 billion to support a continuing program of this magnitude. This will create a psychological problem inasmuch as it will appear to the public as a substantial increase in the defense budget, whereas in fact the level of the program would in that case remain the same.

Sincerely yours,

W. J. MCNEIL.

The question arises, has the Defense Department done great injury to our defense effort, by arbitrarily withholding funds from expenditure and stretching out and cutting back defense programs in order to hold defense spending this year at $38 billion? Admittedly, this is a very serious action. It is difficult at the moment to evaluate the full effects of the slowdowns and cutbacks. We all hope that important ground will not be lost in the battle to maintain sufficient military strength.

Undoubtedly we are still very strong militarily. On this point I would like to cite a statement recently made by Adm. Arleigh Burke, Chief of Naval Operations, and a member of the Joint Chiefs of Staff. He said:

We have the military power to destroy the Soviet Union today, not just by one means but by several means, not just by one weapon but by many weapons, not just from one direction but from many directions. The Soviet Union knows this.

The United States, of course, does not want war. Our capacity for destruction of a potential enemy is very great. But there is another side to the coin. The capacity of the potential enemy to hurt us is also very great. As has been said before, there is no real alternative to peace. The chief objective of our defense program is not to fight a war but to prevent war.

William E. Borah

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DWORSHAK. Mr. President, the Borah Foundation Committee and the Borah Commission are sponsoring appropriate activities in recognition of the 50th anniversary of the beginning of the late William E. Borah's United States senatorial service.

In order to recall some of the significant achievements of Senator Borah's outstanding service, I requested the Legislative Reference Service of the Library of Congress to prepare a political review of his renowned senatorial career.

I ask unanimous consent to have this statement inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WILLIAM E. BORAH

William E. Borah was born on a farm near Fairfield, Ill., on June 29, 1865. He attended the common schools of Wayne County, Ill, and Southern Illinois Academy at Enfield. He was graduated from the University of Kansas at Lawrence in 1889, studied law, was admitted to the bar in 1890, and commenced practice in Lyons, Kans. In the following year he moved to Boise, Idaho, and devoted his time exclusively to the practice of his profession. He was an unsuccessful candidate for election as a silver Republican in 1896 to the 55th Congress and an unsuccessful candidate for election as United States Senator in 1903. Mr. Borah was a member of the Republican National Committee from 1908 to 1912 and a delegate to the Republican National Convention in 1912 which nominated William Howard Taft for the Presidency.

He was first elected as a Republican to the United States Senate in 1907, 50 years ago this year. Senator Borah won reelection in 1913, 1918, 1924, 1930, and 1936, serving from March 4, 1907 until his death on January 19, 1940. He was an unsuccessful candidate for the Republican presidential nomination in 1936.

In 1895, he married Miss Mamie McConnell, daughter of Governor McConnell, whom he served at one time as secretary.

He early attained renown in the practice of law, participating in some of the most sensational criminal trials of the period as a State prosecutor. These included the prosecution in 1899 of a labor leader, Paul Corcoran, for alleged complicity in dynamite outrages and murder in the Coeur d'Alene

mining area in northern Idaho, and in 1905 the prosecution of William D. Haywood and other leaders of the Western Federation of Miners for the murder of former Gov. Frank Steinenberg, of Idaho.

He was opposed by Clarence Darrow, attorney for the defense in the Haywood trial. After the Haywood trials, Mr. Darrow described Mr. Borah as the ablest man he had ever contended against.

Following his defeat by a caucus-approved candidate in the Idaho Legislature in 1903 for the senatorship, he stumped the State reiterating that "King Caucus must go." Four years later, he carried his candidacy to the voters with such great effect that a majority of those elected to the legislature were pledged to vote for him for Senator.

To sum up the activities of Senator Borah in Congress, it is said, would have been to write a general summary of the political history of the United States for a third of a century, for no important matter came up in Congress without his having something to do with it.

Mr. Borah played a prominent role in the submission by Congress of the constitutional amendments providing for the popular election of Senators, the income tax, and prohibition. He was a constant advocate of a corrupt practice act to regulate campaign practices. He had a prominent part in the movements to unseat Senators Stephenson, of Wisconsin; Lorimer, of Illinois; and Newberry, of Michigan. He was the author of the resolution directing inquiry into the preconvention campaign expenditures of 1920. He sponsored the bills creating the Department of Labor in 1913 and the Children's Bureau.

Despite his lifelong habit of political independence, Senator Borah never opposed the election of the presidential nominee of his party except on one occasion. This was in 1896, when as a young man of 31 he ran for Representative on the Republican ticket while supporting William Jennings Bryan, the Democratic presidential nominee, on the free silver issue.

Mr. Borah believed strongly in the two-party system and was opposed to attempts to form a third major party. He said on many occasions that he preferred to make his fight within the Republican Party. When Theodore Roosevelt sought the Presidential nomination in 1912, Senator Borah acted as one of his floor managers in the Republican Convention. He declined, however, to follow Roosevelt into the Progressive, or "Bull Moose," Party. In 1924, he supported the candidacy of Calvin Coolidge, although he himself received the endorsement for reelection of the Independents under Senator La Follette. He declined, however, to accept the Republican Vice Presidential nomination in 1924. He vigorously supported the Republican candidacy of Herbert Hoover in 1928.

Criticized as an "isolationist," Senator Borah was strongly for world peace and the reduction of armaments. He opposed with equal vigor anything that smacked of entangling alliances with European powers. His leadership in the fight against the entrance of the United States into the League of Nations and the World Court focused wide attention on him. He was one of those who insisted that European nations should pay their World War I debts to the United States.

He opposed American military occupation of Nicaragua, Haiti, and Santo Domingo, bitterly fought reciprocity with Canada, and urged free tolls for American ships in the Panama Canal.

Senator Borah was perhaps best known for his leadership in the successful fight against the entrance of the United States into the League of Nations and for his part in bringing about the Washington conference for the limitation of armaments in 1922. His speech of November 19, 1919, opposing the Versailles Treaty was widely regarded as ranking in its impact with the greatest forensic efforts ever delivered in the Senate. The Washington Arms Conference of 1921 was brought about to a great degree by the insistence of Senator Borah. Although he did not approve of the four-power treaty that resulted, Senator Borah regarded the naval limitation treaty that grew out of the conference as a promising step toward world peace. He also advocated an economic conference to supplement the work of the armament discussions.

Senator Borah strongly supported economy in Government as a means of lifting the burden of taxation resulting from World War I. He opposed high tariff schedules and the soldiers' bonus. He once refused to accept a rise in salary voted by Congress until he had been reelected, holding that he had not been chosen for a position paying a higher salary.

He opposed President Hoover in 1931 for the administration's failure to provide what he considered adequate drought relief in 21 western States.

Although opposed to most of President Roosevelt's New Deal measures, Senator Borah approved the reduction in the gold content of the dollar, which Congress, on the recommendation of the President, put into effect in June 1933.

Senator Borah opposed the NRA codes, which he charged tended to encourage monopoly, to which he had been opposed for years. He opposed President Roosevelt's attempt to pack the Supreme Court in 1937. He criticized waste in the distribution of relief funds and helped bring about a senatorial investigation of Federal relief.

During 1936, Senator Borah was a candidate for the Republican Presidential nomination. He warned the members of his party that it was doomed to defeat unless it accepted new leadership. He openly began his campaign for the election of favorable delegates in February, selecting as his principal issue the question of economic concentration. He was successful in the Wisconsin and Nebraska primaries, but met defeat in New York and other key States. In the 1936 election, he was reelected to the Senate for his sixth term by his greatest vote, polling 126,000 voted to 54,500 for his Democratic opponent, on the same day that President Roosevelt won the electoral vote of Idaho and 45 other States.

He was one of the supporters of the investigation made into the structure of the American economy by the Temporary National Economic Committee. In 1938 he left his party in voting to increase the WPA appropriation. He was repeatedly criticized for his objection to the Wagner antilynching bill, which he opposed on constitutional grounds. He gave support to the southern Senators who opposed it during the prolonged filibuster that defeated the bill. He was strongly opposed to any attempt at invoking cloture. He felt that free debate had killed many bad pieces of legislation.

Senator Borah opposed the power of the President to negotiate reciprocal-trade agreements and the third term.

He was the leader of a bloc of Senators who bitterly opposed repeal of the Neutrality Act in 1939. He believed that repeal was the opening wedge to American participation in World War II.

Of him it was said, "he represents so many points of view that everybody agrees with him sometimes and nobody agrees with him all the time."

"Pride in the positon he attained as both a national and international figure," stated the New York Times at his death in 1940, "caused the voters of Idaho to reelect him successively, even though he frequently was at odds with the leadership of his party both National and State."

Japan's Cotton Textile Industry

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the Council for Improved United States-Japanese Trade Relations.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COUNCIL FOR IMPROVED UNITED STATES-JAPANESE TRADE RELATIONS,
Washington, D. C., August 29, 1957.

Hon. MARGARET CHASE SMITH,
Senate of the United States,
Washington, D. C.

DEAR SENATOR SMITH: I have noted that in speaking in the Senate on August 26 in favor of S. 314 you made some comments upon Japan's cotton textile industry which are far from accurate. You have a well-deserved reputation for fairness and integrity, and I know that you would wish to afford an opportunity for correction if, in the heat of debate, statements were made which will not stand sober scrutiny.

You said (CONGRESSIONAL RECORD, p. 14509) "only in the end to find Japan fully exploiting her cheap labor, paid coolie wages, for cutthroat competition against her benefactor." These inflammatory words create an entirely wrong picture of the situation in Japan's cotton teextile mills, where conditions are good by any standards in the world and wages are, if anything, above those prevailing for similar skills in other Japanese industries. These facts were fully presented last year to the subcommittee of the House Ways and Means Committee headed by Representative HALE BOGGS when that subcommittee was in Japan, and they are documented on pages 2097 to 2104 of volume 4 of the hearings of that subcommittee. I enclose two pamphlets published by the Council for Improved United States-Japanese Trade Relations which deal objectively (in our view) with the subject of Japan's textile labor.

It is true, of course, that Japanese wage rates are much lower than those of the United States, because Japan is a poorer country. International trade would, indeed, dry up if a poorer country were barred from exporting to the United States because it is poorer.

You also referred, in the same passage quoted above, to "Japan, to whom we have poured millions of dollars and the finest and most modern of textile machinery out of the goodness of our heart." Japanese leaders have frequently expressed their gratitude for the economic aid to their country in the early postwar years. It simply is not true, however, that the United States furnished textile mills to Japan or rebuilt Japanese mills. The reconstruction of Japan's textile industry was accomplished with internal Japanese investment funds, not from United States aid.

Finally, the expression "cutthroat competition" is unfair and subject to serious misinterpretation, when at the request of the United States Government the Japanese Government and Japanese cotton textile industry are enforcing painful and rigorous controls to insure that Japan's exports to the United States do not occasion difficult readjustments for the American industry. Let me refer you in this connection to the admirable

summary of the cotton textile situation in relation to Japan by Mr. Boggs which appears at pages 3185 to 3188 of the CONGRESSIONAL RECORD for March 13, 1957.

This letter is not addressed to any legislation pending in the United States Congress, but is designed only to correct misapprehensions about competition from Japan. I trust that you will see fit to introduce it into the CONGRESSIONAL RECORD before the Congress adjourns.

Yours sincerely,

NELSON A. STITT,
Director.

Time To Put Up or Shut Up

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Bernard F. Hillenbrand, executive director, National Association of County Officials.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO PUT UP OR SHUT UP

(By Bernard F. Hillenbrand, executive director, NACO)

It seems to us that much of the criticism of civil defense is cruel and irresponsible. Anyone with a spare rock seems to want to throw it at the civil-defense effort.

All levels of civil defense take a beating but our county civil-defense people seem to get the most abuse. They are the most vulnerable. They are close to the people. When the civil-defense effort fails—they bear the brunt of the blame even though it isn't always their fault. They usually receive no pay and get little recognition. For the most part they are the same conscientious Americans who served on the draft and rationing boards and other thankless jobs during our numerous wars. Everyone who didn't like rationing, drafts, or the war lets some of that feeling rub off in their criticism of civil defense.

This is not to say that all is well with civil defense. Far from it. The civil-defense people are the first to admit that much is wrong. We do not advocate that anyone stop criticising now or ever. Criticism is good. It is the wind against which a good kite rises or a poor one falls. It is like pain in the human body. It warns that something is wrong.

We do have standards for criticism. It must fair and it must be in accord with the facts. And those who would call attention to shortcomings must be willing to do their part to correct them.

These seem to be the facts. Clean or dirty, we have the atom and hydrogen bombs and so do the Russians. Other countries have or will probably have the bomb, too. With or without fallout, these big bombs can kill millions of people—Americans included. There is talk about disarmament, but so far it is just talk. No responsible official in any country has so much faith in peace talk that he is advocating that his own country disarm.

Perhaps those who deny the need for civil defense have some different facts. We think not. We do need civil defense.

Even if there were no threat of war there would be need for civil defense or something like it to cope with natural disaster. In 1953, the Federal Civil Defense Administration was designated as the Federal Disaster Relief Coordinating Agency. Since that time $55 million has been allocated to State and local governments to relieve suffering among victims of floods, forest fires, and other catastrophes. Our folks in Louisiana and Texas were the latest to fall victim to raging nature.

Despite tremendous efforts of former Federal Civil Defense Administrator, Gov. Val Peterson, and officials at the State and local level, our home defense effort has far to go. A House congression committee under the energetic leadership of CHET HOLIFIELD, of California, made a most thorough study of the subject and concluded that our entire approach to civil defense should be revised. The committee has a solution which has been incorporated into a bill now before Congress. It won't be passed this year. Maybe it will never be passed. It calls for development of a national plan, construction of underground shelters, more assistance to States and localities to finance costs and overall reorganization of FCDA. For the citizen it means more taxes, volunteering for civil-defense work, more time-consuming civil defense test exercises, and many other inconveniences. In the meantime, Congress has passed the Durham bill, H. R. 7576, which is a step toward strengthening civil defense. It gives more responsibility to the Federal Government and authorizes the expenditures of $18,850,000 toward the administration cost of State and local civil defense agencies.

For our part we will continue to give our all-out support to Bob Adams, and the dedicated members of his civil defense committee of the National Association of County Officials. Lt. Gen. Clarence R. Huebner, president of the State directors' association, has often said that the county is the most vital link of the civil defense chain. Our counties are planning an increasingly important role in civil defense, as evidenced by the fact that Maj. Gen. Edwin G. Ziegler, civil defense director of Buffalo and Erie Counties, has just been elected president of the United States Civil Defense Council. He will do a fine job. Former Gov. Leo A. Hoegh, of Iowa, has just been named the new Federal Civil Defense Administrator. He has a big job and we should help him all we can.

It is truly time to put up or shut up.

Senator Morse's Statement Opposing S. 2377

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. KEFAUVER. Mr. President, I voted against S. 2377. It was not possible for Senator MORSE to be present. He opposed the bill and wanted the statement of his position in the RECORD. I ask permission to insert this very thoughtful reason as to why Senator MORSE, had he been present, would also have voted in opposition to S. 2377.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WAYNE MORSE, DEMOCRAT, OF OREGON, ON S. 2377, THE SO-CALLED JENCKS BILL

I wish the RECORD to show my opposition to the final version of S. 2377 as agreed upon in conference and approved by the Senate.

From the first I have maintained that a measure dealing with basic rights of due process, embodied in a decision of the Supreme Court, required more deliberate consideration in committee and by the bench and bar than S. 2377 received.

The bill as drafted by the Department of Justice and reported to the Senate was a poor bill which undercut the Supreme Court's decision and imperiled other rights heretofore protected by the courts. After many revisions, the bill was greatly improved in the Senate.

The two rollcall votes in the Senate defeated attempts to deprive defendants of rights protected by the Supreme Court's decision and to impair other decisions interpreting the Federal Rules of Criminal Procedure. The ground gained in the Senate was lost in conference.

I regret the Senate's hasty action in approving the conference version.

Adams County, Ohio, Opens Its Doors to the World

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POLK. Mr. Speaker, I am glad to supply the following information about the world's conservation exposition and plowing contests which will be held in the Sixth District of Ohio at Peebles in Adams County:

ALL IN READINESS FOR GIANT WORLD'S FAIR OF AGRICULTURE

PEEBLES, OHIO.—Adams County, Ohio, opens its doors to the world next week during the 1957 world's conservation exposition and plowing contests here, September 17, 18, 19, and 20.

"Everything is in excellent shape," according to General Chairman Earl K. DeVore, Winchester, Ohio, dairyman. Transportation, food and housing arrangements have been completed. Preparations for the exposition have been underway for 3 years.

All roads leading into the area have been widened and resurfaced. Free parking areas will accommodate more than 33,000 cars at one time, and an elaborate system of traffic control will prevent any cross-traffic tieups within the 2,500-acre site area. More than 20 food concessions, under supervision of public-health authorities, will be stocked with 26 tons of hamburger, 3 miles of hot dogs, 1 million paper cups, 12,000 gallons of milk, 24,000 gallons of coffee, 12 tons of potatoes, 33,000 pies, and 120 tons of ice.

Cochairman Bob Miller of station WLW, Cincinnati, points out that while thousands of visitors are expected at this World's Fair of Agriculture, no one need fear the traffic or crowds. The crowd on any one day will be no larger than that at a Big Ten football game, plus the fact they will be dispersed over a 16-farm area. And, they will not all be trying to arrive at the same time, as they do at a sporting contest.

This will be the largest onetime, all-inclusive agricultural event ever held in the United States, and the first time the world plowing contests have taken place on American soil. Champion plowmen from 14 countries will compete for the world plowing championship, with the winner to be announced at the master plowman's banquet in the Peebles High School gymnasium Friday evening, September 20.

The Ohio State plowing champions will be named after the September 17 State eliminations, and will be entered in the national plowing matches the following day. The national winners on September 18 will compete in the 1958 world contests in Germany.

In keeping with the established tradition of American field days, admission is free on State and National days, September 17–18. In keeping with the established tradition of the world contests, a 50-cent admisison charge will be made to those over 18 years of age on September 19–20.

Included among the many dignitaries scheduled to attend the exposition are: the Honorable Ezra Taft Benson, Secretary of Agriculture; Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission; and the Honorable C. William O'Neill, Governor of the State of Ohio.

A queen of the furrow, selected from more than 1,100 rural Ohio contestants, will reign over the entire exposition. Other attractions include a complete women's program—highlighted by a New York fashion show; and daily appearances by the world-famous 102-piece United States Army Field Band. Tractor-tipping demonstrations will be featured each afternoon. Exhibition shooting by Herb Parsons, the world's greatest marksman, will be presented September 19–20. Visitors during the first 3 days will have a chance to see some 40 top sheep dogs in action in the supreme championship trials of the North American Sheep Dog Society.

More than 100 acres will be devoted to educational and commercial exhibits. The educational exhibits will illustrate utilization of our natural resources through proper land and livestock management. Visitors will see the ultimate in soil and water conservation practices as they apply to this particular area. More than $1 million worth of farm machinery will be on display in the commercial exhibits.

A 3,000-foot airstrip on the site will accommodate aircraft as large as DC–3's.

Following the exposition, the foreign plowmen, team managers, and officials will be guests of various agricultural, business, and industrial groups on a week-long tour of the Buckeye State.

Carlos Castillo Armas—Resolution by the Congress of the Republic of Guatemala

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith a copy of a resolution adopted by the Congress of the Republic of Guatemala:

The Congress of the Republic of Guatemala has been informed through the Ministry of Foreign Affairs, of the resolutions adopted by the Congress of the United States of America, expressing its deepest sorrow at the death of His Excellency, Carlos Castillo Armas.

Therefore, the Congress of the Republic of Guatemala resolves: To thank the Honorable Congress of the United States of America for their kind expressions of sympathy to the people of Guatemala, which they issued as representatives of the people of the United States of America. Through these expressions our people have received, in this hour of tragedy, reiterated proof of moral support from the representatives of the people of the United States, and this will encourage us to proceed with energy and courage in continuing the social and economic reconstruction so successfully started by the illustrious President Castillo Armas, a victim of international communism.

FEDERICO CARBONELL RODAS,
President.
GUILLERMO VIDES CASTANEDA,
First Vice President.
VIRGILIO VISCOVICH PREM,
Second Vice President.
JULIO PRADO GARCIA SALAS,
First Secretary.
MANUEL DE JESUS GIRON TANCHEZ,
Second Secretary.
LUIS D. ESKENASSY CRUZ,
Third Secretary.
OSCAR COBAR CASTILLO,
Fourth Secretary.
Ministry of Foreign Affairs.
GUATEMALA CITY, GUATEMALA, CENTRAL AMERICA, *August 28, 1957.*

Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution of the Washington State Association of County Commissioners.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

AGAINST FEDERAL AID TO EDUCATION

"Whereas the National Association of County Officials is an organization dedicated to the maintenance of constitutional government, States rights, and strong local government; and

"Whereas this association holds to the deep conviction that strong local government is a bulwark of democracy; and

"Whereas this association is opposed to Federal control or interference with respect to matters which should rightfully be left for local determination; and

"Whereas there is now pending in the Congress of the United States legislation proposing to enact Federal aid to education; and

"Whereas the financing and full control of educational facilities within the States are rightfully the sole responsibility of the States and the political subdivisions thereof: Now, therefore, be it

"*Resolved*, That the National Association of County Officials does hereby go on record as being opposed to Federal aid to education; be it further

"*Resolved*, That a copy of this resolution be sent to each Member of the Congress of the United States."

At this point, Richard Watts, executive secretary of the of the Washington State Association of County Commissioners, moved that the resolution proposed by the legislative committee be tabled. Mr. Watts came to the speaker's rostrum and made a brief speech, saying that he felt that there was such divided opinion within the association on the subject of Federal aid to education that this resolution would split the organization and alienate important elements of our support.

The motion to table the proposed resolution was then put to a vote and defeated.

The Record and Accomplishments of the Committee on Ways and Means During the 1st Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. COOPER. Mr. Speaker, it has been my custom since I have been chairman of the Committee on Ways and Means to place in the RECORD a brief report near the end of each session on the work and accomplishments of the Committee on Ways and Means during the session of Congress for the information of Members of Congress and the interested public.

The survey which I have just completed on the work of the committee this session provides ample evidence of the diligent and conscientious attention to duty of all members of the committee. I wish to take this opportunity to again commend them for their hard work, their devotion of long hours and days and weeks to our committee activity. I would like to express my grateful appreciation to my distinguished colleagues on the committee who have served so ably and so conscientiously on the committee during this session. I should also like to take this opportunity to state that as members of the committee they have initiated and acted upon legislation which is greatly in the public interest and of tremendous assistance to the citizens of our country.

This legislative activity has covered nearly every major field of the committee's broad jurisdiction. While some of the bills receiving favorable action by the committee were what might be termed minor bills, a number of measures properly fall within the category of major legislation. At a later point in this report I shall give a brief summary and description of the action of the committee in each of the areas of its jurisdiction. I shall also, at a later point, indicate the activity of the three subcommittees which the committee reestablished at the beginning of this Congress.

This session of the 85th Congress has been a period of intensive activity by the Committee on Ways and Means. The legislation which has been favorably acted upon by the committee is sound, responsible, and beneficial to the American people. The committee has, with determination and conscientiousness,

applied itself to the exceptionally heavy workload before it and has made great progress in the interest of all our citizens. Due to the vital importance of matters falling within the jurisdiction of the Committee on Ways and Means, to the economy and well-being of our Nation, it is particularly necessary that this committee exercise the utmost care and thought to screening the many proposals referred to it so that those measures selected for favorable consideration will be ones which are in the public interest and which benefit all Americans. I can truthfully say that the record of the committee during this session has been an outstanding one. As an individual member of the committee, I voted against some of the matters which were nevertheless ordered reported by a majority of the committee. This is the way our committee system works.

As I shall point out in more detail later in this report, the committee has taken action on a broad front. It has favorably reported, and the House has passed, the first technical revision of our excise tax structure since 1932, when many of our present excise taxes were first adopted. It has favorably reported a major bill the purpose of which is to correct unintended benefits and hardships and thus close many actual and potential loopholes in our income and estate tax laws. It has favorably reported a bill which has now become public law which make it possible for our citizens to receive a higher interest return on their investments in United States Savings bonds. It has protected the fiscal integrity of the Government by extending, on the request of the administration, certain excise and corporate tax rates until June 30, 1958. It has favorably acted on amendments to the Antidumping Act. It has taken favorable action on a variety of social security measures affording further benefits to our citizens. It has acted to empower the Government to further control the manufacture of narcotic drugs. And it has acted on a broad variety of other measures,

But equally important as the matters on which the committee has taken final action are the studies which are underway looking toward major action next session. The three subcommittees of the committee have been hard at work on agendas which they have developed and the groundwork which has been laid through their continuing careful studies will be basic to action to be taken by the full committee in the forthcoming session.

In my past reports of this nature I have taken occasion to point out the constantly increasing workload of the Committee on Ways and Means. In the survey I have just completed, it is obvious to me that this pattern of increasing activity in the areas of jurisdiction of the Committee on Ways and Means has continued on a sharply ascending curve which attests to the importance of the matters which we handle and to the vital relationship of our legislative activities to the welfare of our country. In this report I shall shortly present statistics to show that more public bills have been referred to the Committee on Ways and Means during this session of the Congress than have been introduced and referred to us in any single previous session in the committee's history. At the end of the 84th Congress I pointed out that some 1,324 bills had been introduced and referred to the committee for consideration, which was the largest number ever referred to us up to that time. During the 1st session of the 85th Congress, which is just drawing to a close, a total of 1,538 bills have been referred to us for consideration. Thus, it can be seen that more bills were referred to the committee during the 1st session of the 85th Congress than during both sessions of the 84th Congress. These 1,538 public bills cover every area of our jurisdiction and every facet of our activity. This is between 3 and 4 times the number of bills which were referred to the committee during the 2d session of the 84th Congress, and approximately twice the number of bills which were referred to the committee in the 1st session of the 84th Congress. Of course, it is generally true that more bills are introduced during the first session of the Congress than during the second session. However, to repeat, the total of 1,538 bills which were referred to the committee during this 1st session of the 85th Congress represents more bills than were referred to the Committee during both sessions of the 84th Congress, or for that matter, any previous Congress.

I will set forth below a comparative table which I have had prepared showing the number of bills introduced and referred to the committee for the past decade. It can readily be seen from this table how vastly the work of this committee has grown during that period. For example, 10 years ago, during the 1st session of the 80th Congress—1947—a total of 407 bills were introduced and referred to the committee, which represents only approximately one-fourth of the total of 1,538 bills which were introduced and referred to the committee during this session of the 85th Congress. Six years ago, during the 1st session of the 82d Congress—1951—some 433 bills were referred to the committee, again only about one-fourth the number referred this year.

The following table shows statistics in this regard for the past 10 years:

TABLE I

Number reported	27	5	1	-------
Number passed by House	26	6	1	-------
Number enacted into law	17	6	-------	-------

At the beginning of this session of the Congress, the committee acted to reestablish three subcommittees covering three of the major areas of the committee's jurisdiction. These subcommittees and the membership of each follow: Subcommittee on Internal Revenue Taxation, under the chairmanship of the Honorable WILBUR D. MILLS, with the following membership: NOBLE J. GREGORY, THOMAS J. O'BRIEN, FRANK IKARD, RICHARD M. SIMPSON, ROBERT W. KEAN, and HOWARD H. BAKER; Subcommittee on Excise Taxes, under the chairmanship of the Honorable AIME J. FORAND, with the following membership: HERMAN P. EBERHARTER, EUGENE J. KEOGH, FRANK M. KARSTEN, A. S. HERLONG, Jr., THOMAS A. JENKINS, NOAH M. MASON, and HAL HOLMES; and the Subcommittee on Foreign Trade Policy, under the chairmanship of the Honorable HALE BOGGS, with the following membership: CECIL R. KING, BURR P. HARRISON, EUGENE J. MCCARTHY, THADDEUS M. MACHROWICZ, DANIEL A. REED, JOHN W. BYRNES, ANTONI N. SADLAK, and THOMAS B. CURTIS.

I. STATUS OF LEGISLATION 1ST SESSION, 85TH CONGRESS

During the first session of this Congress, the committee has favorably reported to the House of Representatives a total of 48 bills, of which 43 have been passed by the House. Of the 43 which have been passed by the House, a total of 21 has passed the Senate, and a total of 21 has been signed into public law. As may be seen from table I, more bills were reported during this session than in any previous session during the past 10 years, with the exception of the 1st session of the 84th Congress.

The follwing table shows the status of legislation on which the committee has acted favorably during the session just completed, broken down into categories of tax bills, social-security bills, and tariff bills:

TABLE II

	Social security	Tariff	Tax	Total
Bills reported to House	11	13	26	50
Bills passed House	10	11	22	43
Bills reported to Senate	8	10	4	22
Bills passed Senate	8	9	4	21
Bills enacted into law [1]	8	9	4	21

[1] This figure includes 10 bills awaiting the President's signature.

The full committee met 61 times in executive session and in addition conducted public hearings on 5 different subjects for a period of some 8 days, receiving testimony from some 119 different witnesses, plus the statements received from many other individuals and organizations for the record. In this connection, it is important to point out here that groundwork for much of our legislative activity this session was laid in public hearings conducted by our three subcommittees last fall. Those hearings, of course, were not covered in my report at the end of last session and properly should be included here. During these hearings, which lasted a total of 36 days, some 356 witnesses were heard, in addition to many additional statements submitted for the record. Data concerning the public hearings of the full committee and the subcommittees follows:

TABLE III.—*Public hearings of Committee on Ways and Means and subcommittees thereof*

	Date	Number of witnesses
Committee on Ways and Means:		
Tax Rate Extension Act of 1957, H. R. 4090, H. R. 4091.	Feb. 6, 1957	2
Maximum interest rate permitted on United States savings bonds, H. R. 4734, H. R. 4735.	-	4
Amend certain provisions of the Antidumping Act, 1921, to provide for greater certainty, speed, and efficiency in the enforcement thereof, and for other purposes, H. R. 6006, H. R. 6007.	July 29-31, 1957	9
Sliding scale import excise tax on lead and zinc, H. R. 8257, H. R. 8265, H. R. 8303, H. R. 8307, H. R. 8328, and H. R. 8464.	Aug. 1-2, 1957	70
Provide for Federal agencies to withhold city income taxes of Federal employees, H. R. 6745.	Aug. 27, 1957	14
Subcommittee on Internal Revenue taxation:		
Requirement that taxpayers establish a reserve for past depreciation in connection with a changeover from a retirement method of depreciation to some other method.	Apr. 12, 1957	5
Technical amendments to the Internal Revenue Code.	Nov. 19-28, 1956	37
Subcommittee on Excise Taxes: On excise taxes.	Nov. 26-30, 1956; Dec. 3-10, 1956	108
Subcommittee on Foreign Trade Policy: On administration and operation of customs and tariff laws and the trade agreements program.	Sept. 17-28, 1956; Oct. 2, 1956	90

Overseas conferences: The subcommittee also conducted overseas studies and conferences and received statements and views from a large number of witnesses which have been published as vol. 4 of the hearings containing some 373 pages.

Moreover, the three subcommittees of the committee met in executive session approximately 38 times during the session.

II. BRIEF DESCRIPTION OF LEGISLATIVE ACTIVITY

A. Tax legislation:

During the first session of this Congress the Committee on Ways and Means took favorable action on 26 bills, the purpose of which was to amend the Internal Revenue Code in various respects. Many of these bills made important changes in our tax structure, and three of these bills constituted major legislation. Of these 3, 1 has been signed into public law, 1 has passed the House of Representatives and is presently pending before the Senate Finance Committee, and 1 is pending on the House Calendar. Of the 22 bills which might be labeled minor bills, 2 have been signed into public law, 19 have passed the House, and 3 are pending on the House Calendar.

A brief description of the three major bills in the tax field follows.

A major tax bill, which has been favorably acted upon by the committee and which has passed the House of Representative and is now before the Senate Committee on Finance, is H. R. 7125 entitled "Excise Tax Technical Changes Act of 1957." While this bill, as indicated by its title, is a technical one and does not make any major changes with regard to excise tax rates, it contains the first overall technical revision of the general excise tax provisions since 1932, the year when a great many of these provisions were first adopted. Its title does not truly indicate the vast amount of time and work which went into the bill's preparation, consideration, and reporting by the Committee on Ways and Means. In order that the true nature of the work involved may be indicated, the bill itself consisted of some 430 pages, and the committee report accompanying the bill consisted of approximately 212 pages. This bill represents the culmination of over 2 years of intensive work both by the full committee and by the Subcommittee on Excise Taxes, formerly the Subcommittee on Excise Tax, Technical, and Administrative Problems.

In addition to numerous changes in virtually all classes of the miscellaneous excise taxes, the provisions of the code relating to the communications and documentary stamp taxes and the important credit and refund provisions have been entirely rewritten by title I of the bill. Title II of the bill is concerned with the provisions of the code relating to the taxes on distilled spirits, wines, beer, tobacco products, and firearms. The bill provides a general technical revision of the distilled spirit provisions and also the occupational tax provisions relating to wholesale and retail dealers in alcoholic beverages. Title I of the bill, as indicated above, contains the first general technical revision of the excise tax provisions which has been attempted since the time when most of those provisions were first incorporated in the Internal Revenue Code. The extensive and intensive work which went into the preparation of final drafting and approval of this bill by the committee can be indicated also by the fact that extended public hearings were held on the subjects covered by the bill for a period of approximately 2 weeks in October 1955 and also again in January and March of 1956, incorporating over 1,000 pages of testimony and statements in three volumes. Several interim reports were prepared and considered by the subcommittee and given careful and complete consideration by the full Committee on Ways and Means prior to final action on provisions of the bill. The bill was reported by the committee on May 24, 1957, and passed the

House of Representatives on June 20, 1957. It represents a major revision of the technical excise tax provisions of the code.

A second major tax bill favorably reported by the Committee on Ways and Means was H. R. 8381 entitled "Technical Amendments Act of 1957." This bill represents a major step in the elimination of substantive unintended benefits and hardships in the existing income, estate, and gift tax provisions, and also removes many technical errors and ambiguities in the tax statutes. The bill contains 81 sections. While in terms of the number of changes most of the bill deals with the correction of inadvertent errors in the internal revenue laws, the bill contains considerably more significant provisions which are concerned with "unintended benefits" and "unintended hardships" which relate to problems of revenue significance which have developed over a considerable period of time. This bill represents the culmination of intensive work by the Subcommittee on Internal Revenue Taxation, by the full Committee on Ways and Means and by the staffs. Active work toward the bill was begun in July of 1956 when the Subcommittee on Internal Revenue Taxation was established to review existing income, estate and gift tax provisions and to determine the substantive unintended benefits and hardships and technical problems needing correction. That subcommittee held public hearings in November of 1956 which cover over 500 pages of testimony and statements received from various individuals and organizations interested in these matters. In addition, as indicated, both the subcommittee and the full Committee on Ways and Means spent many days in executive session studying these various problems before reporting H. R. 8381. The bill was reported by the committee on July 9, 1957, and is presently pending on the House Calendar.

A third tax bill which can properly be considered a major bill from the standpoint of the general revenues was H. R. 4090 entitled "Tax Rate Extension Act of 1957." This bill, as reported by the Committee on Ways and Means provided for a one-year extension of the present corporate income tax rate and existing rates of certain excise taxes. In the form in which the bill passed the Senate, a 15-month extension of these tax rates was provided for, and in that form the bill was agreed to by the House of Representatives and signed into law by the President.

The extension of these tax rates concerned was requested by the Secretary of the Treasury in behalf of the administration and was agreed to because of their effect on the Federal budget in the fiscal year 1958. It was estimated that, had the rates not been extended, there would have been a deficit in the fiscal year 1958 of about $500 million. It was estimated that the total full-year effect under the bill as passed by the House would be $2,975 million. The bill was favorably reported by the Committee on Ways and Means on February 7, 1957, passed the House on March 14, 1957, passed the Senate on March 27, 1957, and signed by the President on March 29, 1957.

Two additional tax measures which received favorable action by the Committee on Ways and Means deserve particular mention here. These bills are now pending before the Senate Committee on Finance. The first of these, H. R. 8865, relating to the administration of certain collected taxes, was designed to secure greater compliance with present law on the part of employers and others in paying over to the Government trust fund withheld tax moneys such as income, social security and retailers taxes. It provides, generally speaking, for penalties to insure that employers who withhold income, or social security taxes or who collect excise taxes shall pay such moneys into the Treasury. The committee was advised that, as of December 31, 1956, the delinquent withheld income and social security taxes alone amounted to $279 million. This legislation was designed to prevent this from further occurring.

The second tax bill which also deserves special mention, in addition to the major bills, is H. R. 8216, a bill to amend the Internal Revenue Code to prevent unjust enrichment by precluding refunds of alcohol and tobacco taxes to persons who have not borne the ultimate burden of the tax. This legislation limits refunds to cases where claimants bore the ultimate burden or repaid the amount of the tax to the person who bore the ultimate burden. Claims already filed, including refunds of these taxes, amount to $830 million.

In addition to the above major bills and bills deserving of special mention, the committee also took favorable action on 19 miscellaneous bills of lesser importance relating to taxes. These miscellaneous bills covered a variety of different subjects too lengthy to outline here. Details as to these and all other bills referred to the committee can be found in the legislative calendar of the committee.

B. Fiscal legislation:

In the field of general fiscal legislation, other than taxes, the Committee on Ways and Means took favorable action on one bill, H. R. 5520, which properly can be classified as major legislation. As reported by the committee and in the form in which it passed the House of Representatives, this bill would have increased the maximum permissible interest rate on savings bonds—and savings certificates—held to maturity from 3 percent to 3½ percent a year, compounded semiannually. It would have authorized the Secretary of the Treasury, in his discretion, to increase the yield on savings bonds and savings certificates bearing issue dates of February 1, 1957, or later, and it would also have authorized the Secretary, in his discretion, to increase the maximum interest rate on series E savings bonds, maturing on February 1, 1957, or later which the holder retained for an extension period of not more than 10 years beyond their maturity dates. The Senate amended this bill so as to provide discretionary authority to the Secretary to raise the interest rate on these bonds to 3.26 percent in lieu of the 3½ percent authority contained in the House bill, and the bill in this form was agreed to by the House and approved by the President April 20, 1957.

This legislation is quite important to the millions of individuals who purchase and hold series E savings bonds, since it will permit the Secretary of the Treasury to increase the interest rate payable to these millions of individuals on this important type of savings, if he deems this advisable. This legislation was designed to further encourage investment in these bonds by our individual citizens. The importance of this authority, which can be exercised by the Treasury, in affording our citizens increased interest on this class of investment is underscored by the generally rising interest rates on other comparable forms of investment. This legislation will permit our individual citizens to continue to participate in this vitally important savings program at a rate of interest more commensurate with that which is paid on such other forms of similar investment.

C. Narcotics legislation:

The Committee on Ways and Means also took favorable action during this session of the Congress on a bill, H. R. 9028, covering another important area of the committee's jurisdiction, namely, the field of control of narcotic drugs. While this legislation is technically tax legislation, or constitutes an amendment to the Internal Revenue Code, from a substantive point of view it appropriately can be considered to be an additional different field of jurisdiction. This legislation was designed to give full effect to treaty obligations of the United States to limit exclusively to medical and scientific purposes the manufacture of narcotic drugs and to require that such manufacture be restricted to persons and premises that have been licensed for the purpose. It is also designed to amend the Narcotic Drugs Import and Export Act to bring the regulation of exports in conformity with current treaty obligations, and to permit the importation and exportation of certain narcotic drugs for scientific research purposes. This action of the committee during this session thus further supplements the important action taken by the committee and the Congress during the last session with regard to control of the illicit trafficking in drugs and the prevention of insidious and heinous crimes resulting from the use of such drugs. This legislation is considered therefore to be quite important in protecting the welfare of our citizens and in promoting the general interest. It is now pending before the Senate Committee on Finance.

D. Social-security legislation:

One of the most important major fields of jurisdiction of the Committee on Ways and Means is that relating to our national social security laws. As may be recalled, during the second session of the 84th Congress the Social Security Act amendments of 1956 were finally enacted by Congress and approved by the President. During this first session of the 85th Congress, the committee did not act on a major social security bill compar-

able to the Social Security Act amendments of 1956 but it did take action on a variety of lesser, but nonetheless important, bills in this area of its jurisdiction. The action which the committee took on these miscellaneous bills in the field of social security will afford benefits to a very large number of our citizens who, because of certain provisions in existing law, would not have been able to receive such benefits. For example, a large number of ministers had not availed themselves, for one reason or another, of the privilege which was extended to them of electing, by April 15, 1957, to come under the act as a self-employed individual. A number of other ministers had been mistakenly enrolled along with lay employees in certain church schools and similar organizations and were faced with the prospect of losing their social security coverage. The committee acted, in H. R. 8892, to afford these ministers a further opportunity to elect coverage and to insure that all those who desire coverage might obtain it. Another bill, H. R. 6191, extended the time in which the disability freeze provisions of the act could be made retroactive, which should be of material benefit to those of our citizens who have been unfortunate enough to become disabled. In this same bill the committee also took favorable action on a provision which eliminated from present law the so-called dual disability provision as it related to disability-insurance benefits insofar as veterans who were receiving service-connected disability compensation from the Veterans' Administration are concerned. This change in the law will permit veterans to draw both social security and veterans' disability benefits.

As indicated above, there were a variety of these miscellaneous bills, a total of 11, too numerous to outline here, which will be of very material benefit to our citizens. All of these social-security bills are now law or are awaiting signature by the President.

E. Customs and tariff legislation:

The Committee on Ways and Means has taken action on a number of bills with respect to customs and tariff matters. One bill of particular interest and which deserves mention here is H. R. 6006, the purpose of which is to amend the Antidumping Act of 1921 so as to provide for greater certainty, speed, and efficiency in the enforcement of that act. This legislation was based upon the report made to the Congress by the Treasury Department in accordance with section 5 of the Customs Simplification Act of 1956. The three principal features of this legislation are as follows:

First, it amends provisions of the act relative to the assessment of dumping duties to correct possible situations which may arise where sales at less than fair value and injury are found but where no duties can be collected; second, it amends certain definitions contained in the act so as to bring them into conformity with new definitions included in the Customs Simplification Act of 1956; and third, it provides for mandatory public notice when there is reason to believe or suspect sales of imported merchandise at dumping prices, and mandatory public notice by the Treasury Department and the Tariff Commission of their decision in dumping cases along with reasons therefor. This legislation embodies all the amendments which the Treasury Department was prepared to recommend to the committee at this time. However, the committee recognizes that many interested individuals and organizations have urged more basic amendments to the Antidumping Act, and the committee is continuing to study this act, along with other matters in this general field, with respect to the desirability and advisability for further legislation. This bill is now pending before the Senate Committee on Finance.

Another bill in the customs and tariff field which deserves some particular mention here is H. R. 6304, the purpose of which, as acted upon by the committee and as it passed the House of Representatives, was to make permanent the existing privilege of free importation of gifts from the members of the Armed Forces of the United States on duty abroad. The Senate amended this bill so as to extend this privilege for an additional 2-year period, and in that form is was agreed to by the House of Representatives and approved by the President. This legislation should be of particular interest to the members of the Armed Forces abroad in that, from a morale standpoint, it is extremely important to a serviceman on such duty to be able to send small gifts and souvenirs from the region in which he is serving to his family and friends in this country.

The Committee on Ways and Means acted favorably on a total of 13 bills in the field of customs and tariff matters and, although the majority of these bills properly could be classified as minor bills, they do provide benefits and helpful assistance to our citizens and our industries.

F. Studies and program for second session:

As I have indicated above, the Committee on Ways and Means and its subcommittees have under way studies and investigations which should be of material assistance in the further consideration of important legislation during the next session of this Congress. Due to the nature of the public bills falling within the jurisdiction of this committee, it is particularly necessary and advisable that the committee act with the utmost thoughtfulness and caution. The relationship of tax legislation, fiscal legislation, social-security legislation, and customs and tariff legislation to the economy of our Nation and the well-being of our citizens is obvious, and the committee has always taken cognizance of this fact. It could not act precipitously on legislation of this kind. I emphasize these matters because it underscores and gives emphasis to the significant studies which are under way particularly by the three subcommittees of the committee.

I have already announced that the Committee on Ways and Means, beginning next January 7, will conduct general revenue revision hearings. During the course of those hearings the committee will receive the views and comments of individuals and organizations with respect to our revenue system. In the meantime, the Subcommittee on Excise Taxes is continuing its work toward further technical and administrative changes, and, even more important, is making a study of our Federal excise tax structure and rates.

Let's Look at the Record

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PORTER. Mr. Speaker, the gentleman from Tennessee [Mr. REECE] has the audacity to state in the Appendix—pages A7206–A7207—August 27, 1957, that I have not given sufficient replies to questions he has asked me July 19 and August 9, 1957.

I invite any Member or other reader of the RECORD to read our respective statements and judge for himself.

I also point out that I have been very willing to debate these matters on the floor of the House, or elsewhere, whereas the intrepid gentleman from Tennessee confines his ill-informed sniping to insertions in the RECORD. I venture to hope he will eventually consent to pose his questions to me personally on the floor of this House, or elsewhere.

For the benefit of those who have not the time or facilities or disposition to read the previous exchanges, let me make these brief comments on the questions the gentleman lists in his August 29, 1957, insertion.

I adhere to my position that dictators should be overthrown and that I, along with most Americans, favor their being toppled by a revolution to bring justice and mercy back into government, peaceful revolution if possible.

As for what the Costa Rican newspapers reported, if the gentleman objects to any story I will be glad to confirm or deny its accuracy. But I see no point in burdening the RECORD with these clippings. However, the gentleman, or any other person, may see these clippings in my office. I never have refused anyone access, contrary to the gentleman's assertion.

The matter of the trip expenses paid by the Colombian newspaper, El Tiempo, and by the Costa Rican Government has been fully explained and justified in these pages. The Library of Congress has approved every aspect. We have a favorable official legal opinion. I have not, it is true, asked the Attorney General. Why does not the gentleman do this. It is time he consulted some lawyer on this question.

As for the military advantages of the dictator-run countries in Latin America, I am most willing to debate this issue with the gentleman. The real issue is what policies are most effective in fight-

ing international communism in Latin America.

I do not intend to embarrass any employees of the State Department by disclosing which of them favor an end to the "be soft to Latin American dictators" policy of Secretary Dulles and President Eisenhower.

As for the enthusiastic reception I received in Costa Rica, I point out to the gentleman that this was prior to my origination and introduction of an amendment to cut off aid to Nicaragua and other Latin American dictatorships.

As for the defeat (171 to 4) of the amendment in the House, I believe it was largely because it had had no committee hearings. I expect a better result next time.

If the gentleman cared to investigate even cursorily, he would find that I have consulted often with members of the House Foreign Affairs Committee and the State Department, and I shall continue to do so.

I have not been silent in the face of these questions, contrary to the gentleman's astounding assertion. It is the gentleman who shuns debate and ignores and neglects the most elementary factfinding.

I repeat my request that the gentleman agree to debate these issues in person, on the floor or elsewhere. Let us have and end to his timid hit-and-run unilateral insertions in the RECORD.

A Message from Hon. John W. McCormack, Member of Congress, Majority Leader, United States House of Representatives

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. ALBERT. Mr. Speaker, I desire to extend my remarks by including in the CONGRESSIONAL RECORD a message from the distinguished majority leader, Honorable JOHN W. MCCORMACK, which appears in the current Newsletter of the nationalities division of the Democratic National Committee:

A MESSAGE FROM HON. JOHN W. MCCORMACK, MEMBER OF CONGRESS, MAJORITY LEADER, UNITED STATES HOUSE OF REPRESENTATIVES

The enormous role which Americans of many diverse national heritages play in making our country great must be obvious to anyone who sits in Congress. During my 30 years of service in the House, I have known and worked with elected Representatives whose parentage brought to the United States the best from almost every corner of the globe.

Among our Democratic Members of Congress today there are Representatives whose families came within the last generation or two from Italy, Spain, Ireland, Poland, France, Germany, Austria, Belgium, Switzerland, Czechoslovakia, Yugoslavia, Norway, Sweden, and India. Among them are the chairmen of several of our most important committees.

The fact that these men have shown such qualities of statesmanship and patriotism as to cause their neighbors to elect them to our highest legislative body is by itself proof of the great contribution which immigrants have made to the United States.

Based on my observations, I wish to praise the work of the nationalities division of the Democratic National Committee. It is both important and necessary. The division helps Americans of recent parentage abroad to take a more active part in affairs of government, and thus to be better citizens. It helps all of us toward better understanding of our neighbors, and a fuller knowledge of each other's heritage. It stands for the Democratic Party's deep interest in the welfare of every man and women in the United States, and it represents the American spirit at its best.

A Threat to the Coal Industry

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JENNINGS. Mr. Speaker, last week the Special Subcommittee on Coal Reserves reported on its findings after 15 months of study. The recommendations of this subcommittee were of particular interest to the coal-producing region of Virginia, for it was here that one phase of the study was conducted.

At my request, the Subcommittee on Coal Research held hearings at Abingdon, Va. It was my privilege to testify at this hearing and to arrange for the appearance of representatives of coal management, of the United Mine Workers of America, and of transportation officials as well as executives of large consuming industries.

Mr. Speaker, it is not my intention to review the report of the Special Subcommittee on Coal Research at this time, except as it may pertain to the overall fuels situation in this country. With the approach of adjournment, I feel impelled to protest attempts to import natural gas into this country when such vast amounts of bituminous coal, anthracite, and lignite, as well as domestic oil and gas, are available. To this extent I am pleased at the opportunity of quoting the special subcommittee's report and recommendations.

The subcommittee observes that the estimated recoverable coal reserves of the continental United States are of such magnitude that they would last for 1,900 years or more at the present rate of coal consumption. It points out that this enormous quantity would be sufficient to cover an area the size of the Commonwealth of Virginia with a solid layer of unbroken coal approximately 41 feet thick.

Virginia, home of the first commercial mine in the western hemisphere, has produced more than 600 million tons of coal since that first mine went into operation in 1745. Despite this vast output, however, there are still more than 5 billion tons of recoverable coal remaining, or 8 times more than the total amount extracted in the past two centuries.

Coal is an important business in the western portion of the Commonwealth of Virginia. It also has an important bearing on the economy of most of the other areas of our State. The millions of tons of coal that roll each year from the mines of Virginia and West Virginia into the great docks of Hampton Roads find employment for thousands of railroad workers throughout the length of the State. Last year 42,197,191 tons went through Hampton Roads en route to Europe and the rest of the world, with additional tonnages tranferred there for water shipment to New York and New England.

Virginia is also an important consumer of bituminous coal. In addition to that which is used for home heating, more than 3,993,000 tons were consumed in our electric-generating stations in 1956. I should like to mention parenthetically that steam-electric powerplants in Virginia in 1956 had a total installed capacity of 1,587,900 kilowatts. Another 483,000 kilowatts of capacity will be available in plants now under construction that will be completed in 1957. For 1958 another 770,000 kilowatts will be available with 160,000 to be added in 1959 and a like amount in 1960. Thus the capacity of steam-electric generating stations is scheduled to double in less than 5 years, as contrasted with an estimated increase of about 50 percent for the country as a whole in the same period. These figures were compiled under the direction of William L. Kurtz, of the National Coal Association's department of coal economics, and were published this week. Other important customers include the chemical industry, the cement industry, textile mills, and a variety of other industrial and manufacturing plants.

I concur with this appraisal of the coal industry's position as reported by the subcommittee on coal research:

The development of this great resource and revival of this industry should be a national undertaking of the highest priority.

Mr. Speaker, it is my hope that the major recommendations of the subcommittee will be adopted through legislation by Congress early next year. It is a most important assignment, for it will be a contribution to the welfare of the entire Nation as well as to coal-producing regions. Meanwhile, any program to bring in foreign fuels in direct competition to the coal industry would be a direct contradiction to the program recommended by the subcommittee.

We do not need foreign gas in our Midwestern States any more than we need foreign peanuts in Virginia or anywhere else in America. I have been disturbed at the suggestion that the Federal Power Commission allow Canadian gas to enter the fuel markets of this coal-rich Nation. I know that any time a foreign fuel usurps coal's markets anywhere east of the Mississippi River, the impact will eventually extend right into the homes of my constitutents. Whenever there is excess coal production, the entire industry suffers. Even if that were not the case, however, opening domestic fuel markets to an alien product

would certainly be unfair to members of the United Mine Workers of America in the affected areas. For that reason I am hoping that my colleagues from all sections of the country will join in denouncing the plan to put Americans out of work. It is a matter now before the Federal Power Commission, and I trust that the decision of that Government agency will dispose of the case to the satisfaction of our workers. Meanwhile it is a matter which requires the close attention of all Members of Congress.

Let's Look at the Record

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. RAY. Mr. Speaker, in recent weeks we have heard and read many criticisms of certain decisions of the Supreme Court, and even of the Court itself and its members. Some of those criticisms have been careful and thoughtful; others have been hasty and intemperate. Most reflect dissatisfaction and concern over the results of the decisions. Only a few rest upon an analysis of the issues, the law and the facts which were before the Court and upon which its decision in each case was based.

There are 13 decisions subsequent to the school segregation case—1954—about which Members of this House have been especially critical.

Six of those decisions must be attributed to ommissions or defective action on the part of Congress. Another, the Jencks case, involved unwise tactics by the prosecution in a criminal case in a Federal court—and 2, Kremen and Zucca, involved improper actions of 2 bureaus of the Department of Justice.

Among the six are the Stevens case, the Watkins case and the Mallory case. In the Stevens case the Court found that certain laws enacted by Congress established a congressional intent to occupy the field of prosecution for acts in violation of the Federal antisedition law and, therefore, that violation of that law could not be prosecuted by a State in its courts. Corrective legislation—H. R. 3—has been introduced and is pending before our Judiciary Committee. A similar bill was reported favorably by the Judiciary Committee last year but was not acted upon by the Rules Committee.

The Watkins case merely held that we had not extended to the House Un-American Activities Committee the authority to carry on some of the investigations that committee had undertaken. It is well recognized and has long been established that a delegation of legislative authority must state a clear and definite rule or principle within which the agency can act. Here again the remedy is clear and it is in our hands.

The Mallorey case construed one of the rules of procedure in Federal courts. That decision relied upon and followed the Dennison case decided 6 years ago. Congress has had ample time to bring about a change in the rule of procedure.

The Jencks case is quite different from the three just mentioned. Here the Court applied another long-established rule that if a prosecutor relies upon the testimony of a witness who had made an earlier report on the facts about which he testified, that report must be made available to the defense, or in the alternative, the testimony of that witness must be stricken from the record.

The Jencks, Kremen, and Zucca results can be avoided in the future by adequate action in the department concerned.

The other four—Slochower, Schware, Konigsberg, and Sweezy—involve whether or not State and local laws and administration were in conflict with the Constitution of the United States. Remedial action if desired lies with State and local authorities.

I submit that we in Congress should not try to hold the Supreme Court responsible for results due to our own shortcomings in legislating or to the actions of officials in the administration. And it must be kept in mind that as time goes on without our taking remedial action, it is the Congress and not the Court which has the responsibility for continuing in effect the law as found by the Court.

World's Fair of Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POLK. Mr. Speaker, the world's conservation exposition and plowing contests to be held at Peebles, Ohio, September 17 to 20 of this year, are of sufficient importance to be known as the World's Fair of Agriculture. I am glad to submit the following information for the RECORD:

THE 1957 WORLD'S CONSERVATION EXPOSITION AND PLOWING CONTESTS, INC., SEPTEMBER 17, 18, 19, 20, PEEBLES, OHIO

BACKGROUND

This is the fifth world's plowing contest—the first ever held on American soil. This is the largest, onetime, all-inclusive agricultural event ever held in the United States. Previous contests have been held in Canada, North Ireland, Sweden, and England. Preparations already are underway for future contests scheduled in Germany, North Ireland, France, and the Netherlands. This is the world's fair of agriculture.

WORLD PLOWING ORGANIZATION

The executive committee directing this group is composed of agricultural leaders from 14 countries. General secretary is Alfred Hall, London, England.

WORLD PLOWING ORGANIZATION

Two-man plowing teams representing 14 countries will compete for the world plowing championship, September 19–20. Countries entering teams in this competitive event are: Belgium, Canada, Denmark, Finland, Great Britain, Holland, Italy, New Zealand, North Ireland, Norway, Sweden, United States, and West Germany. Each of these teams won the national event in their own country to qualify for the world contest. The 1957 world champion will be announced at the master plowmen's banquet in the Peebles High School Friday evening, September 20.

NATIONAL PLOWING MATCHES

The United States "world series" of agriculture will bring together champion plowmen from approximately 15 States in the national contests, September 18. The winners of this event will represent the United States in the 1958 world contests to be held in Germany.

OHIO STATE PLOWING ELIMINATIONS

The 1957 county plowing champions from Ohio will compete September 17 for the State championship. The winners automatically will participate in the national matches the following day.

EXECUTIVE COMMITTEE

The committee directing the State, national and world competitions this year at Peebles is composed of: Earl DeVore, Winchester, Ohio, dairyman, general chairman; Bob Miller, WLW farm program director, Cincinnati, and Bob Barre, area soil conservationist, Hillsboro, Ohio, cochairmen.

SITE

Local, State and national soil conservation technicians have been working for the past 3 years with 16 farmers in preparing the 2,500-acre site. Visitors will see the utimate in soil conservation practices which apply to this particular terrain. The 2,500 acres have been loaned by the 16 cooperating farmers interested in hosting the world event.

GOLDEN PLOW AND CAIRN OF PEACE

A Cairn of Peace (a permanent monument composed mostly of native stone, but including a stone from each of the competing countries) will be dedicated at 3 p. m., September 19. This cairn is the fifth in a series of permanent monuments which stand as a landmark at the site of each world plowing contest. The cairn is topped by a golden plow, emblematic of superiority in the art of plowmanship. A miniature golden plow will be presented to the world champion plowman.

EXHIBITS

More than 100 acres will be devoted to educational and commercial exhibits. The educational exhibits will feature proper utilization of natural resources through proper land and livestock management. Commercial exhibits will be highlighted by more than a million dollars' worth of farm machinery on display.

SPECIAL EVENTS

In addition to the competitive events, daily features will include appearances by the world-famous 102-piece United States Army Field Band, the Queen of the Furrow, and radio and television stars; also, a complete women's program, featuring a fashion show, with New York and area models; 40 top border collies (first 3 days) in the supreme championship trials.

FACILITIES

Free parking areas will accommodate 33,000 cars at one time. Free 10-minute transportation from parking areas to exposition site. Continuous free wagon tours over a 4½-mile route. A 3,000-foot airstrip capable of handling DC–3's. More than 20 food concessions (approved by State health authorities). All roads leading into the area have been widened and resurfaced. Traffic-control plan designed to eliminate any cross traffic within the site area.

ADMISSION

In keeping with tradition of American field days, no charge will be made September 17–18. In keeping with the past established tradition of the world event, a 50-cent admis-

sion charge to those over 18 will be made September 19–20.

PRESS FACILITIES

A press tent will be in operation starting September 16 and continuing through September 20. Typewriters, tape recorders, and cameras will be available (we ask that you bring your own tapes and film holders). There will be a number of attended pay telephones in the vicinity of the press tent. There will be Western Union wire circuits in operation.

Statement Concerning the Activities of the Committee on Merchant Marine and Fisheries, House of Representatives, 1st Session, 85th Congress

EXTENSION OF REMARKS
OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BONNER. Mr. Speaker, I submit the following report of activities of the Committee on Merchant Marine and Fisheries, of which I am chairman, for the 1st session of the 85th Congress. The report is brief, but I expect that, in accordance with past customs, a full and complete account of committee activities will be submitted at the close of the Congress next year.

During the year, a great part of the time of the committee was devoted to basic studies of matters within the jurisdiction of the committee, preliminary to consideration of specific legislation during the second session. Some of the problems under consideration involved safety legislation for small pleasure boats, and late in the session bills were introduced for action next year. As a part of its work in this field and in furtherance of its aim to report a simple and effective means of control for the over 4 million small boats in the country which are presently unregulated, the committee distributed to the governors and attorneys general of the States and Territories copies of the bills with a request for their cooperation in achieving a workable uniform law for State and Federal cooperation in the field of boating safety. In addition, the Council of State Governments has placed this subject on the agenda for its next meeting in Washington on September 5 and 6, 1957.

In a related field, the committee considered 18 bills involving Public Law 519, of the 84th Congress, which extended Coast Guard jurisdiction over boats for hire which carry 6 or more persons. The law, as originally enacted, would have subjected such boats to regulation on January 1, 1958, but a number of Members of Congress were of the opinion that the date did not provide sufficient time for understanding of and compliance with Coast Guard regulations. After study and hearing, the committee concluded that additional time should be afforded, and accordingly reported a bill extending the deadline to June 1, 1958. That bill is now awaiting action by the President.

In the field of merchant marine activity, the committee placed emphasis on its studies of basic problems, rather than immediate legislation. Probably the most serious problem confronting the merchant marine is the possibility of a diminution in its importance in the field of national defense. New strategic concepts, with their emphasis on air power and missiles and the belief that any future war will be of very short duration, have induced the belief in some quarters that the supply problems of the past, which could only be met by the merchant marine, will not exist. In an effort to determine whether such ideas had any support among those charged with the responsibility for the safety of our Nation, the committee called the Secretary of the Navy and the Secretary of Commerce to testify regarding the attitude of the administration. Their testimony, together with that of the many other witnesses who appeared, is presently under study by the committee, and will be the subject of a separate report to the House.

Primarily, as a result of the work of the committee in the previous Congress, substantial progress can be reported in the modernization of our merchant marine. As a result of the encouragement of the committee, the Maritime Administration revised its policy on operating subsidy contracts to increase their duration to 20 years. This was necessary to provide assurance of continued subsidy to the operators who were faced with the necessity of replacing their aging fleets with new ships at great cost. One company, Lykes Bros. Steamship Co., has entered into a contract to build 53 ships at a cost of half a billion dollars. Another, States Steamship Co., has undertaken the obligation of building 13 ships at a cost of $150 million. On Wednesday of this week Grace Line launched the Steamship *Santa Rosa* to replace a 25-year-old combination vessel of the same name. Another similar vessel is presently under construction, and these two constitute the start of a $286 million construction program to include 9 passenger-cargo vessels and 15 freighters. In addition, the Maritime Administration is in the process of soliciting bids and awarding contracts for over 15 ships for operation on essential trade routes.

The encouragement and the work of the committee over the past few years is reflected not only in the future prospect of a completely new and modern merchant marine under the American flag, but in the present activity in our shipyards. Only a short time ago the committee became aware of the dangerously low rate of activity in the shipyards, with the resulting low employment and the loss of shipbuilding skills so necessary to the welfare of our country in wartime. There was evidence of deterioration of our tramp fleet, with no prospect of replacement of its aging ships because of the lack of prospect of continued business and the consequent inability to secure financing of new construction. Ships were being laid up for lack of cargo because of foreign competition by newer ships at lower rates. Extended hearings produced a record in which representatives of Government, labor, ship operators, and investment experts contributed their ideas.

Ultimately, the situation was attacked on two fronts. The first involved assurance of more cargo for American ships. This was accomplished by requiring the shipment of not less than one-half of cargoes in which the United States Government had an interest on American ships—the so-called 50–50 law. While previous separate bills had contained such a provision, there had been no permanent requirement, and thus no assurance of future business. As a result of this law, some degree of stability is guaranteed American-flag ships.

The other goal—that of securing new construction to protect our defense stake in the shipyards and to keep us competitive in the field of ocean trading—was achieved through a combination of administrative action and legislation. As to the former, the Maritime Administration tightened its rules covering transfers of ships to foreign flags by instituting a requirement that for each transfer, equivalent ships must be built in American yards for operation under the American flag. By this action, shipowners were able to secure a part of the capital necessary to build new ships, shipyards received much needed business, and assurance was secured that our fleet would contain new ships designed to meet the needs of our commerce and defense.

The other problem urgently requiring action was the ever recurring need for financing of new construction. In the United States, ocean shipping has never been regarded as a prime investment. With the cost of new ships far above their present ones, shipowners were not in a position to think about securing financing of replacements. After long study, the committee evolved the bills which amended the Merchant Marine Act to provide for Government guaranty of private mortgages on ships, and has continued its activities to amend the basic legislation as experience required. The effect of this approach was, for the first time, to make ships attractive as investments for private capital. The result has been a substantial contribution to present shipbuilding activity, and a prospect of future expansion of our American-flag fleet.

For some time the committee has been concerned over the failure of the United States to keep abreast of other maritime nations in the field of passenger vessels. Such vessels have been vital as troop carriers, and they are essential to maintain American-flag service during peacetime. In an effort to meet the need for such vessels to some degree, bills have been introduced by the chairman and other members of the committee to authorize the construction of a ship similar to the steamship *United States*, to replace the steamship *America*, and a new 1,400 passenger vessel for operation in the Pacific. Hearings on both of these will be scheduled early in the next session, and early action by the committee is assured.

The collision of the motor vessel *Stockholm* and the steamship *Andrea Doria* off Nantucket Island on the night of July 25, 1956, and the sinking of the latter with

a loss of 50 lives, focused the attention of the world on the subject of safety of life at sea. Pursuant to authority granted by the House, the committee undertook a staff investigation by a group of experts of the collision to determine what lessons could be learned and applied to minimize the consequences of such happenings in the future. The result of their study was embodied in House Report No. 2969, 84th Congress, which recommended certain actions by various agencies of the Government. To determine what progress had been made in carrying out the recommendations contained in the report, a hearing was held late in this session to receive progress reports. As a result of this hearing a report—House Report No. 1179—was made by this committee, with recommendations that prompt steps be taken to secure international action to consider the necessity for raising standards of safety.

Another matter that was the subject of extended hearings by the committee was that of utilization of private terminal facilities by the Armed Forces to a greater degree than at present. Although the bill which gave rise to the hearings was not acted on, it is expected that further action will be taken in the course of the next session.

Within the sphere of its jurisdiction over fisheries and wildlife, the activity of the committee ranged from consideration and action upon bills affecting control over the salmon fisheries in the Northwest and Alaska, to protection of commercial fishermen in the Caribbean Sea and Pacific Ocean. The necessity for action in the latter field arose from the fact that there is no international agreement as to the offshore limits of territorial waters, and the distances claimed range from 3 miles by the United States to 200 miles claimed by Peru. United States fishermen conducting their activities in waters claimed by some maritime nations have bene subjected to seizure of equipment, detention, fines and, in two cases at least, bodily injury from shots fired in the course of seizure. In 1954, Public Law 680 was enacted, which authorized the State Department to reimburse fishermen for fines illegally collected by foreign nations. However, the losses suffered were considerably greater than the fines, and legislation was introduced to include reimbursement for these items. As a result of hearings, a bill was reported to provide reimbursement for loss of fishing gear and personal injury to citizen crew members.

In the field of migratory wildfowl, there has been criticism for a number of years over the disposition of proceeds of duck stamp sales. At the time of the enactment of the original legislation requiring the purchase of stamps by hunters, it was believed that the proceeds of the sales would be devoted chiefly to the acquisition of badly needed additional wildfowl refuge lands. However, over the course of years, the Department of the Interior has utilized by far the greater portion of money derived from that source for other purposes, and the acquisition program has suffered. In an attempt to correct the situation, a number of bills were introduced and considered by the committee which would earmark the proceeds of the duck stamps for refuge acquisition. During the course of hearings, bills were introduced to meet objections made by those interested in the problem, and at present the committee has before it a bill believed to implement the original purpose of the early legislation which has the endorsement of a large proportion of the sportsmen of the country, and on which final action will be taken early in the next session.

Early in this session the committee received a graphic illustration of the problem of inflation facing the country. During the 84th Congress Public Law 251 was enacted which authorized the construction of two new vessels for the Coast and Geodetic Survey at a cost of $3,700,000 each. When bids for their construction were received, it appeared that an additional $300,000 per vessel would be required, and the necessary authorization bill was reported by the committee and subsequently enacted into law.

In the field of activity touching the Panama Canal, the committee was confronted with the necessity of acting on legislation to implement the new treaty made with the Republic of Panama in 1955, covering the transfer of some $24 million of land and buildings to be transferred to the Republic, and the necessary authorization of expense for replacement of transferred facilities within the Canal Zone. Authorization of the transfer was favorably reported by the committee, but some of the remaining problems of the impact of the treaty upon the Panama Canal Co. remain to be considered during the next session.

Present calculations indicate that the Panama Canal will be utilized to its fullest capacity not later than 12 to 15 years hence. In view of the time required to locate, plan and construct additional facilities, the committee is undertaking to recruit a staff of experts in the engineering and transportation fields to evaluate existing data to determine the proper location, type and extent of additional means for transit between the Atlantic and Pacific Oceans in the region of Central America. It is planned that the result of their efforts will be reported to the House for its guidance in considering necessary legislation to augment the present canal facilities.

In addition to the work of the staff, a number of subcommittees plan to engage in studies of matters within their jurisdiction in preparation for action on legislation during the next session of this Congress.

During the 84th Congress, legislation was enacted to effect a reorganization of the Fish and Wildlife Service of the Department of the Interior to establish an assistant secretaryship within the Department and to separate the commercial fisheries jurisdiction from that of sport fisheries and wildlife. During the present session it appeared that the reorganized Service planned very considerable increases in the number of regional offices and personnel theretofore existing. The committee has been studying the situation for the purpose of seeing that the personnel increase was kept at a minimum, consistent with the proper functioning of the Fish and Wildlife Service, and plans to continue its work in this field during the recess. In this connection, the chairman has agreed with the Assistant Secretary of the Interior for Fisheries and Wildlife that there will be no increases in personnel and no vacancies will be filled until the committee has had opportunity at the beginning of the second session to hear from responsible officials as to the need for any increase.

Virginia Tanner Choice of Woman's Ad Club

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. BLITCH. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article entitled "Woman of the Year—Virginia Tanner Choice of Woman's Ad Club."

Miss Tanner and I were classmates in Douglas, Ga., and I have followed her career with keen interest. In my opinion, she is most deserving of this fine tribute paid her by the Woman's Advertising Club of Baltimore. I am exceedingly proud of her accomplishments in the field of advertising, and wish to share this fine article concerning Miss Tanner with my colleagues.

The article follows:

WOMAN OF THE YEAR—VIRGINIA TANNER CHOICE OF WOMAN'S AD CLUB

(By Virginia Tracy)

Baltimore has Georgia to thank for some delightful additions to its population.

One of them has just been named "woman of the year" by the Woman's Advertising Club of Baltimore and, as a result, has become a candidate for national honors.

She's the comely, capable and charming southerner, who edits the Baltimore & Ohio magazine, the first woman to become editor of a railroad magazine in the country and the first woman editor to become president of the American Railway Magazine Editors Association—oldest and most colorful industrial editing association in the Nation.

Virginia Tanner is a native of Douglas, only child of the late Melvin Tanner, for many years superintendent of schools in Coffee County, and Mrs. Tanner, the former Miss Kate Norman, who was a schoolteacher in Georgia.

TAUGHT FOR A YEAR

Their daughter, too, had a brief fling at teaching. After receiving her bachelor of arts degree from the Georgia State College for Women at Milledgeville, Miss Tanner taught for a year at Waycross, Ga., and then joined the staff of the Waycross Journal Herald. She has studied journalism at college, where she was active on the paper, and later had attended the Columbia University School of Journalism.

Virginia has written articles for the Atlanta Journal magazine, the New York Times magazine, and the Sunday Sun magazine, and when she first came to Baltimore was associated with an advertising agency engaged in writing radio scripts.

Though she tries "not to be a professional southerner," this Georgia Baptist is senti-

mental about her homeland. She loves its people, its warmth and friendliness, its traditions and culture. Her home in Douglas stands near the Swanee River on whose banks a handsome museum has been erected to honor the memory of Stephen Foster.

LOVED THE TOBACCO MARTS

When she was a little girl, she loved to be taken to the sprawling tobacco warehouses where she listened entranced to the chant of the auctioneer. Douglas is in the heart of the tobacco country, one of the largest tobacco markets in the South, and is located not far from Sea Island, Ga., where she spent many happy weekend vacations.

Like Margaret Mitchell, she, too, had a grandmother who remembered Sherman's march through Georgia and who marveled at the accuracy of the details in her book. Virginia was in Atlanta for the premiere of Gone With the Wind, the most momentous occasion in the city's history—since the Yankee general's tragic trek.

Miss Tanner is still active in her high-school alumni in Douglas and in her college alumnae in Milledgeville, where she was president of the student body in her senior year. Milledgeville was the first capital of the State of Georgia and its beautiful homes were spared by Sherman. The president of her alma mater lives in the house that was the Governor's mansion in the antebellum era.

But business and pleasure have taken Virginia to many other parts of the world. She loves to travel and she has not only visited every section of America, but has been in Mexico, Canada, and the Caribbean.

ENCHANTED WITH FRANCE

Last summer she toured Europe for the first time and was so enchanted with Paris that she is now studying conversational French in preparation for another trip to France.

Her sole pet is a little black cocker spaniel named Ginger, who lives with Mrs. Tanner and Virginia at the Geneva Apartments. In art, her tastes run to the works of the French impressionists. In literature, she lists Thomas Wolfe and Ralph Waldo Emerson among her favorite authors.

Other likes include the Democratic Party, Adlai Stevenson, Edward R. Murrow, and Ethel Merman. Virginia is a great believer in the United Nations, and in cultural exchanges among the countries of the world. She has a great yen to drive a sports car. Her favorite color is blue. It matches her eyes. She not only wears a lot of blue but likes to have it around her with touches of gold. Interior decoration is a hobby.

In selecting Miss Tanner for woman of the year, the Woman's Ad Club took into consideration her many accomplishments in a field that is still pretty definitely a man's world.

MEMORABLE EXPERIENCES

As assistant director of public relations in charge of publications of the Baltimore & Ohio Railroad, Virginia has had some memorable experiences that range from sharing a diesel locomotive ride with Van Johnson during a Hollywood-to-Washington migration of cinema folk for the Capitol's March of Dimes ball, to interviewing President Truman and Winston Churchill on their way to Fulton, Mo., where the great Briton delivered his famous Iron Curtain speech.

Baltimore's nominee for woman of the year, who occupies the highest position held by a woman in railroad public relations in the land, was instrumental in developing the enormously popular historic-trains fabric, now being shown in department stores and interior decorating shops from coast to coast, depicting in color copies of authentic locomotives in the Baltimore & Ohio's famed museum.

The fabric was on display in London at Eastertime when the city's large model train builder's associaton staged its annual spring show.

Displays are also being arranged for Holland, France, and Norway. And the project is still growing, with sport shirt, apron, and Christmas wrapping paper manufacturers seeking rights of reproduction, and, incidentally, of reminding the public of America's first railroad.

Commentary: To Congress a Platypus Is Born

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CRAMER. Mr. Speaker, many words have been uttered on the confusion and contradiction of civil-rights legislation as passed by this Congress. I have opposed all of the bills to come before the House on the basis they are highly discriminatory against the South, through denying trial by jury and interference with States rights. The Tampa Sunday Tribune of August 25, 1957, published in the First District of Florida, made an intriguing comparison of the many stages of growth and resulting wording of this bill. I include it in the RECORD so that all might read this interesting comment:

Looking over the latest and final compromise bill on civil rights, we are convinced that Congress and Mother Nature have at least one thing in common: both can give birth in moments of stress or caprice to strange hybrids unlike anything else in the biological (or political) kingdom.

The House has crossbred Democratic and Republican versions of the so-called jury trial amendment, and come up with a design historians may describe as the duckbilled platypus of American jurisprudence. The platypus is somewhat duck and somewhat mammal. The new compromise is somewhat trial-by-jury and somewhat trial-by-judge, with fur and feathers haphazardly intermingled.

As we get it, the compromise would work like this in the enforcement of voting rights:

If a person is accused of criminal contempt for violating a judge's order, the court can decide whether to permit or deny a jury trial.

In either case, the top penalty would be 6 months' imprisonment and $1,000 fine.

But if the judge tried it himself, and imposed more than 45 days and $300, then the defendant could ask that his case be tried again and this time by jury.

This may well prove the oddest judicial design ever written into the criminal law. If a defendant doesn't like his sentence, he can make the court do it all over again.

Yet it is but slightly more bizarre than the first "compromise" which the Republicans unveiled a couple of days earlier with great fanfare.

Under this offering, a choice was up to the judge. He could have jailed a man without trial for not more than 90 days, or he could have called a jury trial with a maximum penalty of 180 days.

In other words, the judge would have determined the penalty ahead of the verdict. Before the evidence was heard, the judge would have been forced to decide if the defendant was merely moderately and academically contemptuous or guilty of revolving, freewheeling contempt. This, too, was an ingenious plan; we have long labored under the idea the sentence came last.

This first, or Republican, compromise was a transparent plan to try and put the Republican label back on the bill which Senator Lyndon Johnson and his Democrats had put through the Senate. Democrats didn't take it. The last plan, the compromised compromise, is probably acceptable to majorities in both Houses because both Democrats and Republicans will be able to claim the bill as theirs.

Why Arkansas Needs Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HAYS of Arkansas. Mr. Speaker, there has been much discussion about the pros and cons of Federal aid for school construction in Arkansas, and I should like to give my reasons for supporting the legislation proposed to the House this session. The newspapers in my district have taken different positions on this issue and I appreciate the encouragement given me by some of them. I do not mean to disparage the arguments made by those newspapers opposed to Federal aid, however, but rather would like to point out to them why I believe Arkansas would benefit from the kind of program which was defeated in the House by the narrow margin of 203 to 208. And, Mr. Speaker, many other States are confronted by similar conditions. In a recent editorial, John F. Wells, of the Arkansas Recorder, published an open letter asking my colleague Mr. TRIMBLE and myself some pertinent questions about this issue. Under leave to extend my remarks, I include this editorial and my answers, which were also published in the Recorder, as follows:

A LETTER TO TWO CONGRESSMEN

AUGUST 2, 1957.

Hon. JIM TRIMBLE,
Hon. BROOKS HAYS,
House Office Building,
Washington, D. C.

GENTLEMEN: We note that, with resultant applause from the Arkansas Gazette in which the Recorder cannot join, you voted for the amended (to penalize districts with segregated schools) Federal aid for education bill.

It is a foot-in-the-door proposal, as we see it, with the National Government offering school districts money, collected in the first instance from the people and returned to them after great chunks have been carved out for the support of bureaucracy.

Because we are fond of both of you personally, we want to give you ample opportunity to convince us, and others who may share our antipathy for the Federal aid legislation, that you are right and we are wrong.

Would you mind answering these questions?

1. Which school districts—identify them—in all the counties where the taxpayers vote for you biennially are in need of the Federal construction money that the defeated bill would have provided?

2. Who in your respective districts has urged passage of the bill? (We don't ask you to supply names of individuals, but would appreciate your listing organizations.)

3. What organizations in your respective districts are on record as opposed to the legislation?

4. What would be the source of the Federal money? Are current tax revenues adequate to provide it?

5. Would not such an appropriation tend to be inflationary?

It is not our purpose to heckle you. We do not question your sincerity, and we don't want to be in the attitude of criticizing without opening our columns to you for a full and frank discussion from your points of view.

Respectfully,

THE ARKANSAS RECORDER.

AUGUST 8, 1957.

Mr. JOHN F. WELLS,
Arkansas Recorder, Little Rock, Ark.

DEAR JOHN: I appreciate your giving me an opportunity to present my reasons for supporting Federal aid for school construction. I am sorry that you cannot agree with me that this is a necessary program to provide for the adequate education of our children. It is designed as a temporary crash program to help the States provide about 170,000 additional classrooms, the present deficit. No Federal controls are involved in this effort to aid the States to meet their primary responsibility for public education. I cannot agree with you that it is a foot-in-the-door proposal to gain Federal domination, because all the necessary safeguards against such a possibility were written into the bill and, in any event, the whole program terminates in 5 years. As for the State of Arkansas paying for this assistance with its own Federal tax money, you might be interested to know that Arkansas would get much more money back than it paid into the Federal Treasury and has everything to gain financially from this assistance—Arkansas would contribute about $1,500,000 of the $300 million spent yearly and get back $5,292,000. This expenditure is also in the national interest because the rest of the country has a vital stake in the education of Arkansas citizens, many of whom will spend their adult lives in other parts of the country.

The vote you criticize was against a motion to strike the enacting clause, a move that would have killed every chance for Federal assistance for school construction. Adoption of that motion denied the House the opportunity of voting on the pending amendment offered by Congressman AYRES to replace the Kelley bill with the administration proposal. The Ayres amendment would have killed the nonsegregation amendment. Thus my vote was designed to enable the House to approve the Ayres substitute.

As for your specific questions, I should like to answer them briefly as follows:

1. Just about every county in my district and most of the counties of the State need money to build additional classrooms. The State is taxing the people to the limit and no further burdens should be imposed until some Federal contribution is made.

2 and 3. While several organization have contacted me who are either for or against the legislation, the letters I have received from individuals lead me to believe that an overwhelming majority of the people in the district are for Federal aid for school construction.

4. As I have already pointed out, the Federal revenues from taxes that Arkansas would pay for this school aid are much less than the money Arkansas would receive. Current national tax revenues are more than adequate to meet the cost of this program, which was included in the President's budget, a budget that envisages a $3 billion or $4 billion surplus. I have been aware all along of my duty to the taxpayers of other States and have opposed the spray-gun type of distribution of Federal funds. I was one of only nine Democrats who supported the need formula in the last Congress similar to the Ayres amendment mentioned above.

5. This appropriation would be no more inflationary than current Federal expenditures for roads, housing, social security, or any other Federal grant program.

Thanks for your invitation to submit this statement, and I hope you will find the information useful in your continued analysis of this problem.

Sincerely yours,

BROOKS HAYS.

The Statue of Liberty Speaks

EXTENSION OF REMARKS
OF
HON. L. H. FOUNTAIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FOUNTAIN. Mr. Speaker, a very fine constituent of mine, Mrs. Joyce H. Shearin, of Roanoke Rapids, N. C., has composed, and received a copyright for, a very unusual and inspiring meditation entitled "The Statue of Liberty Speaks." Mrs. Shearin has put her heart and her soul into its words. Her composition deserves recognition, and every freedom-loving believer in a Divine Being should have the opportunity of reading, hearing, and using it on appropriate occasions.

In this hour the world is in a turmoil. The redemption for mankind is being worked out in many mysterious ways. There is an urgent necessity for us to recognize the sovereignty of Almighty God—and recognizing it—to call upon Him for more faith, for a better understanding of His magnificent purpose in our lives and for a greater courage to fulfill the many tasks He has committed to us.

As a constant reminder of these truths, and in recognition of a fine piece of work, under leave to extend my remarks I am very happy to include below Mrs. Shearin's meditation, which she has dedicated to Mr. J. C. Shearin and J. C. Shearin, Jr.:

THE STATUE OF LIBERTY SPEAKS

(A meditation by Joyce H. Shearin, Roanoke Rapids, N. C.)

(Character: The Statue of Liberty wearing authentic costume.)

(Introduction: I direct your attention to the Statue of Liberty, who, today, reigns supremely on Bedloe Island, in New York Harbor. We shall be privileged to hear her thoughts concerning America, its people, and all humanity, as she speaks to our Heavenly Father.)

(Patriotic music—chorus, organ or orchestra—is heard in the background as curtain rises. A medley continues as indicated in margin. On stage, the Statue of Liberty is standing immovable, posed identical to the original statue. She slowly comes to life. Music becomes softer. Miss Liberty begins to speak reverently to God.)

FAITH OF OUR FATHERS

STATUE OF LIBERTY. I am thankful, O Heavenly Father, that I, like all Thy people throughout the world, am privileged to come into Thy presence. The brave leaders of this country—Washington, Lincoln, Lee, and others—prayed for Thy guidance and were fortified by Thy strength. And so it is with me. Each time that I come to Thee I am fortified by Thy strength, and my light shines brighter upon all the land.

I humbly beseech Thee to help me hold fast this torch which perpetually gleams with the light of liberty—a beacon of hope for the world.

MARSEILLAISE HYMN

I thank Thee today as I have each day for 72 years (to be changed according to time—dating from 1884) for having been chosen to represent liberty. It was a memorable day in 1884 when the citizens of France presented me to the United States as a symbol of liberty and brotherhood which are mutually enjoyed under a free form of government.

I am thankful, too, Father, that liberty is represented as a proud woman, for all ages and for all people, dressed in a simple robe which falls in graceful folds to the pedestal upon which I stand.

BATTLE HYMN OF THE REPUBLIC

And this tablet which I hold so firmly here in my left arm: May the people of this land have a fuller appreciation of the treasure inscribed upon it—the date of the Declaration of Independence. I thank Thee for this tablet, because it keeps me mindful of the struggles of the patriotic forefathers of this country who sacrificed their lives and fortunes for freedom; and the heartaches of those who more recently have given their best—their lives and loved ones—for the preservation of our American heritage. Let no one neglect the responsibilities of maintaining liberty.

COLUMBIA THE GEM OF THE OCEAN

Let every person remember, Father, that in the begining this country was founded on a belief in God; that its citizens are members of a magnificent Democratic organization—the United States Government—whose principles are based on the existence of a supreme being, these principles being declared on that never-to-be-forgotten day, July 4, in the year of our Lord 1776.

This country was born under God, and only under God will it live as a citadel of freedom. Even as the great Liberty Bell in 1776 rang out the glad tidings of the Declaration of Independence, it sang of Thee. The inscription engraved upon it is from Thy guiding book: "Proclaim liberty throughout all the land unto all the inhabitants thereof." So, it is now as it should be—that as allegiance is pledged to this country the people say: "I pledge allegiance to the flag of the United States of American and to the Republic for which it stands, one nation, under God, indivisible, with liberty and justice for all."

AMERICA THE BEAUTIFUL

Even the smallest coins of this country are a reminder that it is "In God We Trust." Let no one forget that free people who put their trust in God are the greatest people. They demand that life, liberty, and the pursuit of happiness be made available to everyone, regardless of race, creed, or color. I am constantly aware of this, for here at my feet lies the broken chain of oppression and bondage, struck from enslaved people.

MY COUNTRY 'TIS OF THEE

This crown that I proudly wear sends forth its golden rays of brightness and warmth for all to see and treasure as freedom's holy light. Oh, what a joy it is for those who love liberty to give Thee all the praise for that

holy light when voices ring out in that prayerful song:

"Our fathers God, to Thee
Author of liberty
To Thee we sing;
Long may our land be bright
With freedom's holy light
Protect us by Thy might,
Great God, our King."

Without Thy strength, O Heavenly Father, I could not extend to people everywhere the invitation written for me by Emma Lazarus and carved on the base of my statue:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore
Send these, the homeless, the tempest-tossed to me:
I lift my lamp beside the golden door."

THE STAR-SPANGLED BANNER

(As Liberty quotes the last line she slowly resumes her pose as the Statue of Liberty, raising her lamp on the word "lift." Music swells with the Star-Spangled Banner; thus the audience rises in tribute.)

Salute to Sam Pryor, America's Goodwill Ambassador

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PATTERSON. Mr. Speaker, as the 1st session of the 85th Congress draws to a close, it occurs to me that one of the most valuable and enduring influences toward better understanding and cooperation in this troubled world is the goodwill engendered through association of individuals in various countries. And I think that it is worthy of mention that one of our most distinguished fellow-citizens, Mr. Samuel F. Pryor, Jr., is one of the finest of these unofficial goodwill ambassadors for the United States. His wide range of interests, both personal and business, has taken him to many parts of the world on missions of goodwill. He is one of the few American business executives licensed to pilot his own plane and despite the fact that he is entitled to travel aboard the luxury airliners of Pan American World Airways, he prefers to pilot his own plane on many of his global travels.

As a very young man, Mr. Pryor served in destroyer flotilla duty in the United States Navy from 1917 to 1919. Later he was a second lieutenant in the United States Marine Corps Reserve from 1926 to 1940.

Mr. Pryor graduated from Yale in 1921 with a bachelor of philosophy degree. He also holds an honorary doctor of laws degree from Marietta College. While a student at Yale he was the intercollegiate boxing champion. In the years immediately following graduation, Mr. Pryor conducted big game safaris in various parts of the world.

Now vice president, assistant to the president, member of the executive committee and member of the board of directors of Pan American World Airways, Inc., Samuel F. Pryor, Jr., began his business career in 1922 as district sales manager for Remington Arms. He became assistant to the president of American Brake Shoe Co. and vice president of its subsidiary, Southern Wheel Co., in 1925. He joined Pan American in 1941 and is one of the most versatile and brilliant members of its present outstanding executive staff. Included in his business activities are positions as director and member of the executive and finance committee of Hertz Corp., director of Howe Sound Co., director of the Greenwich, Conn., Trust Co., chairman of the executive committee and director of the Vanadium Corporation of America, and chairman of the board of directors for Philpryor Corp., and for the Middle East American Oil Co.

While Mr. Pryor's business interests are many and varied, they do not constitute his entire field of activity. This father of a family of 5 children, and proud grandpa to 6 grandchildren is keenly interested in community, family, and civic affairs and finds time for active participation in many areas. He is a director of the Boys' Club of America. He is also a captain in the historic Connecticut Governor's Footguard.

Active participation in local and national civic affairs has included serving as Republican national committeeman for Connecticut in 1938, vice chairman of the Republican National Committee, chairman of the arrangements committee, and director of the eastern campaign headquarters for the campaign of Willkie for United States President in 1940. Mr. Pryor resigned as vice chairman and committeeman in 1941.

During World War II, Mr. Pryor directed the airlines' airport development program, locating 50 airfields, seaplane and lighter-than-air bases in South America and Africa. Successful location of these air operations bases made possible the effective air operations which were a most important factor in the successful campaigns of the United States and its allies against the enemy. In recognition of this outstanding contribution to the Nation, President Truman awarded the Medal of Merit to Mr. Pryor on April 15, 1946.

A singular honor, of which he is most proud, came to Mr. Pryor when Pope Pius XII awarded him the medal of a knight commander of the Order of St. Sylvester, at the Vatican on April 22, 1950. Mr. Pryor is one of the few non-Catholics to be thus honored in recognition of his moral excellence and his achievements which encourage others to good works. The award is only made to those who have made outstanding contributions and who are of such stature in the world that they serve as guide and inspiration to others.

Of all these and many other achievements not detailed here, we salute Samuel F. Pryor, Jr., business and civic leader; man of vision and ability, highly esteemed in farflung places; goodwill ambassador without portfolio; and outstanding citizen.

Report of Annual Courthouse Conferences

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. McGREGOR. Mr. Speaker, following our usual custom, on Monday, August 12, we started our annual courthouse meetings in each of the seven counties of our district. We completed the tour on Saturday, August 24. As you will recall, Mr. Speaker, these dates were set up many months ago after a conference with you and the leaders. We all felt at that time that Congress would have adjourned; however, I recognize that circumstances beyond your control altered these plans. I regret that I did not get to attend all of the meetings in each of the seven counties, but those meetings at which I was unable to be present, were handled by Mrs. McGregor and my secretaries. I felt it my duty to return to Washington when controversial legislation on which I was not recorded, was brought before the Congress for consideration. Even in the face of flying back and forth, I missed several of the courthouse meetings and missed several rollcalls, more than I have missed, I believe, since the first of the year.

During the district tour we personally interviewed about 417 people and during the evening and public meetings, approximately 1,685 were in attendance. I was highly pleased with the results of these meetings since it afforded me an opportunity to become better acquainted with the people and problems of the district. In many instances we could be of service in explaining legislation and to give careful study to the personal problems presented to us. Many of the cases brought to our attention had to do with:

First. Veterans benefits and claims, the coverage of the new laws relative to those who have worn the uniform of our country.

Second. Immigration, the possibility of new laws.

Third. Farm problems, including acreage allotments, and the requirements and benefits of soil bank participation.

Fourth. Highways, many county and township officials and citizens were interested in the highway legislation and how it affected county and township roads.

Fifth. Flood control, one of the problems of our district was the flooding of roads below some of the dams that were constructed for flood control.

Sixth. Social security, many were interviewed relative to their benefits under this law.

Seventh. Mail service, numerous requests for extensions of rural routes were received confirming the reintroduction of my bill this session.

Mr. Speaker, I find that the people of the 17th Ohio District are greatly dis-

turbed by several issues and may I put them in the following categories:

(A) Inflation: They are worried about the decreasing purchasing power of the dollar, living costs and the price of the products they buy are rising. Many savings accounts are being depleted. Even though taxes and unnecessary expenditures have been decreased, many are finding it most difficult to pay their taxes and are asking all of us to do everything within our power to reduce all expenses except where absolutely necessary and essential so that a tax reduction may be made. The philosophy of placing a penalty on initiative and thrift should be discontinued.

(B) Communism: Many question the continuous increase in the cost of our defense program and defense against communism. They feel that those in command of the military are not careful with the taxpayer's money nor efficient in the handling of the problems given to them. There is too much delay, too much redtape, too much jealousy between the branches of military organizations, and it is too costly.

(C) Labor: People are worried relative to the apparent activities of racketeers among various organizations. In this regard some of our national union officials seem to have been squandering the money the rank-and-file laboring man has been paying to them each month. Many are demanding more stringent labor laws, even to the extent of right-to-work laws. People are objecting to having to pay a union fee, then working just a few weeks and being laid off and their place filled by another worker.

(D) Business: Many are worried about various enterprises placing them under the jurisdiction of big business; or, they find themselves in the category that their product cannot be produced in competition with so-called big business with enormous production lines.

(E) Farm program: I honestly believe that the majority of the people of our district want to do away with the alleged farm control program. They recognize the enormous cost and are of the opinion that most of the Federal laws are benefiting the large 1-crop farmer and give very little consideration to the rotation farmer. Great dissatisfaction prevails relative to acreage allotments and penalties imposed thereon. Many feel that all farmers should be entitled to vote on the crop referendum. They also feel the farmers should be allowed to raise the necessary crops for feed and seed purposes on their farms.

(F) Social security: Many of our people are confused by the various interpretations of the social-security law, such as eligibility for benefits, et cetera.

(G) Highways: All of our people want good highways and are willing to pay for them. They do want, however, the rights of a property owner to be considered. The property owner should be entitled to a fair value for his property. The road contractor should receive a fair profit for his endeavors. Certainly, the highway user is entitled to a good road for his dollar spent.

(H) Mail delivery: Our people were very appreciative of our introduction of a bill that would grant mail service to all wherever practicable. They were happy to learn that the legislation has been endorsed by the Post Office Department and hope that Congress will take definite action when it reconvenes.

Mr. Speaker, it was a real privilege and honor for me to meet personally and discuss many problems with the people. I am happy to have been afforded the opportunity to have been present and to present my capable office staff who so very efficiently took care of these meetings when it was necessary for me to absent myself and return to Washington to vote on important legislation before the Congress.

Civil Rights Compromise is Plain Petty Politics

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CRAMER. Mr. Speaker, I ask inclusion at this time of an editorial from the Tampa Times of August 26, 1957. In this editorial is pointed out one of the many true and highly discouraging aspects of civil-rights legislation passed in the closing days of the 1st session of the 85th Congress.

The editorial that follows points out in detail many of the political aspects that have made this measure so obnoxious to many Members as well as a great number of citizens throughout the Nation.

CIVIL RIGHTS COMPROMISE IS PLAIN PETTY POLITICS

The "iffy" civil rights compromise reached by congressional leaders last weekend is nothing more than a politically-motivated effort of both sides of this controversy to save face. The real interests of the nation were grossly ignored while the politicians threw their arms around each other's shoulders and said in effect, "We can't win against each other, but let's fix it so we can't lose, either."

The goal of the northern liberals in Democratic ranks and the administration had been to secure the Negro bloc vote in the big cities. When it became obvious that southern opposition was powerful enough to defeat the strong civil rights legislation demanded by the Administration, both sides of the liberal bloc decided to create an atmosphere in which it appeared that they are equally responsible for protecting Negro voting rights.

The compromise solution is to modify the Senate bill which provided a jury trial for persons accused of violating Federal injunctions in civil rights cases. The new version permits a jury trial only if the fine is in excess of $300 or imprisonment in excess of 45 days.

This leaves ample opportunity for Federal meddling in southern affairs by politically inspired civil-rights agents and blocks local control in these matters. A person accused of contempt of a Federal court will be at the mercy of a Federal judge who may sentence him to pay $300 and serve a 45-day jail term with no appeal to a local jury. This is simply setting up a political dictatorship by the Federal courts.

Southern Democrats should fight this modification of the Senate compromise even if it means invoking that vital tool, the filibuster.

The liberals in both ranks are displaying crass hypocrisy in waving the civil-rights banner in the pretense of helping the southern Negro. Their real interest is the political hope of capturing the northern Negro bloc vote by pretending great concern over racial conditions in the South.

The use of the civil-rights bill as a political weapon is certain to be demonstrated in 1958 and 1960 elections, if it passes.

Newsweek magazine reported last week that Vice President NIXON, a presidential aspirant, is making advocacy of civil rights his personal political trademark. It observed that Mr. NIXON wants the Justice Department to send squads of investigators into the South at once to prosecute all infringements of the Negroes' rights to vote.

This is an example of the political capital the politicians intend to make of the civil-rights legislation at the expense of the peace and welfare of the South.

The Senate passed a reasonable civil-rights measure which would perform a sincere job of protecting Negro voting rights, while protecting also the local southern communities from an invasion of latter-day carpetbaggers. But the compromise measure offered by the House negates defenses erected in the Senate bill and opens the door to political manipulations in the guise of helping Negro voters.

If this measure passes, Congress will indeed, have sunk to a record low in the mire of political expediency.

The Fight for Freedom Is Everlasting

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to enclose a very timely editorial, which appeared in the June 15 issue of the Worcester, Mass. Evening Gazette, reminding us that freedom and liberty are not automatic. We must continue to fight today as forcefully as did our ancestors, for the enemies of liberty are ever-present and ever-challenging, even as the Communist dictatorship imperils human freedom in this hour.

The article follows:

FAMOUS ANNIVERSARY OF HUMAN FREEDOM

Today is the 742d anniversary of the signing of Magna Carta. As we look back over the centuries to the field of Runnymede, where the rebellious barons forced King John to sign the famous document of freedom, we can see how relentless has been the struggle for human liberty. Considering the state of the world today, we can understand how much there is to be done before mankind can be deemed truly free.

The signing of the Magna Carta in 1215 did not automatically bring liberty to England. The rights inscrolled on that coarse piece of parchment had to be fought for again and again. They had to be gradually enlarged, so that the liberties the baron class sought for itself would be finally extended to people of all walks of life. Not until 1867 did Britain attain full manhood suffrage. Not until 1920 did women vote throughout the United States in a presidential election.

The fight goes on. The rights inscribed in Magna Carta, enriched by further rights won during the intervening centuries, are deathless symbols to freedom-loving people everywhere. Next month, a monument will be erected at Runnymede to commemorate that portentous moment in history. The monument will be financed by American and British lawyers, as a common testimonial to the majesty of the law that has made Britain and the United States outstanding among nations.

It will be a fitting gesture. For among the many now antiquated phrases of Magna Carta is one that still rings true and clear. It is the one guaranteeing to anyone accused of a crime the right to trial by a jury of his peers.

The Veterans' Education Appeals Board Has Finished Its Job

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. TEAGUE of Texas. Mr. Speaker, the 85th Congress has enacted Public Law 85–200 terminating the Veterans' Education Appeals Board which was created on July 13, 1950, by Public Law 610, 81st Congress. On September 12, 1950, President Truman appointed the three members of the Board, the Honorable C. M. Thompson, Chairman, Hon. E. L. Earpin, member, and Hon. J. Z. Miller III, member.

These gentlemen have now completed the monumental task which confronted them in 1950. They have rendered decisions on 531 cases. The guidelines laid down by these decisions served to improve the administrative procedures of the veterans' education and training program under Public Law 346, 78th Congress. The cases considered by the Veterans' Education Appeals Board involved $200 million in claims. The policies laid down by their decision affected the entire veterans' education and training program for World War II veterans which has involved $17 billion total expenditure, about $5 billion of which was for tuition payments to educational institutions.

A review of the history of this Board brings out an important lesson in governmental operation. The veterans' education and training program for World War II veterans created an unprecedented relationship between the Federal Government and practically all of the public and private educational institutions of the Nation. It became necessary for the Federal Government, through the Veterans' Administration, to enter into contracts for reimbursement for the training of veterans. There were no precedents to follow and a great deal of misunderstanding, dissatisfaction, and abuse grew out of the contractual procedures which were followed.

The controversies had become so intense by 1950 that it became necessary for the Congress of the United States to create a separate and independent Board to consider and settle the controversies which had arisen between educational institutions and the Veterans' Administration. Prior to the creation of the Board, an educational institution finding itself in disagreement with the Veterans' Administration had no clear avenue of appeal. The Veterans' Administration found refuge in an earlier act of the Congress giving the Administrator finality of decision and the educational institutions involved found it impossible to seek review by the Court except under the most limited circumstances. The American tradition of Government is not served when an agency serves as its own prosecutor, jury and judge, and there was continual dissatisfaction since the contending educational institutions had no source of appeal to the Administrator's decision. The Veterans' Education Appeals Board was created to provide such an appeal. It removed contractual controversies from a political atmosphere since it was inevitable that educational institutions feeling that they had not obtained fair consideration would turn to Members of Congress for assistance.

The Veterans' Education Appeals Board has now come to the end of its program and has been discontinued at its own request. The Members of the Board labored long and tirelessly in a field beset with the most exasperating complications. They have done a good job and have rendered an outstanding service to the veterans of the Nation. I worked on the legislation which created the Board and have followed their activities closely throughout their existence. I am pleased to have this opportunity to express my sincere appreciation and admiration for accomplishments of the Veterans' Education Appeals Board.

Virginia Tanner Day

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following proclamation by the Honorable Elie L. Holton, mayor, city of Douglas, Ga., proclaiming Monday, May 6, 1957, Virginia Tanner Day:

MAYOR'S PROCLAMATION—VIRGINIA TANNER DAY

Whereas Virginia Tanner is a native of Coffee County and city of Douglas, Ga.; and

Whereas Virginia has distinguished herself in her chosen field of journalism, and is now assistant director of public relations of the Baltimore & Ohio Railroad and is the first woman to become editor of a railroad magazine in the country and the first woman editor to become president of the American Railway Magazine Editors Association; and

Whereas Virginia has throughout the years retained an active interest in her hometown of Douglas and its people; and

Whereas she has been named woman of the year from the city of Baltimore;. and

Whereas the people of Georgia and of Douglas in particular wish to express their love and admiration for Virginia.

Now, therefore, I, Elie Holton, mayor of the city of Douglas, hereby proclaim Monday, May 6, 1957, as Virginia Tanner Day in Douglas.

Witness my hand and the great seal of the city of Douglas this 4th day of May 1957.

ELIE L. HOLTON,
Mayor, City of Douglas.

National Grange Headquarters Should Not Be Destroyed

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POLK. Mr. Speaker, before Congress adjourns I want to express my views in opposition to the proposal of the administration to condemn and tear down the National Headquarters Building of the National Grange here in Washington.

This building, which is a modern 8-story office building, was purchased by the National Grange in 1941. It occupies a ground space of 50 feet by 70 feet on Jackson Place and is surrounded on the west and the north by the historic Decatur House.

The money for the purchase of this property was raised through activities carried on by the more than 7,000 local subordinate granges throughout the Nation. Many of these local granges are located in the Sixth District of Ohio and I have received numerous protests from grange members about this proposal by the administration.

It is rumored that if the Grange Building is condemned and torn down the space it now occupies will be used as a lawn between the Decatur House and the proposed new office building to house the swelling White House staff of the President. As was well stated on yesterday by the gentlewoman from Idaho [Mrs. GRACIE PFOST]:

It is generally estimated that the Federal Government will have to pay $500,000 for the Grange property if it is acquired by the General Services Administration by condemnation. Add to this the cost of clearing the site and putting it in grass, and you will have the most expensive lawn in America.

I have an open mind on the question of the need for additional office space for the President. Likewise, if additional Presidential office space is needed, I have an open mind on the question as to whether it be located on Jackson Place, as now proposed.

However, I am firmly convinced that it is not necessary to destroy the Grange Headquarters Building for this purpose. The land occupied by the Grange Building lies north of the area that would be used for the proposed new executive office building.

I agree that a nice lawn between the proposed new office building and the so-called Decatur House might be desirable,

if a vacant space for this lawn was available, but certainly it is not economical or sound business for the Government to condemn and tear down a modern 8-story office building in order to provide a 50-by-70-foot grass plot. To this I am unalterably opposed. I shall use every effort at my command to defeat this proposal.

Mr. Herschel D. Newsom, master of the National Grange, has written me about this problem. His letter to me and my reply are as follows:

NATIONAL GRANGE,
Washington, D. C., August 1, 1957.

Hon. JAMES G. POLK,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN POLK: The Grange needs your help to preserve its national headquarters building.

Early this year the Government instituted eminent domain proceedings and by a declaration of taking filed therein took title to our building. In addition it took all remaining privately owned property in this block—except the Decatur House on one corner. It is proposed to tear down the buildings on the land which has been taken to erect thereon a structure known as Federal office building No. 7.

Actually, the Grange property is only a relatively small rectangle—50 feet by 70 feet—and is surrounded on both the west and the north by the Decatur House. Thus, the two buildings together form but a single rectangle, the larger part of which (Decatur House) will remain intact. Because of its unique juxtaposition with Decatur House, the destruction of our headquarters building is entirely unnecessary to permit the erection of a Federal office building. The attached plat shows the properties involved.

In addition to the offices of the National Grange itself, our building houses the National Council of Farmer Cooperatives, the American Institute of Cooperation, National Agricultural Research, Inc., Farm Roads Foundation, and Washington offices for more than 30 farm publications. Thus there can be no question that the building is presently serving a very important and worthwhile public purpose in the interest of agriculture and the American farmer.

The National Grange purchased this property in 1941 with funds which had been raised for the purpose through activities carried on by the more than 7,000 local subordinate Granges throughout the Nation. These activities included the serving of lunches and dinners, apron sales, penny suppers, amateur plays, and many more. Thus Granges and Grange members across America have their nickels and dollars invested in their national headquarters building.

The location of this building is important to Grange members, and they are proud of the fact that their work and contributions have provided a symbolical national home for farm families within a block of the White House, even as are located the headquarters buildings of the AFL–CIO and the United States Chamber of Commerce. All of us will appreciate your help in preserving our building for us.

If S. 2261 just reported by the Public Works Committee were to be amended as follows this objective would be accomplished:

Page 9, line 17, insert a colon in lieu of the period and add the following:

"*Provided, however,* That no portion of lot 816, square 167, in the District of Columbia (the headquarters of the National Grange of the Patrons of Husbandry) shall be acquired for or used for any such project, and the Administrator is directed to withdraw the declaration of taking of said lot heretofore filed by him in the United States District Court for the District of Columbia and to take such other action as may be necessary to restore title to said lot to the National Grange of the Patrons of Husbandry."

This proposed amendment is consistent with the action taken by the Congress earlier this session when in an effort to preserve the Grange Building, it approved a provision in the Independent Offices Appropriation Act prohibiting the use of funds during the fiscal year 1958 for Federal office building No. 7.

We shall be very grateful for your support.

Respectfully yours,
HERSCHEL D. NEWSOM, *Master.*

AUGUST 30, 1957.

Hon. HERSCHEL D. NEWSOM,
Master, the National Grange,
Washington, D. C.

DEAR MR. NEWSOM: You may be assured that I shall use every effort at my command to help preserve the National Grange headquarters building at its present location.

On June 27 when the conference report on the independent offices appropriations bill, H. R. 6070, was considered in the House of Representatives I was glad to vote for Senate amendment No. 11, prohibiting the use of funds during fiscal year 1958 in connection with Federal Office Building No. 7 on square 167 in the District of Columbia.

I am also glad to tell you that I approve and will support your suggested amendment on page 9, line 17, of S. 2261, an act to amend and extend the Public Buildings Purchase Contract Act of 1954.

This bill probably will be considered at the next session of Congress.

You have well stated how unnecessary and uneconomical is the proposal to destroy your headquarters building.

I have talked with many members of Congress about this issue and I believe that in the next session of Congress those of us who are supporting you in your valiant fight to preserve your headquarters building, will be able to squelch, once and for all, this silly proposal.

Most sincerely,

JAMES G. POLK.

Ramon Magsaysay, Champion of Liberty

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. TEAGUE. Mr. Speaker, Saturday, August 31, is the anniversary of the late president of the Philippines, Ramon Magsaysay.

Mr. Magsaysay came to Washington shortly after I became a member of this body and it was during his stay here that I became acquainted with him and gained the privilege of having him as a personal friend. Throughout the past 10 years I viewed with interest his leadership of his country and the role he played in world affairs.

Although he is no longer with us, his memory will stand as a living memorial to his people and the rest of the free peoples throughout the world. It is only befitting that our country on the anniversary of his birth honor him as the first to be placed in the "champions of liberty" series of postage stamps.

Who Gets the Subsidies?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting 5 pages, or 5 chapters, on the subject Who Gets the Subsidies? These articles have been presented to me by the American Farm Bureau's research staff, and although I do not agree with them in their entirety, I feel that they have approached the subject and in every way attempted to be fair and equitable.

Subsidies are something that our forefathers knew nothing about and possibly this generation and the next generation would be better off if we forgot all about them. At least we know that subsidies play a very important part in our economy, and therefore I respectfully ask the membership to read this report from the Farm Bureau.

I personally congratulate the Farm Bureau's research staff for this report. It certainly took a lot of time and a lot of thought, and I repeat, I honestly believe they have endeavored to present both sides of a very difficult subject.

WHO GETS THE SUBSIDIES?—PART I

(EDITOR'S NOTE.—This is the first part of a discussion of subsidies and what might be done about them, prepared by the American Farm Bureau's research staff. Future issues of the Newsletter will carry articles continuing this discussion.)

Subsidies are very much in the news these days. Everybody knows that certain groups get special benefits from Government programs. In general, it can be said that those who get such special benefits are subsidized. But it is not a simple matter to say what is a subsidy and what is not.

Almost everything that the Government does benefits some people at the expense of others or helps some more than others. The real problem is to draw a line between those programs that really contribute to the general welfare and those that benefit certain groups at the expense of the public.

There are many kinds of subsidies. Sometimes the Government gives money to people—or buys products it doesn't need—to help the "needy," to encourage certain kinds of business, to stabilize the economy, or to guard against a national-defense emergency.

Sometimes the Government provides services to various groups including commercial users at less than cost.

Sometimes the Government encourages a particular type of business or individual activity by favorable tax treatment. Then there are numerous cases—such as tariffs or other import restrictions, minimum wage and maximum hour laws—where the Government helps people get higher prices and wages, but does not guarantee them a market.

HOW DO YOU LOOK AT SUBSIDIES?

There are different ways of looking at subsidies. One school of thought says, "Practically everybody is subsidized. The subsidies we want are justified by the subsidies other people get. We are as good citizens as they are. Why shouldn't the Government help to support us, too—or at least give us enough to offset the subsidies others are getting?"

Another school of thought says, "Yes, we do have some subsidies, but not nearly as

many as some people think. The Government can't give anything to anyone without first taking it from someone else. The idea that one subsidy justifies another is wrong. Subsidies are really a device by which the Government plans the economy—decides what factories are to be built, what goods and services are to be produced, how they are to be distributed, and finally how the national income is to be divided between the people. Do we want more of this or less?"

What do you think about subsidies? Do you think the Government ought to use subsidies to see that everybody gets a fair share of the national income? Do you want the Government to decide what you "fair share" is? Do you think we have too many subsidies, thtat many subsidies have outlived their original purpose, that we ought to get rid of all of them, or that we should consider them individually?

Before we try to answer these questions, let's look at a few of the more important cases where the Government is said to be subsidizing various groups and let's consider these cases in the light of the following questions:

(1) What is the purpose of a particular subsidy?

(2) Is it a worthy purpose—that is, a purpose that benefits the public as a whole—or is it a purpose that benefits special groups at the expense of the taxpayers? Does it improve or hinder the functioning of a market economy?

(3) Is a Government program necessary to accomplish this objective? If so, is a subsidy the best possible or most economical means of accomplishing the desired objective?

(4) Is the subsidy really accomplishing the objective for which it was established? In other words, are the taxpayers actually getting the results for which public funds supposedly are being spent under a subsidy program?

ACCELERATED AMORTIZATION

Under the tax laws, a taxpayer may deduct the cost of productive facilities which wear out over their estimated useful life. This may be as long as 100 years.

During World War II, industry was allowed to accelerate or speed up such deductions and to deduct the cost of certain facilities in a 5-year period. This practice was revived in 1950 as a result of Korea and continues today.

The advantage of accelerated amortization is obvious. It means that a part of a taxpayer's taxes are deferred until after the amortization period. This does not of itself reduce the total taxes that must be paid over the useful life of the facility. It does give the taxpayer several years' free use of income that otherwise would have been paid out as taxes for the year in which it was earned.

This clearly is a subsidy. The question is whether it is justified in the national interest.

There may be some justification for speedy writeoff of facilities used solely for national defense. It is hardly reasonable to expect industry to amortize an investment in a tank plant, for example, over a 30-year period if the plant has no civilian use and may be useless in 5 years. In such cases it may be better to stimulate private investment in defense facilities by accelerated amortization than it would be to build the plants with public funds.

Is it a different matter, however, when accelerated amortization is extended to facilities such as steel materials, electric powerplants, freight cars, and passenger airplanes which are largely or fully usable for peacetime civilian purposes? This has been done to a considerable degree in recent years on the ground that we need to build a bigger mobilization base.

Through the extension of such tax privileges the Government is in a position to help determine what production facilities are to be built, who is to build them, and where. This power has been used to aid areas with unemployment problems.

Here are some questions to consider:

(1) Do we want the Government to use the tax laws to allocate resources?—To decide what industrial facilities are to built?—who is to build them?—Where?

(2) Is this type of Government planning of civilian facilities really necessary for adequate national defense and security?

WHO GETS THE SUBSIDIES?—PART II

(EDITOR'S NOTE.—This is the second part of a discussion of subsidies and what might be done about them, prepared by the American Farm Bureau's research staff. Future issues of the Newsletter will carry articles continuing this discussion.)

PUBLIC POWER

Public power projects are subsidized in a number of ways—by low interest rates on Government investment, by charging some project costs to nonreimbursable items, such as flood control and navigation, and by exempting public projects from most of the taxes that normally are paid by private enterprise.

The Second Hoover Commission found that 7 public power administrations were subsidized to the extent of $71.7 million in 1953.

Some say that the Federal Government must develop power facilities to insure maximum development of our resources and make low-cost power available for economic development.

Others say that Federal projects cannot really produce power any cheaper than private enterprise. If Federal projects can sell power for less than private enterprise, it is only because of Government subsidies. Thus, the areas that receive lower-cost power as a result of Federal projects are being subsidized at the expense of the taxpayers in other areas.

For example, New York, New Jersey, and Pennsylvania have about 20 percent of our total population. These States pay about 29 percent of all Federal income taxes. They use approximately 19 percent of all electricity sold in the United States. But they have no Federal powerplants existing, under construction, or authorized.

Do these three States gain from the development of subsidized power in other regions of the country or do they lose through increased taxes and the migration of industry to public power areas?

Here are some basic questions on public power policy:

(1) Is a public power administration more able to reflect power demands than is private industry working through the market system?

(2) Is it more desirable to subsidize public power with tax money than to encourage private development and make it contribute to the public treasury through the tax system?

(3) Is the real objective of public power advocates cheap power or Government control of productive resources?

POST OFFICE

Most people are aware that the United States Post Office operates at a loss. The big deficit items are second-class mail and third-class mail. In 1954, for example, the net post office deficit was about $400 million.

Second-class mail (newspapers and magazines) showed a deficit of $218 million.

The loss on third-class mail (largely advertising circulars) was $147 million.

Fourth-class mail (parcel post, including books which are carried at a special rate) showed a deficit of $23 million.

Some say that the Government is subsidizing the large commercial users of the mail including newspaper and magazine publishers, mail-order firms, and direct-mail advertisers. Others say that the post office is a service to all the people and that it should not be expected to base its rates entirely on its costs.

Second-class mail privileges for magazines and newspapers and the special rate for books originated in the belief that the Government ought to encourage the diffusion of knowledge. Some people say that the circulation of advertising material diffuses knowledge with regard to products, services, and prices.

Unlike some other subsidies, the same mailing privileges are available to all who ask for them. The second-class mailing privilege is used, not only by commercial publishers, but also by a wide range of individuals, corporations, and associations who publish newspapers or magazines for their members, employees, customers, or other special groups.

Low postal rates are no guaranty that anyone taking advantage of them will make a profit. Many magazines and newspapers have failed despite the advantage of second-class mailing.

On the other hand, it can be argued that everyone who uses Government services such as mail should pay the full costs of these services.

Here are some questions to consider:

(1) Who benefits from low second-class mail rates—newspaper and magazine publishers, their subscribers, or their advertisers, or all three?

(2) Who gets the benefit from low rates on catalogs and advertising materials—the advertisers or their customers?

(3) Should all mail users pay the full cost of the services they use?

(4) Should the Post Office be considered a business enterprise or a public service?

WHO GETS THE SUBSIDIES?—PART III

(EDITOR'S NOTE.—This is the third part of a discussion of subsidies and what might be done about them, prepared by the American Farm Bureau's research staff. Future issues of the Newsletter will carry articles continuing this discussion.)

WATER TRANSPORTATION

All types of water transportation receive some form of Government aid.

Coastwise shipping is protected by laws requiring goods shipped between United States ports to move in American ships. All ocean shipping benefits from Federal aids to navigation.

Construction subsidies are used to pay for national defense features of oceangoing cargo ships and tankers and to offset the fact that construction costs are higher in the United States than in foreign shipyards. Construction subsidies are also used to promote research and new designs for ships, machinery, and equipment.

In recent years, the construction differential subsidies have varied from $40 million to $146 million per year. In addition, the Government sold many commercial usable vessels to private shipping concerns at considerably less than their market value following World War II.

Operating differential subsidies are paid to shipowners on certain international routes to compensate for the fact that operating costs of domestic operators are higher than their foreign competitors.

The Government recaptures one-half of the profits of a subsidized operation in excess of 10 percent of the capital necessarily employed over a 10-year period. In recent years operating differential subsidies are accruing at the rate of something over $100 million per year.

Some say that maritime subsidies are necessary to maintain operating shipyards and

a strong merchant marine for national defense purposes.

Others question whether subsidies are the best way to make certain that we have enough ships and shipbuilding yards in time of war. If competition were substituted for subsidies, it might be possible to find cheaper ways to build and operate ships.

Furthermore, the removal of trade restrictions here and abroad could increase cargo volume and help to reduce inefficiencies. What do you think?

Navigation and harbor improvements are other subsidies to maritime, lake, and inland waterway transportation. The Constitution gives the Federal Government control over navigable waters.

It has long been national policy to spend public funds to improve harbors and facilitate safe navigation. The real question is whether the use of improved waterways should be free for commercial purposes after the public has paid for the improvement. This question is particularly important in the case of inland waterways which compete with other forms of transportation.

Some say that the Government should improve navigation for national defenses and to give the public the benefit of low-cost water transportation.

Others say that improvements in intracoastal and river navigational facilities tend to favor a relatively small group of water shippers at the expense of their competitors, the public, and other forms of commercial transportation. User charges are collected on the Panama Canal and will be collected on the St. Lawrence Seaway, but not on other inland waterways.

Here are some questions to consider:

(1) Does national defense really require that we subsidize the construction and operation of oceangoing ships?

(2) Who gets the benefit when navigational improvements open a river to barge transportation—the general public, shippers, or the barge operators?

(3) Should user charges be collected on improved waterways such as the Mississippi River?

RAILROADS AND TRUCKS

Many years ago railroad construction was subsidized by large grants of public land. The primary purpose was not to benefit the railroads, but to open public land to settlement.

The land grants were part of a broad national policy which included the distribution of public lands to homesteaders, mining, and lumber interests either free or at nominal prices. On the basis at which the land was valued at the time, the railroad grants were worth $123 million.

In return, the railroads granted rate reductions on Government traffic including mail until the early 1940's. Through such rate reductions, they, in effect, paid the Government $1.1 billion for the land grants.

The only current railroad subsidy is the accelerated amortization granted on new equipment such as boxcars and locomotives.

Since trucks use highways which are built with public funds, some people say that the trucking industry is subsidized. Others say that the trucks pay their own way or more through license fees and user taxes.

The use of public highways by trucks leads to extra reinforcing costs in road construction as well as extra maintenance costs. The question is whether trucks pay enough user taxes to cover their fair share of highway costs.

In 1952, motor vehicles paid State user taxes totaling $3,097 million, of which trucks paid $1,057 million or 34.1 percent. These truck taxes were 41 percent of total 1952 expenditures on State administered highways. In the same year, trucks paid Federal excise taxes totaling over $426 million. It is estimated that trucks will bear a minimum of 25 percent of the total increases in taxes under the Federal-aid-to-highway revenue acts in 1956 plus their pro rata share in gasoline, tire, and tread rubber taxes.

Here are some questions to consider:

(1) Do you think the railroads have adequately repaid the Government for land grants?

(2) Does the fact that trucks use public highways give them an advantage over the railroads who provide their own rights-of-way?

(3) How should highway costs be divided among the various classes of highway users?

(4) Do you think trucks pay their fair share of highway costs in your State?

WHO GETS THE SUBSIDIES?—PART IV

(EDITOR'S NOTE.—This is the fourth part of a discussion of subsidies and what might be done about them, prepared by the American Farm Bureau's research staff. Future issues of the News Letter will carry articles containing this discussion.)

AIDS TO AIRLINES

Airlines receive a number of Government aids which differ so much they need to be considered separately.

Direct subsidies have been paid airlines to speed the development of a new industry. Direct subsidies have been declining. Direct subsidies amounted to about $76 million in fiscal 1954 and are estimated at $34 million for fiscal 1957. Subsidy payments are now largely confined to local service airlines and certain international routes. Airline routes and rates are completely regulated by a Government agency.

Subsidies were paid through airmail until a few years ago. Airmail pay currently is said to be based on the value of the service rendered. Some say that the service airmail pay still includes a subsidy. Others say that total payments for transporting airmail are not greatly different than what would be charged for a comparable movement of air express.

From the standpoint of public policy, the subsidization of airlines through airmail pay appears undesirable. If the public wants to subsidize airlines, it would appear that there should be a clear separation of such subsidies from Government pay for services rendered.

Airway, communication, and navigation facilities are maintained by the Federal Government. Some say that such facilities are comparable to public highways. The airways are used by a large number of private and military planes as well as by the airlines.

Others say it may be an appropriate function for Government to maintain airways and control traffic, but that airlines should pay user charges. The airlines do pay a Federal tax of 2 cents per gallon on gasoline; however, some of the newer planes burn kerosene which is not subject to the tax.

Airports are largely built by local communities with Federal aid which has been running around $20 million per year.

Airlines have also received accelerated amortization privileges on new equipment.

Here are some questions to consider:

(1) Was it sound public policy to subsidize the airlines when they were an infant industry?

(2) Should the airlines be expected to stand on their own feet today?

(3) Does the public interest require feederline service to cities that fail to generate enough business to cover the cost?

(4) Is it good public policy to keep United States airlines flying to important foreign countries if this requires a subsidy?

(5) Should the Federal Government help finance local airports or should the entire job be left to local governments and the airlines?

(6) Is the maintenance of airway facilities (navigational aids and traffic control) basically different from the maintenance of public roads?

(7) Should the airlines pay user charges for the maintenance of airways?

(8) Should excise taxes on aviation fuel be considered to be user taxes?

SUBSIDIES TO LABOR

Some say that Federal wage-hour laws in effect constitute a subsidy to labor. Such laws help some workers to get higher wage rates and overtime payments. But the same laws discourage overtime employment and make it more difficult for some workers to find jobs.

WHAT DO YOU THINK?

Jobless workers are subsidized through the unemployment-compensation program. Benefit payments under this program have been running about $1.4 billion per year. Administrative costs amount to another $250 million.

Some say that this program encourages idleness. Others say it helps to stabilize the economy and to ward off a serious depression. Benefits are temporary. They help to prevent unemployment from spiraling. The high level of employment in recent years indicates that most people prefer work to unemployment benefits. What do you think?

SOCIAL PROGRAM

The Federal Government has been making grants to States at the rate of $1.4 billion per year for payments to needy persons such as dependent children and aged, crippled, and blind persons. It was once thought that the expenditure for direct relief would decline as more people became eligible for social security. This has not yet happened.

The social-security program itself is geared to subsidize the lower income groups and those who enter the program at an older age at the expense of other participants.

For example, a person who has paid social-security taxes on an average income of $110 per month can receive $60.50 per month in benefits while a person who has paid taxes on an average earning of $350 can receive only $108.50.

Furthermore, individuals with the same average earnings may receive the same retirement benefits although some have paid social-security taxes for a much longer period than others.

What do you think about aid to the needy and the social security questions?

(1) Should the care of needy persons be left entirely to the States and local communities or should the Federal Government help?

(2) Should benefits under the social-security program favor low-income persons and those who enter the program at an advanced age or should payments be related to the amount each individual has paid into the program?

WHO GETS THE SUBSIDIES?—PART V

(EDITOR'S NOTE: This is the fifth and final part of a discussion of subsidies and what might be done about them, prepared by the American Farm Bureau's research staff.)

AGRICULTURE

Many of our agricultural programs have been called subsidies—particularly by nonfarm people. Some people even think that such programs as agricultural research and extension are subsidies. Others say that these programs are not subsidies because many of the benefits are passed on to the public in the form of better, or more economical farm products.

What do you think?

The Federal Government is also spending funds for more direct subsidies, which include price support operations, surplus removal, soil conservation payments, and soil bank activities.

Some say that agricultural subsidies are justified by subsidies others are getting.

Others say that the real question in agricultural policy is not what others are doing, but what is good for agriculture.

These people say that subsidies have created surpluses and other problems which are actually reducing farm income by destroying opportunities for farmers to earn a high per family income. That is, agriculture will do better by expanding markets on a sound basis and adjusting production to real market demand than it will do by depending on subsidies.

They say that farmers would do better by trying to eliminate any unjustified subsidies that are being paid to others than to try and get bigger subsidies when subsidies have failed to solve our farm problems.

The impact of subsidies is far greater on agriculture than on other industries. Subsidies put some industries in a better position to compete, but they still must find customers for their products. That is, there are checks and balances in nonagricultural subsidies that prevent them from causing great disruptions.

The most important check is that the Government has not guaranteed a market for the subsidized industries. For example, the second-class mailing privilege does not guarantee a publisher that he will sell his newspapers or magazines.

In agriculture the picture is reversed. Agricultural subsidies have had the checks and balances removed. Through price support, the Government has guaranteed agriculture a market.

The guaranteed market causes farm production to increase in spite of production controls. In other subsidized industries overproduction is checked either by limits on the amount of the subsidies or by the fact that production must be sold on the open market.

The restrictions and waste in agricultural programs are an inevitable result of price supports. For it is well to remember—we have wheat and cotton export subsidies because of price supports; we have quotas and allotments because of price supports; we have surpluses, surplus-removal programs, and diverted acre problems because of price supports.

With all of the experience we have had with Government attempts to boost farmers' income, which is down while the income of free industries is up, it seems wise to take a hard look at what subsidies really do.

The total cost of the agricultural programs is almost impossible to calculate. However, the realized cost of efforts to stabilize prices from 1933 through 1956 has been in excess of $14 billion. In addition, payments in excess of $3 billion have been made to conserve the soil. Some examples of program costs in stabilizing prices are: corn, $1¾ billion; cotton, $2⅛ billion; wheat, $3⅓ billion; peanuts, $183 million; rice, $100 million; tobacco, $241 million.

Estimated soil-bank payments for 1957 are $1.2 billion. The export subsidy programs, while moving surpluses, have been expensive. For example, the International Wheat Agreement for the export of wheat has cost $759.6 million since 1949. Cotton exports are costing an estimated $45 per bale on 6.5 million bales in 1956–57. In addition, public funds have been made available to finance about half of these exports through loans, gifts, and foreign-currency sales.

The cost of the agricultural programs goes far beyond the monetary figures. Because of the programs, farmers must live under laws, rules, regulations, and orders that divide up the right to produce. Under these Government programs and controls the tendency is to level down all farmers to a low common denominator gathers momentum every year.

Here are some questions to ask yourself:

(1) Will farmers gain more by trying to expand on the subsidies they now have or by trying to eliminate all subsidies?

(2) Have Government subsidies brought prosperity to agriculture?

(3) Have subsidies given to agriculture created sound markets for agriculture, or have they created more problems?

(4) Should farmers be paid for operations that are normal and accepted farming practices?

IS EVERYBODY SUBSIDIZED?

Many other Government programs involve varying degrees of subsidy. For many years the Government has bought all newly mined silver at an artificial price. This is done in the name of monetary policy. But it provides a market for the silver mining industry. A few years ago the Government started buying a number of other domestically mined minerals in the name of providing a stockpile for national defense. But when the stockpile goal was reached, Congress ordered the buying program continued to provide a market for the affected mines.

Millions of veterans are participating in a subsidized Government life insurance program; however, this amount of insurance is no longer available to new veterans. Some people are living in subsidized public housing. There is no question but what we have an amazing number of subsidies, but it may be that subsidies are overemphasized. Some say that everybody is subsidized. Others say that a great many people do receive some subsidy but that relatively few economic groups really depend on subsidies for their well-being.

Some say that subsidies are so much a part of our system that it is useless to examine or question them, and that the important thing is to see that every group gets its share of Federal subsidies. Others say that if we take the approach that one subsidy justifies another, the net result may be a completely controlled economy. In this connection the Supreme Court has said, "It is hardly lack of due process for the Government to regulate that which it subsidizes."

What do you think?

Background and Development of Old Glory

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I would like to include at this time a most interesting and educational article, by Madeline Corse, tracing the background and development of Old Glory, which appeared in the June 14, 1957, issue of the Worcester, Mass., Telegram.

The article follows:

HOW OUR NATIONAL EMBLEM EVOLVED

(By Madeline Corse)

What is a flag? The word comes from the Anglo-Saxon fleogan, which means "to float in the wind," but our national flag has a higher meaning, the symbol of freedom.

The Declaration of Independence did not provide the Thirteen Colonies with a flag of their own. Many flags were flown, it is true, some stately, some symbolic, others frankly defiant.

As early as 1634 the Massachusetts Bay Colony was flying the Union Jack, which was gradually changed to suit their own needs, until a pine tree was given a place on the flag. Eventually the Union Jack was displaced, and in 1775 our naval vessels flew a plain white flag with a large pine tree.

SONS OF LIBERTY

Just before the Boston Tea Party, the daring Sons of Liberty met under a huge elm which they called the Liberty Tree. Somewhat belatedly, General Gage ordered the tree cut down, but it survived as the emblem on a new flag, with the words "An Appeal to God" beneath it.

Down at Fort Moultrie, S. C., another flag was flown in 1775, the colors chosen because the men wore blue uniforms and their caps were adorned with silver crescents. They chose a blue banner, with a silver crescent in the canton, or upper left-hand corner.

Five different rattlesnake flags flew in the South and elsewhere. The Culpepper minutemen in Virginia first carried one in 1775. On a bright yellow ground, a coiled rattlesnake reared its head. The wording below was a warning, "Don't Tread on Me." There is much symbolism here. The rattlesnake has bright eyes and no eyelids, denoting vigilance. It gives warning before an attack, but never surrenders. Its bite is fatal. The separate rattles are firmly united, as were the Thirteen Colonies.

A fighting flag was flown at Concord Bridge, the standard of the Bedford minutemen. "Their flag to April's breeze unfurled" was square in shape, with a rich red ground. The design in silver and gold was copied from an old flag of the city of Ostend, an arm and a sword thrust out from a cloud. Three round gray spots represent cannon balls. The motto on a scroll is Vince aut Morire (Conquer or Die). The Bedford flag, carried into battle by Cornet Nathaniel Page, is preserved at the free public library in Bedford.

When General Washington journeyed via New York to Boston to take command of the Continental Army, he was attended by the Light Horse Guards of Philadelphia. Their flag displayed 7 blue and 6 silver stripes, the forerunner of our national flag.

On January 1, 1776, Washington left his headquarters in Cambridge, Mass., to see a new flag raised at Prospect Hill in neighboring Somerville. While the Union Jack was retained in the field, the flag had 13 stripes of red and white, and is known historically as the Cambridge flag.

THE STARS AND STRIPES

The Bennington flag used the number 13, representing the Original Colonies, in 2 ways. There were 13 stripes, red and white, but with the white on the outer edges. The blue field displayed 11 stars in a half-oval formation around the numeral 76, with 2 single stars above. These stars are unique because they are 7-pointed. Under this illustrious flag Gen. John Stark led 2,000 Green Mountain Boys to victory.

The making of the first official flag has always been in dispute. Francis Hopkinson, of Pennsylvania, a signer of the Declaration of Independence, is usually given credit for its design. It is generally conceded that Betsy Ross actually made the flag for a congressional committee consisting of George Washington, Robert Morris, and Betsy's uncle, Col. George Ross.

General Washington's own coat-of-arms included 5-pointed stars, and while his own tentative design for the new national flag showed 6-pointed stars, it is said that Betsy Ross showed him how she could fold material and make a 5-pointed star with a single cut of the scissors.

The following resolution was adopted in Congress on June 14, 1777, the first Flag Day:

"Resolved, that the flag of the 13 United States be 13 stripes, alternate red and white; that the Union be 13 stars, white on a blue field."

The 13 stars form a perfect circle.

An interesting legend comes to us from an Army officer's letter written in 1777, in which he tells how a flag was made and

flown over Fort Stanwix in what is now Rome, N. Y. According to his account, the red was "pieces of stuff procured from the garrison."

Another name for our flag was coined when in 1824 a sea captain in Salem, was presented with a flag on his birthday. Joyfully he shouted: "I'll call her Old Glory, boy, Old Glory!"

Boston Naval Shipyard

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I enclose a very fine article in relation to the Boston Naval Shipyard, appearing in the August 9, 1957, edition of the Boston Naval Shipyard News, and written by its editor, Mr. James L. Harrington.

The article follows:

A BOSTON NAVAL SHIPYARD-BUILT SHIP IS A STRONG GUARANTY TO THE UNITED STATES FLEET THE SHIP IS THE BEST THAT MAN CAN PRODUCE

Behind the guaranty that a Boston Naval Shipyard-built ship is the best that man can produce is the exciting story of vessels from this naval shore establishment which have fought in every naval battle since the War of 1812, and documents reveal stirring sagas of the sloop *Frolic* hurling her might against the British brig *Little Fox*, climaxed with the destroyer *Mayrant*, better known as the *Mighty May*, receiving the surrender of Marcus Island from the Japanese.

Ships built and manned by New England men left the shipyard from 1813 till the close of the last great war to carry the colors of the United States to victory. Navy tars fought with cutlass, boarding hooks and staccato bursts of antiaircraft fire to place these vessels in world halls of fame—while others that departed from this harbor lie deep off the coasts of Tripoli, France and Japan, undersea monuments to the men who hewed, built and sailed the fighting craft of a great Navy.

A far cry from the sleek, greyhound lines of a modern-day destroyer, the U. S. S. *Frolic* was an 18-gun sloop of war authorized by an act of Congress, January 2, 1813, and was the first naval vessel built at the Charlestown naval shore establishment. She was designed and built under Josiah Barker, who also constructed the *Independence*. Her total cost was $72,095.

Departing from Boston on February 18, 1814, under the flag of Master Commandant Joseph Bainbridge, for a cruise to the West Indies, she met and destroyed the brig *Little Fox* on March 7 and later captured an unmanned privateer schooner on April 3.

However, her fame was short-lived. While 15 miles off the coast of Natanzas, Cuba, the *Frolic* was captured by the H. B. M. *Orpheus*, a vessel of 36 guns, and the H. B. M. *Shelbourne*, a man-of-warsman carrying 12 guns. Seizing the American craft proved to be of little value to the English forces for the skipper and crew of the *Frolic* had thrown overboard all her guns during a 60-mile sea chase.

After being taken by the British, the *Frolic* was renamed the *Florida*, used in the British revenue service. Her career was short, for she was broken up at the Chathan dockyard in 1819.

Sailing from Boston under the flag of Commodore William Bainbridge, the second craft to be launched from the shipyard, the U. S. S. *Independence*, took part in the war with Algiers. As peace was concluded before her return to the States, she showed herself at various Barbary ports, arriving at Newport, R. I., November 15, 1815.

TOPS IN FIGHTING CRAFT

The *Independence* was a 74-gun ship of the line and, when launched July 20, 1814, was considered the tops in fighting craft. Later tours of duty reveal this line vessel serving as flagship for Commodore John B. Nicholson, Commodore Charles Stewart, Commodore William B. Shubrick, Commodore Charles W. Morgan, and Commodore William Mervine. Her final spot, limited in duty, was at Mare Island, Calif., as a receiving ship and a barracks ship for the station marines.

Her eventful and colorful career ended when she was stricken from the Navy list on September 3, 1931, and sold on the same date to John H. Rinder for $3,515.

The *Alligator*, *Boston*, the first *Cumberland*, *Warren*, *Falmouth*, *Boxer*, and *Porpoise* were built during the years of 1820–36. These vessels were all sloops-of-war except the *Cumberland*. Exploring barks, store ships, steam cutters, screw sloops and screw steamers also went down the shipways at Boston.

FIRST SCREW STEAM FRIGATE

Mention is made of another famous craft, the *Merrimac*, launched on June 24, 1855, in the presence of thousands of spectators. The vessel, which battled the *Monitor* on March 8, 1862, was announced to be the finest vessel of her class afloat. She was the first screw steam frigate launched in our Navy and was built to carry 40 heavy guns. The total cost of the ship was $879,126.

Following cruises to Annapolis, Habana, England (note: the British Admiralty ordered several frigates patterned after the *Merrimac*) she sailed for the Pacific. Returning from the Pacific, she arrived at Norfolk on February 6, 1860, and was taken out of commission. This was her last service under the flag.

In April 1861, she was readied for use, but for the prevalence of treasonable counsels would have taken out of Norfolk before the destruction of the Navy yard, April 21, 1861. Her conversion to an ironclad, under the name of the *Virginia*, and her attack upon our ships in Hampton Roads, her defeat by the *Monitor*, March 8, 1862, and destruction by the Rebels May 11, 1862, have become matters of history.

"Damn the torpedoes. Full speed ahead."

A colorful naval phrase, passed down through the century, was uttered by Adm. David G. Farragut, skipper of the Boston-built *Hartford*, during his memorable performance at Mobile Bay. Farragut, who gained a distinguished career as an officer, took command of the *Hartford* when she went on her first cruise to the East Indies, in 1859–61.

FIRST TORPEDO BOAT

She was launched on November 22, 1858, from the same ways as the *Merrimac*. Following the Civil War, she was sent to the East Indies under Rear Adm. H. H. Bell, who had been Farragut's chief of staff at New Orleans. She went out of commission shortly after a spar deck was added at New York.

The iron torpedo boat, the *Intrepid*, the first vessel of its kind added to the Navy, was launched from the old upper ship house, since torn down, on March 5, 1874.

Between 1861 and 1866 the Civil War caused great activity in the building, equipping, and movement of vessels at the shipyard. During this period 39 vessels of war were built at Charlestown and neighboring shipyards. Close to 45 vessels purchased by the Navy were overhauled, refitted, and equipped here.

CONSTRUCTION LULL

A lull in new construction ran between the years of 1874 and 1902 with the *Pentucket* completed in 1902, and the *Cumberland*, a steel training ship, completed in 1904. Prior to our entry into World War I, the U. S. S. *Bridge*, a store ship, was placed into service on May 18, 1916.

When the armistice was signed the keel of the U. S. S. *Brazos*, an oiler, had been laid and went into service on May 1, 1919. She was followed by the *Neches* on June 2, 1920 and the *Pecos* on April 23, 1921. On October 12, 1923, the shipyard was crowded with visitors to witness the launching of the U. S. S. *Whitney*, a destroyer tender.

The event marked Navy Day and men and women, accompanied by their families, entered the shipyard from early in the morning until late at night. A gala swimming meet was held in the large drydock and the finale was a huge fireworks display at the old baseball park, now the location of the electric shop and pipe shop.

Beginning in 1935, the destroyers, "eyes of the fleet," commenced to roll from the shipways—destined to make fame in a long 4-year war against Germany and Japan. It was here that the Navy Department sent out a call for the skilled shipbuilders of New England. Men had answered the call in 1899 and now their descendants wended their way to build ships of steel. Gone were the days of handhewn decks and ribs—poured steel and pressed metal plates were the answer.

FAMOUS FIGHTING DESTROYERS

Ships like the *MacDonough*, *Monoghan*, *Case*, *Conyngham*, and the *Mugford* were completed long before the shadow of war fell across New England. In their wake came the famous *Mayrant*, the fighting *O'Brien*, a courageous *Madison*, *Lansdale*, *Gwin*, and *Nicholson*. And one must not forget the stalwarts *Humboldt* and *Matagorda*, seaplane tenders.

"The enemy has struck a savage and treacherous blow. We are at war, all of us. There is no time now for disputes or delays of any kind. We must have ships and more ships, guns and more guns, men and more men—faster and faster. There is no time to lose. The Navy must lead the way. Speed up—it is our Navy and your Nation."

This message was received from Secretary of the Navy Frank Knox on December 8, 1941.

The Boston Naval Shipyard went into high gear.

Men and women, young and old, combined their efforts with youngsters of high school age, to answer the call of the Navy. Three 8-hour shifts per day went into effect. Unskilled hands, under the tutelage of experienced supervisors and mechanics, soon learned the intricacies of shipbuilding.

A not uncommon sight was a woman welder or drop forger. Ship after ship rolled down the ways, commissioned, fitted for sea and sent off to war. Yes, 166 fighting craft, built in the shipyard by New England men and women, went to battle against Mussolini, Hitler, and Hirohito.

Some ships left never to return—sunk by surface shellfire?—stricken by submarine torpedoes?—blasted by dive bombers? Who knows? Naval archives tell most of the stories of the *Guest*, *Ralph Talbot*, the *Griswold*, and others, but some ships had no survivors to tell a story.

Ships and more ships, destroyer escorts to submarines, wended their way, along with landing ship tanks from Omaha Beach to Guadalcanal. Soon the Atlantic and Pacific Fleets had many supporters in fighting hearts of steel. The fame of Boston-built ships was heard from Tarawa to the midnight bombardment of Hammamatsu.

Mighty aircraft carriers and undersea raiders from Boston carried the fight to the very

shores of Nippon. And many stood fast in Tokyo Harbor when the Nipponese signed the famous and historic surrender papers aboard the U. S. S. *Missouri*.

The Boston naval shore establishment still serves the Navy, building and overhauling the mightiest aircraft carriers afloat or a lowly harbor tug.

Her latest achievement is the U. S. S. *Suffolk County* which will join the fleet next Thursday.

Today many of the ships that were constructed in the Boston Naval Shipyard still serve with the fleet, while others are in mothballs, ready for a day when they might be called to action.

That day arrived during the Korean warfare when yard personnel speedily restored naval vessels to an active status.

But whatever the needs of the fleet and Nation may be, the Boston Naval Shipyard stands alert and able to meet those needs. The 157 years of shipbuilding experience have created a shipyard at Boston, manned by workers whose forefathers built gallant sailing vessels, that the American people can always depend on for distinguished service. Boston built is a guaranty that the best ship possible of construction has joined an illustrious line of the sea defenders of America.

High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. PFOST. Mr. Speaker, the petition has long been considered an authoritative voice of democracy. Recently out in my State of Idaho, however, the petition became the tool of a private power company engaged in a gigantic drive to try to make the Members of this body believe there is great grassroots opposition to the high Hells Canyon Dam in the very State which would benefit most from its construction.

Unless I am very much mistaken, these petitions will eventually appear somewhere in Washington—either in a House committee or on the floor—as bona-fide evidence that there is overwhelming opposition to the high dam in Idaho.

The way in which the power company used its influence—and its employees—to obtain the signatures on the petitions is described almost daily in the letters I receive from various parts of Idaho. For obvious reasons I am not going to divulge the names of my correspondents, but I would like at this time to ask unanimous consent to place in the RECORD excerpts from some of their letters:

CAMBRIDGE, IDAHO.

Yesterday, when we heard that the Idaho Power Co. had a petition out, getting people to sign against a Federal high dam in Hells Canyon, we started a petition of our own to see how many were for the high dam. In a few hours time, we had over 100 signers, all very much in favor of the high dam. We talked to people in a small area and many more would have signed, if we had reached them. Quit a few people told us that they signed the Idaho Power Co. petition only because great pressure was put on them to do so by the Idaho Power employees doing the petitioning, or because they were afraid of losing their jobs on the two low dams now being constructed. I think it is a pretty bad thing when people are forced to vote contrary to their beliefs to protect their jobs. The last general election showed the true feelings of the people of Idaho and the Northwest.

COUNCIL, IDAHO.

Another thing I'd like to tell you is that the Idaho Power Co. petition that was circulated by their employees, was a must for the employee. Each man had to procure 10 signatures on the petition.

NAMPA, IDAHO.

Since the Senate passed the Hells Canyon bill, I know that all of the money will be directed against the House action—which will be millions. The Idaho Power has been more active than at any time in its history. All of the chamber of commerce boys throughout the State are going to all of their employees with petitions, and they are really putting on the pressure.

NEW PLYMOUTH, IDAHO.

As you doubtless know, the Idaho Power Co. has petitions out for its dams at Brownlee, etc. One was presented here and I signed it rather than offend the manager. We have good accounts with their employees. It was presented as an effort to help them out.

COUNCIL, IDAHO.

We also want to tell you that the Idaho Power Co. is now circulating petitions for the low dams. The workmen are being asked to sign and you can see that they would be afraid not to sign—coercion, I would call it. High dam people are also circulating petitions for the dam, but we are at a disadvantage because of their indiscreet policies—their low dam policies.

HAILEY, IDAHO.

As you know, here in southern Idaho, with the two strongest papers, the Boise (Idaho) Statesman, and the Twin Falls Times News, so controlled by the Idaho Power Co., the people have little chance of presenting their views. Even in our little weekly, the Hailey Times, there were two articles favoring the Idaho Power Co., and the amount of taxes they pay. Last week my husband was in Lincoln County, and he ran into a paid employee of the Idaho Power Co. going around getting farmers to sign petitions against the Government dam, telling them their water rights were in danger, etc. Most of them fell for these lies.

Yesterday, when my husband paid his electric bill here, at the office, they asked him if he ould sign the petition. He pointblank said, "No."

POCATELLO, IDAHO.

For your information, I went into the power company office here in Pocatello, just a day or two ago to pay my light bill, and the clerk in that office shoved a petition in front of me and asked if I would sign that petition opposing the high Hells Canyon Dam. I informed her immediately I would not sign that petition and hoped that the Hells Canyon Dam would go through by the Federal Government. They are using every means possible to defeat that bill. Anyone who pays their bill, young or old, who goes in there, is asked to sign the petition. I thought I would give you this information. Perhaps you already know it.

WENDELL, IDAHO.

Since the Hells Canyon bill passed in the Senate, there is now one of the most vigorous campaigns ever attempted to confuse the issue and defeat the bill in the House. All Idaho Power Co. employees are out early and late circulating petitions and telling people that if the present construction is stopped, there will be a power famine.

Mr. Speaker, I would like also to include several other letters which indicate how the wind really blows in Idaho on the Hells Canyon Dam issue:

TWIN FALLS, IDAHO.

This letter is written to thank you for your excellent work in sponsoring a bill to authorize construction of a high dam at Hells Canyon. I feel confident that this community feels the same way about it; also, the great majority of people in southern Idaho. This is true in spite of the thousands of dollars worth of propaganda circulated by the private power interests.

CALDWELL, IDAHO.

I am writing this letter in the hope that we might give you some moral support in your fight for Hells Canyon Dam. I suppose the Republicans are going to try to prove that the high dam is anything but economical, but we believe that anything would be more practical than Idaho Power playing dog in the manger, and simply keeping the people from building an adequate structure in the deepest gorge in the United States.

At the last meeting at the Community Hall (Sand Hollow) it was easy to tell that there were more high-dam rooters than ever before. It is a shame the people can't vote on such issues. We would win easily.

Mr. Speaker, in view of the widespread support for the high dam in the area which would be most benefited by it, I sincerely hope the Hells Canyon bill can be brought to the floor of the House for consideration early in the next session of the Congress.

Refugee Relief Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two telegrams which I have received from the outstanding Greek leader, Mr. Spyros Skouras, and Monsignor Swanstrom, of the Catholic Relief Services, NCWC.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

LONDON, *August 30, 1957.*

Senator KENNEDY,
United States Senate,
Washington, D. C.

DEAR SENATOR: Congratulations, and am highly appreciative bill you sponsored behalf Greek refugees. Please accept my gratitude.
Kindest regards.

SPYROS SKOURAS.

NEW YORK, N. Y., *August 26, 1957.*

Hon. JOHN KENNEDY,
United States Senate,
Washington, D. C.:

Wish congratulate you your good work getting some relief to meet our mutual problems with refugees. We are all hoping and praying for early passage by Congress of a bill.

Monsignor SWANSTROM,
Catholic Relief Services, NCWC.

An Odd and Cynical Approach to Justice

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CRAMER. Mr. Speaker, the following two editorials in August from the St. Petersburg Independent, St. Petersburg, Fla., well illustrate the feeling of a great segment of the public throughout the Nation as well as in the first district of Florida. The final provisions of civil-rights legislation, which I have opposed, in giving to the Federal judge trying such cases the right to pretrial judgment as to guilt creates an absurdity both in concept and in law. I ask inclusion of these two editorials at this time that the position of the people of the first district will be clearly understood. I hope that all who read these editorials will clearly see that the hybrid creature created by this Congress is one that will in the future come home to haunt its breeding ground.

The editorials follow:

ODD APPROACH TO JUSTICE

All the backing and filling in Congress on the proposed civil rights law has finally produced a Republican compromise proposal so ridiculous it does not deserve serious consideration.

In brief, the compromise calls on Federal judges to decide in advance whether a defendant is just a little bit guilty or flagrantly guilty of criminal contempt.

Under the bill passed by the Senate, defendants charged with civil contempt in voting rights cases could be jailed by a Federal judge without jury trial. Civil contempt is an action in which the court acts in an effort to enforce compliance with its order. But in criminal contempt cases—an action designed to punish the defendant—a jury trial would be provided.

The jury trial provision has stuck in the craw of administration leaders, not only because the jury trial provision is applicable to all cases of criminal contempt, but because they say it would weaken the voting rights enforcement.

So now House Republican Leader MARTIN, with President Eisenhower's blessing, has offered a compromise proposal. His proposal would give judges sole discretion to decide whether there should be a jury trial in voting rights cases in which a person is accused of criminal contempt for violating a court injunction.

If a judge tried the case without a jury, he could impose a penalty no stronger than 90 days in jail and a $300 fine. But in the event he decided there should be a jury trial, the defendant, if convicted, might be imprisoned for as long as six months and fined up to $1,000.

Thus if the judge decided in advance that the defendant was just slightly guilty of criminal contempt he could slap him in jail without a jury trial. But if he deemed the defendant's action warranted heavier punishment he would have to provide a jury trial.

Certainly this is a strange approach to justice, particularly when the judge necessarily would be so intimately involved in such a case from the beginning. Indeed, in those cases which the judge deemed less serious, he would be the accuser as well as the judge and jury.

If a compromise on the jury-trial phase of the bill is necessary, it would be well to limit its scope to voting rights cases. But the Republican proposal is a cover-up job to save face—compromise for the sake of compromise. As such it is merely a travesty.

CYNICAL APPROACH

After the Democrats and Republicans produced a judicial hybrid it now appears that Congress will adopt the bobtailed civil-rights bill.

The hybrid—one of the oddest-looking animals ever conceived—is a compromise on the jury-trial amendment. It provides that in voting rights cases the judge shall decide whether criminal-contempt charges shall be tried by himself alone, or by a jury. But if the judge tries the case himself, and assesses a penalty of more than 45 days in jail and $300 fine, the defendant has the right to demand and receive an entirely new trial.

The compromise provision is almost as ridiculous as the Republican proposal which would have permitted the judge in such a case to deny jury trial if he thought the defendant a little bit guilty but would require a jury trial if he thought the accused flagrantly guilty.

The only reason for limitation of the jury trial in such a case is the prevailing belief that southern juries will not convict in a civil-rights case. And if this is not a cynical approach to the whole matter of civil rights we have never seen any examples.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BYRNE of Illinois. Mr. Speaker, as we come to a cessation of activities of the first session of the 85th Congress, I would like to have consent to insert a few remarks about Chicago's observance of I Am an American Day on September 15. Our beloved President Eisenhower has proclaimed Citizenship Day. The two occasions will be observed simultaneously in Chicago.

I was born and raised in Chicago and I know how keenly we feel the responsibility of being an American and I say too, that we are dedicated to preserving America. In becoming a new citizen, it is important to understand fully what it means to be an American and what it took to make America. I have long looked upon American citizenship as a priceless heritage.

Americans are comprised of many creeds and many colors. In this composite there is a very basic ingredient which is the source of our greatness. I refer to the love and recognition of God Almighty. As I have listened to the deliberations on mutual security, I am convinced that the greatest certitude we can have for mutual security among nations is a rededication to the principle of Peace on Earth, Good Will to Men.

In my opinion, we cannot be true Americans without loving God, working for peace and praying that our efforts to safeguard the liberties given us by our Constitution and the Almighty will continue to be blessed.

When Chicagoans gather together on September 15 to give thanks and thought to being Americans, I will be among them. Many will be new citizens and many will be natural-born citizens. Each has a responsibility to the other. I am proud indeed that nearly 250,000 men of the Holy Name Society of the Roman Catholic archdiocese are joining with other civic, patriotic, fraternal, business, and labor organizations in Chicago to observe I Am an American Day. Each of us is an integral part of our beloved country.

Congressman Dollinger's Annual Report

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DOLLINGER. Mr. Speaker, following is my report to the people of the 23d District of New York on the first session of the 85th Congress.

Early in 1957, the President announced his legislative program, which was very impressive. In fact, his recommendations were a continuance of Democratic programs established under Democratic administrations, and therefore had the support of Democratic Members of Congress. Although the Democrats did all in their power to push action on vitally needed legislation, the President's lack of leadership, failure to gain support of his own party, failure to wield his authority and give administration backing to important measures, have wreaked havoc. His record of achievement is a sorry one. Out of 16 major recommendations, only a few have been enacted into law, and the legislation passed only because of support of the Democrats; on many major issues members of his own party refused to stand behind him.

The President's following proposals, all important to the majority of our people, have not been touched upon so far, due to his apathy and indifference: Extend the minimum wage to more workers; special Federal assistance to cut unemployment in distressed areas of the United States; extend and perfect the social-security system; overhaul and improve the Taft-Hartley Act; legislation to control monopolistic mergers; Federal assistance for hospital construction with special reference to low-cost care of chronic cases and needs of older persons; increased Federal aid for medical care of the needy and to help build facilities to train more physicians and scientists; expansion of voluntary health insurance through Federal reinsurance and pooling arrangements; immediate statehood of Hawaii and Alaska; extend and liberalize the Refugee Relief Act. These may be called "sins of omission." Let us examine the record and we shall see that the Republicans have continued to carry out their policy of helping the moneyed interests and disregarding the needs and general welfare of the average citizen.

REPUBLICAN GIVEAWAYS CONTINUE

The natural gas bill, which would cost consumers $800 million annually, is backed by the President and is being pushed by gas and oil interests. I voted against the measure in committee, and my efforts and all those opposed have succeeded in preventing a final vote up to this time. However, strong efforts will be exerted early in the next session to enact this legislation. I shall continue to fight against passage of this vicious bill.

The President used his great influence to help retain the Hells Canyon power site for the Idaho Power Co., another victory for private power interests, which will mean higher prices for consumers.

The administration has been urging passage of a bill providing for the return of seized German war assets to German nationals. In effect, this would mean return of property seized during World War II to the German war lords who were responsible for the atrocities committed against humanity. I am opposed to this giveaway, and will do all in my power to prevent the return of such seized property.

After years of battling private power interests, which wished to grab Niagara power and which had the blessing of the Republicans, we finally succeeded in passing a bill which provides for development by the power authority under New York State law. This will protect consumers.

CIVIL RIGHTS

Passage of the civil-rights bill marked a great day in the legislative history of our country, and I was deeply gratified to have the opportunity, after years of unrelenting work in behalf of civil rights, to cast my vote in favor of the legislation. When we consider that this is the first time in more than 80 years that civil-rights legislation has been passed, its importance cannot be measured.

Admittedly, the Civil Rights Act of 1957 is not the strong bill which passed the House—and even that was not strong enough to right all prevailing evils of discrimination and I was not satisfied with it. It is far from ideal; it does not meet all present needs and provides fewer remedies than the American people as a whole would have wished. However, it was expedient to accept a compromise; it was wise to accept the best that we could get rather than have no bill at all and let even a small victory escape us. Now we have a starting point; now we can continue to build until every last vestige of discrimination is wiped out and true freedom enjoyed by all.

At least, on its face, the Civil Rights Act carries a significant new approach to enforcement of Negro voting rights—rights guaranteed by our Constitution since passage of the 14th and 15th amendments in 1868 and 1870. Such guaranties have meant very little or nothing in the face of threats, obstacles, and numerous cruel and blatantly illegal methods used to prevent Negroes from voting. Action by the Federal Government to enforce these constitutionally guaranteed rights has been a dire necessity for more than half a century.

At last, we are over the first hurdle; we have had a showdown on the issue of civil rights. Those sincerely interested in justice and equality for all have succeeded in getting favorable congressional action on a civil-rights bill.

IMMIGRATION

The McCarran-Walter Immigration Act with its shocking inequities still remains on our statute books, despite all attempts to rewrite the law to make it conform with our American ideals and principles and our professed desire to help the oppressed peoples of the world, who look to us for shelter.

The immigration bill recently passed is a mere drop in the bucket; it does not touch the most glaring hardships or unfair provisions in existing law. Chief of the inequities is the national origins quota system using the 1920 population census as a basis for setting quotas. This provision was deliberately intended to discriminate among aliens on the basis of race and nationality. Unused visas for northern European countries, where the quotas are large, average 250,000 a year. If 1950 were used as a base year, it would raise the annual admissions total by about 65,000; it would reallocate unused national quotas—of countries like England—to small-quota countries, where the demand for admission to the United States is greater.

The new bill also failed to give resident status to 28,000 Hungarian refugees who now have a stateless status here; it failed to end present discrimination against naturalized citizens. It does admit orphans adopted by Americans overseas; it does help reunite families which were split when one member or more immigrated; it does provide for waiving fingerprint requirements for certain foreign visitors; it does permit more than 60,000 aliens to enter this country on a hardship basis.

I shall not rest until the harsh and antiquated McCarran-Walter Act of 1952 has been repealed or completely rewritten to meet the pressing need for a more humane and sensible immigration policy.

REPUBLICANS SCUTTLE IMPORTANT BILLS

The Republicans again killed the school-construction bill. There is a lamentable lack of adequate schools throughout our country; our children are forced to attend overcrowded schools; schoolhouses in many areas are run down and in dangerous states of disrepair. The future of our country depends upon the education and training we give our youth. Defeat of the bill cheated our children of benefits that are justly theirs and our Nation will suffer as a result of this unwise action on the part of those who voted against the legislation.

Eisenhower said he wanted a Federal school-construction bill; yet he never raised his voice when the measure was being considered. This is another instance of failure on his part to be well-informed and to assert his leadership.

Tax relief was promised us, but the administration has bitterly fought every effort to lower income taxes. At the same time, loopholes in the present law have made it possible for Big Business to profit by tremendous tax writeoffs. The average taxpayer, because of record-breaking high living costs, can barely exist, but the industrialists wax fat on huge profits and tax exemptions.

Wages have not kept pace with increasing living costs. I introduced a bill to increase the minimum wage to $1.25 per hour. Stiff opposition on the part of the Republicans has prevented action on this legislation.

The administration vigorously opposed pay increases for postal workers and classified employees. In spite of the President's threat to veto the measures, the Senate and House passed pay increase bills. I was pleased to have the opportunity to vote in favor of the sorely needed pay increases.

Social security should be liberalized and extended, but Democratic efforts to get action on legislation to increase benefits have failed because of lack of cooperation on the part of the administration.

Housing continues to be a major problem. Legislation passed during this session is helpful to the building industry and to those financially able to own their own homes, but the greatest need is for more federally aided housing projects to house those in low-income and middle-income brackets. The Republicans have cut the number of housing units at every opportunity and, so far, the Democrats have been unable to increase the number to the figure provided in the original Democratic housing program.

The mistrust generated by Secretary Dulles and lack of faith in our President and Secretary of State to wage a successful fight in matters of foreign policy increase daily as we watch the United States losing ground in the Middle East and as the Soviet Union accomplishes one successful coup after the other. There has been no decisive action on the part of the administration to achieve peace and therefore Israel remains vulnerable to attack by her enemies. Until the 9-year Arab-Israeli deadlock is broken there can be no real peace in the world. I, of course, shall continue my efforts in behalf of Israel and try to help her at every opportunity.

MISCELLANEOUS ISSUES

In view of ever-increasing living costs and the fact that wage increases have not kept pace to meet them my efforts to help consumers have continued. I introduced, among others, bills to help veterans and their dependents; for tax relief to annuitants; to increase personal income-tax exemptions; to repeal excise taxes; to end discrimination against older workers.

BRONX CONGRESSIONAL OFFICE

Just a reminder that my congressional office at 938 Simpson Street, Bronx, is open daily. My constituents are welcome to call there and to take up any problems they may have. I also urge them to write me so that I may have the benefit of their views regarding legislation. I also invite them to call at my office, 1723 House Office Building, when they visit Washington.

The Hopes and Fears of the Young in This Atomic Age

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very interesting article, by Eugene Gilbert, of Youth Research, appearing in the June 27 issue of the Worcester (Mass.) Evening Gazette, containing an account of the reaction of teen-agers to the potentialities of the atom bomb and atomic energy.

The article follows:

TEEN-AGERS AND THE ATOM BOMB

(By Eugene Gilbert)

Growing up in the shadow of the atomic mushroom, most of today's teen-agers hope it portends good rather than evil.

Three out of four youngsters say they are happy atomic energy was discovered.

One in three thinks the atomic bomb will end wars.

Only 1 in 4 thinks it's likely to destroy mankind.

At the same time, 55 percent concede they do have fears for the atomic future. A Wisconsin girl sums hers up this way:

"Let's not talk about it. It sends chills up and down my spine—and I don't mean the kind you get when you look at a handsome boy, either."

A 15-year-old boy, one of the non-frightened 38 percent, takes a more fatalistic view:

"What's to be afraid of? You've got to die sometime—and I don't think one bomb is going to do it, anyway."

"People talk themselves into all sorts of stupid things," says another youngster. "The sky isn't going to fall down tomorrow but still some people worry about it."

SEE GOOD PREVAILING

Generally, the girls we questioned in a national survey were more fearful than the boys.

But frightened or not, 4 out of 5 teen-agers think atomic energy has greater possibilities for good than for evil.

"The atom can be a very helpful tool if we are wise enough to use it in the right way and not for destroying ourselves," says a Philadelphia girl.

"Unless the higher ups really go crazy, our civilization will stride forward because of atomic energy," observes a New Jersey boy.

BOON AND DISASTER

"For me personally, the discovery of atomic power with its benefits to mankind is the major happening of the 20th century," enthuses an 18 year old.

Speaking for the pessimistic minority, a Connecticut youth asserts:

"The forces of evil have caused the development of atomic energy. Perhaps the forces still left for good in the world will be able to drive it out before we all have to pay the penalty."

"I feel we would all be better off if it had not been developed because it can do more harm than good," adds a New Yorker.

MOST DOUBT WAR

On the question of whether there will be an atomic war, some 36 percent say "Yes," while 47 percent say "No."

"Nations will be too wary ever to fight a full-scale war," says a Brooklyn boy hopefully.

"There will always be wars and more wars," counters a pessimistic Georgia youngster. "It will take more than a good scare to stop governments from wanting to crush other governments."

"It all depends upon nations' ability to cooperate and the role of power politics, but I am sure it will all work out," says a cautious optimist of 19.

PESSIMISTIC

While those feeling that atomic energy is likely to destroy mankind are in the minority, they state their case with blunt finality.

"I think we are destined to destroy ourselves," says a Sarah Lawrence College student.

"Everything points to the end of civilization as we presently know it," prophesies a college sophomore.

TWENTY YEARS TO LIVE

"I think it's already too late to stop the powers that be from causing our destruction and that of those around us," is the grim warning from a 15-year-old Los Angeles boy.

"We're finished, man," says one young pessimist, "whether we like to admit it or not. Maybe not today or tomorrow, but you can count on a big bang one of these fine days."

It is interesting to note that of that group 5 percent foresee an end to mankind in 5 years, 9 percent in 5 to 10 years, 10 percent in 10 to 20 years, and 64 percent in more than 20 years.

SOME HOPE

But, on the bright side, there are those who believe every bit as firmly that there is a future for homo sapiens.

"I think eventual fear of atomic energy will end war and atomic energy will be used to benefit mankind," predicts a New Haven, Conn., boy.

"Nothing can wipe us off the face of the earth," concludes a Chicago girl, with the faith and bright confidence of her 16 years.

British Planning Atomic Powerplant Seven Times Size of Calder Hall

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article appearing in the August issue of Atom entitled "Hinkley Point Power Station," which follows:

HINKLEY POINT POWER STATION

The Minister of Power has given his consent to the construction by the Central Electricity Authority of a nuclear power station at Hinkley Point, Somerset. A public inquiry into the proposal was held at Bridgwater by inspectors from the Ministries of Power and Housing and Local Government.

The Minister has considered very carefully, in consultation with the Minister of Housing and Local Government, the evidence given and the submissions made on behalf of the parties at the inquiry. He appreciates that, as pointed out at the inquiry, the coast at Hinkley Point has a character at present isolated and undeveloped, but sites for nuclear power stations as suitable as that at Hinkley Point are very difficult to find and the Minister does not consider that a power station on this site will seriously affect the amenities in this sparsely populated area or be unduly conspicuous when seen from neighboring viewpoints.

In a letter to the county council, and also in evidence at the inquiry, the central electricity authority have given a number of assurances in connection with this project. In particular, the authority intend to appoint a landscape consultant in connection with the landscaping of the site and architects of the highest standing will be employed for the buildings. The authority will also discuss the design of the buildings with the county council at an early stage, and will consult with the county council and the Williton rural district council on the question of providing public paths in substitution for rights of way which may need to be diverted or stopped up. Public access to the foreshore in the neighborhood of the power station will only have to be restricted during the period of construction.

It is expected that the output capacity of this station will be 500 megawatts, equal to that of the Battersea Power Station—or 7 times that of Calder Hall. The highest building will be 175 feet. There will, however, be no tall chimneys, and only very short vents about roof level and hardly visible. There will be no cooling towers. The station will be connected with the 275-kilovolt supergrid line which is planned to run between Melksham (near Bath) and Exeter, but it is intended that the route for this connection should be well clear of the Quantocks and Brean Down.

Milford, Ohio, Chamber of Commerce Resolution

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POLK. Mr. Speaker, the Milford Chamber of Commerce, of Milford, Clermont County, Ohio, is one of the finest organizations of business and professional men in southern Ohio. Under date of August 15, 1957, the Milford Chamber of Commerce in special session adopted the following resolution which I deem to be of sufficient importance to be made a part of the CONGRESSIONAL RECORD:

Whereas it is our considered judgment that the cost of our Federal Government is too great and unnecessarily so; and

Whereas necessary reduction of the cost of Government would result to the benefit of Democrats and Republicans alike; and

Whereas the Honorable Herbert C. Hoover, distinguished, able, and devout patriot, who gives so much and takes so little, has just recently celebrated his 83d birthday: Therefore be it

Resolved, That the Milford Chamber of Commerce, Milford, Ohio, respectfully exhort the Congress to honor Ex-President Hoover and the members of his commission by adopting the accrued budget as presented by the commission for congressional consideration; and be it further

Resolved, That we send commendations to Ex-President Harry S. Truman for his practical wisdom and political courage in bringing the great talents of Mr. Hoover to labor for more efficient and less costly government and that copies of this resolution be sent to Mr. Hoover, Mr. Truman, President Eisenhower, Vice President Nixon, Senator Lyndon Johnson, Senator William F. Know-

land, Senator Bricker, Senator Lausche, Speaker Sam Rayburn, Representative John McCormack, Representative Joe Martin, Representative Clarence J. Brown, Representative James G. Polk, Representative Gordon Scherer, the Cincinnati Times-Star, the Cincinnati Post, the Miami Valley News, the Clermont Courier, the Milford Advertiser, and the Cincinnati Enquirer whose editorial inspired this resolution.

Duly adopted in special session August 15, 1957.

GEORGE H. DAY,
President.
JOHN HARDOERFER,
Executive Secretary.

Address by Adm. Arleigh A. Burke, United States Navy, Chief of Naval Operations, Before the 58th National Encampment, Veterans of Foreign Wars, Miami Beach, Fla., Monday, August 26, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. VAN ZANDT. Mr. Speaker, I have recently had the privilege of attending the 58th annual encampment of the Veterans of Foreign Wars held during the past week in Miami, Fla.

It is always a pleasure to me to renew and strengthen my ties of friendship with the members of this fine patriotic organization dedicated to the defense of our country and specifically to the perpetuation of the ideals and way of life on which our Nation was founded and has since followed. The continual effort of the VFW to protect our national inheritance of freedom is to be commended and appreciated by all Americans.

This year, the encampment was highlighted by the presentation to Adm. Arleigh A. Burke, Chief of Naval Operations, of the VFW commander in chief's Gold Medal award for distinguished citizenship. This highest award of the VFW was made to Admiral Burke for his contributions to national security.

The selection of Admiral Burke to receive this coveted citation was indeed an appropriate and timely recognition of the great service which this dedicated officer has given our country.

It is not without cause that Admiral Burke has come to be recognized as a steadying force—a balance wheel, so to speak—in our highest military councils. In this period when we hear so much about friction and unwarranted rivalry between the increments of our military services, Admiral Burke has become a symbol of progress and efficiency through cooperation and understanding. His attitude toward and manner of dealing with the important problems which face our military and naval leaders today could well be noted by all who are interested in this vital aspect of our national security.

This important attribute is in addition to Admiral Burke's indisputable forte as a brilliant strategic thinker and planner—an indispensable ingredient in the successful military leader.

The tribute paid to Admiral Burke by the Veterans of Foreign Wars was justly deserved. The VFW is to be commended for their recognition of the great contributions of Admiral Burke.

Another highlight of this encampment was the appearance and speech of the distinguished Commandant of the Marine Corps, Gen. Randolph McCall Pate. The tremendous ovation given General Pate by the members of the Veterans of Foreign Wars was indicative of the high regard in which General Pate is held by those who appreciate the role ever played by the Marines in the safeguarding of our Nation.

General Pate, the gentleman and the leader, is unfailingly a pleasure to be with. He told the encampment what they hoped to hear—and I guess already knew—that the Marine Corps, as our combat force in readiness, as always, was ready to go wherever and whenever they were needed.

True to the Marine tradition of getting the best out of its officers and enlisted personnel, General Pate struck a particularly pertinent note when he told the encampment that the boys our country produces today are the soundest and finest on the face of the earth. General Pate's speech is printed elsewhere in the RECORD.

As a member of the Armed Services Committee and as an officer in the United States Naval Reserve, I am proud of these two outstanding officers.

Those at the VFW encampment expressed many favorable comments upon the inspiring manner in which Admiral Burke and General Pate represented the Department of the Navy. It is easy to understand why there is such widespread belief throughout the country that the naval services today have the finest Navy-Marine command team in history. This reassuring situation with respect to the uniformed heads of the Navy and Marine Corps is the direct result of the close relationship between Admiral Burke and General Pate. This relationship between the uniformed chiefs of the Navy and Marine Corps has been reflected down through the entire chain of command in both services. The result is a spirit of mutual respect, understanding and cooperation that is all too rare in these times. I am certain that the leadership example set by the Chief of Naval Operations and the Commandant of the Marine Corps could well be emulated by the other services.

This smooth-functioning, efficient, cooperative teamwork between the Navy and the Marine Corps, resulting from the Burke-Pate leadership, is a credit to the administrative ability of the Secretary of the Navy Thomas S. Gates, Jr.

These few words I have spoken are not, I hasten to assure you, exclusively my personal conclusion. These attributes of Admiral Burke and General Pate are so striking, and the favorable conditions they have created so apparent, that comment has been generated throughout our Nation. Editorials in periodicals the width and breadth of the country have expressed approbation of the outstanding contributions of Admiral Burke and General Pate.

I commend to the attention of this House the speech of Admiral Burke before the Veterans of Foreign Wars 58th annual encampment, together with an editorial from the August 27 issue of the New York Times reflecting the widespread admiration which the country has for the steadying influence of Admiral Burke in these critical days:

ADDRESS BY ADM. ARLEIGH A. BURKE

Commander in Chief Holt, members of this great patriotic organization, Veterans of Foreign Wars of the United States, and ladies of the auxiliary, I accept this award with deep appreciation and humility. While you have honored me personally, I accept this award not for myself but on behalf of the wonderful men and women of the United States Navy. In the final analysis it is these fine youngsters, from your homes and your communities, who are the real strength of your Navy. They are the ones who stand a vigilant watch in our fleets around the world today. On behalf of everyone in the Navy, we pledge to you that we shall do everything possible to continue to merit the confidence which you have symbolized by this award.

You have conferred upon me the additional honor of speaking to you at this opening convocation of the 58th national encampment of the Veterans of Foreign Wars. This honor I accepted with deep appreciation. As a member of the Veterans of Foreign Wars I am, of course, aware of the basic objectives and interests of this organization.

Patriotism, belief in our Constitution, and devotion to the way of life which it provides are basic concepts of the Veterans of Foreign Wars. Your organization understands clearly the subtle and open dangers of world communism. You defend with resolute determination our Nation and our liberty against the evil forces of communism.

These also are the essential faiths of those who serve in the Armed Forces. These are the motivations, the beliefs, and the aspirations of those who now serve, as you have served, in the military services of the United States.

You may rest assured that the young men and women whom you have sent from your homes, the products of our schools, of our communities, and of our churches, are superior to those who bear arms in the name of the Communist tyranny.

The strength of our young men is rooted in the simple, homespun teachings of Americanism, a belief in God, and devotion to country. This is the heritage of freedom which has been passed from generation to generation of American fighting men. This is the essence of the moral right and spiritual strength, which veterans such as you have passed to those who now stand where you stood, in the ranks of the defenders of our Nation.

Belief in God, faithful devotion to a country of freemen, represent intangible but overwhelming strength, which distinguishes our fighting man from the military vassals of communism. These moral and spiritual strengths give to our fighting men a quality unknown to those who march under the banners of the hammer and sickle.

You can depend upon the young American because he is better. He is better, tougher, and a more resourceful fighting man than anything the Communists can muster.

But we all know well that our fighting forces must have, in addition to these moral and spiritual attributes, the most efficient weapons and leadership. We would, indeed, be putting a tragic burden upon our fight-

ing men if we did not give them the finest weapons and leadership that human effort can provide.

For the past 2 years I have, as Chief of Naval Operations, served as a member of your Joint Chiefs of Staff. On the basis of this privileged experience I can report to you, without reservation, that the Armed Forces of the United States are doing the job you want them to do.

During my service as a member of the Joint Chiefs of Staff I have had an excellent opportunity to observe my colleagues in the joint chiefs, who are also the uniformed heads of their respective services. They are men of whom you can be justifiably proud. They have, without exception, rare qualities of leadership and superior professional knowledge. As the military heads of the services, they work continuously to improve the individual services for which they are responsible. They have been eminently successful, because our military services—all of our military services—are the best, the most modern military services in the world today.

This continuous effort toward progress is being made by each of our fine military services. Each is making a significant contribution to the overall advancement and progress of our national defense team. There is a wholesome, reassuring cooperative effort among your armed services to give our country the military power the Veterans of Foreign Wars has long urged as necessary to guard against the predatory forces which threaten our freedom.

It has been an inspiring experience, as well as an honor, to work together with the military chiefs of the other services in the common effort to give our country better national security.

It has been a rare privilege to work with, to observe, and to know my colleagues in the Joint Chiefs of Staff, both professionally and personally.

It has been a reassuring two years in which I have been able to sit down and work, in an atmosphere of cooperation and sincerity, with such able leaders as Gen. Maxwell Taylor, Chief of Staff of the Army, Gen. Randolph Pate, Commandant of the Marine Corps, Gen. Nate Twining, former Chief of Staff of the Air Force, and his distinguished and able successor, Gen. Thomas White.

In particular I wish to pay my respects to the retiring chairman of the Joint Chiefs of Staff, Admiral Radford. Few men of our time have contributed more to our Nation than has Admiral Radford during his long naval career.

Our Nation continues to be fortunate in having a man of the proven ability of Gen. Nate Twining, who as you know, has recently succeeded Admiral Redford as Chairman of the Joint Chiefs of Staff.

Telling you of the fine cooperative spirit that exists among members of the Joint Chiefs of Staff does not mean to imply that my colleagues are not men of strong conviction. They most certainly do have strong professional and individual beliefs as to what is required to give our Nation and the free world the protection we must have.

The Joint Chiefs of Staff differ occasionally on the basis of professional background or personal belief. But there is never any doubt that the determination and strong will of each are based on the common objective of doing what is best for the country. Each member knows that strong convictions on the part of men of good will are an important basis for arriving at the best possible defense within a reasonable budget. There is no major problem affecting our national security that cannot be resolved by men of strong but fair attitudes.

The longer I serve in the Joint Chiefs of Staff the firmer becomes my assurance that my colleagues are imbued with a common desire, motivated by a common objective, and dedicated to a common purpose. Their common goal is to provide the versatile, hard-hitting military power that will assure the preservation of our Nation and our freedom.

This cooperative team efficiency, which characterizes the strength of the Joint Chiefs of Staff system, underscores the wisdom and farsightedness of the position long held by the Veterans of Foreign Wars on this matter. You Veterans of Foreign Wars can justifiably feel a sense of deep satisfaction from your unswerving support of our American Joint Chiefs of Staff system. The combat history of World War II, recent events, and events which occur almost daily, combine to justify your stand in support of our Joint Chiefs of Staff system. In hot war and in cold war our American-developed Joint Chiefs team concept has demonstrated clear superiority over any system of one-man rule.

The armed services and the Nation as a whole are indebted to the Veterans of Foreign Wars for the constant and determined stand you have taken in support of the laws which make the American Joint Chiefs of Staff system the keystone of our defense structure.

Turning now to the subject of our Nation's seapower, you would probably be surprised if you did not hear from me on this subject. It would surprise me, too.

The Veterans of Foreign Wars have long insisted that our country be provided with modern, hard-hitting, fast-moving, balanced fleets. You deserve the thanks of all Americans for your timely recognition of the really serious implications of the continuing rise of Soviet seapower. Our Nation is more secure because of the stand your organization has taken on this matter.

The fundamental dangers arising from growing Soviet seapower have been pointed up in the perceptive, well-informed resolutions of your previous encampments.

In calling attention to the increasing might of the Soviet Navy you have helped our Nation recognize one of the great strategic realities of our time.

There is not, even now, adequate appreciation in many quarters of the critical world problems created by the Kremlin's maritime expansion.

Whatever else the men in the Kremlin may be, they are hard, cold, and ruthless strategists. They have keenly and accurately appraised the geographical nature of the free world.

They realize the fundamental fact that the non-Communist world is geographically, economically, and strategically a vast oceanic confederation.

They know, as we know, that it is the sea that provides the highways of commerce and trade that nurture the free world in peace. They know also that the sealanes are the strategic sinews that alone can bind the free world together in time of war.

The men in the Kremlin know too that the United States and her allies depend on sea transportation for the raw materials for our industries in peace and the strategic materials in time of war. They know that our allies throughout the world can prosper in peace and be supported in war only as long as we control the seas.

There is no empty theory behind the rising threat of Communist naval power. It is cold, hard fact.

When World War II ended the United States was the number 1 seapower, Great Britain was second, and the Soviet Union was down among the lesser naval nations. In a short span of 12 years the world has witnessed an astounding shift in international power relations. The Soviet Union has now replaced Great Britain as the second ranking seapower in the world.

The naval building rate of the Soviet Union since World War II has exceeded all other peacetime naval construction programs in history. They have a large, well-rounded Navy. They already have the largest submarine force in history, and they are still building submarines at the rate of about 100 a year, a rate never equaled by any nation at peace.

They are devoting great effort to development of submarines capable of launching guided missiles against metropolitan and industrial targets in any part of the world.

Your Navy is working constantly to improve our capabilities against a submarine offensive if it should come.

The versatile forces we are developing, our ships, aircraft and missiles—all of them—are designed to play their part in the fight against the submarine. They must be designed also to oppose all other threats to our control of the sea as well.

At this moment we do not have all the answers needed to perfect defenses against enemy submarine attacks. There are some tough problems yet to be solved. Able and dedicated officers, enlisted men and civilian scientists are working tirelessly to create the defense we must have. I am confident that we will succeed.

Meanwhile, it would be dangerous and somewhat less than frank if we were to minimize the threat which Soviet seapower poses to our survival.

There is one encouraging aspect of our naval development that I would particularly like to bring you up to date on at this time. We now have in commission, under construction, or authorized for construction by the Congress, a total of 21 ships which will be propelled by nuclear powerplants. This includes 19 nuclear-powered submarines. The first of these is *Nautilus*, which on January 17, 1955, sent her now-famous message "underway on nuclear power." *Seawolf* has since joined the fleet, and we are launching the fourth nuclear submarine at our Navy Shipyard at Portsmouth, N. H., tomorrow. Four of the nuclear-powered submarines now authorized will carry missiles.

The nuclear-powered cruiser *Long Beach* is being built by Bethlehem Steel at Quincy, Mass. We have recently announced the contract for the nuclear-powered carrier to the shipyard at Newport News, Va. To round out our nuclear-propulsion program we hope to ask the Congress to authorize the construction of a nuclear-powered frigate.

Your Navy has powerful forces deployed today in distant waters. Such distant deployment would require an attack by our Nation's enemy against our distant naval forces, attacks which otherwise might be directed toward our cities and industries.

The protection of this country is not based on a defense line through New York and Miami, or Boston and Seattle. That is not good enough in the nuclear-missile age. Our outer barrier against enemy aggression must be away from our shores, out into the practically endless reaches of the distant seas.

The nature of the East-West conflict, together with the technological developments of our time, are placing an ever-greater importance upon sea power. The ability to maintain freedom of the seas assures the wellbeing of the free world in time of cold war. Control of the seas is the key to survival and victory in event we are attacked.

Your Navy is helping man the distant ramparts of the free world, 24 hours a day, 7 days a week.

With its ships, aircraft, and landing forces on distant stations, the Navy maintains our first line of defense overseas.

Your Navy is ready. And your Navy is determined to give our country the maximum in defense for every dollar made available to us.

Important as the Navy is to survival in the nuclear-missile age, the Navy alone cannot protect our Nation and the free world. No one weapon, no one service by itself, can, by itself defend our Nation and our allies. Suc-

cessful, efficient defense requires teamwork in which all our military services participate. The Army and the Air Force, and our wonderful, hard-fighting, seagoing partners, the Marine Corps, all are indispensable elements of our defense team. We need them all.

The strength of the United States depends upon the interest and understanding of defense problems by the American people. The Veterans of Foreign Wars, and its members as individuals, have done much to assure that our Nation will have a strong, versatile force for defense. Our Nation is more secure because of what your organization has done to bring to our Nation a deeper understanding of the necessity for a strong defense posture in these perilous times.

You are performing a great and a necessary role. Ours is a better Nation and a stronger Nation because of you.

It has been an unforgettable pleasure to be with you. On behalf of the men and women of your Navy, I thank you for the honor you have bestowed on me.

In concluding I salute you, Veterans of Foreign Wars.

You served in war.

You are serving in peace.

Yours is the kind of patriotism by which a nation endures.

[From the New York Times of August 27, 1957]

THE JOINT CHIEFS' TEAM

"A soft answer turneth away wrath." Adm. Arleigh A. Burke, Chief of Naval Operations, remembered the Biblical injunction yesterday in his address in Miami to the Veterans of Foreign Wars. Admiral Burke is a fighting leader; he has given the Navy a new dynamism and he could never be accused of failing to uphold his service point of view. But he has always stated his case without rancor, personal bitterness or recriminations against other members of the defense team.

His tribute yesterday to the other members of the Joint Chiefs of Staff and to that body as a corporate entity was, therefore, to be expected from Admiral Burke, but was nevertheless refreshing in this time of service disputes, and unwarranted criticism of the heads of our services.

There is "never any doubt," the Admiral said, that the "common objective of the good of the country is the goal of each member of the Joint Chiefs. * * * "There is no major problem affecting our national security that cannot be resolved by men of strong but fair attitudes. * * * In hot war and in cold war our American-developed Joint Chiefs team concept has demonstrated clear superiority over any system of one-man rule."

Admiral Burke's recipe for leadership—team effort and praise for the other members of the team—should be the rule in Washington; it would ease many of the service rough spots that lie ahead.

James P. Wesberry

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HAYS of Arkansas. Mr. Speaker, I have read with appreciation the remarks of the gentleman from California [Mr. DOYLE] carried at page A6670 and paying tribute to the chaplains of the Senate and House. Our colleague, the gentleman from California [Mr. DOYLE] has rendered a helpful service in assembling and publishing this information. The list of chaplains of the House from the beginning of the Congress includes only the regularly elected chaplains. Mr. Speaker, I would like to add this footnote with reference to the fine service rendered by one of the acting chaplains during the illness of the beloved chaplain James Shera Montgomery. I refer to the chaplaincy of James P. Wesberry in 1949. In his brief service as acting chaplain Dr. Wesberry endeared himself to the Members and formed lasting friendships here. His inspiring prayers were published as House Document 344 of the 81st Congress.

Unabated Greed—A Protest by a Philadelphia Builder and Developer to Increased Discounts on FHA Loans

EXTENSION OF REMARKS

OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mrs. GRANAHAN. Mr. Speaker, in recent days I have received a letter from a friend of mine who is engaged in the home-building field in the Philadelphia area, and his letter points up so well a serious situation in regard to mortgage financing that I feel it deserves the attention of the entire membership of the House and of the Senate as well. Consequently, under unanimous consent, I am submitting this letter for insertion in the CONGRESSIONAL RECORD.

Since the letter was written for my personal information, I have decided to delete the name of the constituent who sent it to me, because I would certainly not like to see him subjected to possible reprisals from the financial institutions with which he has to deal for having called this to my attention so forcefully.

He points out that before the FHA interest rate was raised an additional one-quarter percent, the discount rate on FHA mortgages in Philadelphia was between one-half and 1 percent—meaning the builder or buyer had to pay a side payment or premium of that percentage of the mortgage in order to get financing on a home.

FHA mortgages, as we know, are fully insured by the Federal Government, so the lender takes no risk whatsoever. Even so, on such mortgages, the lender was able to demand and get this additional side payment of from one-half to 1 percent as a further price of making the insured loan and inducement.

Now, however, my constituent points out, even though the FHA interest rate has been increased by one-quarter percent—the second increase in a year—assuring higher returns for the lenders who issue FHA-insured loans, FHA has also set a maximum discount rate in the Philadelphia area of 1½ percent—and the lenders are insisting on this full additional amount.

I think this will probably be the first time in history—

This constituent wrote to me—

that the interest rate and the discount rate were increased at the same time, and if that is not an outrage and typical example of unabated greed, then I do not know what greed means.

The full text of the letter in question is as follows:

Just in case liberal Members of Congress like yourself should become incensed upon receipt of information of the policy adopted by the banking industry as explained below, I would like to register or add my protest to what should develop in a flood of protests on the part of home builders and citizens who are in the market for the purchase of a home.

For the past few months, until the release of the new FHA downpayment policy, raising the interest rate one-quarter of 1 percent and lowering the downpayment in accordance with the action of Congress, the discount rate on mortgages was between one-half and 1 percent.

At the same time the release of the new terms were made public the Administration also informed the banking industry that a ceiling would be set on discount rates and that the ceiling in the Philadelphia area would be 1½ percent.

Instead of the bankers taking the additional one-quarter of 1 percent interest and delivering mortgages at par, the greedy so-and-so's are demanding and setting the discount rate at the full 1½ percent permitted under the Executive order.

I think this will probably be the first time in history that the interest rate and the discount rate were increased at the same time, and if that is not an outrage and typical example of unabated greed, then I do not know what greed means.

I certainly feel that the banking interest should be blasted publicly by Congress, and shown up for this outrageous action.

I know that unless fellows like myself call such things to your attention, you would not have the information on which to take appropriate action.

America

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I would like to include, at this time, a very pertinent article, appearing in the June 30 issue of the Worcester (Mass.) Telegram containing some most inspiring comments on the 125th anniversary of the famous hymn, America.

The article follows:

AN ANNIVERSARY OF AMERICA

Americans do well to observe the 125th anniversary of the famous hymn America. They need have no fear about singing it as often and as spiritedly as they wish. There was a time, a generation and more ago, when things were different. Then there was a race between America and The Star-Spangled Banner.

Largely through the efforts of the Veterans of Foreign Wars, it was The Star-Spangled Banner which won, despite the fact that it is hard for the untrained voice to sing, on account of its wide range. On March 3, 1931, Congress passed a measure declaring that the "composition known as The Star-Spangled Banner is designated as

the national anthem of the United States of America." That made it official.

But Americans have not lost any love for America. The strong and stately strains of God Save the King, combined with the lofty words by the Reverend Dr. Samuel F. Smith, make America a great national hymn. The theme is as appropriate today as it was in 1832, perhaps even more so. "Sweet land of liberty * * * Let freedom ring * * * Land of the noble free * * * Sweet freedom's song * * * Author of liberty * * * With freedom's holy light."

America has patriotic fervor without vainglory—love of country, love of freedom, faith in God. After 125 years, Americans may realize its beauty and appropriateness anew. "Let music swell the breeze."

Report to the People of the Second District of New Hampshire

EXTENSION OF REMARKS

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BASS of New Hampshire. Mr. Speaker, the 1st session of the 85th Congress has adjourned and we are now able to appraise its accomplishments and their effect on the Nation and the Second Congressional District in New Hampshire which I am privileged to represent in Congress. This has been an unusual session, for although it followed within weeks the sweeping reelection victory of President Eisenhower, the Congress has been led by the opposing party, and for the first time a President has served under a two-term constitutional limitation.

FOREIGN AFFAIRS

The drive of international communism for world domination continues unabated, and with the memory of the brutal Hungarian suppression last fall and the decline of western European influence in the Middle East, international considerations have dominated much of the work and thinking of the Congress. Programs of economic and military foreign aid for our allies, and a continued high level of expenditures for national defense were closely examined and approved under increasing inflationary pressure and world tension. Early in this session, the Congress wisely supported the Eisenhower doctrine—a program of support for our friends in the vital Middle East.

SPENDING

During fiscal year 1957 we again enjoyed a balanced budget, and a resulting small surplus which was applied to debt reduction. Through stringent economies mostly on domestic spending, the Congress, working with the administration, has been able to reduce by more than $4 billion the original budget estimates for 1958. I supported many reductions consistent with national security in the belief that in a period of inflation the Government should make every effort to postpone or cut back on all but the most essential expenses. Reducing appropriations is one of two effective means of decreasing the cost of Government. The second, a more positive approach, is to increase efficiency, and in this respect I introduced 5 bills which implement the most important recommendations of the Hoover Commission. They speak for themselves. First, government shall not engage in business-type operations that compete with private enterprise; second, have the budget presented annually on the basis of accrued expenditures so that the Congress will have closer control over actual spending; third, have the military services use each other's vacant storage space to prevent duplicated facilities; fourth, permit a more business-like distribution of Government surpluses; and, fifth, create a civilian-managed agency to administer common supply and service activities for the armed services.

TAXES

I am hopeful that next year we will have a sufficient budget surplus through continued Government economies and reductions in spending to permit substantial tax relief to the income taxpayer and to small business.

SMALL BUSINESS

During the year the important Banking and Currency Committee on which I serve enacted several measures of importance to our economy. Before this committee come matters pertaining to small business which forms the backbone of our New Hampshire economy. This session we enacted legislation to extend the life of the Small Business Administration for 1 year, and have increased the SBA's authorization for loans which will be used to aid smaller businesses. Next year we hope to take action that will establish the SBA as a permanent agency to carry on its work, and soon the people of New Hampshire will see an office of the SBA opened in Concord to deal with their special problems.

Also before this committee come questions in regard to housing. I am happy to say that just recently the FHA announced it is liberalizing downpayment requirements for purchasing a home, thus making the dream of home ownership a reality for many families.

POULTRY CRISIS

As New Hampshire is a rural State, we are naturally interested in agriculture, particularly the poultry farmer who accounts for roughly one-half of our agricultural income. And today the poultry industry is sick. In view of this critical situation, I have worked in close cooperation with the Department of Agriculture to formulate a plan that would help restore the poultry industry to its once healthy State without Government controls or interference. To accomplish this purpose, I introduced a 7-point program calling for increased Government purchasing of eggs and broilers for the armed services and other Government agencies; restriction on Government credit agencies dealing with poultry expansion; increased domestic and foreign consumption of eggs and broilers; and a "clear the air" investigation of integration by the Justice Department's Antitrust Division.

INTERNAL SECURITY

Congress wisely enacted legislation requested by the administration which restricts the use of FBI files by criminals and subversives without violating their constitutional rights. This law was necessary to clear up doubts which had arisen from a recent decision of the Supreme Court on the question of FBI files.

CIVIL RIGHTS

The Congress enacted a moderate civil-rights bill—one which we hope will insure that the Negro will vote in increasing numbers in every part of the country, and that through this power of the ballot, they will enjoy increasing civil rights in other fields. Although this is not a real issue in New Hampshire, it is very controversial in other parts of the country, and has dominated the latter part of this session.

CATHEDRAL OF THE PINES

Senator BRIDGES and I were fortunate and honored to have sponsored and worked for the passage of a resolution of the Congress recognizing the dedication of the famous Altar of the Nation located at the Cathedral of the Pines in Rindge, N. H., as a memorial to all American war dead.

SUMMARY

Except for civil rights, relatively little legislation of importance was passed at this session, other than the necessary routine business of providing funds to run our Government. This was partly, but not entirely due to a divided Republican administration and Democratic Congress. We can hope in the 2d session of the 85th Congress that sound legislation will be enacted covering many areas of direct concern to us in New Hampshire.

During the recess, I intend to conduct office hours in some 60 cities and larger towns in every county of the Second District. I hope that as many of you as possible will stop by during office hours in your area to see me and discuss your problems.

Amending Chapter 233, Title 18, United States Code

SPEECH

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, this bill is a stronger bill than either the House or the Senate versions which preceded it.

Its purpose is to protect Government files as a result of the decision of the Supreme Court in the Jencks case and to clarify the situation arising from that decision.

In the Jencks case the Supreme Court ruled that after a Government witness had testified, the defendant had the right to inspect previous statements made by that witness and in the possession of the Government. This decision was based on the rule of evidence that a defendant can impeach the veracity of a witness by questioning him on prior inconsistent statements, and has certain rights to see

such statements. It went somewhat further than previous decisions in stressing the rights of the defendant.

Prompt action by the Congress was essential because some of the lower Federal courts were running wild as a result of the Jencks decision. They had permitted accused persons to rummage through Government files, and in one case even to inspect transcripts of grand jury hearings.

The bill just passed by Congress limits the effects of this decision. It makes it clear that the defendant has no right under the Jencks ruling to see a prior statement of a Government witness until such witness has testified, and not under any pretrial procedures. It limits the statements which can be inspected to those which relate to the subject matter of the testimony of the witness, and it further limits them to a written statement made by the witness—or adopted by him—or to an oral statement made by the witness to an agent of the Government and recorded contemporaneously.

If the Government contends that the prior statement does not relate to the subject matter testified to by the witness, the statement is submitted to the trial judge in chambers without being shown to the defendant, and he can excise portions of the statement which do not have such relevancy.

This bill should be helpful in clarifying the situation, but I regret that it was necessary for the Congress to act with some haste. I believe that it would have been extremely helpful to have had available the result of the mature study of the Jencks decision which will undoubtedly be made by law schools, bar associations, and other legal authorities.

I believe that as a result of further study it may be possible to devise even more effective provisions to protect secret Government files. Perhaps more discretion could be allowed to the trial judge. In the Jencks case the Supreme Court was giving its interpretation of the law, and did not base its rulings on constitutional requirements. If so, it is entirely within the province of the Congress to change the existing law, so long as the new procedure which it establishes does not violate due process of law.

The Land of Opportunity?

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I would like to include a most revealing and interesting article by Sylvia Porter, appearing in the June 14, 1957, issue of the Worcester (Mass.) Telegram.

This statistical compilation unhappily reminds us that 96 percent of Americans have incomes under $10,000, and 74 percent under $5,000.

However, the article does hold out some hope that "you, too, can become a millionaire," but you have about one chance in a billion.

The article follows:

THE AMERICAN ECONOMY STILL CREATES MILLIONAIRES

(By Sylvia Porter)

The odds that you or I ever will have an income of a million dollars a year or a half or a quarter or a tenth of a million are mighty meager, to put it most modestly.

Rather, the Internal Revenue Service's just-released final analysis of our 1954 income-tax returns indicates a full 96 percent of us had incomes of under $10,000 and over 74 percent of us had incomes of under $5,000. And while tens of millions of us have moved into higher brackets since 1954, the basic income pattern is the same.

FASCINATING STATISTICS

Nevertheless, I confess that ever since the days of the New Deal—when the lament that none of us ever would be able to become wealthy again in our land moved into our folklore—I have been utterly fascinated by statistics revealing how many Americans have achieved the income stratosphere of $100,000 to $1 million a year. Somehow, I suspect that you too harbor a secret curiosity about this—so here goes, with the results of three separate studies on high incomes which by coincidence have all been released in the last several days.

According to the Internal Revenue Service's survey of income tax returns:

ROSE IN 1954

In 1954, the number of $1-million-a-year Americans zoomed 39 percent over 1953 to a total of 201. (That, incidentally, was the period of the 1953–54 recession.) The 201 Americans had an eye-popping total income of $406.5 million.

The number in the $100,000 to $1 million group rose 19 percent to an impressive 18,509. There is no question that many more have entered this fabulously well-heeled group since 1954.

According to a Business Week survey of top executive salaries:

In 1956, seven executives of American corporations received salaries of over $500,000.

Their names? Eugene G. Grace, chairman of Bethlehem Steel; Harlow H. Curtice, president of General Motors; Arthur B. Homer, president of Bethlehem Steel; Crawford H. Greenewalt, president of du Pont; Frederic G. Donner, executive vice president of General Motors; Louis C. Goad, executive vice president of General Motors; and Robert E. McMath, vice president of Bethlehem Steel.

One among these seven—Grace—received a pay hike that boosted him, in solitary splendor, to more than $800,000, the first man to earn that much a year since Business Week started the surveys in 1950.

THOSE OVER $300,000

In addition to the top 7, another 16 received salaries of over $300,000 a year.

Their corporations? Of the 16, 4 are with Ford, 3 with Du Pont, 2 with Columbia Broadcasting System, and the others are with United Merchants & Manufacturers, Union Carbide, Republic Steel, Distillers Corp.-Seagrams, General Motors, Procter & Gamble, and Gulf Oil.

And according to the American Management Association sixth annual survey of salaries in the "middle management" category:

In 1957, the average business executive in the middle management category is earning nearly 6 percent more than he earned last year.

Of over 6,000 middle management executives surveyed, three-quarters received salary raises last year. In large companies, middle management salaries may go as high as $30,000.

TAXES REDUCE TOTAL

Of course, taxes slash the total incomes. For instance, the estimate is the tax bite shrinks Grace's take home to about $133,000. And out of the $406.5 million reported by the 201 millionaires, taxes took over $222 million.

But by any standard you can mention, these top salary and income men must be called tremendously wealthy. And they must have investments from which they can earn incomes subject only to limited taxation.

In short, these dollar statistics pound home the fact that while America is becoming a land of "people's capitalism," it also is a land of giant capitalists too.

And despite the New Deal, Fair Deal and now what even some ardent Republicans call the Ordeal, the Horatio Alger saga lives on. It's still possible to become a millionaire and remain one.

Give Dulles Credit

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., of August 28, 1957:

GIVE DULLES CREDIT

No man in world history has toiled harder for the cause of peace than John Foster Dulles and for that he has earned the gratitude of his fellow man.

Sometimes his decisions, at first glance, seem to be all wet and arouse heated criticism even from those who admire him personally.

But give credit where credit is due and point to what the man has achieved, rather than look alone at the blocks he has stumbled over.

So in this vein we want to give Mr. Dulles full credit for his foresight in his long ban against allowing any Americans to enter Red China, a nation that still holds many Americans prisoners, and slaughtered no less than 4,500 in the Korean war by tying their hands behind them and compelling them to kneel at the edge of their already-prepared graves to die from bullets in their skulls.

Mr. Dulles stood out for a long time against penetration of the Bamboo Curtain, but a certain element of the American press kept barking at his heels on what they sloganed as "right to know" until he reluctantly lifted the ban to permit some 20 newsmen to go to China. What they could find out about the Peiping Government while being shadowed around the clock is hard to comprehend, but yap they did and finally won their point.

No sooner had the announcement been made than Peiping radio, official voice of the ruling dynasty, said the newsman would not be admitted because they would be acting as spies for United States, and in turn, the Communist Chinese government demanded that a like number of their newsmen be permitted to visit America, a move, that if granted, would be practical recognition of Red China and an open rebuke to Gen. Chiang Kai-shek who saved the west coast from invasion by Japanese forces after Pearl Harbor by tying down so many Nipponese divisions in Manchuria, Tokyo could not

spare the manpower to virtually wade ashore off the coasts of Washington, Oregon, and California, so poorly were they defended.

Mr. Dulles, on frequent occasions voiced his objections against any exchange of relations with China until the last American, held prisoner there, was granted his freedom.

Last week some 40 addled-brained Americans, who had fallen for Russian propaganda by attending a Communist youth festival in Moscow, defied their Government by visiting China as guests of government that would not hesitate to slit their throats should the occasion arise.

We had hoped those men in the newspaper world who have been putting their Secretary of State to so much pressure for an official O. K. to visit China, would let up on their pressure after seeing how another group of American travelers had flouted the authority of their Government. But no—they had to continue their breast beating until Mr. Dulles had to give ground. And now they can't get into China until some other deal is made in which their own American Government will be the loser.

What, we might ask, as a fellow newsman, could any American correspondent find out in China when his right to travel would be limited to certain areas as it is in Moscow, and all his dispatches subject to censorship?

They would have served their country better had they continued to play ball with Mr. Dulles, who in view of what has occurred within the past couple days, had the Chinese sized up for what they actually are, double crossers.

World Plowing Champion To Be Announced at September 20 Master Plowmen's Banquet

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. POLK. Mr. Speaker, I am pleased to furnish for the RECORD the following additional information about the World's Conservation Exposition and Plowing Contests to be held at Peebles, Ohio, September 17–20:

WORLD PLOWING CHAMPION TO BE ANNOUNCED AT SEPTEMBER 20 MASTER PLOWMEN'S BANQUET

PEEBLES, OHIO.—The initial announcement of the 1957 world plowing champion will be made at the master plowmen's banquet in the Peebles High School gymnasium Friday, September 20. The banquet starts at 6:30, and Ohio's first lady, Mrs. C. William O'Neill, will announce the winner on a special WLW radio broadcast from the banquet to be heard between 10 and 10:30 p. m.

Plowing champions from 14 countries will compete for the coveted "golden plow" award during the 1957 World's Conservation Exposition and Fifth World Plowing Contests here, September 19–20. This marks the first time the world contests ever have been held on American soil. The Ohio State plowing contests will be held September 17, and the national plowing matches, September 18.

Flags of all 14 competing countries will decorate the banquet hall, according to Chairman M. G. Harover, Manchester, Ohio. The Queen of the Furrow will be presented with her court, and special musical entertainment will be provided by the Hometowners of Radio Station WLW, Cincinnati, recent winners of the Godfrey Talent Scouts program, and Robert Webb, Supervisor of Music, Manchester Public Schools. Also appearing will be the world famous 102-piece United States Army Field Band.

Toastmaster will be Judge James W. Lang, Jr., Manchester, Ohio, chairman of the exposition program committee.

Other dignitaries appearing on the program include Ohio's Gov. C. William O'Neill; Alfred Hall, general secretary, World Ploughing Organization, London, England; Earl DeVore, Winchester, Ohio, exposition general chairman; and Walter Feurlein, of Germany, who will extend the official invitation to the 1958 World Plowing Contests in his country.

TENTATIVE TRAVEL ITENERARY FOR FOREIGN PLOWMEN, TEAM MANAGERS, AND OFFICIALS OF THE 1957 WORLD'S CONSERVATION EXPOSITION AND FIFTH WORLD PLOWING CONTESTS

(There will be approximately 60 in this group, representing 14 countries)

September 12: All European representatives depart London Airport, TWA flight No. 971. United States, Canadian, and New Zealand teams and officials arrive (evening). Taft Hotel, New York City.

September 13: 6:40 a. m., flight No. 971 arrives Idlewild International Airport—met by exposition officials; 12:30 p. m., press conference, Taft Hotel, followed by afternoon tour of Manhattan Island, dinner, and evening free.

September 14: 7:20 a. m., depart LaGuardia Airport, TWA flight No. 1; 9:10 a. m., arrive Washington, D. C., Airport, and guests for the day of national farm organizations for luncheon and tour; 6:45 p. m., leave Washington airport, TWA flight No. 41; 8:06 p. m., arrive Greater Cincinnati Airport, and board buses for transportation to Peebles, Ohio, and housing in private homes.

September 15: Free day at Peebles (attend church of choice, tour site, check equipment).

September 16–18: Peebles (practice plowing) and attend World's Conservation Exposition functions.

September 19–20: Peebles (world plowing contests) and attend World's Conservation Exposition functions; 9 p. m., announcement of world champion at plowmen's banquet.

September 21: 11 a. m., arrive WLW studios, Cincinnati (luncheon and network broadcast); 1 p. m., Cincinnati baseball game; 6 p. m., dinner at Netherland Hilton Hotel, Cincinnati.

September 22: Agricultural tour to Columbus, lunch at private farm homes in Washington Court House area, lodging at Ohio State fairgrounds.

September 23: Tour of Columbus and Ohio State University, College of Agriculture.

September 24: Tour of Akron, Ohio, visit Hardin County Fair, dinner.

September 25: Tour Akron industrial plants.

September 26: Tour of Cleveland, depart 9:55 p. m. from Cleveland Airport and arrive at New York's LaGuardia Airport 11:55 p. m.

September 27: 6 p. m., depart Idlewild International Airport, TWA flight No. 970.

Constitutional Rights of the States and of Individuals

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit the following report of the committee on maintenance of constitutional rights of the States and of individuals of the Mississippi State Bar.

The report is most timely:

REPORT OF COMMITTEE ON MAINTENANCE OF CONSTITUTIONAL RIGHTS OF THE STATES AND OF INDIVIDUALS, MISSISSIPPI STATE BAR, 1956–57

We, the committee on maintenance of constitutional rights of the States and of individuals, recommend to the Mississippi State Bar the adoption of the following resolution:

"Whereas a year ago, the bar of this State, in convention assembled, adopted a resolution deploring the usurpation of sovereignty of the several States by the Supreme Court of the United States; and

"Whereas this course of the decisions, we believe, has continued and broadened into other phases of State sovereignty, and if it continues will ultimately nullify the authority of the sovereign States and will operate to render obsolete the term 'States rights' as we presently use and understand the term; and

"Whereas since the opening of the October 1956 term, we believe, decisions of the United States Supreme Court have been rendered without regard for precedent or established rules of constitutional interpretation, which have resulted in increased strife, confusion, and disunity, not only among sections of these United States but also among peoples of different races and creeds within the various sections, and among the departments of the Federal Government; and

"Whereas we the members of the Mississippi State Bar, being charged by legislative mandate, as members of the legal profession, with the duty 'to support the constitution and laws of this State and of the United States,' as well as being urged by a sense of patriotism and loyalty to our Federal Government and our State, feel called upon to reiterate those foundation stones of government in which we believe and which we are convinced are embodied in our Federal Constitution and also in the constitutions of the several States; and

"Whereas we believe in the intrinsic value of every individual regardless of race, creed, or color, and that each is entitled to life, liberty, and the pursuit of happiness under due process of law and under equal protection of the law; that equal justice should be meted out to all men under the law, and that it is our duty as lawyers to do our utmost to see that this end is accomplished; that violence should be averted; that the rights of all men should be defended with equal vigor to assure to all their true constitutional rights; and

"Whereas we believe that since the opening of the October 1956 term of the United States Supreme Court, the true intent and purposes of the framers of our Federal Constitution have been circumvented and ignored by the Supreme Court of the United States, especially in its construction of the 1st, 5th, 10th, and 14th amendments to said Constitution, in that said Court no longer seems to heed or give credence to the fact that the several States, in ratifying the Federal Constitution, reserved to themselves all powers and authority not specifically relinquished to the National Government; but instead, the Supreme Court of the United States, through legislation by judicial fiat, under the guise of constitutional interpretation, has brought about an ever-increasing trespass upon those areas heretofore rightfully held to be within the province of the authority reserved by the States; and

"Whereas Chief Justice Charles Evans Hughes gave graphic expression to his fear of encroachment by the Federal Government upon the rights of the States when he said:

"'I have not yet adequately expressed the more than anxiety I feel at the ever-increasing scope given to the 14th amendment in cutting down what I believe to be the constitutional rights of the States. As the decisions now stand, I see hardly any limit but the sky to the invalidating of those rights if they happen to strike a majority of this Court as for any reason undesirable. I cannot believe that the amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions.'

"And since that time, the danger of which Chief Justice Hughes warned has been multiplied countless times so that we find ourselves rapidly approaching the point where State sovereignty is becoming only a hollow shell; and

"Whereas it has become increasingly evident that the outcome of litigation affecting States rights and internal security of the Nation before the Highest Court of this land can no longer be anticipated by application of the doctrine of stare decisis, we reaffirm our position as being in accordance with the belief of Judge Thomas M. Cooley, as stated in his great work on constitutional limitations (8th ed., vol. 1, pp. 123, 124), that 'A Constitution is not to be made to mean one thing at one time, and another at some subsequent time when the circumstances may have so changed as perhaps to make a different rule in the case seem desirable. * * * It is with special reference to varying moods of public opinion, and with a view of putting the fundamentals of government beyond their control, that these instruments are framed; * * * (and) a court or legislature which should allow a change in public sentiment to influence it in giving construction to a written constitution not warranted by the intention of its framers, would be justly chargeable with reckless disregard of official oath and public duty. * * * What a court is to do, therefore, is to declare the law as written, leaving it to the people themselves to make such changes as new circumstances may require.'

"Whereas we believe that recent opinions of the Supreme Court of the United States, purporting to draw the dividing line between national and State sovereignty within the concept of the Federal Constitution, trespass upon rights of the respective States; and

"Whereas, nevertheless, as lawyers, we do respect the Court as an institution, but reaffirm our right and duty to legitimately and constructively criticize the members of the Court and their opinions; and

"Whereas, among the illustrations of the breadth, depth and scope, and indicative of the trend of such usurpations of power by the United States Supreme Court, with the States and prosecutions affected, are:

"The State of Kansas, in *Walker* v. *City of Hutchinson, Kans.* (1 L. Ed. (2d) 178), decided December 10, 1956, was denied the right, to determine, through its State statutes which were approved by the Kansas Supreme Court, the sufficiency of notice by publication in a real property condemnation suit, as violative of the 14th amendment to the Federal Constitution.

"The State of Arkansas, in *Miller, Inc.* v. *State of Arkansas* (1 L. Ed. (2d) 231), decided December 17, 1956, was denied the right, through its State statutes which were approved by the Arkansas Supreme Court, to require a contractor who bid on a Federal project in Arkansas to comply with Arkansas contractor licensing requirements, although the Federal Government had not acquired the property upon which the construction work was to be done, on the ground that such would interfere with the application of the Federal Procurement Act.

"The State of Michigan, in *Butler* v. *State of Michigan* (1 L. Ed. (2d) 412), decided February 25, 1957, was denied the right through its State statute, approved by the Michigan Supreme Court, to determine what was and to prohibit the possession and disposition of obscene literature on the ground that it violated the due process clause of the 14th amendment to the Federal Constitution.

"The State of Utah, in *Guss* v. *Utah Labor Relations Board* (1 L. Ed. (2d) 601), decided March 25, 1957, was denied the right, through its Labor Relations Board, to enjoin unfair labor practices prohibited by the National Labor Relations Act even though the National Labor Relations Board declined to entertain the Union's complaint, because the Federal act preempted this field in the absence of the National Labor Relations Board ceding jurisdiction to State agencies.

"The State of Ohio, *Amalgamated Meat Cutters and Butcher Workmen, etc.* v. *Fairlawn Meats, Inc.* (1 L. Ed. (2d) 613, decided March 25, 1957), was denied the right, through State courts, to restrain a labor union, not representing a majority of employees, seeking to compel an employer engaged in interstate commerce to agree to union shop contract, because the Federal act preempted any State action even though National Labor Relations Board obviously would decline jurisdiction.

"The State of California, in *San Diego Building Trades Council* v. *Garmon* (1 L. Ed. (2d) 618, decided March 25, 1957), was denied through its courts power to enjoin unions on the same ground of preemption by the Federal act, even though the National Labor Relations Board declined to entertain a petition for relief.

"Although dealing with a procedural matter under rule 58, dealing with the finality of judgments of the Court, the United States Supreme Court, speaking per curiam, in *United States of America* v. *Ohio Power Company* (1 L. Ed. (2d) 683), held where a taxpayer had won a tax recovery lawsuit by the Court's denial of certiorari on October 17, 1955, and the denial of two Government petitions for a rehearing on December 5, 1955, and May 28, 1956, did on June 11, 1956, sua sponte, vacate its own order of December 5, 1955, and both denials of rehearing, and reversed itself so as to make the taxpayer lose that which he had won more than a year and a half previously, and as to which Justices Harlan, Frankfurter and Burton were disturbed to the point of dissenting, by separate opinions, saying the action of the majority to be a departure from sound procedure and '* * * unsettling to lawyers and litigants and more disturbing to their confidence in the even handedness of the Court's processes than to be left in the kind of uncertainty which today's action engenders, as to when their cases may be considered finally closed by this Court.'

"The State of New Mexico, in *Schware* v. *Board of Bar Examiners of the State of New Mexico* (1 L. Ed. (2d) 796, decided May 6, 1957), acting through its bar examiners, whose action was approved by the New Mexico Supreme Court, was denied the right to exclude appellant from the State bar examination on the ground, among others, of past membership in the Communist Party, because the Court said that such would be a violation of the due process clause of the 14th amendment to the Federal Constitution.

"The State of California, in *Konigsberg* v. *State Bar of California* (1 L. Ed. (2d) 810, decided May 6, 1957), was denied the right, through its bar examiners, whose action was approved by the California Supreme Court, to deny appellant permission to practice law in California because of his refusal to answer questions as to his present and past membership in the Communist Party because, according to the United States Supreme Court, such would violate the due process clause of the 14th amendment to the Federal Constitution. The majority opinion so offended Justices Clark and Harlan that, dissenting, they said, among other things: 'But what the Court has really done, I think, is simply to impose on California its own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern.'

"The property rights of Stephen Girard have now been violated by the Court. This decision is a sequel to the segregation cases, which involve merely a phase of deprivation of States rights, originating with *Brown, et al.*, v. *Board of Education of Topeka, Kansas* (98 L. Ed. 873, and 99 L. Ed. 1083), in which the Court departed from legal precedent upon the separation of the races and the doctrine of separate but equal facilities, and during the October 1956 term of Court, now concluding, continues to usurp State regulation of educational and recreational facilities, and intrastate transportation. This trend culminated in the Girard College case, *Commonwealth of Pennsylvania and City of Philadelphia, et al.*, v. *Board of Directors of the City Trust of the City of Philadelphia* (1 L. Ed. (2d) 792, decided April 29, 1957). Girard by his will chose to endow with his own money a college to admit 'as many poor white male orphans between the ages of 6 and 10 years as the said income will be adequate to maintain,' and of which will the city of Philadelphia was named as trustee. The administering board of directors of city of Philadelphia, following the dictates of the will, refused to admit two Negroes. This action was approved by the Orphans Court of Philadelphia and the Supreme Court of Pennsylvania, but the United States Supreme Court avoided the direction of the donor and held such refusal of admission to be discrimination under the 14th amendment to the Federal Constitution on the theory that the board which operates Girard College is an agency of the State of Pennsylvania and, therefore, their action constituted State action.

"The United States Government and its courts in *Curcio* v. *United States of America* (decided June 10, 1957), not yet officially reported, were denied the right to hold in contempt the secretary-treasurer of the International Brotherhood of Teamsters for a refusal predicated upon the fifth amendment to answer a question as to the whereabouts of the books and records of the union he had been ordered to produce and which inquiry arose when the Federal grand jury of the southern district of New York was investigating racketeering in the garment and trucking industries in New York City.

"The United States Government in Communist cases, styled *Yates, et al.*, v. *United States of America* (Nos. 6, 7, and 8, decided June 17, 1957), not yet officially reported, totally lost its case to secure affirmance of the lower court conviction in 1952 on a charge of conspiring to overthrow the United States Government against Henry Steinberg, the party's legislative director for Los Angeles County; Rose Chernin Kusnitz, party organizer in New York and later in Los Angeles; Frank Spector, Los Angeles organizer; Al Richmond, editor of the Daily People's World, and Philip Marshall Connelly, the World's Los Angeles editor, all of whom freed of said charges instead of reversing and remanding for further action by the trial court as was the Supreme Court's decision regarding the nine other defendants involved, and which acquittal was recognized as the first instance of its kind in the entire history of the Court according to Justice Clark who, in his dissent, said, among other things:

"'In any event this Court should not acquit anyone here. In its long history I find no case in which an acquittal has been ordered by this Court solely on the facts. It is somewhat late to start in now usurping the function of the jury, especially where new

trials are to be held covering the same charges.'

"The United States Congress, in *United States* v. *Watkins* (decided June 17, 1957), was denied the right to require Watkins as a witness before its committee to answer questions unless the committee first established the pertinency of the question and specified the purpose thereof, and the Court determined abrupt limits upon the authority of congressional committees and freed Watkins of contempt proceedings theretofore brought because of his refusal to name persons he had known in the Communist movement, and Justice Clark dissenting says, among other things: 'The majority has substituted the judiciary as the grand inquisitor and supervisor of congressional investigations. It has never been so.'

"With regard to the impairment of constitutional rights by legislation introduced in the Congress, we feel that reference should be made to the pending so-called civil-rights bill which has passed the House of Representatives and is now before the Senate. Under the guise of preserving equity jurisdiction, this bill would give to a single judge the right to conduct a criminal hearing where he would be both judge and jury. Mr. Justice Felix Frankfurter condemned such invasion of the constitutional right of an individual to a jury trial in his book entitled 'The Labor Injunction' wherein he clearly warned against this device, saying:

" 'The heart of the problem is the power, for all practical purposes, of a single judge to issue orders, to interpret them, to declare disobedience and then to sentence.'

"He said the injunction employs the most powerful resources of the law on one side of a bitter social struggle.

"Justice Frankfurter opined that trial by jury in contempt proceedings is an innovation in modern practice, but is a return to what is old in the history of English law.

"And he said that 'since a charge of criminal contempt is essentially an accusation of crime, all the constitutional safeguards available to the accused in a criminal trial should be extended to prosecutions for such contempt.'

"The effect of this proposed legislation would tend to create a central police force which has been proved throughout history to be a forerunner to the abolition of human rights. Such concentration of power in the Federal Government was warned against by the late Justice Robert H. Jackson before he died in 1954. He said:

" 'If the Department of Justice must prosecute local officials, the FBI must investigate them, and no local agency which is subject to Federal investigation, inspection, and discipline is a free agency. I cannot say that our country could have no central police without becoming totalitarian, but I can say with great conviction that it cannot become totalitarian without a centralized national police. At his trial Hermann Goering, with great candor, related the steps by which the Nazi Party obtained complete domination of Germany, and one of the first was the establishment of the supremacy of the national over the local police authorities. So it was in Russia, and so it has been in every totalitarian state. All that is necessary is to have a national police competent to investigate all manner of offenses, and then, in the parlance of the street, it will have enough on enough people, even if it does not elect to prosecute them, so that it will find no opposition to its policies. Even those who are supposed to supervise it are likely to fear it. I believe that the safeguard of our liberty lies in limiting any national policing or investigative organization, first of all, to a small number of strictly Federal offenses, and, secondly, to nonpolitical ones. The fact that we may have confidence in the administration of a Federal investigative agency under its existing heads does not mean that it may not revert again to the days when the Department of Justice was headed by men to whom the investigatory power was a weapon to be used for their own purposes': Now, therefore, be it

"*Resolved*, That we, the members of the Mississippi State bar, in convention assembled, having stated our beliefs in the premises, do hereby:

"1. Commend all Congressmen from Mississippi and the other States who have worked unceasingly to preserve the constitutional rights of the States, of all individuals, and the internal security of this Nation, and urge them to continue this struggle which we believe must be won if our American heritage is to be perpetuated. We especially urge them to continue in their efforts to defeat the civil-rights bill recently passed by the House of Representatives and now being considered by the Senate.

"2. Commend the members of the Mississippi Legislature, the Governor of Mississippi, all other State officials, and all individuals joining therein with them for their untiring efforts directed toward the maintenance of State sovereignty in every phase thereof, and urge them and Members of Congress from Mississippi to exert their every effort to bring about a termination and reversal of the usurpation hereinabove recognized.

"3. Urge the Congress to enact corrective legislation to restrict judicial violation to the Constitution.

"4. We pledge ourselves to maintain eternal vigilance in the preservation of individual and States' Rights and urge them to keep abreast of the new developments in these matters and to be prepared to acquaint the general public with the newest trends at every available opportunity.

"5. Urge the members of the bars of the other 47 States to bind themselves together and lend their efforts to curb usurpation by the United States Supreme Court of the rights of the sovereign States, and we further urge the Bars of the other States to give their thoughtful consideration to the idea of forming within their respective bar associations a committee comparable in purpose to the 'Committee on Maintenance of Constitutional Rights of the States and of Individuals' of the Mississippi State Bar in order that we may share ideas and work together for the common good of all; be it further

"*Resolved*, That copies of the foregoing resolution be sent to the Members of Congress from Mississippi; to the Attorney General of each State; to the President of the American Bar Association; to the editor of the American Bar Association Journal, and to the president of all State bar associations."

Respectfully submitted,

COMMITTEE ON MAINTENANCE OF CONSTITUTIONAL RIGHTS OF THE STATES AND OF INDIVIDUALS.
HUGH N. CLAYTON, *Chairman*.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. VANIK. Mr. Speaker, I join with many of my colleagues in appreciation of the fact that the first civil-rights bill in 82 years now goes to the President's desk for likely approval.

While this legislation is not perfect in many respects, it represents the best law which could be passed at this time. The test of this legislation will not be in the convictions or imprisonment which it may produce. The test will be in the civil-rights violations it may discourage. It is to be hoped that the mandate of this legislation will fix itself clearly in the mind of every citizen to the end that he will not impair or interfere with the voting rights or civil liberties of his fellow men.

If the spirit of this legislation is wholeheartedly accepted by the American people everywhere, no further legislation may be required. Our hope is that true tolerance will become habit and custom throughout the American scene.

Ranch Life in Montana

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. METCALF. Mr. Speaker, on July 23, the Wall Street Journal characterized ranch life in Montana this way:

Ranch life still can be lonely—neighbors often are miles away—but the modern ranchhouses remind one of suburban homes. Tall television aerials dominate roof lines. Inside, kitchens gleam with appliances and bathrooms are bright with tile. Cadillacs are numerous and expensive pleasure boats dot the ranch country's lakes and reservoirs. In the summer, ranch wives gossip of last winter's vacation in Bermuda, Hawaii, Mexico, California, or Arizona.

On August 8, the senior Senator from Montana [Mr. MURRAY] and the junior Senator from Montana [Mr. MANSFIELD] took the floor of the other body to point out that ranch life in Montana is not the party the Journal pictures it to be.

The senior Senator from Montana pointed out that the farmers and ranchers of Montana are in trouble. He noted that ranchers "are earning no return whatsoever" on the more than $1 billion they have invested in land and cattle, that at today's prices they must sell 7 more calves to buy a combine than 5 years ago.

Editor Miles Romney of the Western News, weekly newspaper published at Hamilton, Mont., in my home county, took note of the newspaper article and the speech in the following editorial:

PAINTING PRETTY PICTURES

When the Wall Street Journal published an article telling how Montana farmers were living in luxury and head over heels in prosperity it was too much for Montana's Senator JIM MURRAY.

In a Senate speech the Montana solon took general issue with the Journal's report, pointing out that farmers and ranchers must sell 7 more calves at today's prices to buy the same combine which cost $200 less 5 years ago when the price of beef was 8½ cents higher.

MURRAY also pointed out that 2,000 Butte miners have been laid off in the past 90 days, a Roundup coal mine has been shut down, a 40-man shift has been laid off by the Diamond Match Co., unemployment in the Bil-

lings area is up 275 percent over last year, men have been laid off by the Anaconda Aluminum Co., and so forth.

MURRAY suggested it was time the administration did something to help lead and zinc miners suffering from a bad market while foreign operators flooded it with cheap metals. He thought the administration should do something to improve the economic stability of farmers and ranchers. He wrote a letter to the editor of the Journal appealing to him to remove the rose-colored glasses from his reporter and send him to Montana to report the facts.

There has been so much talk in some newspapers, upon the air, in administration puff notices, to the effect that times are prosperous, that many people are mousetrapped into believing prosperity in general. Some people hold a different view of this economic picture. With prices for necessities of life everywhere upon the increase, the administration had better cease painting pretty pictures and begin devising ways and means of protecting the rank and file of Americans from an inflation which could prove to be ultimate disaster.

Mr. Speaker, the senior Senator from Montana also said he does not know of a single small cattle producer in Montana who has paid any income tax in the past 5 years. The facts destroy the pretty picture painted by the Wall Street Journal.

United States Steel Increased Cost of Steel $250 Million To Match Wage Increase of $94 Million

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PRICE. Mr. Speaker, a number of us have watched with interest as the great steel companies have insisted that their recent $6-a-ton price increase was forced upon them by additional wage costs. This was on top of two earlier price jumps within a year. For one, I have also read with interest an editorial in the NAM News, a publication of the National Association of Manufacturers, stating that the question of steel prices has nothing to do with "social responsibility or social irresponsibility."

Let us concede that the manufacturer in America is not supposed to take into account the question of social responsibility. He is supposed to price his products, instead, only in regard to feasibility—that is, in accordance with what he can get away with in the marketplace. This, in any case, is the thesis of the NAM News.

But, if we concede that this is true, two other very important issues are raised.

The first is whether, if steel producers deny any social responsibility for prices and inflation, why do they try to justify the increases by blaming them on wage rises.

The wage increases won by workers last year, in direct wage payments and in fringe benefits, amounted to 20 cents an hour. The increases won this year, under the same contracts, totaled about 15½ cents an hour.

The 1956 wage increase cost United States Steel an estimated $94 million, if it is assumed that no part was matched by increased productivity, which is contrary to experience.

But Big Steel raised its prices last year an average of $8.50 a ton, calculated to produce about $250 million in additional revenue. And this year, to pay for a 15½-cent wage increase, Big Steel has jumped its prices another $10 a ton, in 2 jumps, calculated to add at least another $300 million in revenue.

Big Steel will make more money, before and after taxes, by raising its prices and blaming wage rates, than it made in 1956 and 1955 and 1954.

The pattern is the same in other giant industries. Ford and General Motors complained in 1955 that they would have to raise prices in 1956 to balance wage increases of 20 cents an hour. But in 1955—before prices were raised but after the wage increase—GM earned $1.41 after taxes for each of its 400,000 employees for each man-hour worked. Ford made $1.47 per man-hour after taxes.

There is some skullduggery going on.

There was once a Member of the Congress who worshipped Wall Street so fervently that he insisted that his colleagues should listen to the bloodless voice of the markets, to the calculations of businessmen who would have laughed at the idea of social responsibility.

But that was two generations ago. I do not think that the Congress today is willing to surrender its own prerogatives and the interests of the people to the bloodless voice of anybody or to the blatant declaration of irresponsibility proclaimed by the NAM News.

The giant corporations are raising prices far beyond what seems necessary to match wage increases, but they are blaming workers and unions for the price increases.

On the other hand, their spokesman of the NAM contemptuously says that the giant corporations are not supposed to have any sense of social responsibility.

I suggest that this attitude is two-faced and dishonest and—more important—defiant of democracy. If the world of the giant corporations is so irresponsible, then it is the duty of the Congress to impose upon that world some sense of reality.

Good Conservation Contributes to Christian Culture

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very timely and thought-provoking editorial, appearing in the July 8 issue of the Waltham, Mass., News Tribune, reminding us that intelligent conversation is an important part of good Christian life. I recommend its reading.

The article follows:

NEED FOR GOOD TALK

Conversation isn't a lost art in this country, as has been said so many times. Television and other diversions notwithstanding, there is no lack of conversation. The trouble is that most of it is of the buzz-buzz, gossipy variety, being of the sort which makes lots of noise without getting anywhere in particular.

Thus, conversation as an art rather than as chatter seems to be the thing which is missing. We don't hear much these days about the debating societies and discussion groups of other generations which did for the cerebral region what gymnasium workouts did for the muscles.

Significantly, just this type of social activity is coming back in a modest way. Foremost in blazing the way is the League of Women Voters organization which puts motivation into its membership procedure by sponsoring workshop groups. These probe into all facets of community, State, and National problems in a series of units meetings devoted to good talk.

At college, of course, much of the value to be derived from the educational process is to be found in the jam sessions in which students test the pedantic theory in the free-for-all atmosphere that a practical debate encourages.

At Boston University, informal get-togethers of students with President Harold C. Case and Mrs. Case have become a tradition. During the past year some 1,500 students participated in 1 of 13 adventures in conversation in the Case castle, as the president's home is known. The intent is to give each student at least one opportunity to participate in these affairs during his 4-year college career.

In similar vein, Brandeis University's student-faculty ratio of 10 to 1 is deliberately designed to bring pupils into constant close association with instructors. So well has this worked that it is difficult to know when classes begin and end, at times, the mutual interest in small, intense discussions being what they are.

One other point concerns television. A program we look forward to is the year-end CBS roundtable in which Edward R. Murrow sits with correspondents from all over the world and amiably, unhurriedly analyzes the trends through an interchange of comment. On educational TV, the programming high on our personal list is the professor-student discussion type offered quite frequently.

Americans are noted for the hard sell, the fast-thinking approach, the advertising gimmick, all the flash and glitter of expediency. It gives the feeling our national culture is superficial. We certainly can do with more studies, penetrating thought, and the way to it is to be found in good talk.

The ability to carry on an intelligent conversation is an important part of living.

Dairy Firms Get 2.2 Cents Profit on $1

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I would like to place in the CONGRESSIONAL RECORD today an article by Mr. Lewis C. French, vet-

eran farm editor of the Milwaukee Journal, which appeared in the Sunday, August 18, 1957, issue of the Milwaukee Journal, entitled "Dairy Firms Get 2.2 Cents Profit on $1":

DAIRY FIRMS GET 2.2 CENTS PROFIT ON $1—NATIONWIDE SURVEY SHOWS INCOME OF MILK DEALERS ROSE SLIGHTLY IN 1956

(By Lewis C. French)

How much profit is there in the milk business?

The Nation's dairy dealers made a net operating profit of 2.23 cents on every dollar of sales in 1956, according to a survey made by Prof. G. W. Starr, of the school of business administration at the University of Indiana, for the Milk Industry Foundation of New York, N. Y.

The survey of dairy profits was started in 1941. It now covers 425 dairy plants in 342 cities in 45 States.

Few issues are more controversial than that of profits on milk and dairy products. Dairy farmers protest they are not getting enough for their milk. Consumers often protest that they pay too much for their milk and cream.

LOW, HIGH NOTED

The foundation's survey showed a narrow margin of profit. In the 16 years of the survey, reports have shown dairy dealers' profits as low as 1.44 cents for each dollar of sales in 1952 and as high as 2.28 cents in 1954. The 1955 return was 2.18 cents.

The brightest part of the 1956 report was that fluid milk sales in the plants surveyed showed a sales increase of 7.5 percent over 1955.

While the survey showed that dairy dealers did not make much money, the financial report showed that stockholders of big interstate dairy corporations, which operate chains of manufacturing plants and distributing companies, did very well. Even a small slice of profit on the millions of dollars consumers spent for dairy foods paid off for the corporations.

On the national average, farmers shared a little more than half of the consumer dollar, 50.03 cents in 1956. The 1955 slice, according to the survey, was 47.64 cents.

Farmers are paid for their milk on the basis of 100 pounds and butterfat tests. One hundred pounds of milk measures out to about 46 quarts.

AVERAGE CLIMBS

In 1956, dairy farmers averaged $5.45 a hundred pounds for 3.8 percent butterfat test milk. The 1955 national average was $5.32.

Wisconsin dairymen would have clicked their heels at that price.

The report shows that throughout the Nation in 1956, consumers paid an average of 24.2 cents a quart for home delivered milk, an increase of just over 1 cent a quart from 1955.

Wisconsin farmers were paid less than the average for their milk and Wisconsin consumers paid less for their supplies.

Shippers to the greater Milwaukee market last year averaged $4.02 a hundred pounds for standard 3.5 percent butterfat test milk, according to H. R. Erdmann, Federal Market Administrator. Adjusted for the 3.8 percent fat (cream) content of the milk prices used in the national survey, this would be around $4.24 a hundred pounds or $1.21 less than the national average.

The average for all market milk in Wisconsin for 1956 was $3.74 or $1.71 a hundred less. And the 1955 average on this class milk within the State was $3.55 a hundred.

QUART COSTS 19 CENTS TO 22 CENTS

Wisconsin consumers benefited considerably. Most consumers in the larger cities, including Milwaukee, paid 21 or 22 cents a quart for grade A milk and often 19 to 20 cents a quart in stores.

"While 24.2 cents was the average price received by the companies in the survey for a quart of home delivered milk, there was considerable sold in larger containers at a discount," the report said, acknowledging that the quart home delivered price no longer was the barometer of consumer price.

CONTAINER SIZE IS FACTOR

The trend is decidedly away from one quart sales. People buy one-half and full gallons. The Erdmann report shows that in Milwaukee only 11.3 percent of the Milwaukee consumers now buy 1-quart units.

There are two reasons. One is that the Milwaukee price, and that in most state cities, is more than ever based on the size of the container purchased, with a discount being given for larger containers. Then, with alternate day deliveries, the housewife wants larger containers.

Sharp changes on the Greater Milwaukee market area show why the quart unit is no longer the accurate barometer of milk sales or prices.

Noted in the Erdmann reports are these facts:

Sixty-five percent of the fresh milk sold in Milwaukee is in half gallon containers—40 cents for home delivered milk, when the 1956 survey was made, and 32 cents to 36 cents in the cash and carry retail outlets.

Sixteen and six-tenths percent of the sales are in full gallons at still lower prices.

More milk with less cream is sold. In June, out of 31,140,000 pounds of milk sold, 1,388,000 pounds was skim milk with the cream removed or just a trace left for flavor.

Use of 2 percent butterfat milk—compared to the normal 3.5 test—now runs more than 350,000 pounds a month and the volume is growing.

Buttermilk sales are up to 560,000 pounds.

DOLLAR COST BREAKDOWN

The fractional breakdown of the cost of selling milk—based on each dollar of sales—as computed by Professor Starr follows:

Material costs	$0.5791
Administrative salaries	.0081
Other salaries and wages	.2068
Taxes and licenses	.0288
Insurance	.0053
Depreciation	.0166
Advertising	.0116
Containers	.0529
Supplies	.0529
Other expenses	.0119
Operating expenses	.9777
Net operating profit	.0223

The report notes that the 57.91 cents listed for material costs is not all for the farmer-producer. The share to the farmer was 50.03 cents. Purchased transportation, such as tank trucks, is added.

CONTAINERS COST MORE

The national report shows that container costs have almost doubled. To sell a dollar's worth of milk or cream in 1941, the bottle or fiber containers cost 3.76 cents. They cost 5.88 cents in 1955 and 5.66 cents in 1956.

Transportation showed the sharpest increase in cost, 41 percent in 1956 over 1955. Wages and salaries of office help were up 6.4 cents of the dollar, with taxes and licenses 5.3 percent higher.

Dairy dealers surveyed spent $17 million for advertising and sales promotion along with the $6 million budget of the American Dairy Association, which the producers contributed to stimulate sales.

"It is true that there is a narrow margin on bottle milk and cream sales," said one Wisconsin dairy distributor. "You just skin by, especially on home-delivery sales. The margin increases with higher volume sales through cafes and stores, and even the self-service dispensers.

"Then, too, there is a higher percentage on sidelines, especially cottage cheese and low-fat milk and flavored milk. To stretch the returns, most dairies now sell eggs, butter, cheese, citrus-fruit drinks, and in some States even the historic competitor of the dairyman, oleomargarine. Yes, they sell either butter or margarine from the same sales truck or dairy counter."

The Economic Need of the Hour—Patriotic Cooperation Against Inflation

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very pertinent editorial, appearing in the June 27 issue of the Worcester (Mass.) Evening Gazette, very sensibly and clearly reminding us that we will become suffocated by inflation unless all economic segments of our society combine and cooperate efforts to retain and maintain economic stability. It has been done, it can be done, and it must be done if we hope to avoid economic catastrophe.

Let us all dedicate ourselves to the proposition and the challenge in patriotic concern for the welfare of the Nation.

The article follows:

LIVING COSTS STILL GOING UP

Inflation is still the No. 1 domestic problem faced by the Eisenhower administration. Living costs went up in May for the ninth straight month, according to the Bureau of Labor Statistics. The Consumer Price Index rose to 119.6, based on average prices for the 1947–49 period.

This news is nothing new to the average shopper who pushes his cart around the supermarket every week. As the food prices have climbed, penny by nickel, the pressure has been felt on budgets throughout the land. The question is: where will it stop? No one seems to know.

Another question is: Whose fault is it? There is no agreement on this one. Secretary of the Treasury Humphrey takes credit for curbing inflation and then complains that inflation is the cause of the growing Federal deficit. Consumer credit is another reason given—even as other people are complaining about "tight money." Labor blames business profits. Business blames high wages. Everyone deplores the rising prices. But many also fear that even a slight leveling off could result in a recession.

It is a strange phenomenon—prosperity that continually squeezes the average man's pocketbook. One thing seems clear: if the inflation is not curbed somehow, there is going to be a rising demand for wage increases throughout the Nation. These will be followed, as the night follows the day, by price increases.

Many observers think that this steady weakening of the dollar is inevitable. But inflation has not proved inevitable in Western Germany—to take one example—where the mark has risen in value to become one of the strongest currencies in the world. It is a sign of defeatism to say that the most powerful and prosperous nation in the world can do nothing about this disease which is eating into its economic vitals.

The Navy's Role in Limited War

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following foreword of Adm. Arleigh Burke, Chief of Naval Operations, to the new book The Sea War in Korea, written by Comdr. Malcolm Cagle, United States Navy, and Comdr. Frank Manson, United States Navy, Annapolis, United States Naval Institute, July 1957:

When the Communists invaded Korea on June 25, 1950, the United States was neither expecting nor prepared to fight in that remote area. They apparently had analyzed United States willingness, readiness, and ability to fight and concluded that we would simply watch and complain, but not fight. The Communists apparently saw an opportunity to seize some additional free world territory with little risk and at little cost.

The United States Army had no troops in Korea, the United States Air Force had only a few wings in the Far East, and the United States Navy had only 1 cruiser, 4 destroyers, and a few minesweepers in the Sea of Japan.

With so few combat forces initially available, control of the seas—taken for granted as is too often the case—was a prerequisite in implementing the United Nations decision to resist aggression against the Republic of Korea. Without the capability to use the seas, the decision to intervene on a rocky peninsula half a world away would have been meaningless and unenforcible. With control of the seas, the decision was sound and reasonable.

Once the decision was made, ships of the free world navies converged on Korea from every one of the seven seas—combatant ships, oilers, supply ships, ships loaded with troops, ammunition, guns, tanks, and aircraft; ships from the South China Sea, the Indian Ocean, the Pacific, the Atlantic, and from the faraway Mediterranean.

Control of the seas gave the United Nations the advantage of mobility—the opportunity to consolidate and combine the free world's economic and military strength. Seapower brought American troops, first from Japan, later from the United States. Seapower defeated the initial aggression with the classic amphibious assault at Inchon. Seapower made it possible to redeploy the United States forces from Hungnam. Seapower helped to limit the conflict.

Use of the seas was denied to the Communists. This placed serious limitations on their ability to build up military power in Korea. It exposed the land flanks of the North Koreans (and later the Red Chinese). It denied them easy resupply by sea.

The Communists' attempt to seize Korea by military action was a failure. But this failure does not mean an abandonment of military adventures by the Communists. They will try again whenever other means fail or when they see a weakness they can exploit or find a vacuum they can fill.

The Communists have stated repeatedly that any means may be used to attain their goal of world domination, including war. The most important tenet of communism—the one given most stress in their doctrine—is that communism must continuously strive to possess all power, and conversely to destroy all rival power. This proposition is basic to communism. It must be borne in mind constantly when dealing with Communists. Their tenet and their goal do not change.

There are many other explosive areas in the world. They are explosive because of this standing threat and this goal of communism.

While the Korean war was unusual in many respects, it nevertheless has great meaning and significance for the future. In 1957 terminology, it would be called a "limited war." In the thermonuclear age, as major nations of the world improve their capability to wreak mutual destruction upon one another, the probability of all-out nuclear war is diminished. The probability of limited war is increased. It is important that the Korean war receive careful study. It is the first limited war the United Nations have fought against Communist totalitarianism.

The naval history of the Korean war is outlined in this book in great detail. The authors have distilled from it the lessons, results, and significance of the Korean war. This effort should be of great interest and benefit to every student of international or military affairs.

Of the many lessons of the Korean war, three stand out above all others:

1. The military forces of the United States must be vigilant and ready to defeat aggression in any area and in any form, whether it be large of small, atomic or conventional. Our hope, of course, is that our visible, vigilant strength will discourage Communist aggression. To do so, we must be capable of effective counteraction, ranging from the uses of a squad of marines to the use of atomic-tipped ballistic missiles. Our Navy must have many different arrows in its quiver.

2. Control of the sea is prerequisite to victory in modern war, whatever its size, type, or scope.

3. The Korean war was a limited war. A limited war is the type of war most likely to occur in the thermonuclear age.

ARLEIGH A. BURKE,
Admiral, United States Navy,
Chief of Naval Operations.
WASHINGTON, D. C., *May 1, 1957.*

The Sea War in Korea: A Remarkable Book

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FULTON. Mr. Speaker, as the 1st session of the 85th Congress draws to a close there is ever greater concern in the minds of the Members of Congress over the American position of leadership in the field of foreign policy. The recent announcement by the Soviet Union of the successful firing of an intercontinental ballistic missile has caused some in this country to make quick and possibly intemperate remarks about free world security. If there ever was a time for men in posts of leadership to weigh their words with care and maturity—that time is now.

Although this session of the Congress is over, it does not mean that the work of the membership has ended. Before reconvening in January 1958, each and every Member will give considerably of his time and energy to the problems of foreign policy and the military security of this country and the free people of the world.

Despite statements that may be issued from the Kremlin from time to time, Americans can be reassured that this Nation continues as the greatest military power on the globe. In order to exercise moral leadership in international affairs in behalf not only of the 170 million citizens of this country, but also for those millions in the satellite areas who yearn for the eventual day of freedom, it is important that the United States preserve its military strength. And it is equally important that strength be in appropriate balance to meet the variety of tests which may be forced upon us, considering our worldwide United States security bases that must be safeguarded.

Comdr. Frank Manson is now head of plans and policies analysis in the Office of the Chief of Naval Operations, and has been a special assistant to Adm. Robert Carney and Adm. Arleigh Burke. He has played an important part in documenting the story of the Pacific war in the official battle report series.

America has long recognized that, despite the heavy costs, it must continue to maintain a balanced military power in union with its free world allies. No single-weapon system is sufficient to meet the many types of threats to our United States security. No single weapon is adequate to implement all facets of American international policy. America and its allies must ever be prepared to meet the newly arising threats quickly and effectively—on land, on the sea, and in the air. The cost of a balanced military posture will never be low. There is no bargain basement price tag on security. But, when told the facts, I am confident the American people are willing—yes, eager—to pay the economic price for genuine security. The American people will likewise demand that the President and the Congress provide that kind of military strength which is so necessary to an enlightened and just foreign policy in this troubled world.

It is with this thought in mind that I bring to the attention of the Congress—and to the attention of the American people—this story of The Sea War in Korea, which so graphically portrays the interlacing of foreign policy and balanced military forces. This is the real story of the Korean sea war, and every intelligent United States citizen will find it extremely interesting and informative, as it is based on actual war firsthand documents and official sources. The top military commanders, including General MacArthur, have been consulted on the preparation of this inspiring volume.

Congratulations to the authors, the United States Naval Institute, and the good United States Navy for a job well done.

As a member of the Foreign Affairs Committee of the House of Representatives it is a real privilege to recommend to my colleagues the recent book documenting and evaluating the application

of free world military power in restraint of aggression. This fine volume is entitled "The Sea War in Korea." The book is published by the United States Naval Institute. It is written by Comdr. Malcolm W. Cagle, United States Navy, and Comdr. Frank A. Manson, United States Navy, and is a highly professional and readable translation of that story into language which every citizen can understand. Those of us in the Congress who must make responsible decisions about the defense budget each fiscal year should never forget that the strong justification of our Military Establishment is to implement American foreign policy based on power and justice. Our United States Military Establishment must always be of such nature and balance that it can appropriately support our entire foreign policy and not just a part, through weakness.

The authors of The Sea War in Korea are peculiarly and remarkably qualified to write the story of that conflict. Comdr. Malcolm Cagle, a native of Tennessee, has a distinguished record as a naval flyer in World War II, and holds the Navy Cross for bravery. He has occupied important positions in the Pentagon and is now beginning graduate study at the National War College following duty as special assistant to the Secretaries of the Navy, Charles Thomas, and Thomas Gates. Although primarily a seagoing man, he has found time to write extensively in the past and has received repeated recognition for his literary talents.

Comdr. Frank Manson, served aboard the famous destroyer *Laffey* that was hit by seven kamikaze planes in the Pacific in World War II, and served in many capacities with distinction in the United States Navy in both the Atlantic and the Pacific theaters.

The Wilderness Bill

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SAYLOR. Mr. Speaker, the Christian Science Monitor of August 27, 1957, carried a very informative article on the wilderness bill by Mr. Kimmis Hendrick, chief of Monitor's Pacific news bureau.

In effect this article clarifies some of the misunderstanding of the purposes of the bill which were set forth in an earlier article written by Mr. Roscoe Fleming which was inserted in the RECORD on July 25, 1957, by the gentleman from Oregon [Mr. ULLMAN].

I believe Mr. Hendrick's statement will be of great interest to all my colleagues in considering this important legislation, and I include it as part of my remarks:

PRESERVATION SOUGHT: WILDERNESSES SCANNED

(By Kimmis Hendrick)

LOS ANGELES.—Will Congress give the American people a system for preserving their magnificent wilderness heritage?

Conservationists have offered a plan. A bipartisan group of Senators from Maine to California is supporting a bill introduced this session.

Put before the Upper House by Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, the bill if enacted into law will be known as the National Wilderness Preservation Act. Senator HUMPHREY says it represents "improvements, corrections, and clarifications" of a similar bill introduced last year.

The United States Forest Service is arguing that the bill is weighted too heavily on the conservation side, and through the Department of Agriculture has offered a substitute proposal. In response, conservationists have modified their bill to meet the basic Forest Service objections but without weakening its long-range purpose.

This purpose, as the conservation bill clearly states, is to make it national policy to preserve for posterity the untouched treasure of the Nation's available wilderness areas. The bill also would establish a National Wilderness Preservation Council to coordinate this policy.

WILD AREA DEFINED

In language that obviously strives to match with words the grandeur of the lands it deals with, the bill defines a wilderness area as one "where the earth and its community of life are untrammeled by man, where man himself is a member of the natural community, a wanderer who visits but does not remain and whose travels leave only trails."

It was indeed an American poet who many years ago stated this ideal so eloquently that conservationists delight to quote him. Walt Whitman said, "Without wilderness, America will change. Democracy, with its myriad personality and increasing sophistication, must be fibered and vitalized by regular contact with outdoor growths, animals, trees, shrubs, sun warmth, and free skies, or it will dwindle and pale."

GRADUAL THREAT SEEN

Already the United States has a few wilderness areas officially designated for protection with just this ideal in view. But conservationists note that they are threatened constantly by interests that want their timber or their minerals or to make them into popular resorts.

Introducing the conservationists' bill this year (S. 1176), Senator HUMPHREY noted that the process of this threat may be gradual. Now is the time, he said, in which guards against it can be set with no sacrifice. Such an ardent Republican conservationist as Representative JOHN P. SAYLOR, of Pennsylvania has spoken to the same effect.

Forest Service opposition seems to be based on the desire to avoid any interference with the present authority of a single official to make final decisions regarding wilderness area administration.

The wilderness bill, according to Dr. Richard E. McArdle, Forest Service Chief, "would give a degree of congressional protection to wilderness use of the national forests not now enjoyed by any other use. It would tend to hamper free and effective application of administrative judgment."

Dr. McArdle also says that last year only 1 percent of those who visited national forestlands went into wilderness-type areas. In testimony before congressional committees, he has stated that "the great mass of recreational users is precluded, by lack of roads, from seeing and enjoying these areas."

ROLE FOR CONGRESS

But if roads were built, conservationists answer, and great masses of people could then visit these back country areas, there soon would be no unspoiled wilderness left on this continent at all.

If this were to happen, conservationists point out, there soon would be no unspoiled wilderness left on this continent at all.

Why should there be? Conservationists argue that the more crowded this continent becomes, the more people have the right to know what primitive country means. They have the right to the tangible and intangible benefits of land that hasn't been exploited for short-range profit or turned over to mass recreation.

David R. Brower, executive director of the famed Sierra Club, admits that many people may never see a wilderness area and that many may never wish to see one. "But wilderness must be there," says Mr. Brower, "or the world's a cage."

As contemplated in the conservationists' bill now before Congress, the Wilderness Council it establishes would not be an administrative unit. The Forest Service has spoken as though it feared its power, but as a matter of fact, as Dr. McArdle himself has said before the Senate Subcommittee on Public Lands, the council actually would have no administrative responsibilities.

It still would be the prerogative of Congress, as it is today, to add to, modify, or subtract from the lands designated to remain in their primeval state.

The wilderness council would consist ex officio of the persons at the time designated as the Chief of the United States Forest Service, the Director of the National Park Service, the Director of the Fish and Wildlife Service, the Commissioner of Indian Affairs, the Secretary of the Smithsonian Institution. Amendments have been proposed, acceptable to conservationists, which would add the Director of the Bureau of Land Management and reduce the number of citizen members, also provided for, from 6 to 3.

The Wisconsin Election

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MINSHALL. Mr. Speaker, much has and will be written about the results of the recent Wisconsin senatorial election. It is significant that such an outstanding publication as the Cleveland Press should add its bit to this editorial quarterbacking. As one who has consistently supported the economy bloc during the 1st session of the 85th Congress, I should like to call the attention of my colleagues to the excellent editorial which appeared in the August 29 issue of the Cleveland Press:

WILL THE REPUBLICANS LEARN?

The upset election in Wisconsin should prompt the modern Republicans to think.

The margin was so decisive it hardly can be attributed to entirely local issues or personalities. It sends to the seat left vacant by the death of Republican Joseph McCarthy the first Democrat to be elected to the United States Senate from Wisconsin in 25 years.

The new Senator, WILLIAM PROXMIRE, is moreover a relative newcomer to Wisconsin, a resident of that State for less than 10 years. And his opponent was a proven vote getter, Walter J. Kohler, three-time Governor of the State.

It is significant that only 30 percent of Wisconsin's eligible voters turned out to the polls and this may be an indication of Republican apathy which extends far beyond the borders of Wisconsin.

For this apathy there are, perhaps, many reasons including local discontent with farm policy. But an important reason is inflation.

lus the revised pitch on big Government pending which has characterized the last w months.

Reduced size of government and reduced pending were vital planks in the Republican latform of 1952, upon which Dwight Eisenower was elected, breaking the 20-year reign f free-spending Democratic New Deal and air Deal.

Again in 1956 there seemed to be a choice etween spending and saving. Those favorng spending had a chance to vote for Adlai tevenson, who was overwhelmingly defeated.

The determination to pare down our vast ederal bureaucracy, to enforce economy, to ght inflated living costs, to ease the heavy urden of taxes, has been the cohesive force hich has held the Republican Party toether through two national elections.

It has prompted those who believe in that olicy to get out and work in the elections. has prompted them to bother to vote.

It prompted an avalanche of mail to Conress when the $71,800,000,000 budget was ubmitted by the administration and forced congressional economy campaign.

But the Republican label is no longer on hat campaign. The fire has gone out of the rusade and that could be one reason for hat has happened in Wisconsin.

Aid to Poland

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am leased to include a very timely article, ppearing in the June 8, 1957, issue of he Worcester (Mass.) Evening Gazette, resenting a most practical and commonense summation of our extension of id to Poland during these trying days f her existence under a Communist egime.

I recommend its reading for a clearer nderstanding of Poland's unfortunate urrent position and the hope of her ventual freedom with our reasonable ssistance.

The editorial follows:

AID TO POLAND IS A GAMBLE

The administration is taking a big gamble giving aid to Poland. But it is a gamble at may pay off handsomely. The $48 milon worth of goods that we will shortly be ipping to Polish ports, plus the $46 million ore that will be made available when ongress passes the surplus agricultural mmodities disposal program, may loosen e Kremlin's hold on Poland to such a deree that the Communist empire will be riously weakened.

Not all observers agree with this interetation. Some Members of Congress have nted that aid to Poland is aid to Moscow, d that we should not help any Commuist regime anywhere.

Poland has a Communist regime to be re. But it is a Communist regime different from the regime which it displaced. e ruling figure in Poland today is Wladysw Gomulka, who spent years in prison der the Stalinists. He is insistent that land shall pursue its own independent urse.

Actually, Gomulka does not have much om for maneuver. His nation lies beeen the Soviet Union and the restive Red tellite of East Germany. Soviet troops are stationed all over Poland. As a result, Gomulka has to walk carefully. He cannot afford to antagonize Moscow.

At the same time, he has made it plain that he is dead set against Moscow domination. It took courage on his part to ask for United States aid, in the face of ominous rumblings from the Kremlin. There is no doubt that the Kremlin is highly suspicious of Gomulka, as it is of Yugoslavia's Tito. Neither is a properly pliant puppet in the Soviet eyes.

If we wait until we get regimes in Eastern Europe which are antiseptically anti-Communist and 100 percent democratic by our lights, we will wait forever. Tito and Gomulka are probably the best we can get at the moment. Communists they are, but they are also nationalists. There is a good case for supporting them in their initial efforts to free their countries from the Soviet embrace.

Discussion of Intergovernmental Relations From the Viewpoint of the Municipality

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. REUSS. Mr. Speaker, recently I inserted in the RECORD a copy of the statement of Patrick Healy, Jr., executive director of the American Municipal Association, before the Intergovernmental Relations Subcommittee of the House Government Operations Committee on July 30, 1957. Following Mr. Healy's prepared statement, there were some interesting colloquies between Mr. Healy and members of the subcommittee. Under leave to extend my remarks, I include them as follows:

Mr. FOUNTAIN. Thank you, Mr. Healy, for an excellent statement.

Mrs. Dwyer.

Mrs. DWYER. Yes, Mr. Chairman. I was quite interested in what you had to say, sir, on sewage disposal plants and water pollution being a national problem. Why then do municipalities on a State level fight air pollution even on a State level and claim it is a municipal problem when pollution of air knows no boundary lines? Why is their position so different in that field? For instance, the State League of Municipalities in the State of New Jersey opposed a provision or proposal by the State legislature that we have State laws on air pollution.

The League of Municipalities opposed that and said it was a municipal problem. I mean, I can see a similarily between water pollution and air pollution.

Mr. HEALY. I am not prepared to answer why the people of New Jersey took that position. I do know that in other States it is considered a State problem, and an interstate problem.

In California, for example, where the problem is particularly acute in some areas, they have asked for expanded Federal research into air pollution control, and they welcome some outside assistance.

Mrs. DWYER. Would your association then feel that it now was a Federal problem rather than a State problem? I mean, have you taken any position on that as you have on water pollution of streams?

Mr. HEALY. Yes, we have. I can't put my finger on it right now, but we have asked for the Federal Government to continue the policies of Federal responsibility for research and technical services, financial assistance to States and municipalities and enforcement of interstate pollution controls.

Mrs. DWYER. Sir, were you interested at all in the first interstate pact that was made on the study of air pollution beween New York and New Jersey?

Mr. HEALY. No; we did not participate in that.

Mrs. DWYER. Your league was opposed to it actually in both States.

Mr. HEALY. I see.

Mrs. DWYER. That is why I wondered on your water pollution how far you have come along in anything on air pollution as well as water pollution.

Mr. HEALY. Our position so far has been mainly to recommend Federal participation in research and technical assistance in air pollution, but in the case of water pollution, we have gone further and recommended and the Congress has seen fit to adopt the principle of Federal aid for construction of sewage-treatment plants.

Mrs. DWYER. In the city of Elizabeth we built our own sewage-disposal plants, and in the city of Plainfield, which is a much wealthier city in my own district they waited until they got a Federal grant, so I am not so sure that that always works on an incentive basis, because sometimes towns that are not as financially able go ahead and do the job that needs to be done for the town without waiting for Federal grants.

There is just one more question I would like to ask. Do you agree with the mayor who was here this morning from Milwaukee, that the Federal Government is in a better position as it concerns collecting taxes; that it is in a financially better position than the States to do the job of civil defense? For instance, he also mentioned school construction.

Would you agree with that when we know that the Federal debt today is almost $274 billion and the money really comes from the States, plus the fact that in school construction it was, I think, brought out that actually there are only 7 States that were in real need of moneys for school construction? That is an involved question. Do you follow my reasoning?

Mr. HEALY. I think I see what you are getting at. Our American Municipal Association has taken no stand on the matter of Federal aid for school construction, but I think Mayor Zeidler this morning, in referring to the superior ability of the Federal Government's tax resources was referring to the interstate character of industry today, the fact that a corporation, while it might be located with its home office in a State that has extra-favorable laws, has farflung operations throughout the country or over several States, and that the individual States left to obtain tax revenues from those corporations are not likely to achieve the same success that the Federal Government can.

I think that is more what he was referring to, and as a former State taxman myself, I can agree with that, that it is in that field of taxation that the Federal Government has more resources, is better able to finance Government than the States are.

Mrs. DWYER. Do you feel it is because the Federal Government has grabbed those resources from the States where they rightfully belonged?

Mr. HEALY. Well, not entirely. I think, as I pointed out in this testimony, that you have a situation of interstate competition too, and whereas a State may find that it is very desirable to undertake certain governmental services, it may not be willing to finance those services by imposing taxes which they feel might discourage industry from locating in that State, and you have got that continuing process going on to dis-

courage States from assuming their obligations to the public.

Mrs. DWYER. In other words, what you are saying is it is to the benefit of the States to allow the Federal Government to do urban development and slum clearance and sewage disposal plants and civilian defense because on a State level their responsibility is to keep their tax rate down low enough to keep industry within the State and keep the people on the local level happy by thinking their tax rate is not high. Are the States not keeping it low by going to the Federal Government, which is so far away that the people don't realize what the taxes really are?

Mr. HEALY. Well, you can apply that same line of reasoning within the State in State aid for school districts, for example. You could say well, let each school district raise its own money, so the people in that district will know what they are paying for. But they don't do that. Most States now have State aid for schools, and in some cases they have State aid for other activities of local government.

I don't think it is an attempt to try to fool the people into thinking they are getting something for nothing. I think it is an equalization program and recognizing the fact that the State is better able to raise revenue than the local school district is.

Mrs. DWYER. In other words, then your philosophy would be, or would it be—correct me if I am wrong—that the equalization such as we have on the State school aid formula would carry on on the Federal Government for other programs as well that equalize the 48 States on moneys going into the States for urban clearance, and so forth.

Mr. HEALY. I am not advocating it as a means of an equalization program that the Federal Government continue to participate in urban renewal. We advocate that as a means of stimulating urban renewal, as a means of providing Federal leadership which, incidentally, results in about $5 of private capital being spent for every $1 of Government money. It is a terrific program to stimulate private initiative and private action in rebuilding the cities.

For example, in your State of Connecticut, Congressman MAY, New Haven has taken the leadership in this program. This is a stimulating type of action that Federal aid results in.

Also it is a financial participation that we feel would not be there if the cities had to do it alone or if they had to depend on State governments.

We are not suggesting that it is an equalization program. It is just the fiscal facts of life in local government.

Mrs. DWYER. I agree with you on the air program that it has been a very fine thing for the cities of America. I was trying to draw you out what your philosophy was as far as your association is concerned.

Thank you all, Mr. Chairman.

Mr. FOUNTAIN. Mr. MAY.

Mr. MAY. I would like to compliment Mr. Healy on his statement and to perhaps get at the solution to these problems, as I tried to do earlier today.

You say that a lot of your answers to the problem lie in better State legislatures, legislators, more pay, but you have to sell the voters on the virtues of good State government, effectiveness and responsiveness of the State government.

Does your association have any promotional ideas or plans to help do that in the various States as a group?

I know in Connecticut they raised the pay, I think, $100 of the legislators last time. But next door in Massachusetts they work a little longer and they get paid five times as much. There is a great conflict going on in Iowa right now. Perhaps your association is doing something about it throughout the country.

Mr. HEALY. We are not. This is just a personal opinion of mine, as I pointed out here. The association has not undertaken any program to improve, you might say, the caliber of State legislatures.

Mr. MAY. That might be a little difficult. As I look at it, as the two former legislators mentioned this morning, they recognized the problem when they were there. We need everybody in the act.

Mr. FOUNTAIN. You have to put yourself in the position to try to improve your bosses and how they operate.

Mr. HEALY. That is right.

Mr. MAY. Along with the chamber of commerce this morning—maybe they are able to get into more areas than yours—it seems to me we are going to need the support of all kinds of organizations and associations in the country to get some conclusions that will be implemented.

Mr. HEALY. I think our association will give some study to this problem. We discussed it very informally among some of the representatives of the leagues of municipalities this last week and there is quite a bit of interest in this.

When I see both the State legislatures and the Congress in operation, what appeals to me is what a comparison there is. Congress does such a terrific job in the consideration and the passing of legislation that I do not know why the same kind of a job cannot be done at the State level.

Maybe the answer, as I have suggested here, is making it a full-time job. Maybe we should have smaller legislatures and make it full time, like Congress is, professional legislators with adequate staffs and adequate committee staffs and and have a continuing session every year.

City councils do that. They do not have staffs and they are not paid, but they are a continuing body that meets once a week year around. I do not know why the State legislature has to meet only once every 2 years for 60 days.

Mr. MAY. It would seem that the great powers they have over the local governments and with the increased populations and problems and the current discussion of the State programs that ought to be undertaken perhaps by States that they have a long way to go to keep up with the other areas of government.

Mr. HEALY. Yes.

Mr. MAY. Something should be done.

Mr. HEALY. That is right. It is going to take quite an educational program to ever put anything like that over. People's first reaction is "my God, they are in session too long now."

Mrs. DWYER. That is right.

Mr. FOUNTAIN. That is usually the attitudes of the governors.

Mr. HEALY. But actually and seriously the State legislature, I think, is the key to the strengthening of this whole State government process and local governments, therefore.

If the Chamber of Commerce of the United States would take on a project like that to improve the legislative processes, I think they might have a very constructive program. They are the leaders in local businesses and to a large extent have a lot of influence on public opinion. That is the kind of a program they ought to try to get behind instead of arbitrarily wanting to cut out all Federal aid and cut out Federal taxes and leave these things to the State. They do not stop to consider how the States are going to handle them if they have them back again.

Mr. FOUNTAIN. I think we all appreciate the viewpoint of the municipalities as expressed by you, Mr. Healy.

Has your group in any of its meetings ever embarked upon the highly controversial question as to whether or not the Federal Government by virtue of aid in various fields may ultimately get control and as a resul of control and continued centralization o power in Washington, because of the inher ent dangers in too much centralizatio might ultimately lead to dictatorship?

Mr. HEALY. We have not considered it fro that particular angle.

Mr. FOUNTAIN. I mention that because we have these discussions, on all of thes Federal-aid programs, the significant argu ments—and I know I make them myse quite often—are that Federal aid ultimatel leads to Federal control and Federal aid wil eventually force local governments and peo ple to rely too largely upon that aid and tha as a result of Federal control eventually ev erybody will have to look to Washington an of course, Washington everyone knows no is a city of bureaucracies. In fact, the othe day we were told during the debate on on piece of legislation that the Federal Gov ernment has approximately 35,000 advisor committees, allegedly advising somebody i Washington as to how it ought to operat and what it ought to do. That is the rea son I asked that question. That seems t be the thing that worries States-righters, s to speak, and there is merit to their posi tion. Then, of course, we in Congress afte we have been here a while learn to appre ciate the position of those who cannot agre completely with the view of the so-calle States-righters because we realize that ther are State responsibilities which many time the people in the States are unwilling t accept or simply cannot accept because o fiscal difficulties which you have described

Mr. HEALY. Well, our association in 194 and 1949 and 1950–51 adopted various state ments on home rule, and one of those state ments adopted in 1949 reads as follows:

"The administration of elections, school and police must always remain within th control of the States and local government Democratic government cannot easily b overthrown by a highly centralized govern ment as long as the elections are local, th educational system under State and loca control, and the police are primarily unde local jurisdiction. Municipal officials pledg their efforts to retain control in fact as we as in theory under these three importan activities."

A lot of thought went into that statemen and reflects our position that as long as yo retain local control of elections, of educa tion, and of police, we do not fear centraliza tion and too much power in Central Govern ment from Federal-aid programs.

Mr. FOUNTAIN. So long as you do not hav Federal control.

Mr. HEALY. That is right.

Mr. FOUNTAIN. With Federal control, it realistically argued, a few people controllin the reins of Government and the purse strings could do away with elections, th police forces, and local authorities; is th not right?

Mr. HEALY. That is right, if they have th police.

Mr. FOUNTAIN. That is what happened i Germany and in Japan. That has been th history of dictatorship. There is the con tinued centralization of power in the hand of a few people, the gradual abolition o rights and privileges of people on the loc scene and, eventually, abolition of the righ to vote and various other privileges.

Mr. HEALY. That is right.

Mr. FOUNTAIN. No other questions.

Thank you very much.

Mr. Naughton.

Mr. NAUGHTON. Mr. Healy, you made re erence to the Federal-State task force th has been appointed by the President and th Governors Conference to examine Federa State relationships. Is there any represen tation on that body of the local governmen below the State level?

Mr. HEALY. No, sir; there is not at the present time. The task force idea was presented to the governors by the President. The governors accepted it in a resolution and have appointed, I think, 10 of their number to their part of it and the President has made his appointments, but there is no representative of local government on the task force. Our president of the American Municipal Association, who is Mayor Ben West, of Nashville, Tenn., wrote to the president of the Governors Conference on July 11, Gov. William G. Stratton, of Illinois, calling attention to the President's talk at Williamsburg and the task force proposal and if you will permit me, Mr. Chairman, I might read part of that letter.

Mr. FOUNTAIN. You may do so.

Mr. HEALY. "In addition to pointing out that the needs of the Nation's citizens are glaringly evident, the President made it clear that unless action is prompt and effective, urban problems will soon almost defy solution.

"You will recall that in defining the problem and acknowledging the need for prompt and remedial action, the President raised the formidable question as to which level of the government, the city, the county, the State or the Federal Government has the basic responsibility to act. He also pointed out that if all levels must merge their efforts in order to handle the problem effectively, some basis must be established whereby the roles of the specific levels of government can be defined.

"In view of the President's emphasis on urban problems and specific references to current Federal programs effecting the Nation's cities, we assume the work of the task force will be directed largely to an analysis of necessary governmental activities in urban areas. On this basis we feel that participation in the task force by persons directly representing municipal interests would prove of great value to it in conducting the sort of study the President outlined. We are perforce most interested in the task force idea and are anxious to participate in its work actively. We should like to have you know that we stand ready to provide whatever assistance we can in furthering the efforts of the task force to conduct a successful and objective reappraisal of the responsibilities and resources of our local, State, and Federal Government."

By letter dated July 23, Governor Stratton answered our President as follows:

"DEAR MAYOR WEST: This will acknowledge your letter of July 11, informing me of your interest in the President's task-force proposal.

"I have noted your comments with reference to the many pressing urban problems now facing America's cities and I appreciate your thoughtfulness in calling my attention to your desire to actively participate in furthering the work of the task force.

"Sincerely,

"WILLIAM G. STRATTON,
"Governor."

That is typical of the way the cities have been treated. Of course, this may just be an acknowledgement. We hope that the Governor's Conference will call some direct representation of cities into their deliberations.

Mr. FOUNTAIN. I was looking for Mr. Michel. I thought he might be able to do something about that.

Mr. NAUGHTON. Mr. Healy, do you know if there is any representation of the legislative branch of State government on this task force?

Mr. HEALY. Well, on the task force itself there is not. They are all governors or Federal officials.

Mr. NAUGHTON. The task force is made up of executive officials from the Federal level and the State level. Since their recommendations, if they are to achieve any great changes or improvements, ultimately must be passed upon by the legislative branch at the State and Federal level, would you have any comment upon whether something might be done to achieve closer coordination with the legislative branch of Government during this study, rather than just presenting the results after its conclusion?

Mr. HEALY. I would hesitate to suggest how that task force should be composed. We have made a suggestion here that urban interests be represented. So far we have not made any impression and I doubt if we would want to suggest anything else in connection with the task force.

Mr. NAUGHTON. I was interested in finding out whether you personally felt there might be value in achieving better coordination and if you had any ideas as to how this might be done?

Mr. HEALY. It would seem that there would be considerable value in having representatives of State legislatures in on the ground floor of the deliberations of that task force, because as you have pointed out, they are the ones that are going to have to pass the laws. My observation has been that many times very well-meaning governors who are men of great stature and broad vision have good ideas which they present to State legislatures that are not adopted, and just as a matter of practical politics it would seem expedient to bring the legislatures into the task force.

Mr. NAUGHTON. Would the last comment apply equally at the Federal level?

Mr. HEALY. I would think so.

Mr. NAUGHTON. Just one other thing.

I think you quoted the philosophy from the Kestnbaum report that the level of government closest to the community should be used in approaching these problems, which need solving. Is it your feeling that the municipality, which I think you characterized is the level of government that is closest to the community, is presently handicapped in solving these problems by restrictions which have either been imposed by or not removed by the States under which the municipalities are organized?

Mr. HEALY. What was the last part of that question?

Mr. NAUGHTON. I wanted to know if it was your feeling that the municipalities, as the level of government closest to the community, have been handicapped in solving these problems because of restrictions that have either been imposed by the States or have not been removed by the States?

Mr. HEALY. Well, actually you mean the Federal programs, Federal aid programs.

Mr. NAUGHTON. Either in connection with Federal aid programs or in solving problems of a general nature.

Mr. HEALY. We feel, as I pointed out, that the present arrangements are quite satisfactory in such programs as Federal aid to airports and urban renewal, where you have a direct Federal-city relationship, and that nothing can be gained by imposing a State channel there, through which Federal aid must pass. Likewise, on all affairs of an urban character, we take the position that the cities are best able to administer local programs without interference from the State. We have quite a strong home-rule statement here that is our guide in this policy and if you care to, I would be glad to read it to you or put it in the record.

Mr. FOUNTAIN. You may leave it with us and we will be glad to include it in the record.

(The document as referred to is as follows:)

"HOME RULE

"1. The rights of home rule should be extended to all American cities. Within the framework of broad constitutional grants and broad statutory grants and limitations, the incorporated municipalities should have the right to adopt and amend their own charters and to pass all other local laws consistent with their powers and not inconsistent with the State constitution and State statutes. The basic right of all people in a democratic society is to govern themselves as long as they can do so without infringing on the rights of others. The extension of home rule would provide a more democratic government in the United States. At the same time, greater responsibility would be fixed on those persons most directly responsible for the conduct of those affairs in government which most directly affect the lives of its citizens. We therefore resolve:

"1-1. The people of an incorporated city should have the right to handle their own affairs under a constitutional grant of power from the State. Home rule would permit cities to amend their own charters by action of the local electors, to choose the activities they wish to perform, and to raise their revenue as they see fit. They should be free to choose their own form of government, not merely to operate a government given them by the State. They should have the right to decide for themselves what services they require, without asking State permission for each new undertaking. They should have authority to raise revenues from any local sources, without being required to beg for funds to pay for the services they need. The municipalities should not be required to support State projects, pay for State services, or carry financial burdens imposed on them by the State (1948).

"1-2. The principle of municipal independence carries with it the obligation of cities to face their own problems, to meet their own responsibilities, to finance their own enterprises within the limits of local resources, and consistent with practical economic and social factors (1948, 1949, 1950, 1951).

"1-3. Local government in the United States should be autonomous so far as practical and consistent with public welfare. While the Federal Government and governments of the several States may invoke their broad powers and greater financial resources to make possible some local government services, still these powers and finances should be delegated for the purpose of administration to the municipal authorities, in a manner consistent with responsible local self-government (1948, 1949, 1950, 1951).

"1-4. The American Municipal Association believes in and will work for effective governmental and administrative organization and practices in municipalities, seeking to preserve the representative character of municipal government, and to assure the people a high standard of municipal service, to the end that the greatest public benefit may result from the use of public funds. While no municipality can have complete autonomy, the cities should have the maximum local authority consistent with their position as constituent elements in a sovereign State (1948, 1949, 1950, 1951).

"1-5. The American Municipal Association maintains that efficient and economical municipal government can best be attained if the citizens of cities have both the power and the duty to require their chosen representatives to constantly seek the best methods of operating municipal activities, without being hamstrung either as to organization or financing by arbitrary restrictions in State constitutions or statutes (1954).

"1-6. The administration of elections, schools, and police must always remain within the control of the states and local governments. Democratic government cannot easily be overthrown by a highly centralized government as long as the elections are local, the educational system under State and local control, and the police are primarily

under local jurisdiction. Municipal officials pledge their efforts to retain control in fact as well as in theory under these three important activities (1949).

"1–7. The AMA supports the national franchise and local home rule consistent with the provisions of the United States Constitution for the District of Columbia (1956)."

Mr. FOUNTAIN. Mr. Healy, you are familiar with the fact—I refer again to North Carolina—that there we have an Advisory Budget Commission which meets continuously and compiles its report, which the Governor usually signs, and makes its recommendations to the State legislature.

I think both the chairmen of the appropriations committees and of the finance committees of the house and senate are on that commission.

I make that preface to this question. If the subcommittee were to seek the viewpoint of the State legislatures, on the basis of your experience with them and your knowledge of the setups in various States, what particular individuals would be the best point of contact for this subcommittee?

Mr. HEALY. I believe most State legislatures have a committee on local government. I would think that the chairman and 1 or 2 of that committee should be on.

Mr. FOUNTAIN. Are you referring to the local government commission?

Mr. HEALY. No, a committee of the legislature.

Mr. FOUNTAIN. It is called the Committee on Cities and Towns in any State?

Mr. HEALY. They have different names for it. That is what I mean. Another committee would be the appropriations committee chairman. Another one would be the tax-raising committee.

Mr. FOUNTAIN. The finance committee.

Mr. HEALY. Finance. Finally the chairman of the committee on highways. I think those are committees that most city problems come before and their chairmen should be pretty well familiar with some of the problems.

Mr. FOUNTAIN. Of course, the chairmen of the appropriations committee could well serve a useful capacity insofar as the State government is concerned as well as the municipal government.

Mr. HEALY. That is right.

Mr. FOUNTAIN. Any more questions?

Thank you very much.

Mr. HEALY. Thank you, sir.

Mr. FOUNTAIN. Mr. Bernard Hillenbrand.

It looks like we are getting a cross section of the various governments in our country.

Research: The Basic Ingredient of Progress

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to enclose a very pertinent editorial, appearing in the June 12 issue of the Worcester, Mass., Evening Gazette, emphasizing that, in this modern age, research is synonymous with progress throughout the country, even as it is in old New England.

The editorial follows:

THE BACKBONE OF NEW ENGLAND

According to some experts, the richest industrial resource of Massachusetts is not the textile, electronic, or any other industry.

It is research.

Without the vast research facilities centered about Boston, New England would be little more than a scenic appendage to the industrial heart of the United States. The work of "research row" on the banks of the Charles River links this region solidly with industry from New York to California.

Even as a pure industry, research is impressive. According to a survey by the Federal Reserve Bank of Boston, New England manufacturers spent $330 million on research and development in 1955. Massachusetts alone has no less than 322 research laboratories covering millions of square feet of space and employing 15,453 people. They service industrialists all over the world.

The importance of research is incalculable in this day. In the communications industry, for example, 77 percent of the sales in 1955 were derived from products unknown 10 years earlier.

Another study, done by Dr. Joseph F. Zimmerman, of Worcester Polytechnic Institute, for the State Department of Commerce, points out how pervasive research is in this area. Boston, says Zimmerman, is now conceded to be the medical research center of the world, with 62 schools and other institutions actively engaged in the pursuit of technical knowledge.

Agricultural and forestry research is playing an ever larger role in New England thinking. When this is coupled to the vast research effort being made continually in the field of industry, it can be seen how essential research is to New England prosperity.

It is sometimes said that brainpower is the biggest shortage in the United States today. Fortunately for New England, some of the best brains in the Nation are actively at work in our laboratories and educational institutions.

Statement by the AFL–CIO Executive Council on the Situation in the Soviet Union

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JUDD. Mr. Speaker, no group in America has been more hard-headedly accurate in its understanding of Soviet moves and maneuvers during the last two decades than the leaders of the A. F. of L., now merged with the CIO. Continuing that brilliant tradition is the following analysis of the exceedingly dangerous operations of Khrushchev, the dictator of the Soviet Union. Even more menacing than his deceptive pretentions of liberalizations is the fact that so many, in their wishful thinking, imagine he is more benign than Stalin, when in actuality he is more dangerous, because more clever.

STATEMENT BY THE AFL–CIO EXECUTIVE COUNCIL ON THE SITUATION IN THE SOVIET UNION

The latest Soviet purge is an inevitable phase of the struggle within the Communist Party ruling clique over succession to Stalin.

In the 40 years of Communist dictatorship there, was not a single purge—no matter how much its real nature has been camouflaged with liberal premises and generous promises—which did not aim to strengthen the one-party system and to concentrate all power in the hands of the Communist Party boss.

Khrushchev has learned from Stalin how to camouflage and combine his purges with a seeming relaxation of Soviet domestic and foreign policies. In the midthirties, Stalin combined his ruthless purges and drive to strengthen his totalitarian control with such "liberal" measures as abolition of bread-rationing, adoption of the new "liberal" Soviet Constitution, popular front tactics, and Soviet participation in the League of Nations. In the midfifties, Khrushchev is driving to strengthen his control of the Communist Party and its totalitarian power over every walk of life—under cover of economic concessions to the peasants, generous promises to the workers, and expanded efforts for so-called coexistence.

Khrushchev and Zhukov, posing as champions of "peaceful coexistence" and generous treatment of the satellites, were the primary architects of the savage suppression of the Hungarian people in their effort to secure national independence and genuine coexistence with Russia and the rest of the world. The more flexible Soviet foreign policy under Khrushchev has not provided the slightest indication of Kremlin readiness to restore to the Baltic, Balkan, central European and Asian countries the national independence and human rights taken away from them by the use or threat of Soviet military force. Moscow is today most categoric in its opposition to German national unification through free elections. It insists on turning the entire German nation into another Soviet satellite by confederating the democratic Federal German Republic with the East German Communist puppet regime. Soviet imperialism in the Middle East has never before been as brazen. Moscow continues its unrelenting opposition to effective international inspection to assure the suspension of atomic tests and the cessation of production of fissionable material for military purposes.

There is just as little truth to Khrushchev's domestic claims. The new economic councils, established in the various Union Republics, are to be controlled by the respective Communist Party machines dominated by Khrushchev. Thus, the much-heralded struggle against bureaucracy actually aims to strengthen Communist Party control over the expanded Soviet economy. This reorganization is, therefore, not a step toward liberalism.

A similar reorganization plan is being prepared for the so-called trade unions in the U. S. S. R., with a view of assuring even stricter Communist Party control. Only by insuring such control, can Khrushchev intensify the exploitation of Soviet labor and hope to fulfill the sixth 5-year plan.

The promotion of Marshal Zhukov to full membership in the Presidium cannot be viewed as encouraging from the viewpoint of the free world. The Red Army is no force for liberalization. The percentage of Communist Party members in the armed forces is higher than in any other segment of Soviet society. Its leaders are fanatical Communists. Significantly, the United Nations report on Hungary emphasizes that the high command of the Soviet Army was even more determined than the Russian civilian authorities to crush the Hungarian democratic revolution. Clearly, the alinement of the Soviet military chieftains with Khrushchev offers no hope for greater freedom for the Soviet peoples and the captive nations or for a more peaceful Soviet foreign policy.

The test of any move towards democratization under a system of one-party dictatorship is the extent to which such a move reduces party control and domination. By this test, the new Khrushchev course, which aims at extending and tightening the hold

f the Communist Party on every walk of life, is away from liberalization and democratization. It is rather, a move toward harker reaction.

It would be fatal for the free world and the Soviet peoples to have any illusions about the Khrushchev course. Its fundamental aims are: (1) To prepare and strengthen the Communist Party machine for the next stage in its drive to destroy all its critics and concentrate all power in the hands of its first secretary. (2) To prepare and strengthen the Soviet regime for more effective pursuit and speedier realization of its basic foreign-policy aims—domination of the world and its remoulding in the pattern of Soviet despotism.

The Tobacco Program Must Not Be Disturbed

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. NEAL. Mr. Speaker, the Agriculture Department's inability to control surpluses of basic farm crops under the high price support program has provoked the Secretary to ask congressional authority to adopt requisite application of the flexible price principle.

It is apparent that even with limited acreage allotments, basic commodities continue to pile up surpluses when farmers resort to improved methods of cultivation.

As evidence that the Secretary, acting under existing laws, has been unsuccessful in reducing the enormous surpluses bought and stored at Government expense, he told the committees of the Senate and House that a new approach must be found. He said that production control is impractical, and that present laws governing acreage allotments and price supports are obsolete. He asked for major changes in the different price support programs for the six basic farm commodities—corn, wheat, cotton, tobacco, peanuts, and rice.

While it is true that approximately 8 billion are presently tied up in surpluses, I would remind our readers that of all the support programs, tobacco is the only one that has operated without cost to the Government or to the taxpayers.

Tobacco is unique in that growers, sales agencies, and manufacturers have cooperated fully with the Commodity Credit Corporation in their well-regulated program to maintain production in line with demand. In so doing, tobacco growers have consistently been favored with 90 percent parity prices without involving the Government with any part of the losses sustained over the Government price-support programs.

In all fairness, whatever the Secretary of Agriculture or the Congress does to solve the problems with which agriculture is beset, we must not interfere with the successful operation of the 90 percent support of tobacco. As long as growers are willing, as they have been in the past, to conform to reductions of their allotments for the sake of a guaranteed living price for their effort, this program should not be disturbed.

For the most part, tobacco is grown on small family farms. It is a personalized crop requiring 436 man-hours per acre. Technology has no place in its cultivation. It is the only cash crop that can return needed income to small farms in hilly country. Sixty and seven-tenths percent is grown on allotments of one acre and under. It requires 12 months to prepare soil, to seed, transplant, cultivate, harvest, and prepare for market.

There are approximately 4,000 tobacco allotments in my district. To disturb their source of assured annual income would be disastrous. Growers will accept reduced allotments when they are convinced it is necessary for the successful operation of the tobacco program.

I realize the Secretary of Agriculture is hard pressed for a solution of the farm problems. Since nothing short of balancing supplies with demand offers much hope of eliminating the surplus problem, his appeal to Congress for some approach other than supports is understandable.

But tobacco is different from any of the basic commodities. It stores well and improves with age. The average stock in storage is about 3 years—just enough to take care of possible crop failures. The tobacco program guaranteeing 90 percent parity to the farmer has cost the Government nothing. It is a workable program, highly profitable to the grower, and should not be disturbed.

In the President's message to the Congress January 11, 1954, he said:

Each farm crop has its own problems and these problems require specific treatment.

He said further:

Tobacco farmers have demonstrated their ability to hold production in line with demand at the supported price without loss to the Government. The relatively small acreage of tobacco and the limited acres to which it is adapted have made production control easier than for any other crops. The level of support to cooperators is 90 percent of the parity price in any year in which marketing quotas are in effect. It is recommended that the tobacco program be continued in present form.

Please, Mr. Secretary, do not disturb the tobacco parity program as long as it is working successfully.

Tennessee Well Represented at World's Conservation Exposition and Plowing Contests

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POLK. Mr. Speaker, Herb Parsons, America's fastest gun handler, and John and Pauline Blankenship, the first husband-and-wife team to ever enter the national plowing matches, are from Tennessee. I am including the following information about them for the RECORD:

WORLD'S GREATEST MARKSMAN TO APPEAR SEPTEMBER 19–20 AT WORLD'S CONSERVATION EXPOSITION

PEEBLES, OHIO.—Herb Parsons, America's fastest gun handler, will give a spectacular free public shooting exhibition at the 1957 world's conservation exposition and fifth world's plowing contests here, September 17, 18, 19, and 20.

A self-taught wizard with a Winchester, Parsons throws a 2¼-inch hard-maple block into the air, cracks the block and splinters the pieces with 4 bullets in an average of 3 seconds. In another amazing feat, he throws 3 clay pigeons behind him and between his legs, swings around and shatters them before they reach the ground. Conditions permitting, he will bag a tiny parachute 700 feet in the air with a high-powered rifle loaded with tracer ammunition.

Safety in the handling of firearms is as important to Parsons as his spectacular shooting, and his whole program stresses firearm safety as well as entertainment. Throughout his exhibition, in which he uses 12 rifles and shotguns, Parsons maintains a rapid-fire barrage of humorous comment. Parsons will appear at 1:30 p. m., September 19–20, the same days when champion plowmen from 14 countries will be competing for the world plowing championship. This is the first time this event has been held on American soil.

Parsons, who shoots under the sponsorship of Winchester-Western, is a native of Tennessee, had his first rifle at the age of 8, and bagged his first limit of quail when only 9. He has been shooting ever since. Described as the fastest and most entertaining gun handler in the country, Parsons is not a trick shooter—he performs his feats legitimately.

HUSBAND-WIFE TEAM TO REPRESENT TENNESSEE IN NATIONAL PLOWING MATCHES

PEEBLES, OHIO.—For the second consecutive year, a husband-and-wife team will carry Tennessee's colors into the national plowing matches, to be held here September 18. John and Pauline Blankenship, Route 6, Murfreesboro, Tenn., made history in the 1956 contest as the first husband-wife team ever entered into the national plowing matches.

Contestants from some 15 States are expected in this year's national matches being held in conjunction with the 1957 world's conservation exposition and fifth world's plowing contests, September 19–20. This is the first time the world contests have been held on American soil. Two-man teams are entered from 14 countries.

The fact that the Blankenships plow as partners, rather than competitors, eliminates the chance of any family squabbles as to which one is the real champion of the family. John plows in the level-land event, and Pauline in the contour contest. 1957 marks John's fourth appearance in the national matches. In previous competition he placed 12th, 9th, and 10th. Pauline made her first appearance in the national contest last year, placing 10th.

Mrs. Blankenship is the second woman ever to appear in a national match. As she explains it, "I'd rather be out there plowing than sitting at home waiting for John."

The Blankenships operate a 208 acre general farm, on which they milk 25 Jersey cows, raise Hampshire hogs, a few sheep, grain, and corn. They also breed and sell English shepherds, an all-purpose farm dog.

The Blankenships have 2 children, Mary Ann, age 11, and Henry, age 13, and they plan

to have the youngsters on hand when mom and dad go after the national plowing championship September 18. The winners of this year's national matches will compete in the 1958 world contests in Germany.

Protecting Our Country Against the Disloyal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. MULTER. Mr. Speaker, no true American can dispute the need to protect our country against disloyal public servants and disloyal citizens. All too frequently, however, in matters of this kind we allow hysteria to bestir our emotions to the point where we become illogical and sometimes almost childish.

Nothing can bring us back to our senses faster than a sense of humor.

That is why I submit, for the enjoyment of our colleagues, the following story which appeared in the Saturday Evening Post of August 24, 1957. With all its humorous aspects, it strikes very close to the truth of what has happened in too many Federal departments and in many departments of local governments:

NOTHING HAD EVER STIRRED UP SUCH A FUROR AT THE PENTAGON AS THE IMPROBABLE CASE OF THE TOP SECRET MAN

(By Jacob Hay)

You may well ask what ever happened to Howard and Vinnie Enderby, but you will never get a clear answer from the United States Government. In fact, the United States Government doesn't even want you to ask questions about the Enderbys, and if you do, you might find yourself regarded with a cold and fishy eye by some polite young fellow from the Federal Bureau of Investigation.

Chances are you've never heard of the Enderbys, and so you wouldn't have heard of their abrupt disappearance. Rest assured the newspapers gave it very little space. On orders from Washington. You think that sort of thing can't happen here? Well, sir; think again.

As it happens, I know what became of Howard and Vinnie. I threatened a floor fight if I didn't get the facts, and the Defense Department finally gave in.

Permit me to introduce myself. Upsham is my name; Clarence P. Upsham, Member of Congress from Exeter County, Pa., representing in the lower House as fine a group of upstanding American citizens as you will find anywhere in this blessed land of ours, coauthor of the Upsham-Shoemaker Act and vice chairman of the Subcommittee on Inland Herb Production.

And I say to you, my friend, that the conduct of the Government with regard to Howard and Vinnie Enderby has been infamous! I repeat, sir, infamous.

The whole nefarious affair began just over 2 years ago, shortly after Howard was, on the strength of some original work he'd done as associate professor at State, appointed to the post of chief of research and development for the Exeter Electronics Corp., of which you have undoubtedly heard.

Roebuck Masterson, president of Exeter Electronics, is a very close personal friend of mine, and I have the facts straight from him, so far as this part of the story goes.

Everybody in Exeter was tremendously proud of Howard's appointment. A hometown boy, he'd gone to State, and from there to MIT, where he'd taken his doctor's degree. And all of this, mind you, without taking a single red cent from his Aunt Bess Enderby, who'd raised him after his folks died. All done on scholarships, hard work and good old, redblooded Exeter County get-up-and-go. Fine boy in every respect. Tall, kind of heavy set, and his hair just beginning to recede a bit. Wore horn-rim glasses, but not stuffy, if you follow me.

Anyhow, when Howard came back to Exeter to work, his Aunt Bess had died, so he went to live at Mrs. Sam Heyward's boardinghouse out on West Market Street near Belvedere Avenue, and that's how he got to know Miss Vinnie Heyward, who was about 3 years younger than he was—that would have made her just on 30—and taught sixth grade at Franklin Elementary. Not what you or I might call a beautiful girl, perhaps, but she had a sweet, kind face and manner. Probably it was only natural that she and Howard should be attracted to each other. Here was Howard, who'd worked too hard getting an education to have much time left for girls, and here was Vinnie, who felt she ought to stand by her widowed mother and was just about resigned to being an old-maid schoolteacher living out her life in their big old house.

And so it got to be pretty well understood between them that just as soon as Howard's year of probation was up and he proved he could handle the job, he and Vinnie would be engaged to be married.

Well, sir, you can imagine how the two of them felt when Roebuck Masterson called Howard into his office and told him the job was permanent.

"That missile-control system of yours has got us an $8 million contract from the Air Force, my boy," Roebuck Masterson told Howard. "Exeter Electronics doesn't overlook work like yours, Howard. Forget the probationary period; the job is all yours, and what's more, your first raise becomes effective today. Congratulations, m'boy!"

It was a dream come true. The big, sunny office with its fine, comfortable furniture, and full command of a research laboratory second to none were really his, Howard Enderby's. It was just about everything a bright young research scientist might wish, and then some.

That very night Howard took Vinnie out to dinner at the Hotel Phineas Exeter and proposed over their second cup of coffee. Vinnie's brown eyes were misty when she accepted, and she could barely keep from weeping when Howard brought out the diamond.

"With what I'll be making," Howard told her, "we'll be able to give your mother so much every month, and she can give up the boardinghouse, if she wants to, and find a nice little apartment. As for us, I've had my eye on that new development, Aurora Hills, out on the Bull Road; one of those split-levels, maybe."

"Oh, Howie," Vinnie said softly, "aren't they terribly dear? I mean, isn't that where the Luther Manchesters bought?"

"Luther Manchester, the lawyer? Why, Vinnie, do you realize I'll be making nearly as much as Luther Manchester made the best year he ever saw?" Howard said proudly. "You won't have to blink an eye when Martha Manchester walks by, no, ma'am. Not Mrs. Vinnie Enderby, the prettiest girl in town."

"Oh, Howie," Vinnie breathed. "I'm so happy for us." And gently she laid her hand, sparkling with its diamond, on his.

Well, then, you can imagine how they must have felt 2 weeks later when Howard lost his job. He'd been working on plans for an entirely new research project when Roebuck Masterson sent for him, and when he arrived in Masterson's office, there was this quiet young fellow from the FBI.

"Howard, I'm 100 percent certain there's been some stupid mistake in the records," Masterson began bluntly, ignoring the shocked look on the face of this fellow from the FBI, "but it's about your security clearance. They tell me they can't clear you to work on top secret projects. Now they tell me! Frankly, I think they're crazy."

"But ——" Howard was speechless.

"Were you," the FBI man asked smoothly, "between September of 1937 and June of 1939, a member of the Demosthenian Literary and Debating Society at the Pennsylvania State College in State College, Pa., now known as the Pennsylvania State University at University Park, Pa.?"

"Why, certainly," Howard replied unhesitatingly. "We won the all-college trophy in 1938. Old Doc Stolzmeyer was our faculty adviser that year. Grand old gentleman."

"H'm'm'm." The FBI man sounded mildly pleased. "That does it. Doubtless you are aware, Mr. Enderby, that Professor Stolzmeyer was at that time eastern regional director of the Communist Party in the United States?"

"Oh, no. Oh, dear me, no."

"Oh, yes. Now the odds are, Enderby, that you're probably fairly loyal, but in this game we can't take chances. Rules are rules and regulations are regulations, and the fact remains that for 2 years, give or take a few weeks either way, you were in regular and close association with a known Communist."

"But we won the all-college on the affirmative of: *Resolved by this house*, That the Soviet Union stinks."

"You see, Enderby? These people are subtle. Sorry, but so far as your clearance is concerned, it's no go."

"But Stolzmeyer himself could tell you I never——"

"Professor Stolzmeyer, Enderby, took a sabbatical for study abroad in 1948. When last seen, he was boarding a train bound for Warsaw. He has since published two papers in the Soviet Journal of Comparative Bibliography and is believed living in Leningrad."

"Heaven knows how I hate to do this, Howard," Roebuck Masterson declared sadly, "but it looks very much as if I'll have to transfer you to household appliances. At least, until somebody clears this mess up once and for all."

"It's been very nice meeting you, Mr. Enderby," said the man from the FBI. "Sorry it's taken us so long to get around to you, but our backlog's tremendous. And you've taken this very well, I may say. Some of them foam at the mouth and run."

"But I've got to finish work on our missile-control system," Howard said desperately. "After all, it's my own invention, and none of the other fellows in the lab fully understand all of the problems we've still got to lick."

"Sorry, Enderby." The FBI agent's tone was final. "We can't take the risk. Your system's been classified 'top secret,' and without a clearance—well——." He shrugged and left.

So Howard Enderby was transferred to household appliances. Oh, it was done with tact and discretion, and Roebuck Masterson always made a point, over the poker table at the country club, of the fact that he needed his best men in household appliances because, in the final analysis, household appliances were the real backbone of Exeter Electronics. When world tension eased, who would need guided missiles? But the world would always need and buy a better vacuum sweeper.

Nevertheless, there was bound to be talk, and there was. Howard Enderby had been tried and found wanting; he just hadn't measured up to the job. Some people said they'd always said right along that Best

Enderby's nephew was a little too smart for his own good.

But Vinnie Heyward, bless her, was steadfast and loyal, and said it didn't make even the tinest bit of difference that Howard's lower salary wouldn't permit them to buy the split-level in Aurora Hills. And she went straight ahead with her plans for the wedding, except that she gave up all thought of a big ceremony with bridesmaids and ushers and all.

"Sooner or later they'll realize this is all just a silly, stupid old mistake," she kept telling Howard. "You'll see."

So they were married. Just a quiet little wedding in the side chapel at St. John's with only a few friends. And found themselves a nice little apartment.

Howard worked hard in household appliances. He developed a new type of switch for the Exeter line's mixer, and eliminated the static nuisance in the rotisserie. But his heart wasn't in it.

One afternoon, roughly 3 months after his demotion, he went to see Roebuck Masterson.

"Sir, I wonder if you'd mind suggesting to Bill Loughlin that he interlock the B-circuit complex with the thermal return," Howard said, referring to one of his former subordinates still working on the missile-control system.

Roebuck Masterson's eyes hardened, and he heaved himself to his feet behind his desk. "Howard, I'm shocked and surprised at you. How'd you know Bill was having trouble with that B circuit? Have you been pumping him for information? Aren't you aware you're not even supposed to know anything about that circuit?"

"It's really very simple, sir. I assumed that, in the normal course of development, Bill would be getting around to working on the B circuit just about now. I happened to pass him in the corridor this morning and he looked worried. I therefore assumed he'd come to the B-circuit problem and was encountering difficulties, and certainly the difficulty most likely to arise is with the interlock. The solution is to tie it in with the thermal return. You see what I mean?"

"You're dead sure Bill didn't violate security and come to you for help?"

"Dead sure."

"I'll pass on your suggestion, Howard, but I'm damned if I know what to think about this."

Well, as it turned out, interlocking the B-circuit complex with the thermal return did the trick, as Howard had known it would.

Several weeks later, he dropped by Masterson's office again, and laid on his superior's desk a superbly miniaturized angle-of-attack computer.

"George Heffernan ought to be about ready for this gadget," he told Masterson. "Anything larger would cramp the space he's going to need for the search-and-track radar." George Heffernan was Bill Loughlin's right-hand man. "I built it at home, by the way, in my spare time."

Two days afterward, Masterson was summoned to the Pentagon to face a grim-visaged group of Defense Department security officers, none ranking lower than full colonel.

"I tell you Enderby's a genius," Masterson told them flatly. "And I can swear on a stack of Bibles that he hasn't been near the research lab since the day I moved him out. The point is, he can estimate and deduce what problems are likely to arise, and then he simply goes ahead and works out an answer."

"He shouldn't," a rear admiral snapped, and stared distantly out of the window at the Potomac. "He's in violation of security even thinking about such things."

"I think intensive surveillance is indicated," an Air Force major general rasped. "We've got to establish who his contacts are; whether he's passing this stuff along and, if so, to who."

"To whom," corrected the gentleman from the Atomic Energy Commission, who had come to the meeting just in case.

"Nevertheless, Enderby's developed a workable gadget and we're going to use it," Roebuck Masterson said in a voice that rang steel. His eyes were icy beneath the formidable white thatch of his brows. "You can't stop a man from thinking, even if everything he thinks is classified."

"That's what I don't like about the situation," the rear admiral admitted.

"I'll initiate intensive surveillance procedures at once," said the gentleman from the FBI.

Three days after this meeting, Agent G. Fred MacBirney moved into the guest-sewing-room-cum-den in Howard and Vinnie Enderby's apartment. Slow-spoken and gentle, G. Fred MacBirney was a tall young man of Howard's age, but considerably thinner. He was also considerably embarrassed.

"Isn't there something in the Constitution about not quartering troops on the people?" Howard asked, when MacBirney showed up at the door, presented his credentials and stated his mission. "Not that Vinnie and I object to you personally, believe me. Vinnie loves company, and so do I, up to a point."

"I'm not exactly troops," MacBirney pointed out, "but I think you've got an argument there that would stand up in court. It's in the Bill of Rights someplace and, frankly, I don't think this is legal; but then, I'm not giving the orders. I also think you're taking this wonderfully, I really do."

"Most of them foam at the mouth and run, I suppose?" Howard inquired, smiling benignly.

"I beg pardon?"

"Nothing, actually. Just a passing thought."

"You could say I'm a visiting cousin," MacBirney suggested helpfully. "I mean, it might make it easier for both of us."

"Do you by any chance play chess?" Howard asked as he helped MacBirney carry his suitcases into the guest room. "I'm an Egeshevsky's gambit man, myself."

"Ever try Braunstein's end game?" MacBirney replied. "It works beautifully, once you get the hang of it."

"Now why don't you two boys step across the street to the Dutch Kitchen for a beer while I fix supper?" Vinnie called from her own kitchen. "Lamb chops, broccoli, and scalloped potatoes. Does Mr. MacBirney take tea or coffee, Howard?"

That evening Howard won 2 games and lost 1. G. Fred MacBirney insisted on going out to fetch midnight hamburgers, and Vinnie finished turning one of Howard's worn shirt collars and repaired a skirt.

Four weeks later, G. Fred MacBirney paused to light his pipe as he walked down South George Street past the First Presbyterian Church. A small anonymous black sedan eased up to the curb and MacBirney got swiftly into it.

"Well, Fred, what's the pitch? We haven't had report one from you, and you've had a month." The driver headed for the open countryside south of the city as he began his interrogation. "Meanwhile, all hell's busted loose in Washington, but I'll get to that later. What's with this guy Enderby?"

"He hasn't been out of my sight for a minute, except when he's asleep. And I'd like to go on record as saying he's as nice a security risk as any I've ever seen. Mrs. Enderby's a superlative cook, and I've put on 4 pounds. It's her marble layer cake with coconut icing."

"Does he keep a typewriter in his bedroom?"

"Now you mention it, I think he does. After all, I'm using what used to be his study. Why?"

"Seems he's written a couple of letters to the Pentagon, and the boys are climbing up the walls and gibbering."

"What sort of letters?"

"They won't tell me, but I get the distinct impression they're horrified at the idea of sending such hot dope through the mails. You know, Fred, if it was anybody else on this assignment but you, I'd swear we were goofing somewhere."

"George, why don't you have dinner with us this evening and see for yourself what the Enderbys are like?"

"Who, me? Me. Why, they'd throw me out so hard I'd bounce into next week."

"Nonsense, George. Howard and Vinnie would love nothing better than to have me bring my boss home to supper."

"Fred, boy, maybe I will." George swung the small black sedan around and headed back toward town. "You say she prefers coconut icing, eh, Fred?" The sedan picked up speed.

G. Fred MacBirney's boss, George, was not exaggerating the gravity of the situation at the Pentagon, where something closely approaching panic had swept through the various branches, bureaus, sections and subgroups devoted to safeguarding the security of the Department of Defense.

The cause of this unfortunate situation was a series of letters from Howard J. Enderby. None of the letters had anything whatsoever to do with projects then underway at Exeter Electronics, and this is what shook one and all so badly. For example, Enderby had outlined, clearly and briefly, a radar diffusing device which could render an aircraft carrier invisible, on radar at least, at less than 2 miles. Once somebody who could understand the letter had been located, the reaction was immediate and violent. The letter was classified top secret, eyes only, and major changes were ordered in the construction of the carrier *Shiloh*, building at Newport News.

Another in the series of letters suggested the solution to a design problem which had been holding up production of the ultra-secret Air Force Vulcanus ground-to-air rocket for nearly 6 months.

"Announcement of the Vulcanus project appeared in my local newspaper more than a year ago," Howard had written, "and since I haven't yet read of its being produced, I got to thinking about the most likely trouble spot your people might run across, and it struck me that the target-locking transistors might give you a bad time. If you've got the problem licked, just throw this into the nearest wastebasket. Yours sincerely, H. J. Enderby, Ph. D."

When the sixth letter arrived, postmarked "Exeter, Pa.," the Under Secretary of Defense for Security called an emergency meeting in his office. It was a tense and uneasy assemblage, and the atmosphere was rendered no cheerier by the presence of a Deputy Attorney General, who had been asked to sit in to advise on questions of constitutional law.

"If this were Russia, we could have this man, Enderby, shot," the Under Secretary for Security said, opening the meeting. "And if this were Great Britain, we wouldn't be conducting this meeting in the first place. Gentlemen, we've got a problem on our hands, mark you my words."

"Under the law," the Deputy Attorney General put in, joining the tips of his fingers in judicial fashion, "the defenda—, that is to say, Enderby, cannot be prevented from thinking, as *Schmidlap* v. *North Carolina* plainly indicates. The question resolves itself into the problem of what you do with a man who keeps thinking top-secret thoughts."

"We couldn't sort of classify his head could we?" inquired a youthful Air Force brigadier, who was promptly frozen into flush-faced and embarrassed silence by a senior admiral.

"Wouldn't it be possible to strike the Demasthenian Literary and Debating Society off your list of subversive organizations?" the Under Secretary of Defense for Security asked

wistfully. "You know, just quietly, just this once. As kind of a favor."

"Well." The Deputy Attorney General was shocked to the depths of his legal soul. "That sort of thing may be all very well over here in Defense, but let me assure you we don't go in for it at Justice; no, sir-ree-bob."

"We've got to do something," the Under Secretary said slowly, pounding the table with his fist to emphasize his words. "We simply have got to do something."

"I still say we could classify his head," the Air Force brigadier muttered beneath his breath, as the meeting broke up an hour later without reaching a final decision.

Back in Exeter, there was quiet joy in the Enderby apartment, Roebuck Masterson daring opposition from his board of directors, had made Howard cochief of research and development, in charge of household appliances, and had raised his salary accordingly. Howard and Vinnie had forthwith purchased the split-level Tudor cottage at 413 Fenwick Lane, right across the street from the Georgian colonial rancher occupied by the Luther Manchesters. G. Fred MacBirney had gone to New York for a weekend and returned with a third-rate but absolutely genuine Matisse drawing which had taken every cent he'd saved for a vacation in Mexico.

"I want you kids to have something to remember me by," MacBirney had said simply as Vinnie accepted his gift, her gentle brown eyes swimming. "That is if I ever leave."

"Which reminds me," Howard said, pausing in the act of stirring the preprandial shaker of martinis, "have you picked out the wallpaper for your room yet, Fred?"

And then the telephone rang.

"Is anything wrong, Howard?" Vinnie asked when her husband had finished listening to the caller at the other end of the wire. "You have such an odd expression on your face."

"They want me in Washington tomorrow afternoon," he told her. "And they said I'd better bring along my attorney, if I had one."

"Oh, Howard, I'm frightened."

His jaw hard, G. Fred MacBirney reached for the telephone, dialed long distance, waited briefly and then spoke, harshly and swiftly, "That you, George? Fred MacBirney here. This is official. I quit. 'Night, George." And hung up. "As it happens," he said, turning to Howard and Vinnie, "I am a lawyer, licensed to practice law in the District of Columbia and before the Supreme Court of the United States. I hereby volunteer my services. Howie, you've just got yourself a barrister."

"I'll pack a lunch and we can drive down," Vinnie brightened at once. "It's been years since I've visited Washington."

The following day, Howard J. and Vinnie T. Enderby, accompanied by counsel, G. Fred MacBirney, presented themselves at the offices of the Under Secretary of Defense for Security, and were ushered into the same room in which the emergency meeting had been called a few days before. The same group was gathered about the long mahogany table, but on this occasion the door was guarded by two United States marines in dress blues.

"Admiral Walkinson, Lieutenant General Bishop, Colonel Catling, and Mr. Davis, of the AEC," the Under Secretary completed the introductions. "Major Cramsie, would you get Mrs. Enderby an ashtray, please? We want this to be as informal as possible, you understand, Mrs. Enderby. Just a friendly little group."

There followed a brief statement of the situation by the Deputy Attorney General, according to Fred MacBirney's best recollection. You will not, of course, be surprised to learn that the verbatim transcript of the proceedings was destroyed by burning immediately afterward, and the two marines who had been present were transferred to duty aboard the radar-picket ship *Covington*, permanently stationed in the Bering Sea. But Fred MacBirney's word is good enough for me, and this is the way it went, as he recalls.

"What it boils down to," the Under Secretary of Defense declared when the Deputy Attorney General had finished, "is that we're in a bind. We need your brain, Enderby, but legally you're not supposed to use it."

"Mr. Enderby's contributions are proving immeasurably valuable," rumbled the senior Air Force general, and there was a loud murmur of assent. "We've got to the point where we couldn't do without his thinking, rocketrywise."

"Hear, hear," said the AEC's representative. "Well said."

"I tell you, Enderby," the Under Secretary resumed, "we've put our best thinking into this mess, and I believe we've come up with the answer."

"It better be good," muttered G. Fred MacBirney.

"We have decided, with the full agreement of the Justice Department," the Under Secretary said, "to classify you."

"Top secret," the Deputy Attorney General added triumphantly.

"Now wait just 1 minute," G. Fred MacBirney thundered, leaping to his feet. "Now you just hold your horses."

But then Howard Enderby was speaking, and a curious smile was on his broad, pleasant face. "Relax, Fred," he said easily, beaming through his horn-rimmed spectacles. "Maybe he's got a point. Naturally," he continued, directing his attention now to the Under Secretary, "you've planned to classify Vinnie—that is, Mrs. Enderby—top secret too?

"Why—ah, I hadn't thought about that angle," came the reply in some confusion. "But I suppose we'd have to, wouldn't we?"

Howard nodded happily. "And I think you'll agree that, as top secrets, we really ought to be isolated. For security's sake.

"We did have something like that in mind, I'll admit," put in the Deputy Attorney General uneasily.

"And it goes without saying that you'll want me to go right on thinking?" Howard went on, sweetly and earnestly.

"Great Scott, yes, man. That's the very reason we've got to classify you," boomed the senior admiral.

"But in order to think properly, I'll need the correct environment, won't I?" Howard asked, and now his voice was so gentle that the representative from the Atomic Energy Commission had to cup an ear to hear.

"That would seem to follow," the Under Secretary agreed smoothly.

"But if I didn't have the proper environment, I might not be able to think or I might even refuse to think, mightn't I?" Howard continued his relentless questioning.

"Again, that might be expected," the Under Secretary agreed, but his tone was suddenly guarded.

"In that case," said Howard Enderby calmly, "I have a number of suggestions to make."

The whole operation was carried out so quietly and efficiently that it was some time before Exeter, Pa., began to wonder what ever happened to Howard and Vinnie. Arrangements were made to dispose of the split-level in Aurora Hills, and the Enderbys' possessions were loaded in an unmarked van which later deposited them at a military airfield on the outskirts of Baltimore, where they were crated for shipment and placed aboard an aircraft of the Military Air Transport Service.

Roebuck Masterson was called to Washington and curtly informed that the Enderbys were now wards of the Government and that he would not discuss the matter further, under any circumstances.

In Alexandria, Va., G. Fred MacBirney paid a hurried call upon a Miss Joanne Baldridge, aged 26, resident in that city, and shortly thereafter these two young persons also vanished.

In Roebuck Masterson, however, the Defense Department erred badly in supposing that he would accept their patently feeble story meekly, and tremble at their veiled threats.

Instead, he came directly to my chambers in the House Office Building and demanded that I take action. As soon as I had heard his story, I did so, for Roebuck Masterson is a responsible citizen and, in addition, exercises considerable influence in my party's affairs on a statewide scale.

As I've told you, it wasn't easy. There were evasions, denials, delays, and endless petty annoyances, but in Representative Clarence P. Upsham the Defense Department was dealing with a man armed with right, truth, and justice, as well as, I might add, a potential member of the House Armed Services Committee, should my constituents see fit to return me to my seat for another term. In the end, the Defense Department crumbled.

While I insist on bringing to merciless light the Government's treatment, highhanded as it was, of Mr. and Mrs. Howard Enderby, I am, on the other hand, constrained by the considerations of our national security to refrain from disclosing their exact location. Suffice it to say that I, like them, was flown there aboard a military aircraft.

Howard and Vinnie, I am happy to say, are enjoying excellent health and, somewhat to my surprise, seem extremely happy. He has put on a little weight around the waist, but the climate has done wonders for them both.

Their house, a really quite commodious structure, faces out over the lagoon from its position in a grove of towering palm trees. Wicker armchairs and tables make the broad, shady verandas comfortable, and a score of cheerful natives, hibiscus flowers in their hair, make Vinnie's household tasks a work of love and joy. Vinnie, by the way, has become an expert at the surfboard, while Howard prefers sailing his catamaran for recreation after a day in his magnificently equipped laboratory.

Fred and Joanne MacBirney live on the other side of the island, past the Nike site and heavy antiaircraft batteries, in accommodations of equal comfort. Fred has been reinstated in the FBI, at Howard's express wish, and, like the Enderbys, the MacBirneys seem quite contented and even happy in their exile.

Indeed, when I announced my intentions of revealing their ghastly plight, both families were urgent in their appeals that I should do no such thing.

"Please, Congressman Upsham," Howard Enderby begged me earnestly on the day of my departure, following a truly excellent native luncheon served on palm leaves by a number of remarkably well-proportioned young native girls, "think it over. We've everything we need here. Fred and I are learning Bogdanoff's Gambit. Lieutenant Nurney, who commands the antiaircraft people, plays beautiful poker. The plane from the mainland brings us anything we want once a month, and I'm in the middle of some infrared-ray work for the Navy. Why not just forget the whole business?" Inside the house, an air conditioner switched itself on, as the day was tepid, and I was grateful for its coolness, since, unlike Howard and Vinnie, who wore merely the simple island garb of brightly colored cotton sarongs, I was dressed in my customary dark blue serge.

"Please, Congressman," Vinnie added her plea, and I was once again struck by the rich golden tan she had acquired while living on this lost tropical atoll.

"No," I told them firmly. "You young people have been grossly mistreated and your rights violated by our Government, and I will see justice done if it is the last

thing I ever accomplish as a Member of the Congress of the United States."

And I intend to. Or get classified top secret myself.

New Jersey Should Be Considered as a Farm Drought Area

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WOLVERTON. Mr. Speaker, my attention has been called to the disastrous results that have followed the drought during the past summer in the State of New Jersey. The farmers of New Jersey have suffered great losses which justify the recognition of that fact by the Federal Government. Too frequently the farmers of New Jersey are overlooked in the application of remedial legislation that has been enacted by Congress that would be helpful to farmers. It is time more considerate attention was given to our New Jersey farmers.

As an indication of the need that exists herewith include as part of my remarks a resolution that was passed by the Senate of the State of New Jersey. It reads as follows:

Whereas the State of New Jersey has been visited with one of the most disastrous droughts which has occurred in many years; and

Whereas the farmers of the State have suffered and will continue to suffer tremendous losses by reason of damage to their crops occasioned thereby; and

Whereas the President of the United States has been requested to determine that the State is a disaster area, so that Federal aid may be made available to those suffering damage by reason of the drought and said request has been denied: Now, therefore, be it

Resolved by the New Jersey Senate, That:

1. The President of the United States is hereby respectfully requested to reconsider his determination that the farming areas of this State do not constitute disaster areas and to determine them as such disaster areas in order that Federal aid may be available to those persons who would be entitled thereto as a result of such determination.

2. The secretary of the senate is hereby directed to forward a copy of this resolution, duly signed by the president and attested by the secretary, to the President of the United States and to each of the United States Senators, and each Member of the House of Representatives, from New Jersey.

ALBERT MCCARY,
President of the Senate.

Attest:

HENRY H. PATTERSON,
Secretary of the Senate.

To further emphasize the need that exists I include as part of my remarks a telegram which I have received from Hon. Charles W. Sandman, Jr., State Senator of New Jersey representing the County of Cape May. His telegram reads as follows:

CAPE MAY, N. J., *August 13, 1957.*
Hon. CHARLES A. WOLVERTON,
House Office Building,
Washington, D. C.:

Due to the vacancy in the Third Congressional District caused by the death of the late T. Millet Hand I have been asked by a delegation of farmers of Cape May County, N. J., to urgently request reconsideration of the negative drought-disaster decision as it affects New Jersey and particularly Cape May County. This county is the smallest county, agriculturally, in the State and now shows crop losses estimated in excess of $1 million and increasing daily. Corn and hay crop total losses. Pastures beyond repair. Farmers feeding winter feeds. Irrigation ponds dry. Rivers used for irrigation now salt and unusable. Lack of feed grains forcing liquidation of livestock. General economic conditions endangered by lack of farm income as it affects local businesses. Farmers unable to settle current indebtedness and unable to borrow for the coming crop year. Only extreme severity of condition and desire to obtain relief for the farmers in this county necessitates this direct appeal.

Respectfully,
CHARLES W. SANDMAN, Jr.,
State Senator, New Jersey.

In answer to this telegram I addressed a reply to Senator Sandman reading as follows:

WASHINGTON, D. C., *August 14, 1957.*
Senator CHARLES W. SANDMAN, Jr.,
Cape May, N. J.:

Telegram received. Regret exceedingly previous action taken by administration in not designating New Jersey as drought area. However, Department of Agriculture advises me Acting Secretary of Agriculture Morse has authorized making production emergency loans pursuant to section 2 (a) of Public Law 38, as amended, to eligible farmers in all counties of New Jersey because of damages and loss to crops and pastures resulting from drought conditions. I am mailing you leaflet outlining requirements for participation. Farmers desiring further information about loan or other types of assistance should get in touch with Farmers' Home Administration office serving their county.

CHARLES A. WOLVERTON,
Member of Congress.

It's Your Life, Be Careful

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very pertinent editorial, appearing in the July 4 issue of the Worcester (Mass.) Telegram, emphasizing that in the greatest number of automobile fatalities that plague this Nation, it is the driver alone who is responsible for the deaths of himself and passengers.

This startling revelation by the American Association of Motor Vehicle Administrators should serve as an adequate warning to each of us and vividly remind us that every time we sit behind the wheel of an automobile our destination is not, necessarily, to heaven in a hurry.

The article follows:

WHAT CAUSES MOST AUTO DEATHS

The familiar plea for safe driving on a national holiday is once more being broadcast throughout the land. There is evidence that these repeated urgings are not entirely without effect, however inadequate they might seem in the face of a killer which takes 40,000 lives a year.

The American Association of Motor Vehicle Administrators points out that traffic deaths dropped 18 percent this Memorial Day compared to a similar period a year ago.

The association appends "one last word of warning to carry through the summer. • • • By far the greatest number of highway deaths occur on the open road with no other auto involved, sheer cases of drivers losing control of speeding cars."

That is a statistic worth thinking about. And it means just one thing. Most of the motorists setting off today for a long Fourth of July weekend will have only themselves to blame if they never get back.

Social Security Wage Freeze

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. METCALF. Mr. Speaker, the following bulletin from the Butte, Mont., chapter of the Disabled American Veterans is a case history of the need for a more sympathetic interpretation of what is meant by the amendments to the Social Security Act that provide for payments to those disabled and for freezing of wages of disabled workers.

The following bulletin recites the case of a man who has had six separate determinations that he be totally and permanently disabled. Yet because the Bureau of Old-Age and Survivors Insurance has laid down as a test that to qualify for benefits "you must have a disability which is so severe that it prevents you from doing any kind of work," this man is denied a right which Congress intended him to have.

The bulletin from the Disabled American Veterans of Butte, Mont., follows:

As every reader of this bulletin knows, our totally and permanently disabled life member, Cornelius (Neal) King, had a hearing last October 22 before a social-security referee on his claim for a wage freeze under the 1954 amendment to the social-security law. The Butte social-security office had previously denied this protection to King's wife and children.

At that hearing, in addition to our witnesses, we had (1) a sworn statement by Dr. Terrill, of the Montana Tuberculosis Sanitarium, showing that King was totally and permanently disabled from silicosis; (2) a certificate from the Montana Department of Public Welfare showing that King was totally and permanently disabled by silicosis; (3) a finding by the Insurance Division of the Veterans' Administration that King was totally and permanently disabled by silicosis; (4) a finding by the Compensation Division of the Veterans' Administration that King was totally and permanently disabled by silicosis; (5) a letter from the Attorney General of the United States of America to the United States district attorney in Butte conceding that King was totally and permanently disabled by silicosis; and (6) a judgment by the Federal court in Butte that King was totally and permanently disabled by silicosis.

In spite of this mountain range of uncontradicted and undisputed evidence of the man's disability the referee said "No," backed up the local social-security office, and denied King's wife and children the protection of the wage freeze—all on the strength of some stuff he read in a big medical book.

In these intervening months the Appeals Council of the Social Security Administra-

tion has decided that their case against King is a bit wobbly, and they have refused to approve this outrageous decision by their referee—at least until he can get in with a little testimony by some witness who is willing to swear on his oath that silicosis does not disable a person.

So they have ordered a rehearing of King's case, now scheduled for September 13, at which time the social-security people will unwrap their star witness to testify that silicosis is not disabling. He is Dr. Armstrong, a medical expert from the University of Maryland, who knows all about respiratory diseases. How do we know he will testify against King? Because if Dr. Armstrong had told the social-security boys back in Maryland the truth—that silicosis was an insidious and certain killer—then they would have reversed the case outright and granted King the wage freeze. But Dr. Armstrong has evidently told them that silicosis isn't any worse than a bad cold. So now the holy white fathers of social security are sending this man to Butte at taxpayers' expense to help them put the harpoon into King—but good.

Yes, King will get the ax on September 13. He will suffer the rottenest injustice that has come to the attention of Butte Chapter No. 6, Disabled American Veterans, in many a long year. He has fought his claims successfully for 10 years, through many Government agencies, and he's still willing to keep up the good fight—but he's 60 years old now and this dreadful scourge of silicosis is taking its toll. He doesn't have much fight left; he doesn't care what the social-security referee does, nor what the medical expert from Maryland says. But whatever the result, King is ready again to take it on the chin.

King is an ex-Butte miner and has served this Nation honorably in two World Wars. Can the rest of us sit idly by while these shrewd bureaucrats of the Social Security Administration nail King to the cross? If we do, we can never tell when we might get a dose of the same medicine. Can we sit by and let the eager beavers in this Government agency make an official determination that silicosis is not a disabling disease? If we do, it will hurt plenty for a lot of veterans as well as nonveterans in this mining community. Can we afford to let the Social Security Administration go on with these milk and honey newspaper articles—about what they'll do for the disabled worker—and then let their hatchetmen give the works to an outstanding United States citizen like Cornelius King?

Butte Chapter No. 6 of the Disabled American Veterans is not about to sit still for this kind of social security.

Hon. Sam McConnell, Jr.

SPEECH
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. FISHER. Mr. Speaker, the entire Nation is the loser when Members of Congress like SAM MCCONNELL retire from office. The announcement of his resignation in order to accept the position of executive director of the United Cerebral Palsy Associations, Inc., ends a congressional career of distinction by one of the most popular and able Members of this body.

Having served for several years on the same committee with SAM, I watched him in action and got to know him well. Equipped with a brilliant, analytical mind, he seemed to always be a little ahead of the field in finding loopholes, detecting weaknesses, and bolstering vital features of legislation. He was indeed a devoted public servant, thinking always of the public interest when controversial legislation was being considered.

In my humble opinion SAM MCCONNELL has been one of the most respected, sincere, and valuable Members who has served in this body since I came here 16 years ago. We need more men like him. I join with my colleagues in this deserved recognition and praise, and extend to SAM and his family Godspeed and all good wishes for the future.

Accomplishments of Present Session of Congress

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. NEAL. Mr. Speaker, among the accomplishments of the present session of Congress is the fact that the legislative branch has been stubbornly reestablishing its position of equality with the executive arm of the Government. I do not mean to say that this has been a recalcitrant Congress, but it has been one in which party lines have been fairly well ignored in considering requests from the White House.

For instance, we gave the President what he wanted in the way of a Mideast doctrine, and it has apparently paid off. His bold plan for that area of the world was questioned at length, but the fact remains that the interests of the free world have been immeasurably bolstered in a critical area.

When you consider the recent heat of the civil-rights debate, you can see again that, unlike the New Deal and the Fair Deal, when a President sends his views to Capitol Hill it is not always with the certainty that they will be accepted with alacrity.

The President is an intensely popular man, but he is a man who accepts the idea wholeheartedly that our system of Government is composed of three branches—the legislative, executive, and judicial. They are, as the President has admitted, fundamental and their rights and constitutional duties cannot be tampered with.

The Republican Members of Congress have consistently tried to limit appropriations to last year's expenditures and to date few new programs have been approved involving any large and continuing outlay of money. It is true that even with these economies, the budget involves a great deal of money, but, eventually only time will tell whether we have been wise or foolish.

It must not be forgotten that we live in a turbulent, unsafe, and totally insecure world. And, frankly, it takes in- surance payments to live in that kind o a world. In the past we have carrie this insurance on the basis of short-ter endowment rates, thereby depleting ou capital structure. It is time we con verted this plan to long-range term rate consistent with the stabilization of ou national currency and our monetary standard.

It would not be wise for this country to temper its present "hard look" at com munism as personified by Khrushche and Bulganin. Communism is still tyr anny, no matter how you regard it.

After I served in the 83d Congress, took occasion to visit Asia. In Afghan istan, India, and other places in the Fa East, I saw the fertile soil in which th false Communist seed is sown with suc prolific repercussions. It simply boil down to this, the Communist bosse preach an almost religious doctrine o political resignation. The people ar exhorted to be apathetic in everythin except their devotion to the regime.

Our aim, therefore, should be to figh it with everything we have, provided al ways we do not overlook the fact tha only by remaining solvent and unite can we hope to prevent creeping socia ism and Communist infiltration. Ever public servant entrusted with financia administration should resolve each da that Lenin's prophecy shall not com true.

So, too, must we face head-on th spending inflationary trends. This is terrific subject, one that is worldwide i scope. People everywhere are demand ing more things. Their demand fo goods is beyond the capacity of th world's productive machinery. We hav decolonialized a great many people an given them an opportunity to demon strate their political maturity. At th same time, even at a faster rate tha their political development, they ar rapidly advancing in their economi growth. This can continue only as lon as they maintain stable currency.

The old established currencies of th world have skidded down to unbeliev able lows of value. The French fran is well below the value, in terms o American currency, of the old America continental dollar. America must s the pattern by stabilizing our dolla then others may be expected to follo

As to what to do about this situatio I personally favor a revision of our ta laws so that private investors may hav more money in their pockets with whic to increase our productive capacity an help alleviate a condition which is no confined to the United States alone, bu to the world at large. Here in Americ labor and industry must cease vyin with each other for higher wages an automatic price increases. The consum ing public, heretofore the innocent vic tims, deserves a break which, if no soon forthcoming, will resort to boycot methods in self-defense.

We have balanced our budget an made a sizable reduction in Federa spending. Let us make this program yearly habit and, as the night follow the day, the purchasing power of th dollar will move toward normal.

Congressional Record

United States of America

PROCEEDINGS AND DEBATES OF THE 85th CONGRESS, FIRST SESSION

Vol. 103 WASHINGTON, WEDNESDAY, SEPTEMBER 11, 1957 No. 161

UNIVERSITY OF MICHIGAN

SEP 16 1957

PERIODICAL READING ROOM

Appendix

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-fifth Congress will be published not later than Thursday, September 19, 1957. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

Walter Reuther's Proposal

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. GOLDWATER. Mr. President, on August 26 I commented on the floor of the Senate to the effect that Walter Reuther's proposal of an average cut of $100 in automobile prices was as phony as a $3 bill. Evidently, I am not alone in this thinking because many editors across the country have assessed this approach in the same way. Knowing that Mr. Reuther is not one to give up easily in seeking the achievement of his publicity attempts, I have collected certain of these writings and ask that they be placed in the Appendix of the RECORD at this point in my remarks so that my colleagues may be kept abreast of popular thinking on this Reuther phony.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of August 24, 1957]

MR. REUTHER IS WRONG

There are superficial resemblances between Mr. Walter Reuther's proposal for checking inflation and the replies from General Motors and Chrysler. Mr. Reuther, speaking for the United Auto Workers, asked the automobile industry to cut prices on new model cars $100, and said that if this were done the UAW "will give full consideration to the effect of such reduction on your coroporation's financial position in the drafting of our 1958 demands and in our negotiations." Mr. Curtice, speaking for General Motors, suggests that the union extend its present contract for another 2 years. "For our part," he concludes, "we will continue to do all in our power to resist inflationary pressures and promote stability." Mr. Reuther emphasizes the automobile industries' profits; Mr. Curtice stresses labor's gains; Mr. Colbert, of Chrysler, the industry's moderation. Each tends to place the burden of beginning to halt inflation on the other.

But there is an important difference in the two approaches. Mr. Reuther's assistance in keeping down costs is not only conditional upon a prior cut in automobile prices. He proposes that if there is a dispute between the union and management over the effect of such a cut upon company finances, it be submitted to arbitration, in which the union would have the right to ask for whatever data on the affairs of the company it chose to bring before the public.

In other words, as Mr. Curtice promptly pointed out, the present proposal "bears an unmistakable resemblance" to Mr. Reuther's demand in 1945–46 that General Motors "open the books" to answer his contention that wage increases could be granted without price increases. And Mr. Curtice quotes Mr. Reuther's later remarks "that the whole question of opening the books was merely a public relations job on our part * * * and it was used to put the company on the spot, so that they would have to talk economics or be over a barrel."

Now it is one thing, in a competitive industry, to talk economics in general and quite another to reveal the whole financial machinery of a company. The one is feasible, the other is not. Evidently Mr. Reuther, on his own showing, knows that. Consequently, Mr. Curtice has every reason to be mistrustful of the Reuther suggestion, quite apart from the basic premise that prices are not properly the subject of collective bargaining. This last is not an arbitrary position; it simply reflects the fact that prices are the result of a complex pattern in which wages are simply one, albeit a very important factor. To appraise that pattern is the responsibility of management, one which, in Mr. Colbert's words, Mr. Reuther wants management to abdicate.

So Mr. Reuther's initiative is not the way to combat inflation. His exchange with Mr. Curtice has pointed up the need for fighting the creeping deterioration of the value of the dollar, a subject on which President Eisenhower has spoken very earnestly. But the way to stop that deterioration is restraint—self-restraint, at whatever key points it can be applied. It is not a matter of bargaining, or something to be used for bargaining advantage. It is a hard, simple thing that rests on the conscience of everyone who buys or sells, who influences wages or prices.

[From the Detroit Times of August 26, 1957]

CALLS REUTHER BID PHONY AS A $3 BILL

WASHINGTON, August 26.—Senator GOLDWATER, Republican, of Arizona, told the Senate today Walter Reuther's proposal for an average cut of $100 in automobile prices was as phony as a $3 bill.

GOLDWATER charged Reuther detests free enterprise and wanted the Government to take over the businesses of the country.

Major auto manufacturers have rejected Reuther's proposal for a price cut in exchange for a UAW promise to make some adjustment in next year's union contract demands.

GOLDWATER said if Reuther so piously wanted to end inflation, he should quit demanding more Federal spending for schools, public power, foreign aid, agriculture, housing, and other projects.

He said Reuther wanted to expedite our transition from the blessings of free enterprise to the oft-proved disasters of socialism, and added:

"Walter Reuther detests free enterprise. He abhors any form of private management,

and the market place in which we and our ancestors have met for thousands of years he considers the very epitome of evil.

"This is the same man who in 1934 was so enamored of the Soviet Union that he closed a letter with the statement 'carry on the fight for a Soviet America.' I say this: that if and when the businessmen of this country succumb to the constant siren wails of Mr. Reuther, then the fight for a Soviet America will be won."

[From the New York Journal-American of August 24, 1957]

M. S. RUKEYSER SAYS: REUTHER "ECONOMIC KIBITZER NO. 1"

As a replacement for the American competitive system, Walter P. Reuther, president, United Auto Workers, appears to be groping for a substitute economic blueprint.

His letter, advocating a $100 wholesale price cut in new model automobiles, which he sent to the presidents of the Big Three, envisages a new technique for rigging prices by collusion between management and the union.

With his customary gift for exploiting the spirit of day to dayness and opportunism, Reuther's essay on how to combat inflation is—to say the least—timely. This is in the Reuther tradition.

Reuther has long specialized in arresting economic ideas. For example, in the early phases of preparation for our participation in World War II, Reuther proposed that the automobile industry simultaneously produce automobiles and munitions. Fetching as the proposal seemed, the War Production Board ordered a complete cessation of manufacture during the emergency of motorcars for civilians.

After the shooting phase of the war, Reuther again captured the headlines by exploiting public apprehensions that a vast period of unemployment might be in the offing. Here Reuther circulated his famous doctrine that wage rates could be upped without increasing selling prices. His rhetoric was enticing, but this has proven to be a multi-billion-dollar economic fallacy.

The postwar record of prices, after the Reuther experiment, indicates that costs, subject to competition, tend to make prices, and that, if unit costs are raised through arbitrary pressures at the collective bargaining table or elsewhere, selling prices tend to rise.

Many learned this simple principle in an elementary course in economics, but this vast country was turned into a laboratory for testing the principle anew.

Two years ago when the guaranteed annual wage was the password of the onetime boy wonder, Walter Reuther, now a mature man of 50, Reuther guessed wrong and rejected the Ford offer of an alternative. Ford proposed to sell employees company stock at half its value on easy installment terms. While it may take a full generation to measure the extent of Reuther's blunder, it can be said that thus far disaster insurance has been of less value during the continuing boom than a stake in the good times.

From a practical standpoint, Reuther's current effort to become public economic kibitzer No. 1, and to arrogate to himself management's responsibility to exercise judgment in pricing products, indicates that he is concerned about the hazards of exploiting the boom to the hilt. His vague suggestion of moderation in wage demands in return for an automobile price cut, is a radical shift of policy from earlier indications that next year Reuther would plump for introduction of a 4-day workweek, presumably for 5 days' pay.

Such a formula would have inflated unit labor costs, and would have put manufacturers on the spot. Under such circumstances, they would have to choose between a workers' strike based on resistance to such a demand, on the one hand, and a possible buyers' strike, on the other, resulting from pricing themselves out of the market through yielding to the demand.

Maybe Reuther himself believes the propaganda about administered prices. While the manufacturers do set nominal prices, true selling prices are determined in competition by haggling by dealers and customers about the value of the old car and the desirability of additional gadgets on the new one.

[From the Flint Journal of August 23, 1957]

CURTICE ANSWER IS CHALLENGING

Probably no one was as surprised as the head of the UAW-CIO by the answer of General Motors President H. H. Curtice to the letter proposing that manufacturers' prices of 1958 automobiles be reduced $100 per unit. An intent to curb the inflationary cycle was avowed. A justifiably flat "No" would have served the Reuther propaganda purpose. Had the bait carried any element of soundness, the absence of a guaranty of equity made it unthinkable.

Reuther knows that present prices of cars are based on estimated costs as of the time of signing the current 2-year contract between the companies and the union.

He knows labor rates and costs of materials from the same cause as it affects suppliers have increased.

He knows that the prices of cars have not been boosted in the face of the added expense of producing them.

He knows, therefore, that, in effect, the prices of current models are less than they were when the 1957 lines were introduced.

In labeling this as a move toward reversing the inflationary trend, he was wearing a different cloak than when he set forth what he will ask in negotiations for a new contract next year.

If the manufacturers will follow his suggestion, he said, he will consider modifying his demands. These constitute a heavily loaded package with such items as a 4-day week that would catapult costs without a compensating increase in production except at expensive overtime.

Mr. Curtice's reply brings the issue down to earth, which is not where the union boss wishes it to be. It returns the matter to the field of labor negotiation, where it belongs. The counterproposal would continue the present contract for another 2 years. In it, the workers are protected with the cost-of-living escalator clause. The merit of its operation was demonstrated again Thursday, when hourly rates were increased 3 cents on the basis of further rise in the cost-of-living index compiled by the United States Department of Labor. This brings to 19 cents per hour the total of raises under the escalator plan. Eligible salaried employees have been recognized proportionately.

Additional protection for the workers is afforded in the annual improvement-factor wage increase designed to boost the buying power of an hour's work to assure employees of an improved standard of living. The amount of the annual increase would be 2½ percent of the employee's straight-time hourly wage rate or 6 cents per hour, whichever is greater.

Major benefit of a 2-year extension of the present contract would be removal of the strike threat which has been worrying workers and others who would suffer from such a blow to our economy. Unemployment has been experienced in many quarters in the automobile field. Supplementing this with enforced idleness at a time when substantial production could be expected is not a happy prospect. It would be a high price to pay merely to aid union maneuvering.

It is apparent that Reuther outsmarted himself in his price-reduction blurb. It permitted a reply which carries pertinent points in the facts of economic life. It goes to the heart of inflation.

This is where we came in. It may be too much to hope that 1958 negotiations now will be approached in good faith, including a minimum of propaganda, and that the glory of ambitious politicians will be subordinated to the good of our entire economy, wherein lies the basic well-being of all of us, including the union members.

[From the Charleston Daily Mail of August 21, 1957]

MR. REUTHER'S GENEROUS OFFER IS REALLY ANOTHER BID FOR MORE ECONOMIC POWER

Walter Reuther, of the United Auto Workers, is convinced that the price of automobiles is too high. He couldn't be more right, and we suspect all motorists and most automobile manufacturers thoroughly agree with him.

On this Mr. Reuther makes an offer: If the automobile industry will cut the prices on the 1958 model by an average of at least $100 a car "we for our part (the UAW) will give full consideration to the effect of such reduction * * * in the drafting of our 1958 demands and in our negotiations."

It is a part of Mr. Reuther's pretty pretense that this represents a fair exchange, an equitable basis for wage negotiations and a major blow against inflation along the lines of the President's request to labor and management to hold the line. At even the least skeptical glance, this is scarcely the truth.

What Mr. Reuther proposes is that the manufacturers make a binding agreement on prices in advance of any collective bargaining in return for which he promises only full consideration. Had he been in earnest, Mr. Reuther might have made his proposition in specific terms, spelling out how much less he was willing to take in wages if management were willing to forego its profits accordingly. On this basis, it might be possible to work out some satisfactory arrangement for easing the burden of inflation.

Unhappily, this does not jibe with Mr. Reuther's performance in the past, and it is not hard to see how management would look upon it with misgivings. Mr. Reuther always wants something, and it is never a question of something or nothing, but simply of how much.

In this instance and despite his artful dissembling, Mr. Reuther wants a little more than usual. He wants, in addition to the power to determine wages, which he pretty much enjoys, the further power to determine prices and profits as well. The fact that this is advanced in the name of economic stabilization does not not conceal its true import. What Mr. Reuther wants most of all is the privilege of bargaining with himself when it comes to the complicated business of dividing the corporate dollar and its principal product among workers, consumers, and stockholders. This is a good deal too much economic power to entrust to any one man.

[From the Dayton Journal Herald of August 21, 1957]

The proposal by Walter Reuther, big boss of the United Auto Workers, to the big three manufacturers in the automobile field—General Motors, Ford, and Chrysler—that they agree in advance to cut the prices of their 1958 models by at least $100 a car under present retail prices, has made interesting reading but has elicited little response from the gentlemen to whom it was addressed.

And for a very good reason, it appears. Mr. Reuther was specific in telling the automobile makers what they should do, but he was pointedly vague in advising them and the public what his union would do in return.

His only commitment was that if the manufacturers comply "we for our part will give full consideration to the effect of such

duction on your corporations' financial position in the drafting of our 1958 demands and in our negotiations."

What sort of horse trading is that?

It would be quite as sensible for the automobile makers to tell UAW that if it will now make a flat commitment to reduce its demands—and how much—in the next negotiation sessions, they will take such commitment into full consideration in fixing the prices of their new models.

Come again, Mr. Reuther, but next time leave the loaded dice at home.

[From the Knoxville Journal of August 20, 1957]

WALTER REUTHER IS REAL CUTIE OF ALL CURRENT CROP OF LABOR'S STATESMEN

This Walter Reuther is the cutie among the labor barons.

He knows how to get publicity which brands him as one of the statesmen of labor, but at the same time wraps up his statements in such doubletalk that he is not committed to anything.

This past weekend fantasy was a fine example of what we are talking about.

Reuther called on the country's automobile manufacturers to reduce their prices on all automobiles by about $100 for 1958. If they would do that, quoth the statesman, then his union would make a favorable note of it in the forthcoming wage negotiations. Mr. Reuther wants all employers to make a profit, according to his statement.

Yet the gentleman is already on record as demanding for the new contracts between the United Automobile Workers and the automobile manufacturers next spring a 35-hour week and a substantial increase in pay.

What the automobile people, and other businesses and industries for that matter, need is a full-time magician on the payroll, someone who can reduce hours, increase wages (with no per-unit production increase), and at the same time maintain, or reduce prices.

Fortunately for him and his brethren, Mr. Reuther is never called upon to perform the miracles he demands of others. It's a lot simpler to call the boys out on strike than it is to raise a payroll.

[From the Detroit News of August 27, 1957]

THE PRICE OF CARS—WHOSE RESPONSIBILITY?

To no one's surprise the Big Three automobile companies have unanimously rejected Walter Reuther's suggestion that they cut next year's car prices an average of $100 as their contribution toward halting inflation.

Agreeing with Reuther's statement of the inflationary problem, they admit that they may stand on dangerously high precipices. They just don't altogether trust the voice behind them saying, "Go ahead and jump. It won't hurt a bit and besides I'll soon come down and save you."

Both L. L. Colbert, president of Chrysler, and Henry Ford II wondered how Reuther would react if his proposal were turned around and he were asked to take an immediate wage cut provided the companies would thereafter consider reducing the price of cars. The mirror imagine is perhaps not exact but the point is well made that Reuther for his part has offered nothing to the cause but a vague promise to be rational.

If the companies cut prices, he says, he will take their financial situation into account in framing his forthcoming contract demands. But he himself observes that this promise is actually self-enforcing since "you cannot wring water from a stone." In short he is assuring the companies that they can go ahead and make their statesmanlike sacrifice of profits to the national interest and he will not penalize them by driving them into bankruptcy.

This is certainly more enlightened than a point of view which might wholly ignore the fact that labor's wages are paid by the sale of their produce. Yet it seems at this date rather low ground on which to rest a claim to statesmanship. Nowhere has Reuther implied any willingness to reduce or even refrain from raising UAW wages, though he actually admits that the wage-price spiral is inflationary and pernicious.

On the contrary the shape and timing of his move clearly are intended to put the onus on the automobile companies for the inevitably inflationary wage demands about to emerge from the UAW drafting rooms. Now that he has the companies on record, presumably he need feel no further restraint of conscience.

In his letter Reuther recognized the principle which requires the subordination of particular economic interests to the general good. It will be interesting to see whether he will give that principle as prominent a place at the 1958 bargaining table as it has had in his sermon on the responsibilities of others.

[From Newsweek magazine]

INFLATION: TO REUTHER—PUT UP

To Walter Reuther's out-of-the-blue proposal that the Big Three of the auto industry cut the prices of 1958 models by an average of $100 as a means of fighting inflation (Newsweek, August 26), General Motors, Chrysler, and Ford, one after the other, said "No" last week—and pinned a propaganda label on the auto-union boss, but GM went further. Its president, Harlow H. Curtice, put a counterproposal squarely up to the chesty, redheaded Reuther.

"Specifically," Curtice wrote to him, "we suggest that you announce now your willingness to extend intact our national agreement for a period of 2 years beyond May 29, 1958 [expiration date of the present contract]." This, said Curtice, would "make a real contribution to the economic stability of our country." (The Reuther plan had promised nothing more on the union's part than that it would give full consideration to some possible modification of its upcoming wage demands.)

"We find it somewhat difficult," Curtice observed, "to reconcile your professed concern over inflation with your expressed 1958 collective-bargaining objectives." Those objectives, he pointed out, would by Reuther's own statement include the biggest wage increase in the history of the union. In short, said Curtice, the whole Reuther proposal looked to him like nothing but another publicity maneuver.

Chrysler's reply to Reuther was published 24 hours later. Its president, L. L. Colbert, wrote: "In a nutshell, you are proposing that management abdicate its responsibilities—and months after sustaining a drastically reduced income, a company would go before the UAW or before a three-man panel to attempt to justify its needs for partial relief. * * * We do not believe that this is the way to combat the forces of inflation."

FIXING THE BLAME

Ford's answer came at the end of the week. In the most bitterly sarcastic of the three letters, President Henry Ford II wrote Reuther: "We will not solve the problem [of inflation] with propaganda broadsides. * * * The rapid increase in wages of automobile workers over the past 10 years—which were negotiated under the duress of your demands—have unquestionably contributed to inflation. Thus, having poured gasoline on the fires of inflation, you now stand by and tell us how to fight the blaze. In return, you say you will consider using less gasoline next time—or maybe only kerosene."

Reuther, in the meantime, had not just been waiting for the mailman. He sent copies of his Big Three letters to the White House with a covering note urging President Eisenhower to give the price-cut plan "the support of your great personal and official prestige." (At his press conference, Mr. Eisenhower said only that he had received and read the letter and referred it "to my economic groups and the Department of Labor.")

REUTHER'S RETORT

Then, as the Big Three's replies came in, Reuther slammed with relish into rebuttal. General Motors, he stated, had "again demonstrated shortsightedness * * * and a shocking disregard for the welfare of the American buying public." As for his plan being a publicity maneuver, Reuther retorted that if it had been one—which it was not—it would have ceased to be one the moment that the Big Three said "Yes." "Our proposal was made in good faith and we hoped for its acceptance."

But Detroit automen recalled (and Harlow Curtice noted in his letter) that Reuther's tactics during the General Motors wage deadlock and strike of 1945-46 had been notably similar to these he is pursuing now. He claimed then that General Motors could afford to cut Chevrolet prices by $100 and still raise wages; he appealed for the support of President Truman. But after a settlement had been reached, Reuther candidly told a press conference: "The whole question [of General Motor's ability to pay] was merely a public-relations job on our part."

[From the Rochester Times-Union of August 24, 1957]

REUTHER RUNS THE COURSE: EVERYTHING BACK TO NORMAL

(By Paul Miller)

Walter Reuther apparently enjoys posing as a statesman, complete with broad views and long-range thinking. Sometimes, too, he makes a convincing picture.

Nobody, however, seems to me to shed a pose and revert to type any faster than Reuther-the-statesman after he gets a rebuff.

He ran that course this week. As the statesman, he had proposed in an elaborate presentation timed for Sunday newspapers, that major automobile manufacturers cut $100 off the price of 1958 cars.

The language of the presentation seemed studiedly restrained and respectful.

It was calculated, in my opinion, to muddy the water and put automakers in a hole public relationswise prior to contract negotiations with Reuther's union.

Reuther must have known that prices of products are not generally regarded as a proper subject for collective bargaining, he's been told that often enough.

Yet, stepping out of the statesman role, he howled as if hit an unexpected wallop when General Motors reminded him all over again, and counter suggested that if Reuther wants to help fight inflation he get his union to extend the existing contract.

At that, Reuther cried arbitrary rejection and shocking disregard of public welfare—Chrysler later also rejected the proposal so pending something from Ford, everything is back again to what must pass for normal in Detroit.

Reuther, who many suspect has national political ambitions for himself, may be expected to make life tough for the automotive Big Three, and to the accompaniment of publicity for Reuther.

Few, however, will expect him to make any contribution to forces effectively fighting inflation, now or in the future. On the contrary.

[From the Kansas City Times of August 24, 1957]

MR. CURTICE GETS DOWN TO BRASS TACKS

In his answer to Walter Reuther's proposal, Harlow H. Curtice of General Motors has spotlighted the big villain behind creeping inflation: The failure of productivity to rise as fast as wages. This was a point ignored

by Reuther in his proposal of a $100 price reduction on 1958 models. And it is a point which cannot, in the long run, be ignored.

But at least there is general agreement between labor and management that inflation is a serious national problem. And we can hope that both are beginning to consider methods of combating it at the wage-price level. Certainly Reuther's original suggestion was a propaganda move. He offered a quid without a quo: The manufacturers to reduce their profits while wage increases continue to add to the costs. The only inducement by Reuther was the suggestion that otherwise the demands would be worse.

However, the whole question of the dangerous spiral of wages and prices is healthily out in the open. We can hope that this will ultimately arouse public opinion. And that responsible management and labor will respond with their best efforts to hold the line before a public revolt.

In recent years the average increase in productivity has been from 2 to 3 percent a year. Wages have gone up an average of 7 to 8 percent annually. The difference of 5 percent is out-and-out inflation which can be absorbed only by the public. Until productivity and wages are again in step, it is difficult to see how prices can be held down. And remember that the profit dollar is as much a victim of inflation as the wage dollar. Just as Reuther must protect interests of his union, Curtice must protect the interests of his stockholders.

Curtice's proposal to extend the present UAW contract by 2 years would, we believe, offer productivity a chance to gain. The proposal assumes both a cost-of-living escalator and an annual increase to improve the living standard of employees. Certainly it would protect the motorcar workers against inflation in a way that people on fixed incomes are not protected.

Pricing is not a matter for collective bargaining. Other costs must be considered as well as the competitive situation. But Curtice could shed some light by discussing that question, not with the U. A. W., but with the people. Certainly it is fair to ask if dealers, with big trade-ins or other gimmicks, are being forced to cut their own profit margin. And the public must wonder how much of the expected price increase for 1958 can be traced to labor costs, how much to raw materials, and how much to cover a better product.

Curtice has at least kept the debate alive, and has come back with a counterproposal. We hope that Reuther's curt classification of the GM answer as a manifestation of "shocking disregard" for the public welfare does not end the matter. For this is an issue which concerns not only labor and management, but also the welfare of the whole economy.

[From the Chicago Sun-Times of August 26, 1957]

CURTICE GETS GM OFF SPOT

If the United Auto Workers want to fight inflation they should extend their present wage contract another 2 years, suggests General Motors President Harlow H. Curtice. This was his answer to Walter Reuther's suggestion the auto companies fight inflation by cutting 1958 model prices $100.

Curtice said prices were not properly a subject for collective bargaining; Reuther turned down the 2-year contract proposal.

The exchange between Reuther and Curtice is preliminary fencing, with an eye on public opinion, before they sit down for collective bargaining over the renewal of the union contract next year. The union is expected to demand a shorter workweek with more take-home pay. It would consider cutting these demands if industry would cut auto prices this fall, Reuther said.

Reuther temporarily had the automakers on a publicity spot, but we think Curtice has wiggled off it. His proposal that the present 3-year contract be extended 2 years should appeal to many union members. Like the 5-year contract that preceded it, it has encouraged stability, reduced strike fears, and given workers pay raises tied to living costs—another one last week.

Moreover, Curtice scored in recalling that Reuther once admitted that a similer price demand he made in 1948 was "merely a public relations job * * * to put the company on the spot so that they would have to talk economics or be over a barrel."

[From the Detroit Free Press of August 27, 1957]

AS AN INFLATION FOE REUTHER MISSES MARK

One of Walter Reuther's personal assets in his climb to power in organized labor has been his ability to discern public-relations dangers while they are still well ahead.

Years ago he glimpsed the future and saw that sooner or later labor was going to be badly hurt with the general public if it had the taint of communism. Wherever his power extended in unions, Communists were disposed of.

Later he foresaw the perils to labor's reputation which lie in men and action such as the McClellan committee has put on view.

But Reuther got there first. Long before the McClellan investigation, he deemphasized goons and banned unsavory characters. And while many may question some ways in which his union's money is spent politically, no sign exists that officers dip into the cash drawer or involve themselves in interests that conflict with those of the UAW.

There is no doubt in our mind that Reuther has looked toward the horizon and spotted another cloud which could throw a dark shadow on labor. It is inflation.

Reuther's method of putting himself on record as a fighter against inflation in a way that nobody could miss was his recent letter to the automobile industry's big three on prices and wages.

With absolute correctness he presented inflation to the automobile makers as a ruinous scourge. With equal correctness he told the manufacturers that checkmating inflation is a joint responsibility of management that sets prices and organized labor that bargains for wages.

Nevertheless, we doubt that Reuther is going to make his position as a foe of inflation as clearcut and self-proving as has been his enmity toward communism and racketeering.

What Reuther urged was that the major carbuilders set 1958 prices $100 below prices on comparable 1957 models. In consideration of this Reuther told the industry: "We for our part will give full consideration to the effect of such reductions on your corporation's financial position in the drafting of our 1958 demands and in our negotiations."

Nobody seems to have missed the fact that while Reuther asked a definite commitment from management on the price aspect of inflation, he was completely indefinite on what the UAW bargainers would do specifically about holding the line on wages.

In this light, the public necessarily has to withhold judgment on the extent to which Reuther's offer has real meaning. It can hardly be expected to be swept away by enthusiasm for a proposition so conspicuously wide open at one end.

Particularly is this so in light of a reminder given Reuther by General Motors President Harlow H. Curtice in his reply. Curtice recalled that Reuther once stated that the UAW's 1958 objective would be the biggest wage increase in the history of the union * * * a shorter workweek with increased take-home pay.

And, answering Reuther, the auto companies cited the fact that whereas 1957 models still carry the same price tags they had when they were introduced, wages in the plants have increased appreciably since that time.

Henry Ford II, replying to Reuther for the Ford Motor Co., dealt with the fact that, whereas its pay rates have gone up 70 percent since 1948, Ford prices have risen only 30 percent—and that they now buy a much better car than in 1948.

Opponents can bat statistics around endlessly, of course. But it seems to us that in all three letters there is a wealth of price, wage, and production fact that will try Reuther's skill at riposte to the utmost.

His truly glaring weak spot, however, was hit on by L. L. Colbert, Chrysler Corp. president.

"Would it not," he asked Reuther, "be just as logical for the automobile industry to ask members of the UAW to take an immediate and sizable wage cut, which the companies would then 'take into consideration' in pricing their 1958 automobiles?"

Reuther's generalities, when met with an array of hard fact such as the auto makers fired back at him, don't impress us as the stuff to make him a hero in the eyes of those who watch prices chase wages, and vice versa, while inflation deflates their purchasing power.

Until he does better, this new gambit isn't likely to harvest the esteem which other long-range public-policy battles have won him.

[From Time magazine]

LABOR VERSUS MANAGEMENT

Walter Philip Reuther, 49, the redheaded boss of the 1,500,000 United Automobile Workers and vice president of the 15-million-man AFL–CIO, remained utterly aloof from the tawdry discourse about Jimmy Hoffa and Johnny Dio going on in Washington. Instead, the UAW's Reuther chose to initiate a new public debate, not about labor corruption, but about economics. Aware of public concern about inflation, Reuther astutely proposed that the big three automobile makers cut prices on 1958 models by $100 or more below 1957 prices, whereupon his union would give "full consideration" to lower company earnings in preparing wage demands (Time, August 26).

The automakers were unanimous in their answer. "Another publicity maneuver," shot back General Motors Corp. President Harlow H. Curtice. Retorted Chrysler Corp. President Lester Lum Colbert: "You are proposing that management abdicate its responsibilities—and that months after sustaining a drastically reduced income, a company would go before the UAW or before a three-man panel to attempt to justify its need for partial relief." Henry Ford II: "The rapid increase in wages of automobile workers over the past 10 years, which were negotiated under the duress of your demands, have unquestionably contributed to inflation. Thus, having poured gasoline on the fires * * * you now stand by and tell us how to fight the blaze. In return, you say you will consider using less gasoline next time—or maybe only kerosene."

Net result of the exchange: a spate of publicity for Walter Reuther and his odd theory that United States private enterprise should be limited by some kind of labor review and control. As Walter Reuther must have realized all along, neither the proposal nor the discussion made any real contribution to the critical struggle against inflation.

Service of Reserve and Retired Officers in the Cold War

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA

IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MARTIN of Iowa. Mr. President, our security rests not only on our career military personnel, but on the millions who constitute our Reserve forces. These private citizens, together with retired military personnel, constitute a link between the professional soldier and the rest of our citizens. They can contribute significantly to our military strength by developing their own understanding of current military problems and transmitting their views to their friends and associates.

The July 1957 issue of the Officer, the official journal of the Reserve Forces Relief and Benefit Association, presents a challenging article by Frank R. Barnett entitled "The Role of the Reserve and Retired Officer in Conflict Through Communication."

Dr. Barnett is associated with the Richardson Foundation as director of research. He was formerly a professor at Wabash College. During World War II he served as an infantryman; he was a Russian interpreter for the G–5 section of the 69th Infantry Division, the first American unit to meet the Red army on the Elbe River in April 1945; he also served as a military government official in Berlin. Subsequently he won a Rhodes scholarship. While in England he had opportunities to revisit Berlin during the Russian blockade and the airlift, to participate in a summer seminar on political science at the University of Zurich, and to interview exiles from the Communist empire who crowded into London after the fall of Czechoslovakia and the purges in Poland, Hungary, and other Iron Curtain nations.

His article suggests that Genghis Khan, represented by the present rulers of Russia, stands on the American frontier. His armies practice conquest by communication. Dr. Barnett shows how our Reserve and retired officers can perform an important role in this phase of the current cold war.

I have found his summary of the present world situation of such great interest that I am bringing it to the attention of all readers of the RECORD by including it as an extension of my remarks:

CLAUSEWITZ HAS REVERSED THE ORDER OF BATTLE

Unwittingly, 2 Russians and 2 Germans have stationed America's Reserve, retired, and inactive officers in the first line of national defense; while, at the same time, they have helped to bar officers on active duty from most of the main battlefronts. The men responsible for this curious reversal of the order of battle are Lenin, Stalin, Hitler, and Von Clausewitz. If those four had not radically altered the ground rules of warfare, Reserve officers would be in reserve.

Instead, Reserve and inactive officers are actually the shock troops in the only battles that may ever be fought: on the fields of politics, economics, public opinion, and the underground. We are confronted with a paradox in which a captain in the National Guard or a retired colonel can actively engage the enemy as a cold war brigadier, while the general in the Pentagon—or in Korea—must watch the contest passively from his Reserve depot. And if the war of ideas (and beliefs) is lost by the inactives, the trial by firepower will almost certainly be defaulted in advance to the enemy.

WHY ARE THE RESERVES ON THE FRONT LINES?

How has the 20th century revolutionized the inactive officer's role in national defense? Why do the theories of Clausewitz—updated by the practice of Lenin, Hitler, and Stalin throw on officers with civilian status the chief burden of what Communists call "institutional conflict?" How does Khrushchev employ the strategy of ambiguity in order to keep the Pentagon perpetually off balance and out-of-bounds in the arena of psychological warfare?

These questions must be answered, for the continuation of Western civilization now depends—increasingly—on the managerial skills, political dexterity, economic drive and sheer will to survive of civilian components which, in a free society, predetermine the uses to which science, strategy, and hardware can be applied by the professional military. The Soviet betrayals after Yalta, the evasions inherent in the Berlin airlift, the stalemate in Korea—those problems might have been resolved by science and strategy. The missing ingredients were moral courage, determination, belief in ourselves. Weapons without will are like a foreign policy without power or a purpose; but in a democracy it is not the career soldier's job to define the national will or frame the national purpose. It is the right and duty, however, of the Reserve and retired officer—who recognizes the problem of survival—to speak up boldly and aggressively, drawing to himself if necessary the fire of the naive, the neutralist, and the willfully misinformed.

TWENTIETH CENTURY WARFARE IS WAGED THROUGH POLITICS AND IDEAS

Von Clausewitz, who was a gentleman, had one thing in common with Lenin, Hitler, and Stalin, who were murderous barbarians. (Some propagandists are busy today claiming that Stalin corrupted Lenin's bright dream of communism; but history proves that Lenin deliberately built terror and treachery into the structure of Communist power.) But all of these men argued that trial-by-arms on the battlefield was only a part—even a minor part—of warfare. To them, conflict between nations was not limited to an artillery duel, a bayonet charge, or a clash between naval vessels and aircraft. Instead, they believed that the struggle for power was waged primarily through politics, education, propaganda, fifth columns, and sheer willpower.

In their view, the battle is three-quarters over when the guns begin to fire. The true military genius labors to break his opponent's will to resist well in advance of a formal declaration of war. The Communists, like the Nazis, try—through ideological and political techniques—to demoralize enemy troops, compromise enemy statesmen, confuse the enemy's civilian leadership. Communists try to frighten politicians in the free world into inaction and attempt to create indecision everywhere by dividing all sectors of society into hostile, suspicious groups who cannot stand together. The master of the Hitler-Khrushchev style of warfare cloaks his own preparations for conquest in peace offensives or offers to expand trade. He practices subversion, economic infiltration, and espionage so subtly that honorable men have difficulty in defining these threats as aggression. For the Communists, the front is everywhere.

This is the new theory of warfare. This is conquest by communication, envelopment by politics, encirclement by economics, and conflict by symbols. This is the fourth dimensional warfare—a contest in which ideas dominate the battlefield and predetermine how our armies and navies and air fleets will be used, or whether they will be used at all. The Communists may not want an atomic war that will destroy their own headquarters. They may not fight in the conventional three dimensions of warfare: by land or sea or in the air. They may prefer to paralyze and isolate America with fourth dimensional warfare; they may try to confiscate our overseas investments; they would like to maneuver us into a voluntary peaceful coalition in the world Soviet state.

THE SOVIETS ARE STILL WINNING THE COLD WAR

For those who faintly trust the larger hope, it may be instructive to recall what has happened in the past year in the conduct of the irregular war:

1. On September 20, a 7-man team of NATO experts announced in Philadelphia that the Soviet Navy had risen from seventh to second place among the world's navies. The team, headed by Vice Admiral Thach, United States Navy, reported that the Russians have a fleet of 400 submarines and are producing 3 new submarines every fortnight. (The Nazis, at the beginning of World War II, had only 65 submarines and still almost managed to sever the Anglo-American lifeline across the North Atlantic.)

2. The 58th edition of Jane's Fighting Ships, published in November, evaluated the growth of Soviet naval power as the most extraordinary development in Communist grand strategy since World War II. Jane's reported that "Besides this huge underwater fleet, Russia has built more cruisers and more destroyers since the end of the Second World War than all the nations of the rest of the world combined."

3. In 1956, the Communists—

(a) sent arms and technicians to Syria and Egypt;

(b) trained Egyptian officers in Czechoslovakian war colleges;

(c) offered their version of foreign aid to Burma and Indonesia;

(d) continued to build up military power in North Korea and off the coast of Formosa;

(e) pushed their underground networks deeper into Iran, Iraq, Jordan, and Saudi Arabia;

(f) backed nationalist revolts in Morocco, Algeria, Tunesia;

(g) threatened Laos and Cambodia with underground armies; and

(h) covered all of these power thrusts into the vitals of the free world with peaceful coexistence talk—aimed at confusing and disarming statesmen in America, Britain, France, and Germany.

4. In the New York Times on May 10, 1956, it was reported that Dr. Willard F. Libby, member of the Atomic Energy Commission, told a Senate-House committee that "The Soviet Union soon will have a lead over the United States in an important phase of basic nuclear research."

5. President Sukarno of Indonesia, despite his good-will tour of America, announced that his country needed a guided democracy which would probably include Communists in the Cabinet.

6. Mr. Allen Dulles, Director of the Central Intelligence Agency, wrote—in an article in U. S. News & World Report, May 11, 1956—that "The Soviet production of machine tools now exceeds that of the United States."

7. There were increased political and economic pressures on Japan to trade with Communist China and do business with Soviet Russia.

8. Mr. C. L. Sulzberger, writing in the New York Times of May 30, pointed out that the Bolshevik Party maintains no fewer than 6,000 schools and colleges of political warfare, propaganda, agitation, and subversion. He pointed out that the U. S. S. R. employs

875,000 full-time and 2,100,000 part-time propagandists.

9. At a dinner of the University of Pennsylvania's Law Review in May of last year, Mr. Allen Dulles said that the Communists were now emphasizing parliamentary revolution, the infiltration of free political parties in an effort to advance the cause of civil war through parliamentary techniques.

10. All over the world, Communist Parties softened their line and move toward popular-front coalitions with any groups that were anti-Western or anti-American.

11. On March 15, 1956, Donald A. Quarles, Secretary of the Air Force, told a Columbia Engineering Alumni Association dinner in New York that the Soviet challenge to United States air-atomic leadership was serious and disturbing.

12. On May 1, Charles E. Wilson, Secretary of Defense, admitted before a news conference in Washington that "the Soviet Union was outstripping the United States in the production of globe-girdling planes that can carry hydrogen bombs." (New York Times, May 2, 1956.)

13. On February 15 of this year, Dr. Edward Teller, one of our foremost nuclear physicists, told the Air Force Association at its meeting in Washington that scientific supremacy would pass from the United States to Russia within the next 10 years. According to the New York Times, Dr. Teller sees no way to reverse the trend, owing to the long lead time required to educate scientists. (Other American scientists are not so gloomy as Dr. Teller, but no one can deny that the Communist world is engaged in an all-out effort to catch up and surpass the West in the training of technical and scientific manpower.)

14. On January 20, the Atomic Energy Commission announced it had detected another nuclear test by the Soviets.

15. On February 23, 1957, Marshal Zhukov, Soviet Defense Minister, warned that atomic, hydrogen, or even more powerful bombs could be rained on the United States in another war. (New York Times, February 24, 1957.)

COMMUNIST COURAGE VERSUS WESTERN DOUBT

So much for communism's military, industrial, political, and economic capabilities. What of Communist willpower? Unhappily for us, Communist will—when it is put to the test—seems to be far more resolute than our own. Communist courage—when the battle is joined—reflects discredit on the superficial phrases with which some free world statesmen seek to clothe the nakedness of their cold war policies.

Last spring, Khrushchev denounced Stalin as a sadist and a murderer; but in the fall the same Khrushchev urged all Communists to be like Stalin when fighting capitalist imperialism. In the spring, Khrushchev prophesied (before the 20th assembly of the Communist Church Militant) that Marx and Lenin would inherit the 20th century. In the fall, at the height of the Suez debacle, Khrushchev snarled at western diplomats in Moscow: "Whether you like it or not, history is on our side. We'll bury you."

Khrushchev risked world war III in November when he threatened to put rockets on Britain and France. Communist China and Communist Russia risked world war III when they offered to send volunteers to Cairo. The rulers of the Kremlin looked down the atomic barrels of all the American airbases surrounding their heartland, looked hostile world opinion straight in the face—and sent 20 armored divisions to crush the life out of Hungary. There is something dreadfully wrong with Communist morals—but, by comparison with the West, they enjoy a crucial advantage in courage, resolution, and the will to win. By their own standards, they are even morally superior to us, for they are obviously willing to die for what they believe in.

Some optimists argue that the slaughter of Hungary exposed a terrible weakness in the Communist empire. Perhaps it revealed an even greater sickness in western civilization and especially America. Our society, unlike communism, is founded on certain assumptions about the moral nature of the universe. If those assumptions are wrong, if there are no sacred obligations, if there is nothing worth dying for, if there is nothing worth risking for, then, of course, the Communists are right; man is an insignificant insect, spinning his pitiful web on a flying ball of meaningless mud. And let us have our creature comforts, prosperity, and peace in our time.

It is doubtful that many Americans think that way at all. This Republic has created the most exciting experiment in human liberty and opportunity the world has ever known. Owing to our unique legal, political, and economic framework, ordinary men and women have had the chance to do quite extraordinary things—for themselves, for their families, and for others, including the peoples of all the world. This experiment in human freedom would never have conferred its unlimited benefits on present generations if it hadn't been for two sets of men:

1. A group of American statesmen who were so controversial that they could have been hanged by the neck if their cause had not prospered.

2. A little band of men from beyond the sea who were equally willing to risk their careers and lives for the American dream—Von Steuben, Kosciusko, Rochambeau, and the Marquis de Lafayette.

Two Frenchmen, a German, and a Pole betting all they had on a new social order—a way of life that might transform not only the American continent but, in time, the whole world. Can we think of those men and not be somewhat ashamed that our Government is afraid to impose moral, political, and economic sanctions against the Soviets over the murder of Hungary?

In World War II, Polish and Czech soldiers fought brilliantly by our side—under General Anders in Italy and in the deadly battles in the skies over Britain. Are British and American statesmen proud of themselves when they think of how casually they permitted Moscow to blackmail Poland, Czechoslovakia and, the rest of Eastern Europe into slavery?

Every schoolboy knows that Lord Byron, the poet, died in a tent on alien soil where he had gone to fight the Turk for the independence of Greece. Neither the British Foreign Office nor the American State Department of today's world would have permitted Lord Byron to make that moral gesture. They would have been afraid that his act would give offense to a tyrant.

Western civilization still has economic strength; it still has skilled manpower; it has science and it has weapons. But does the West any longer believe in itself? Does it have a grand purpose or merely a little set of confused and conflicting ad hoc, emergency programs? Can we, in short, meet the Communist challenge at the ultimate levels of conviction, courage, and ideological commitment?

Or shall we continue in the future—as in the past—to fight every battle of the cold war on our side of the Iron Curtain? Shall we forever be locked into the false dilemma of coexistence or containment? No status quo power has ever checked the thrust of a dynamic barbarian, for even if the defense is 90 percent successful on every occasion, a civilization can be pushed to its grave 10 yards at a time.

The question on Hungary was not world war III versus doing next to nothing. There were many things short of war we might have done, if there had been a plan, and if national will and national purpose had not faltered. Actually, there were minimum risks in imposing economic sanctions flying in unarmed planes loaded with relief supplies, and insisting on U. N. observers. The worst time of all for the Kremlin to start world war III was during the Suez and Hungarian crises. Hungary meant that none of the 60 satellite divisions were reliable. And Suez had brought United States military power into worldwide alert. Our Navy was at sea; our atomic bombers were in the air; our farflung battleline was at the ready. For the Soviets to have risked total war at such an hour would have been suicide, as General Gruenther pointed out at a NATO press conference.

GENGHIS KHAN STANDS ON THE AMERICAN FRONTIER

The reserve officer and the retired officer must commit themselves to active duty because an Asiatic conqueror now stands on our frontier. Owing to science, the Atlantic Ocean is no wider than the Rio Grande. Owing to technology, the Pacific is no broader than Lake Michigan; and the wastelands of the north can be bridged in a few hours' flight. We Americans are face to face with the descendants of Genghis Khan.

HIS ARMIES PRACTICE CONQUEST BY COMMUNICATION

Khrushchev and company are no longer a rude barbarian horde. They are disciplined in science and well armed with engineering. They are schooled in economics and political theory. They speak many languages. They have learned to use education, literature, art, trade, law, and even religion as weapons of subversion. Above all, they are superbly trained in the conduct of symbol-warfare—in conflict by communication, penetration by politics, and confiscation by parliamentary procedures.

THE MILITARY ALONE CANNOT DEFEND AMERICA AGAINST SYMBOL WARFARE

That is why we must talk about private citizens' responsibility for national security. In the past, wars were chiefly shooting matches. Editors and educators, lawyers, bankers, and businessmen naturally left defense problems in the hands of America's soldiers and technicians. Today, the front is everywhere. Certain intangibles can literally wash out the material foundations of defense. If the world climate of opinion is mobilized against us by propaganda, we will lose markets, airbases, and access to strategic raw materials. If, here at home, we lose the will to sacrifice or cynically disregard our spiritual traditions, all of our physical wealth will not safeguard American civilization. Today, national defense begins at the level of domestic political morality, the quality of citizenship training for our youth, and the reputation of American business both here and abroad. These intangibles are the clear responsibility of private citizens—and the special province of civilians who have given a portion of their lives to the service of their country as officers.

PRIVATE CITIZENS CAN DO A GREAT DEAL

There is no need to despair. In a sense, we have not yet begun to fight; for we have thus far neglected to organize systematically our greatest source of strength, the vitality latent in our 4,000 voluntary associations. Only a tiny percentage of America's schools and colleges bother to teach our young people (who will be standing guard duty next year) the facts about communism. In all too many schools and colleges, it is possible to earn a degree without learning any of the unique facts about American civilization. In other words, although we are locked in a struggle for survival, we have not troubled either to know ourselves or our enemy.

Retired and Reserve officers who serve as trustees of school boards, universities, private foundations, professional societies, etc., can do something about that problem. Indeed something is already being done by isolated individuals across the country. But what is lacking is a clearinghouse of ideas, a mechanism for chainstoring the first-rate intellectual product developed in one locality to the rest of the Nation. It is in the development of such a mechanism that the civilian officer—now engaged in law, education, business, banking, publishing, etc.—could perform an outstanding service.

OUR FEARS MAY BE LIARS

In the black hours when Britain was obliged to go it alone, after the fall of France and before America had entered World War II, Winston Churchill cheered Parliament with a quotation from an English poet: "If hopes were dupes, fears may be liars." Hopes about the good intentions of Genghis Khan & Co. have indeed been dupes; but we need not turn from mirage to despair. The enemy has his Achilles heel if we but dare to thrust. There are rumblings in Poland and Czechoslovakia. Some Red army men went over to the rebels in Hungary. There are stirrings within Russia itself—questions from students, murmurings among scientists, doubts among intellectuals. The Russian people have not lost their religion in nearly four decades of rule by militant atheists.

If we can become as excellent in moral philosophy as we are in engineering, we can increase the doubts and tensions behind the Iron Curtain. If we can become as skillful in politics as we are in business management and invention, we can keep the "precincts" of Asia and the Middle East from voting Communist. More than that, we can carry this political battle inside the Soviet empire, and by means short of war, we can help the peoples of Poland, Hungary, China, and Russia to throw the rascals out.

WE CANNOT JUST HOPE FOR THE BEST

We must not expect, however, that the Soviet empire will conveniently disintegrate by itself. The Communists have worked night and day to dissolve the ties that bind free societies together. They have not waited for things to happen; they have made things happen. They have trained tens of thousands of professional revolutionaries to wage psycho-political combat. Communism, moreover, is not just an idea. It is a power technique. The rulers in Moscow are not going to let their empire fall apart even if they lose faith in the validity of Marx.

A NATIONAL SERVICE UNIVERSITY

We believe in professional training in America. We train for engineering and science, we train for business management and philosophy, we train young men at the service academies in the complexities of firepower, logistics, and military hardware. But in all of America there is no training academy which equips Americans to play cold war chess with the Communist masters of political warfare. We train diplomats in international law, but the Soviets operate outside of law through subversion, infiltration, propaganda, and psychological warfare. Politics is a dirty word in America—yet in this 20th century of mass communications there is no alternative to politics—except a hydrogen war.

Do we not need a national service university? The teaching materials in such an academy would include a survey of the problems posed by science and geopolitics, and the strategy and tactics of international communism. Not that we want Americans to copy the Communists—but we must understand their methods to avoid being mousetrapped. The curriculum might also include what could be called the theology of freedom, or the philosophy of citizenship. We are so busy and so pragmatic that we have forgotten much of our own philosophy. Very few Americans can articulate what it is we stand for. We perform, but performance is not enough. The Communists capture the slogans, manipulate the symbols, pervert the communications. We must produce cadres of Americans in every walk of life who are not paralyzed by the cult of doubt and confusion which has swept this country for the past 25 years.

THE STUDENT BODY

Who would attend such a national service university? I would hope that young diplomats would come after they had studied international law. I would hope young officers would come after they had studied strategy and tactics. Our foreign-aid personnel should attend—for their competitors are skilled politicians. And nongovernmental effectives should be there: businessmen who represent our great corporations abroad, ministers and editors, teachers, labor leaders, and the permanent officers of our voluntary organizations. An adequate course could be given in 3 weeks—for the student body would consist of exceptional men who have already attained leadership. In other words, a defense institute would be the equivalent of the Harvard School of Advanced Management, in the field of national survival.

LIMITED GOVERNMENT CAN'T DO THE WHOLE JOB

Someone may ask: Why not simply expand the work of one of the war colleges? My answer is that those splendid colleges necessarily concentrate on problems which can be dealt with inside the framework of Government and the military services. We need an institute whose orientation is toward the work of nongovernmental and voluntary groups. For our limited Government cannot possibly compete with Communist total government in the conduct of ideological warfare. If it did, Washington would have to control our drama, our economic system, our science, our law, our editorial opinion, our schools and our religion. Either private groups will voluntarily commit themselves to some sector of the cold-war front, or those areas will continue to be vulnerable to the political, economic, and psychosocial penetration of Communist unconventional warfare. But private initiative in the cold war will only be effective when it is given some professional training. The Reserve and retired officer, whose voice is influential in commerce, industry, and education, could be the most persuasive spokesman—and trustee—for the kind of training which can enable America to win the conflict of communication and thus avoid a thermonuclear showdown with the Kremlin.

Capitals and Capitols

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Jane Aiken who is a student at Washington Junior High School in Rock Island, Ill.:

CAPITALS AND CAPITOLS

When Illinois was separated from Indiana in 1809, a capital had to be chosen for the new Territory. Kaskaskia, a rough frontier town settled by the French, was the most important commercial center of the region at the time and was finally chosen as a suitable place for the Illinois capital.

The capitol building itself was a large, crude, brick structure erected in the center of the square. It had been the headquarters of the French military commander during the period of French occupancy.

The first State constitution, adopted in 1818, provided that the seat of government should remain at Kaskaskia until otherwise directed by the general assembly. It also directed the assembly to petition Congress for four sections of land to be used for the seat of the government. If this was granted, State authorities were to lay out a town which would remain the capital for 20 years. The grant was made and a town, named Vandalia, subsequently was located on the Kaskaskia River. Here three capitol buildings were erected. The first, a two-story frame affair, was burned December 9, 1823. The second structure, of brick, was torn down in 1836 to make room for a larger building which was erected in an unsuccessful attempt to prevent the removal of the capital to Springfield. This building is still standing.

Before the 20 years elapsed, the question of a permanent location for the capital came up again. Sangamon County had become the most heavily populated area in the State, with 7 representatives and 2 senators in the legislature. These men were called the long nine because of their great height. Abraham Lincoln and Ninian W. Edwards were members of this group whose object was to make the village of Springfield the new capital of Illinois. The long nine voted as a unit in the legislature and were always lobbying for votes for their cause. They gathered strength rapidly, and in 1837 the adoption of Springfield as the next capital was decided on the fourth ballot.

Springfield ranked second in population to Jacksonville among Illionis towns. Despite its vigor, its houses were shoddy, there were no sidewalks, and streets were often impassable because of the deep mud. The cornerstone of the new statehouse in the center of the square was laid July 4, 1837, with much ceremony. The building was considered large enough to meet all the State's future needs.

Illinois, however, was a booming State, and scarcely 25 years elapsed before the building was outgrown. Rival towns then thought they saw a chance to obtain the capital for themselves, but again Springfield outstripped them. On land donated by the city, the cornerstone for our present statehouse was laid in 1868. We hope this ornate, beautiful building will serve for many years to come.

Compulsory Inspection of Poultry

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, I ask consent to include in the RECORD my statement telling of the role of leadership played by members and officials of a labor union in bringing to reality a bill for compulsory inspection of poultry which was passed by Congress in the latter days of the session.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMPULSORY INSPECTION OF POULTRY

(Statement by Senator NEUBERGER)

I believe it is extremely important that the American people know the background of this legislation. They must know that this consumer-protective and health-protective legislation will go on the statute books in large part because of the work of a labor union.

Today, much attention is given the few racketeers who have infiltrated the labor movement or the very labor leaders whose actions have violated the law. That is why, Mr. President, I would bring to your attention the great public service work of the Amalgamated Meat Cutters and Butcher Workmen of North America (AFL–CIO) for the enactment of the compulsory poultry inspection legislation.

At a conference in 1946, representatives of poultry processing workers discussed ways of dealing with the double problem of (1) infections and other forms of disease transmitted from poultry to workers, and (2) the filthy and diseased poultry some processors marketed. Some delegates suggested compulsory poultry inspection legislation as the answer. The conference adopted this idea and urged legislation for it.

The idea of a campaign for such legislation slowly developed in the union. The meatcutters union, especially its poultry workers locals, from time to time urged Congress to enact compulsory poultry inspection legislation.

Some public-health experts had similar ideas. They, too, had intimate knowledge of the need for a compulsory poultry inspection law. Some public-health pioneers were among the first to call for this legislation.

About 3 years ago, the meatcutters union stepped up its campaign for compulsory poultry inspection. It publicized startling facts about the need for this type of regulation. It obtained sworn affidavits from poultry workers describing the terrible abuses against health and sanitation practiced by the backward parts of the poultry industry.

It delved into public-health reports to show the extremely high rate of food poisoning cases due to poultry and poultry products. It proved through Bureau of Labor Statistics reports that the industry had an excessively high rate of industrial injury. It painstakingly researched and brought to congressional attention the psittacosis epidemics and other outbreaks due to diseased poultry which have erupted in areas throughout the country, including Oregon.

The meatcutters union did not do this to hurt the industry. On the contrary, its aim was to secure the quick enactment of legislation, which it knew was an important to the welfare of the industry as to consumers and poultry workers.

The hard work of the meatcutters union for this legislation received the highest praise from a congressional committee studying the need for compulsory poultry inspection. In June 1956, the Subcommittee on Legislation Affecting the Food and Drug Administration of the Senate Committee on Labor and Public Welfare reported to the Senate:

"We wish to express our appreciation to the Amalgamated Meatcutters and Butcher Workmen of North America (AFL-CIO) for the excellent, definitive, and thoroughly documented exposé of conditions in the poultry processing industry under the department's voluntary inspection program which was given this subcommittee by this trade union's representatives. * * * We are grateful to the union and believe the American people will share that gratitude."

Public health organizations also worked hard to convince Congress of the need to enact compulsory poultry inspection legislation. Such groups as the Associaiton of Food and Drug Officials of the United States, Association of State Public Health Veterinarians, Conference of Public Health Veterinarians, United States Livestock Sanitary Association, Association of State and Territorial Health Officers, American Nurses Association, and the American Veterinary Medical Association have aided Congress with their expert knowledge and support. They deserve the highest praise possible for their public service efforts on behalf of this legislation.

Once the facts concerning the need for poultry inspection became known other great organizaitons took part in the campaign. These include the General Federaiton of Women's Clubs, National Farmers Union, American Association of University Women, Young Women's Christian Association, Housewives United, Naitonal Consumers League. These organizations continuously fight on the behalf of consumers.

The overwhelming majority of the poultry industry, too, proclaimed the need for compulsory poultry inspection. I have disagreed with most of the industry groups concerning this legislation, for I have felt that the bills they backed were weak and could not do the job. I believe that the industry leaders made a serious error in not backing the strongest bill possible because such legislation, it seems to me, would have been foremost in their interest. But I must congratulate these men because the majority of the poultry industry leaders did not blindly fight this legislation, as did the heads of other industries when regulatory laws were considered. This is to the great credit of the poultry industry.

Mr. President, I believe it is unnecessary to go through the campaign for compulsory poultry inspection in detail. Congress has had legislation concerning poultry inspection before it for 3 years. The first bills, introduced by the distinguished Senator from Illinois [Mr. DOUGLAS] and in the other House by the able gentleman from Illinois [Mr. PRICE], called for an investigation by Congress of the need for this legislation.

In the beginning of the 1st session of the 85th Congress the distinguished Senator from Montana [Mr. MURRAY] introduced the first actual poultry inspection bill. From that bill developed all the other measures on his subject, some of which were excellent, some extremely weak. I take great pleasure in having been a sponsor and having worked for S. 1128 in this session.

Altogether 5 congressional hearings, 3 in the Senate and 2 in the House, have been held on this legislation. Few pieces of legislation have been so thoroughly considered in committee. And no fewer than five final votes have been taken in both Houses on poultry inspection bills.

Mr. President, the legislation which we have finally enacted on this subject is a compromise measure. Many of us in the Senate would have liked a stronger bill. But we hope and expect that the bill enacted will adequately protect the consumer and poultry worker and will aid the poultry industry to expand. I consider its enactment and excellent step forward in consumer-protective and health-protective legislation.

The American people should know that always in the forefront, leading the fight for this greatly needed legislation marched the Amalgamated Meat Cutters and Butcher Workmen of North America—AFL–CIO. I believe the American people owe this labor union a debt of gratitude.

I want to congratulate the officers of this fine organization, President Earl W. Jimerson, and Secretary-Treasurer Patrick E. Gorman, its other officers and members for their great service to the public. The untiring efforts of this union to protect the consumer and the poultry worker with this legislation is a true example of the work of American labor.

One Way Around a Scandal

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Denver Post of August 19, entitled "One Way Around a Scandal." The way, the editorial says, is to greatly extend research into increased industrial uses of farm products. This, I have been advocating for 2 years, offers the only permanent solution to the farm problem.

There being no objection, the editorial was ordered to be printed in the RECORD, follows:

ONE WAY AROUND A SCANDAL

The magazine Time this week contains a startling headline: "The $5 Billion Farm Scandal—Every Day in Every Way It Gets Worse."

Did the headline refer to criminality, corruption, bribery or income tax evasion in the Department of Agriculture or among the farmers of the United States? No.

The Time story was devoted solely to the Government's farm policy. It called attention to the technological explosion that has increased farm productivity one-third since 1940; to the $5.5 billion worth of farm surpluses stacked away in warehouses, mothballed merchant ships and cold storages; to the national problem that turns values topsy-turvy * * * "making good crop weather seem a national calamity and drought a boon."

What the magazine calls a scandal is in fact becoming more of a national offense to public reason; and there is mounting evidence at hand that farmers know it and resent it the most of all.

In this connection, a report was made recently by a five-man Commission on Industrial Use of Agricultural Products. The Commission was created by Congress to investigate whether some relief from this frightful rotation of spend and waste could be found in the diversion of farm crops to industrial usage.

The Commission set forth some fascinating findings and promising recommendations. It said industry is now investing about 3 percent of its gross sales or $3 billion annually on research. Agriculture is not spending more than $375 million or 1 percent of sales in the same pursuits.

One result of this imbalance in basic research has been, for example, that agriculture is being researched out of its natural markets. (One-half of the market for natural fibers such as cotton, wool, flax, and silk have been taken over by synthetic fibers. Two of every three pairs of shoes are now made partly or wholly of leather substitutes.)

The Commission would treble the $16,145,000 annually provided through the Department of Agriculture for industrial use research. And it asks that 15 percent of the national gross receipts from customs be allotted the administrators of such an industrial utilization program.

The Commission would have Congress create a five-man, nonpartisan, agricultural research and industrial board, its members to be named by the President with the Senate's consent. It would empower the Board to enter into contracts with land-grant colleges and universities, and cooperate with

private enterprise in multiplying the number of scientists and laboratories and experimental projects that can be put to work on the problem.

The Commission took testimony from 188 of the country's outstanding leaders in agriculture, industry, and science. It correlated the work of 18 special task groups and committees representing all of the agricultural products useful or potentially useful in industry. And it put this all into one compact and highly useful report for Congress' enlightenment.

The facts of today's topsy-turvy situation in agriculture comprise less of a scandal than would the failure of the Congress to act upon this one suggestion for meaningful relief.

American Responsibilities in the Nuclear Age

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. BUTLER. Mr. President, in the months ahead the Congress and the executive branch of our Government must meet the challenge posed by the recent announcement that Soviet Russia has perfected an intercontinental ballistic missile.

Students who have followed Russian developments in the military field since the dawn of the atomic age can be of great assistance in evaluating Russian developments in terms of our own responsibilities.

The Johns Hopkins University at Baltimore has an extensive operations research office. Col. William R. Kintner is the United States Army adviser to this unique organization. A battalion commander in Europe in World War II, Colonel Kintner later saw action with the 7th Division in Korea. He has been on the faculty of the Command and General Staff College and more recently has been attached to the Office of the Secretary of Defense. He was the winner of the general prize essay contest for 1956, conducted by the United States Naval Institute.

This prize essay is particularly significant in view of this most recent Soviet announcement. I am including extracts from this study in my remarks for the information of my colleagues and for those in the executive branch who must determine United States policy at this critical junction in world history.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

AMERICAN RESPONSIBILITIES IN THE NUCLEAR AGE

(By Col. William R. Kintner, U. S. Army)

The advent of atomic weapons has not modified Communist ideology which emphasizes the inevitability of world revolution and the ultimate collapse of capitalism. Despite talk of peaceful coexistence, a state of war, whether open or disguised, is, in Kremlin theory, the inevitable relation between the U. S. S. R. and the free world. Communist leaders consider conflict with the Western World, and ultimately the United States, to be inevitable. Nothing short of world domination, therefore, can be their necessary objectives.

In a penetrating analysis Time and the Bomb, an Australian member of Parliament, W. C. Wentworth, stated that Stalin established the framework of the long-range Soviet atomic policy in 1946: "With the discovery of the atomic bomb, Russia entered a soft-shelled period. For the immediate future, her comparative position was vastly weakened; for the more distant future there was the prospect of vast new strength." Yet Stalin foresaw that "It was no longer inevitable that the struggle to communize the world would be a long one."

American possession of atomic weapons would, for a while, however, frustrate Communist plans. Stalin's basic problem, consequently, was how to get through this soft-shelled period. The vital choice lay between two alternatives—

1. To accept international control of the atomic bomb, and allow the world situation to develop without any possibility of atomic war.

2. To sabotage international control of the atomic bomb, so as to force the world eventually toward communism, either by general atomic war or by the constant threat of general atomic war.

Stalin, Wentworth argued, chose the second of these two alternatives.

Regardless of the validity of this interpretation, the outline of the atomic plan which the Soviets adopted a decade ago is beginning gradually to emerge. It is reflected in the shift in pronouncements by Soviet leaders; from marked indifference toward atomic weapons, through eulogy of peaceful applications of atomic energy, to blunt assertions of their power to annihilate nations in a single shattering blow.

Any objective accounting of where things stand after 10 years of the atomic age would show that many of the pillars on which the United States has based its strategy have been weakened. The United States as well as the U. S. S. R. is now dangerously exposed to atomic attack; and United States allies act as if a nuclear stalemate already exists.

Having created these midcentury power realities, the Soviet Union initiated after Stalin's death in 1953 a flexible, accordian strategy of alternating conciliation and threat. It is now proposed to examine available Soviet literature on nuclear warfare, to establish the range of possible Soviet nuclear-based strategic policies, and to point up the responsibilities of the United States as the principal defender of world freedom.

THE EVIDENCE

Unfortunately for us, there is no Soviet equivalent to the Bulletin of the Atomic Scientists. The paucity of detailed information filtering through the Iron Curtain, other than that reaching only highly classified agencies, necessitates resort to research in available Soviet publications; Russian developmental trends, state, military, and industrial, are nebulous.

The Soviet Army newspaper Red Star in January 1954 began a series of articles on atomic energy and its application to military and civilian uses. This series represented the first major effort to make available to the Soviet people information concerning nuclear energy and its range of peaceful and military applications. The Soviet Union had obviously not disclosed the whole course of its atomic policy in its controlled press.

Atomic weapons were adopted by the U. S. S. R. contemporaneously with attaining an all-around mature economy, the result of Stalin's forced industrialization of the country. The Soviets were consequently ready to expand in the nuclear sphere on the foundations of an economic program which had always been weighted toward heavy industry and military production in particular. Postwar technological developments in all three armed services have continued at the expense of production for strictly civilian uses. The recent elevation of the Soviet Union's long-range air force along with unexpectedly rapid progress in nuclear sciences is conclusive evidence of the Kremlin's interest in the atomic age.

The policies behind the Soviet air defense effort appeared in a 1954 Red Star article, The Atomic Weapon and Antiatomic Defense, by B. Olisov, professor, doctor of technical sciences, winner of the Stalin prize, major general, engineering and technical service: "The entire history of wars and of the development of military technology convincingly says that the application by either side in a war of new kinds of weapons or the perfecting of those already known has always also called forth means of counteraction. * * * At present, when the striking power of atomic and hydrogen weapons has already been sufficiently explored, we can speak of reliable and, as experiments have shown, simple methods and means of defense. Measures are being taken not only for the direct defense of troops and the population but methods of combat against airplanes and other carriers of atomic bombs are also being developed, and also methods of conducting combat operations under the conditions of the application of the atomic weapons."

An action of great significance was that of the Supreme Soviet—divorcing the Soviet long range air force (ADD) from army control to the personal supervision of Defense Minister Marshal Georgi Zhukov.

We need no official evidence that the U. S. S. R. has adopted western concepts of unified, indivisible airpower designed preeminently to win command of the air.

Their emphasis upon solid rear areas, without which it is impossible to conduct a war, previously assumed to indicate reliance upon fifth column subversive action against an enemy (together with the converse, rigidly enforced discipline among the entire population of Russia to support the armed forces) admirably fits a concept of atomic knockout blows against the hostile seat of government and key industrial areas.

Exuding the Soviet's increased confidence on this question, Olisov very recently stated: "The existence of atomic and hydrogen bombs in the U. S. S. R. has shown that the atomic armaments race cannot be a guaranty of the safety of the United States of America in case of war."

If further evidence be needed, Red Star, semiofficial publication of the Ministry of Defense, publicizes a sharp trend from ground troops supported by air to air-atomic power as the decisive instrument. This apparent trend does not mean, however, that the Soviet Union is neglecting the task of reorganizing the Red army for nuclear warfare. Soviet theorists ascribe these commonsense efforts as counteraction to American aggressive plans.

A Red Star (1954) series on antiatomic defense proves the Kremlin was not surprised by Marshal Montgomery's proposal to hold strategic nuclear attack for retaliatory purposes while employing fission (if not fusion) weapons for the tactical defense of Europe. These instructive articles advise commanders how to use terrain, soldiers, and civilians on protective measures, especially in the organ of the Young Communist League.

Utilization of the ground, long a skill among Communist forces, receives thorough attention. Instructions range from the individual's hastily dug foxhole to painstaking preparation of bombproof field fortifications for whole units. Specifications for digging into the ground all classes of weapons and equipment are readily met by troops accustomed to pick, spade, and ax.

What is the significance that defense against the bomb, from individual behavior of the Soviet soldier to plans of Soviet generals, is covered without mention of the offensive potential of the same weapons? We only have access to the openly published Communist writings. In the closed book of Soviet tactics, reserved for the higher and politically trusted hierarchy, would doubtless be found complete directives and planning factors for Russian tactical and/or strategic atomic offensives.

We do have some evidence, however, that the U. S. S. R. is developing weapons which seem to be fashioned for offensive atomic action. For example, the magazine Air Force (May 1955) credits the Malot (Soviet equivalen of the United States B–52) with a cruising speed of 630 miles per hour at 55,000 feet, and rates its 4 jet engines at 15,000 pounds static thrust. An indication that these newest planes' early appearance was no extraordinary spurt of Soviet technology and industry may be found in the statement of Gen. Nathan F. Twining, United States Air Force Chief of Staff, that lead time for the MIG–15 was placed at 1 year while the United States of America's F–80 required 2.

Soviet naval capabilities in nuclear conflict are also growing. Whether or not they are actually building aircraft carriers, their expanding cruiser strength ranks second in world navies, close behind acknowledged preeminence in undersea craft. It seems unlikely that guided-missile delivery from both types has been neglected. In fact a note in the Proceedings (August 1955) reports a Soviet guided missile with 140-mile range which can be fired from a submarine at 300 feet depth, and voices fears that the U. S. S. R. is ahead in atomic rocket propulsion.

A similar excellence in ground armament seems probable, even though reports are vague.

THE RANGE OF SOVIET STRATEGY

The Soviet acquisition of both atomic and thermonuclear weapons introduces new factors into the military power equation. The basic Soviet program, as the free world has come to learn, is worldwide domination under the iron heel of the Kremlin. Belief that conflict between communism and the free world is inevitable is and has been the mainspring of Soviet actions. The specific elements by which this strategy has been carried out since the end of World War II can be summarized as follows:

(a) Protect the Soviet Union from attack.

(b) Maintain armed forces of a size and character which can constantly menace the West.

(c) Increase the effectiveness of subversive efforts to undermine the free world.

(d) Press the free world as far as possible but do not deliberately invoke war.

(e) Openly challenge the West for the leadership of Asia, the Middle East, and Africa.

The Soviet march toward world domination can be pursued along three broad lines. These, which will be described subsequently, are peaceful conquest, creeping expansion and nuclear knockout.

Any appraisal of the military establishments of today suggests the preponderance of the Communist bloc (in truth, merely Russian) conventional arms. Outlawing or neutralization of nuclear weapons would redound to the definite weakening of the NATO nations, vis-a-vis the Soviets, while presumably eliminating all serious threat to the solidity of the latter's rear areas.

The purpose of continued Communist invective against inhuman nuclear weapons is simple: prepare for the worst eventuality but work unceasingly to disarm your potential enemy of his essential weapon which is no more than an auxiliary arm for yourself. Contrary to their words, however, Soviet actions all point toward neutralization rather than outlawing these weapons.

There are vital differences between outlawing nuclear weapons and their neutralization by expanding Communist thermonuclear bomb and long-range air force (or intercontinental ballistic missile) capabilities. Any tenable agreement to ban such weapons inevitably includes inspectional provisions antithetical to the sanctity of the Iron Curtain. The Soviets will talk about inspection but never accept it.

Neutralization from strength poses a more dangerous possibility for the West. Communist leader Khrushchev, touring India in November 1955, when the explosion of a Soviet megaton bomb was announced, made this calculated bid for neutralization: "We will never be the first to use such a weapon. We will be very glad if bombs are never exploded on cities or villages. Let them lie and influence the nerves of those who would start a new war. Because if they start a war, they will receive a proper answer."

As other nations besides the United States, the Soviet Union, and Great Britain possess the weapons, the deterrent effect of our Strategic Air Command to prevent nonatomic forms of aggression diminishes. NATO nations' demand for protection rather than liberation prophesies their distaste for a conflict which would destroy their homeland—whether the bombs be strategic or tactical. Nuclear parity will exist when both sides have sufficient bombs (and delivery capability) to destroy the other. It does not require equal numbers, as in the case of high explosive weapons.

THE THREE STRATEGIES

Atomic parity may open attractive strategic possibilities to the Kremlin. On the assumption that the West lets down its guard and loses its political and military cohesion, the Soviets have three possible strategy choices. The first is a surprise knockout nuclear attack designed in such a way as to destroy the United States capability of retaliation. This possibility cannot be ignored, especially since Soviet military writers are now paying considerable attention to the virtues of surprise.

Secondly, and especially if the United States vigorously protects its retaliatory capability, the Soviets may only seek an effective neutralization of nuclear weapons in order to pursue a strategy of increased political warfare under two possible variants. The first variant is that Red armies would actually be unleashed for peripheral aggression; the second would be that the threat of their possible use coupled with intense political pressure and fifth columns might bring about the capitulation of important border nations without the actual use of force.

The third possible strategy is that the Soviets might seek to achieve their goal through genuine peaceful competition. This competition would endeavor to demonstrate to technically backward peoples, particularly in Asia, that communism offers a better and quicker means of achieving industrialization and hence national power than any adaptation of the free-enterprise system.

THE NUCLEAR KNOCKOUT—STRATEGY NO. 1

While the Soviets may believe that the triumph of communism is inevitable, they may feel that the leisurely, almost inevitable rise in their relative power position in comparison with that of the United States is too slow. For this reason a strategy which would quickly eliminate their only opponent has obvious attractions.

Nuclear blackmail to sunder opposing coalitions, nuclear devastation of a defeated foe to occupy more easily and communize his whole country are readily conceivable Communist strategies. Surprise attack with nuclear weapons against a powerful opponent, trusting to the annihilating effect of the first blow may, however, be too great a gamble for cold-eyed men whose fundamental ideology tells them that time is on their side. According to their lights, they need only steadfastly refuse to be provoked into empiricist errors by the actions of their implacable capitalist foes. Recent Communist emphasis upon surprise attack might originate in the need for self-assurance, and as a warning to the West that the Soviet is ready to meet such an onslaught.

The enormity of the stakes demands we prepare to defend against strategy No. 1.

Wentworth's penetrating article explains dfiscerningly why the Soviets might adopt a knockout strategy. Some of the elements of such a plan (against which many events of the past decade seem understandable) were:

1. During the period of atomic weakness maintain an attitude of qualified hostility toward the West. Gesture toward general war, but back down whenever general war is threatened.

2. Push forward on many fronts so as to obtain maneuver space, which would be particularly valuable in the last phases of atomic disadvantage.

3. As nuclear parity approaches, the substitution of a policy of pretended friendliness for the policy of unfriendliness short of war would be possible. This would bring short-term advantages in the free world, and the late stages of the period would not be sufficient for the policy's longer term internal disadvantages to develop.

4. Consistently sabotage any scheme for effective international control of atomic energy, while seeming to make increasing concessions to the idea. In this area advocate measures that will confuse public opinion in the democracies.

5. Once Russia has achieved nuclear parity, press communism forward fairly rapidly under the protection of Russian arms, threatening the world with a general atomic catastrophe if any attempt is made to frustrate Soviet maneuvers.

6. If, after Russia achieves nuclear parity, the West should intervene to prevent progressive communization by force of Russian arms, in spite of the Soviet threat of general atomic war, then (perhaps without warning, and after a short period of the warmest conciliation) unloose a full atomic catastrophe on the world, in the belief that, even if Russia is among the victims, nevertheless only the new order—a permanent, totalitarian, worldwide sovietization—can emerge from the disaster.

In short, the initiative regarding war is in their hands. Worse yet, the chances of a police state launching a surprise blow from within its frontiers are infinitely more likely than that a democracy do so, should democratic processes ever permit the attempt.

The Soviet Union cannot build the perfect defense and the irresistible atomic offense at the same time. The U. S. S. R. too must take into account its vulnerability to the hydrogen bomb before making the decision to employ it against us. If the area of destruction of the H-bomb is of the order of the unmanageable, the Soviet vulnerability to this type of weapon must be as serious as is ours. Unless we neglect our defenses, only a technological breakthrough in the delivery systems would seem likely to disturb the turbulent stability of the hydrogen stalemate.

CREEPING EXPANSION—STRATEGY NO. 2

Whether or not a total nuclear war ever takes place, the possibility of one occurring does have a significant influence on political alinements during the cold war. The leaders of every free country must frequently make assessments of the political implications of the changing global military situation. In a very real sense, the struggle between the United States and the Soviet Union is a battle for the allegiance of the committed and uncommitted nations located along the periphery of the Soviet heartland in Europe and Asia. The American effort to

maintain these nations within the free world has been extremely costly and difficult. The Soviet Union, on the other hand, has been able to exploit the difficulties, discontents, and fears of those people with relatively little expense.

There is some evidence that the Soviet Union now leans, more than in the past few years, toward achieving its aims primarily through political and psychological means backed, as always, by military intimidation.

The Soviet pattern of conflict calls for appropriate, not maximum, violence. It does not eschew violence as such, but gives greater emphasis to the role of psychological-political operations. Communist doctrine—asserting time is on their side—applies brakes to its own fanaticism. It sanctions war, limited or otherwise, to operations which seem, at the time, certain of success at minimum cost. It bluntly halts a misadventure by stratagem ranging from the truce talks, such as halted our Korean offensive in 1951, to quick retreat and denial that fighting had occurred, as after the undeclared 1938 war with Japan in Manchuria.

The Soviets are developing and are increasing their military strength as a backstop for stepped-up political warfare. As the Soviet atomic stockpiles grow, their potential for atomic blackmail will also grow. Retaining their present preponderance in conventional military forces, they might also resort to tactics designed to bring all of Eurasia under their domination without venturing war with the United States. We face an equally real danger that the security of the United States can be undermined by the piecemeal progression, short of war, of Communist domination over the free world and the alienation of our allies through accordion moves of relaxation and fear.

Throughout Asia, in particular, there is a close connection between the Communists' employment of military force and their skillful use of diplomacy, subversion, and guerrilla warfare to erode and destroy the weak governments situated along the Communist periphery. The Communist campaign of expansion is from its inception based on a combination of military force integrated with subversion.

Asia will be a primary area for creeping Communist aggression. The basic program for Communist expansion in this area envisions step by step isolation and subversion of individual countries, utilizing established base areas in the U. S. S. R., China, North Korea, and North Vietnam. A "Thai Liberation Government" and growing army thrives in southwest China; Burmese hill tribes receive arms and agents to foment their traditional enmity for centralized authority; a powerful indigenous Communist Party in Indonesia draws funds and supplies from the mainland; while even militantly neutral India constantly contends with rioting Reds in her cities and nervously scans Communist maneuvers on her borders in Nepal, Bhutan, and Assam. Growing Chinese Communist power stands forth as the proximate agency but the guiding policy emanates as always from Moscow.

Any backward underdeveloped country situated adjacent to the Communist bloc is a likely target of future Communist aggressors posing as anti-colonial liberators. In such a country there will exist an active Communist Party. There will be political incapacity to take vigorous action against subversion. A trumped-up excuse for a liberation insurrection will be devised. Volunteer support will be offered by the Communists. Unless the Communist combination of insurrectionists-volunteers can be checked before they seize the instrumentalities of government as well as control of the main population centers, it may be impossible to prevent the loss of another country.

As this strategy is pursued, the absence of a sharp line of demarcation between war and peace will continue. The terms "hot" and "cold" war, by their sense of mutual exclusiveness, obscure the fact that we are now involved in war. According to Soviet military authority, "If war is a continuation of politics, only by other means, so also peace is a continuation of struggle only by other means."

PEACEFUL CONQUEST—STRATEGY NO. 2

The Soviets have shown a remarkable capacity for waging an unconventional offensive behind their armor of military power. Their campaign of aggression has thus far confused and baffled their opponents. As long as they can advance against soft spots, there seems to be no particular reason why they should attempt to reduce bastions of resistance by the outright use of military force, particularly their own.

The U. S. S. R. has almost achieved a position of hegemony over the Eurasian land mass. It would be wishful thinking of the most naive sort to believe that they would fail to reach out for the whole prize so nearly within their grasp. This reaching, however, need not assume the form of either global or limited war.

Ideological pronouncements emanating from Moscow since the 1955 summit meeting all point to a vigorous campaign to put a new face on communism. The Soviets now see a chance to make an open bid to capture the surging social and political revolutions of Asia, Africa, and the Middle East.

Through programs of industrial development, the Soviet Union may be able to exploit the world revolution in aspirations and install Communist governments subservient to them in areas now outside the Soviet bloc. An extension of Soviet power to a few strategically located countries would expose to bloodless conquest much larger areas vital to our security. This kind of advance in Soviet influence, shrinking the free world and adding to the resources of the Communist bloc would threaten us with ultimate isolation no less than would Red victories in a series of peripheral wars.

It is not comforting to realize that Communist actions for the past several years could mark a phase in the implementation of any of these three basic strategies or, more confusingly, a combination of them. Communist intentions always point toward the higher synthesis which history will produce out of opposites. Thus the Kremlin can actively espouse peaceful coexistence while simultaneously fostering subversive movements abroad and building up its armed forces at home. Through this three-pronged approach the U. S. S. R. will be prepared to capitalize in one of several ways from the new historical situation which will exist once nuclear parity is achieved.

IMPLICATIONS TO THE UNITED STATES

Since the end of World War II, the United States defense policy has been based on the assumption that American security rests on the fullest exploitation of nuclear weapons. As long as the United States retained its monopoly in nuclear weapons, this assumption was valid. Today the monopoly has long since been broken. A period of nuclear parity between Russia and the United States seems inevitable as megaton weapons explode over Siberian tundras.

The near advent of nuclear parity necessitates an objective evaluation of the net significance of atomic weapons in the world power struggle. Such an analysis may indicate that we are asking atomic weapons to carry more than their proper share of the United States security load. It may even reveal that the hydrogen bomb, the yet unborn intercontinental guided missile, and the atomic-powered, nuclear-armed submarine may, unless we take other measures as well, eventually prove detrimental rather than beneficial to the strategic position of the United States.

We must steel our inexorable determination to use these weapons the instant it becomes necessary. Our human instincts recoil at mere contemplation of nuclear warfare, but can any thoughtful person discover any less horror in the prospect of a communized world? We need not yet face a choice so bleak. Before the Soviets reach the nuclear sufficiency they are so rapidly approaching, we have time to turn our efforts toward the whole range of Communist strategies.

The free world needs some more tangible shield than the threat of reprisal. We need a political-military solution capable of blocking all forms of aggression. The military, thinking through the implications of the new weapons and reformulating their doctrines on an entirely different plane of magnitude, confront Clausewitzian verities of limited objectives. Total war's absolute destruction is the negation of strategy which exists only to further national policy. Mutual suicide is not policy but an act of ultimate desperation.

Continued coexistence with the Soviet bloc must rest on terms which are consistent with our national well-being and dignity. To this end United States national policy should provide the political and economic framework for the development of unprecedented nonmilitary programs and sound military strategies capable of coping both with the threat of thermonuclear war and the whole range of subversive, psychological, and paramilitary actions open to the Soviets. Twin aspects of this policy are development of adequate means to assure the military defense of the United States and its alliance system, and an ideological offensive designed to wean the Soviet people, in time, from amoral communism. National policy must be accommodated to military capabilities, clearly specifying what these capabilities should be.

We must develop an antidote to what may become the palsying fear of thermonuclear war. This requires a determined effort to convince the Kremlin that we can and will fight if attacked, plus an equal endeavor to formulate policies which promise success in recurring crises short of war. This latter United States task requires the formulation and implementation of an integrated cold war strategy designed to reduce the dimensions of the Soviet threat, while increasing the power of the United States military posture to deter war.

It is clear that we cannot voluntarily surrender our right to use the hydrogen bomb without abandoning the field to the Soviets. Only the certainty that in extremis it will be used will make the hydrogen bomb a real deterrent to general war and a bulwark against Soviet atomic blackmail.

Our preparations to deter—or in extremis—to meet, total war, will not materially strengthen our hand in peripheral campaigns—or vice versa. Both forms of aggression must be stopped. Additionally our ideological superiority over communism—the sanctity of religion, freedom of the individual, the right to private property, opposing party absolutism—must, joined to enlightened political and economic policies, defeat the Red "peaceful" surge.

Thus the minimum structure for security demands four unshakable military pillars for its support.

1. Retaliatory force of strategic air.
2. Air defense (military and civil).
3. Command of the seas.
4. Local ground defense supported at key locations by highly mobile, atomic armed, joint task forces capable of swift intervention at any trouble spot.

The present strength of each of these pillars varies. The strongest is the United States retaliatory capability but, in a period

of dynamic technological change, this force cannot be maintained in a static manner.

A major effort is now underway to create an air-defense system for North America. Building an air-defense system, including its civil-defense component, will be a huge task but is one that is technologically feasible provided sufficient funds and time are available.

United States capability for exercising command of the seas probably stands at as high a level as our retaliatory capacity. New ships and weapons must be provided the Navy to keep it that way. The free world alliance is bound together by ocean highways. If these highways are severed there is little chance that divided and exposed segments can survive. The scope of the necessary United States naval effort is dictated by the fact that an attacker, seeking to disrupt sea communications, can achieve his purposes with fewer forces than the defender who must assure their use.

The development of mobile task forces to meet hostile actions lesser than general war lies considerably behind the efforts that have gone into the other pillars of the United States defense program. The creation of such forces is a challenging task involving all the armed services.

Until the Communist bloc has changed its basic tenets, has shown by tangible actions its willingness to live with the free nations of the world on a basis of genuine give-and-take we cannot afford ever to let down our guard.

Whether the next several decades will bring the defeat or alteration of communism will depend largely on the relative power and influence of the United States. A national determination to preserve human freedom at whatever cost, America's proudest inheritance, is a test the United States can meet squarely.

Representative Wigglesworth Valued Member of Congress Who Shuns Publicity

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the attached article which appeared in a recent edition of the Boston Sunday Herald:

REPRESENTATIVE WIGGLESWORTH VALUED MEMBER OF CONGRESS WHO SHUNS PUBLICITY

(By Tom W. Gerber)

WASHINGTON, August 30.—A Massachusetts Congressman who once was a star Harvard quarterback is one of the Eisenhower administration's stanchest ball carriers on Capitol Hill.

Yet white-haired, publicity-shy Representative RICHARD B. WIGGLESWORTH, of Milton, probably has had less public recognition than any member of the so-called Eisenhower team.

This is despite the fact he has served in Congress for nearly 29 years and has become one of the most powerful and influential Representatives in the Nation's Capital.

A QUIET WORKER

But these political attributes long have been hidden beneath the 66-year-old Congressman's mantle of modesty which also cloaks his fiery sense of public responsibility.

He works quietly, with intense concentration. He attracts little attention. He seldom issues a statement, unless he's specifically asked.

Few persons recognize his important role in national affairs.

But among these few persons are those in the top echelon of the Government. WIGGLESWORTH's files bulge with letters of tribute from leaders such as President Eisenhower, Secretary of State Dulles, and Defense Secretary Wilson.

Last year when WIGGLESWORTH was faced with Republican primary opposition he hired a public-relations expert to help him in his campaign.

This agent sought and received the Congressman's permission to poke through the files in search of campaign material.

His eyes bulged when he saw the correspondence.

For it disclosed that WIGGLESWORTH is on a first-name basis with virtually every important official in the Government. Yet this is the kind of thing WIGGLESWORTH never tells anybody.

And he was reluctant to allow the public-relations expert to use the correspondence in the campaign, though most Congressmen would have had the letters in public print soon after they were received.

WIGGLESWORTH ultimately was talked into using the letters. And this was one of the first inklings of WIGGLESWORTH's real stature in Congress.

RANKING POSITION

His immense, but seldom invoked, authority on Capitol Hill stems from the fact that he is the ranking Republican member of the House Subcommittee on Defense Appropriations.

This position means he is the Eisenhower administration's top proponent on requests for Defense Department funds. This year, as in previous years, money requests for the Defense Department have been the biggest chunk of the national budget.

WIGGLESWORTH also is second ranking Republican on the House Mutual Security Subcommittee, which handles funds for foreign aid.

And this is an item for which President Eisenhower consistently has waged a vigorous battle. WIGGLESWORTH has been one of the administration's top strategists in these fights.

He has been a member of the House Appropriations Committee since he came to Congress in 1928. He now is the second ranking Republican member behind the venerable JOHN TABER of New York.

In his 29 years in Congress, Representative WIGGLESWORTH has become widely known among his colleagues—and almost nowhere else—as one of the Nation's leading authorities on Government finance and fiscal problems.

In 1952, even before President Eisenhower took office, Representative WIGGLESWORTH was one of a small group of GOP experts that conferred with the President on the Nation's fiscal problems.

CLOSED-DOOR EXPERT

Perhaps one reason WIGGLESWORTH seldom has been publicized in his important House committee job is that most of the testimony is behind closed doors.

This is because justification for sought funds involves telling the subcommittee the Nation's topmost secrets. Thus the public is barred and little ever leaks of WIGGLESWORTH's vital role.

In addition to his important House committee assignments, WIGGLESWORTH is on two other groups that perform essential functions yet received little attention.

The first is the House Republican Policy Committee, under the chairmanship of Representative JOSEPH W. MARTIN, JR., of Massachusetts.

Thus WIGGLESWORTH has a hand in establishing GOP policy on every important piece of legislation that comes before the House of Representatives.

His other assignment is vice chairman of the GOP Congressional Campaign Committee.

This group sets top-level strategy aimed at electing GOP candidates to Congress.

Another indication of WIGGLESWORTH's stature in Congress is his suite assignment in the New House Office Building on Capitol Hill.

Among Congressmen, this is one of the most jealously guarded prerogatives. WIGGLESWORTH's suite of three rooms and connecting hallways is one of the most spacious in the building.

Representative WIGGLESWORTH was born in Boston, a nephew of the late United States Supreme Court Justice Oliver Wendell Holmes. He graduated from Harvard in 1912 and from Harvard Law School in 1916.

BOSTON NATIVE

While at Harvard, he played varsity quarterback on the football team 3 years and also played varsity baseball and ice hockey.

He was Harvard backfield coach for 6 seasons during which Harvard teams won 50 games, lost only 1, and tied 4.

He has been in public service all of his adult life.

He was an artillery officer in France during World War I. Earlier, he was a secretary to the United States Governor General of the Philippines.

Following the war, WIGGLESWORTH was legal adviser to the Assistant Secretary of the Treasury in charge of foreign loans. He was Secretary of the World War I Foreign Debt Commission, assistant to the Agent General for reparative payments in Berlin, and Paris representative and general counsel for the 12 organizations created under the Dawes plan in 1927–28.

But WIGGLESWORTH's activities have not been restricted to national and international affairs.

His files also are crammed with letters from constituents he has helped and from representatives of the shoe, granite, and shipbuilding industries which he has helped over economic hurdles.

AIDS CONSTITUENTS

His 13th Massachusetts District includes Brockton, one of the Nation's shoe manufacturing centers, and Quincy, home of Bethlehem Steel Co.'s Fore River shipyards and the bustling granite industry.

Unlike most politicians, Representative WIGGLESWORTH has kept his charming family in the background during his political career.

However, last year when it appeared he might have a tough fight in the GOP primary, WIGGLESWORTH's wife and three girls pitched in to help him campaign.

A LANDSLIDE

It wasn't a fight—it was a landslide for WIGGLESWORTH.

His gracious wife, the former Florence Booth, of Louisville, Ky., disclosed that her husband often discusses with his family the merits of legislation he is called to vote upon in the House.

"He worries about doing the right thing," Mrs. Wigglesworth told the Herald, "particularly on questions that aren't all black and white."

And she said more often than not he brings home stacks of material to study in connection with his work in Congress.

She told of a circumstance in 1941—before the attack on Pearl Harbor—when Representative WIGGLESWORTH bought a home in Washington's Georgetown section in the morning and voted to extend the draft in the afternoon.

STILL FAMILY JOKE

She said he was convinced that the draft-extension vote would be political suicide. Nevertheless, she said he was convinced it was necessary.

Representative WIGGLESWORTH sent his family a telegram that evening which has been a family joke ever since:

"Bought house this morning, voted to extend draft this afternoon. What shall I do with the house?"

They kept it, of course, and still have it.

Despite WIGGLESWORTH's almost slavish devotion to his job, he has given abundant time to his 3 girls, Ann, 24, who graduated from Smith College in 1955 and has been teaching 2 years; Mary, 22, who graduated from Radcliffe in June; and Jane, 19, a Smith sophomore.

He has taught them sailing, swimming, and tennis and he still takes them to football and baseball games.

"He's wonderful to talk to, too," Ann said. "If there's anything on your mind he listens with understanding and then gives his advice.

"Aside from loving him very much, we have great admiration for him."

Representative WIGGLESWORTH apparently treats his family the same way he does the public. Fuss, attention, or publicity embarrasses him.

"He never misses a birthday or family occasion," Mrs. Wigglesworth said, "and he's always coming up with little surprises.

"Only the presents and the surprises just sort of appear. He likes to do it in a quiet way."

The First Congressman O'Hara

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article by Enoc P. Waters, Jr., in the Chicago Defender of August 24, 1957, in which mention is made of the Honorable James E. O'Hara, a distinguished member of the Negro race who served as a Representative from North Carolina in the 48th and 49th Congresses and died in 1905. He was the first Member of Congress by the name of O'Hara, and the family name is carried into the present generation by his direct descendant, Dr. Ralph O'Hara Lanier. Dr. Lanier, whose middle name is that of the first Congressman O'Hara, at one time was president of Texas State University, later under President Truman was our Ambassador to Liberia, and at present is in New York City with the Negro College Fund.

Mr. Waters' article follows:

ADVENTURES IN RACE RELATIONS—NAMES ARE FOOLERS

(By Enoc P. Waters, Jr.)

Anyone who is fascinated, as many are, by the always interesting and occasionally humorous situations that develop in the field of race relations, will find it worthwhile to trace the origin of the surnames that Negroes bear.

We are told frequently that names like Campanella, Fitzgerald, O'Shaunessey, Kirkpatrick, Dago, Czbowski, or Mazique are not typical Negro names. Are Johnson, Smith, Brown, Robinson, or Kemp typical Negro names?

If the national origin of a name is to be the determining factor then only an African name could be regarded as typical for a Negro just as an Italian name is typical for an Italian.

But in this American melting pot, it's not unusual to find a Jew named Jones and a Greek bearing a French name. There are Poles named Powell and Irishmen named Cohen.

So you just can't judge a man by his name. A story about a Reconstruction Congressman named James E. O'Hara from North Carolina got us to thinking about O'Hara. He served from 1882 to 1887 in the 48th and 49th Congresses.

One of the most illustrious—and incidentally oldest—Member of the present Congress is a gentleman from Illinois named BARRATT O'HARA. Though white, he probably represents more Negroes than the Reconstruction O'Hara who was colored.

In fact, the Illinois O'HARA once met another distinguished gentleman named Rafael O'Hara Lanier, an educator and a diplomat. Seeing only his name, one might suppose that the latter is a combination of Spanish, Irish, and French, and he very well might be, but all who see him regard him as a Negro.

After conversing a while, the two decided that it is quite likely that they have some ancestors in common.

The Reconstruction Congressman once was introduced to some Irish immigrants who had been anxious to meet him believing that he might be a son of the Old Sod.

When they saw his brown face, they were astonished.

"And how long since you kim over?" they asked.

He smiled: "Oh, I've been here quite a few years," he said truthfully, "but the climate of North Carolina has tanned me considerably."

"Begad, but it has that," his visitors agreed, and promptly decided to settle in a northern State where they hoped the climate would not affect their complexions to a similar extent.

Foreign Monopoly

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. METCALF. Mr. Speaker, I have just finished reading a special report by the Attorney General outlining results of a study of the competitive problems of the nickel industry in relation to the Defense Production Act.

This is an interesting report. The Attorney General has found out, as some of us have been maintaining all along, that the International Nickel Company of Canada, Ltd.—INCO—is a ruthless monopoly; that it is a foreign concern, and hence not subject to our antitrust laws, and yet this administration has permitted it to assume the job of allocating a material vital to defense and to nondefense industries.

This report raises as many questions as it answers.

Why did the Attorney General not get around to INCO earlier? You will recall that the Senate Preparedness Subcommittee, in Document No. 4, 82d Congress, reported that INCO, which produces over 85 percent of the free world's nickel, was one of the most formidable monopolies the subcommittee has found.

The report shows that someone must allocate the existing nickel supply. Because the Government is a nickel producer and helps create the shortage, it would seem logical that the Government might allocate the supply. Instead, this administration has allowed a foreign monopoly, which they now denounce, to allocate the supply. This makes me wonder about the legal status of INCO's entitlement system.

I also wonder if it is fair that the production and distribution of INCO competitors be reported, directly or indirectly, to INCO for consideration in making these entitlements.

And, should the Government, which now recognizes INCO's monopoly and previous unfair practices, permit INCO to allocate NICARO nickel?

Mr. Speaker, I started asking questions about nickel last year after I read that the Interior Department was developing a mineral lease with INCO for lands in the Superior National Forest in Minnesota. According to the most recent information I have, that lease has not been executed and there is no plan to approve it at present.

This brings up two more questions:

First. Since INCO is a monopoly according to the Attorney General, would he approve leasing the Minnesota Forest Service property to them?

Second. If not, how long will it be before someone else gets a chance to lease the property and help break the monopoly?

The Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MULTER. Mr. Speaker, in the light of recent occurrences in Syria, it is important to reread the remarks of our distinguished majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], of November 29, 1956, as follows:

For the past year and a half, the administration has been living in a dream world—a world of hope—in foreign affairs.

The realities of current world history and events are now catching up with the administration and our people are having a rude awakening.

We have seen the myth of peaceful coexistence exposed by the ruthless actions of the Soviet Union in Hungary.

We have seen the actual threat of another world war by the actions of the Kremlin. And in our own country we see leadership that, with firmness, could have averted these conditions, just the same as Chamberlain could have averted World War II if he had followed the policy of firmness. Chamberlain showed that the policy of appeasement—or peace at any price—is the road to war.

We see our leadership, in desperation, acting with a lack of policy and in a confused state of mind which may contribute to greater danger.

In Hungary, we have witnessed Communist Russia sending in its forces of killers to suppress the fight for liberty. The reason they moved into Hungary is because the uprising was a fight against any or all forms of communistic government. We have witnessed the Soviet Union establishing the Kadar regime, which is not a legitimate government.

We have heard the pleas of fighting and dying Hungarians falling on ears of inaction. Action that the United States and United Nations could have taken and failed to take has played into the Kremlin's hands in Hungary and elsewhere.

What can the United States do?

In addition to sending of medicine and foods, which has been done to some extent, the United States could announce its refusal to recognize the Soviet puppet Government of Hungary until all Soviet troops are withdrawn and those Hungarians forcibly deported to Siberia returned to their homes.

As I suggested to one of the highest officials of the State Department 2 weeks ago, the United States Government could urge and support a United Nations announcement that United Nations observers were going into Hungary forthwith. The United Nations observers could fly to the Budapest Airport in a United Nations plane clearly marked as such. This could be done under the resolution already approved by the United Nations General Assembly providing for U. N. observers to be sent to Hungary.

The Soviet Union and the Soviet puppet Government of Hungary could only do 1 of 2 things—admit the U. N. observers or arrest and expel them. The burden then would be upon the Soviet Union and the present illegitimate Hungarian Government.

Sending U. N. observers would convey a message of real hope to the patriots in Hungary. It would be a stimulating action to millions of others behind the Iron Curtain who are longing for freedom from any kind of Communist domination.

It should be remembered that, not so long ago, the Communists had to bend to world public opinion when Red Cross trucks with food and medicine were denied admission. As a result of that, world public opinion was aroused—and within 24 hours they permitted them to enter Hungary to bring relief to the suffering people.

It is the inactivity of the United States leadership—its attitude of an aggrieved but thoroughly passive spectator—which creates doubts in the minds of other free nations, and which gives the Kremlin and men like Kadar courage to proceed further.

It is now essential that we immediately get back to sound thinking, to firmness and consistency in our foreign policy, and regain the confidence of our friends throughout the world. This is a matter of paramount importance to all of us.

Now, read the following article that appeared in the U. S. News & World Report of December 7, 1956:

A NEW WAR BUILDS UP IN MIDEAST—SYRIA, ARMED AND RUN BY REDS, STIRRING TROUBLE

BEIRUT.—War—not just another little war, but a whole powder train of little wars which could touch off a world war—is in the air here in Beirut.

Within a few hours' drive over the mountains from this city, capital of Lebanon, is Damascus, the capital of Syria. And Syria has become virtually a Soviet satellite in the heart of the explosive Middle East.

In the half dozen countries of this part of the world, troops are on the move or are digging in, fearing attack. At the core of this military activity is Syria, armed by Soviet Russia, playing Russia's dangerous game in the area. And the Soviet Foreign Minister, in effect, has warned the West against an attack on Syria. Here is the picture:

Syria and Lebanon are at guns' point. Syrian troops are massed on the frontier of this little country, seeking to force it into the pro-Soviet alliance of Syria, Egypt, and Jordan.

Syria and Turkey are at odds, too. Turkey, armed and aided by the United States, has denounced Syria for its threats against Lebanon. The Turks, guarding their northern frontier against Russia, do not want to be outflanked by the Russians through Syria.

Syria and Iraq have been on the threshold of war for weeks. Syria has dynamited the pipelines carrying Iraq's oil overland to the Mediterranean. Iraq's Government, anti-Communist, fears the rise of Soviet influence in Syria.

Syria and Jordan are teetering between alliance and war. One faction in Jordan wants a deal with pro-Western Iraq. Another faction wants a deal with pro-Soviet Syria. It's nip and tuck. The country itself may be divided between Israel and its Arab neighbors.

Syria and Israel are enemies. Israel's armed forces could enter Damascus in a matter of hours. But Israel, fearing that such an attack would unite Arab rivals against her, is waiting, watching.

RUSSIAN STRATEGY

At the bottom of all these wars in the making over Syria is the Soviet Union. Russian plans to operate in the Middle East through Egypt were upset when Britain, France, and Israel attacked Egypt. Now, Western experts say, Russia is working through Syria, turning that country into its major base in this war-ready part of the world.

In Damascus, the United States Ambassador warned Syria about United States concern over the Soviet arms shipments. In Washington, the State Department announced that the United States would view with the utmost gravity any threat to the territory or independence of Baghdad Pact members—Turkey, Iraq, Iran, Pakistan, and Britain.

Soviet penetration into Syria is real, thorough, deep.

Syria's Army of from 40,000 to 60,000 men already has more Soviet equipment than it knows how to use. Total value of Soviet tanks, self-propelled guns and other weapons now in the country is estimated by the British at $60 million. Other reports place the figure at $100 million.

Soviet missions have made Syria their headquarters for the whole Middle East. Hundreds of Soviet experts, advisers, and technicians—perhaps even the crews for tanks and planes which Syrians cannot handle—are in the country.

Air bases in Syria have been equipped to handle Soviet jet fighters and bombers. Six MIG–17 fighters, manned by Soviet crews, escorted the Syrian President back to Damascus from a visit to Moscow—and remained in Damascus.

Communists, once underground, now operate openly throughout Syria. They publish four daily newspapers in Damascus. Their leader directs Communist activities in the Middle East from the Syrian Parliament, of which he is a member.

Press and radio throughout the country are under military censorship. The only foreign news printed is that distributed by the Soviet Embassy.

In addition to all this, Syria's pro-Soviet Army struck directly at Britain and France—and Iraq, too—in the midst of the war in Egypt.

ARMY AND OIL

Syria, up to now, has developed no oilfields of its own. But, in Syria, as in Egypt, Soviet agents found an easy means of cutting the flow of Middle East oil to Europe.

In Egypt, the Suez Canal normally carries 1.2 million barrels of Middle East oil a day, bound for Europe by tanker. Now the canal is blocked by ships sunk by Egyptians in the midst of the short war.

In Syria, 1 set of pipelines normally carries 550,000 barrels of oil a day, from Iraq to Mediterranean ports. When war began in Egypt, the civilian government in Damascus ordered Syria's Army to guard the pumping stations on these pipelines inside Syria. Instead, officers of Syria's Army dynamited the pumping stations, halting the flow of Iraqi oil westward.

The only Middle Eastern oil now reaching Western Europe through the normal routes is some 300,000 barrels a day flowing through a single pipeline from Saudi Arabia. This line, also passing through Syria, was left intact—in part because pro-Soviet leaders in Syria are still trying to get Saudi Arabia into their deal with Russia.

SMALL AND UNDERDEVELOPED

The Syrian base for Soviet operations in the Middle East is a semiarid, sparsely populated expanse of desert and mountains about the size of Oklahoma.

Most of Syria's 3.7 million people are poor farmers and desert tribesmen. Wealthy Syrians, living in the cities, own most of the farmland.

In Damascus, in a dozen smaller cities, groups of army officers, lawyers, schoolteachers, minority leaders, and professional politicians have kept the country's Government swamped in a mass of intrigue.

Within barely 10 years of independence, Syria has had five military coups—some bloody, some bloodless. There have been 20 cabinets and 4 different constitutions. Western experts on Syria have described its politics as a basket of eels. Now, if Soviet agents have their way, all this is coming to an end.

POWER BEHIND SCENES

Real boss of Syria today is neither the President nor the Premier nor even the commander of the army, but a man just promoted to the rank of lieutenant colonel, Abdul Hamid Sarraj. He is a man little known outside Syria, a handsome bachelor of 32. He is chief of the army's intelligence corps and the head of a group of officers who run the army and, through the army, run Syria.

Most of Syria's professional officers still smart under the defeat of the Arab countries, including Syria and Egypt, by Israel in 1948. They admire Egypt's soldier-dictator, Gamal Abdel Nasser. Sarraj, particularly, was impressed by Nasser's ability to get arms from Soviet Russia.

Sarraj worked closely with Soviet agents, military and political, sent to Syria in the past year. Sarraj's own agents in the Syrian Army found evidence to dismiss or demote all prowestern officers, to promote and encourage all pro-Soviet officers who took Sarraj's orders.

Western intelligence reports say that it was Sarraj who pushed Syria's Government into a formal alliance with Egypt more than a year ago. It was Sarraj, too, these reports indicate, who negotiated the arms deal with Soviet Russia at a cost of turning Syria into the main Soviet base in the Arab world.

Under cover of the worldwide excitement over the brief war in Egypt, Sarraj tightened his grip on Syria. He persuaded the Government to declare martial law. Then the army created a war atmosphere and took over the country.

Every night, in Damascus, the air-raid sirens wailed, though there was no sign of planes in the sky. Buildings were blacked out. Streets were sandbagged. The army, directed by Sarraj, set up military censorship of the press and the radio. Pro-Western Syrian leaders were jailed, charged with con-

spiring with the British, the Iraqis, the Israelis.

Shipments of Soviet arms to Syria are being stepped up. They arrive on Soviet freighters, direct from Soviet Black Sea ports, at the Syrian port of Latakia, where the docks are under military guard. With the arms shipments come Soviet technicians, advisers, and experts.

BREAKING TIES

Most of the countries in this part of the world are new, only a few years out of colonial status under British and French management. Some, until recently, looked to the West European powers not only for markets for their oil, but for military protection. Now, since Britain and France joined Israel in the attack on Moslem Egypt, the old alliances are crumbling fast.

Jordan, for example, has announced the end of its alliance with Britain and its determination to order units of the British Royal Air Force, now based in the country, to get out.

Turkey, Iraq, Iran, and Pakistan, all allied with Britain in the Baghdad Pact, now meet without British representatives present. All are urging the United States to join the pact, already supported by United States arms and cash.

War, as it looks now, could flare up in this area at any time. And the charge by the Soviet Foreign Minister of a Western plot to attack Syria indicates that Russia does not intend to give up its position in that country without a fight.

Soviet Russia, out to win control of the Middle East through Syria, is dragging the whole area closer to a chain reaction of little wars which could involve the European powers and United States, too, in a world war.

Mr. Speaker, having in mind what has happened in the Middle East, we should ask ourselves how much more bungling by our State Department can we withstand.

Summary of Legislation Considered by the Committee on Banking and Currency of the House of Representatives, 85th Congress, 1st Session

---

EXTENSION OF REMARKS
OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. SPENCE. Mr. Speaker, legislation considered by the House Committee on Banking and Currency during the 1st session of the 85th Congress may be classified into three categories: Housing, small business, and finance. In the first two fields, the committee acted on emergency legislation early in the session to provide urgently needed assistance to housing and small business. Later the committee considered a comprehensive housing bill which was enacted as the Housing Act of 1957. A complete revision of the Small Business Act was reported by the committee and passed the House. Although this bill was not acted upon by the Senate at this session—instead, a temporary extension of the Small Business Act was enacted—action is expected early in the 2d session. In the third category, finance, the committee reported out a bill regulating savings and loan holding companies, which passed the House but had not been acted upon by the Senate when the session closed. Another committee bill extending the Export-Import Bank was enacted into law. As the session ended, the committee was engaged in extensive hearings on a revision of the Federal laws relating to banks, savings and loan associations, and credit unions. These and other bills acted upon by the committee are discussed below under the three headings, "Housing," "Small Business," and "Finance."

HOUSING

INTERIM AUTHORIZATION FOR FEDERAL NATIONAL MORTGAGE ASSOCIATION

PUBLIC LAW 85–10—HOUSE REPORT 51

HOUSE JOINT RESOLUTION 209

As the mortgage market tightened in late 1956, offerings of FHA and VA mortgages for purchase by FNMA under its secondary market operations sharply increased, with the result that FNMA had neared the limit of its funds in early 1957. In response to urgent requests for action to permit FNMA to borrow more funds for its secondary market operations, the committee on February 7 reported out a joint resolution increasing this authority by $500 million. This was a stopgap measure, designed to meet FNMA's immediate needs, pending more deliberate consideration of long-term needs. It passed the House on February 20, and passed the Senate with amendments on March 12. On March 14, the House agreed to the Senate amendments, and the resolution was signed by the President on March 27, as Public Law 85–10.

As enacted, the measure included, in addition to the $500 million increase for secondary market operations, an increase of $50 million for FNMA's special assistance purchases of cooperative housing mortgages and a technical amendment concerning limits on FHA insured mortgages on multifamily projects in urban renewal areas.

Under FNMA's Charter Act, it may borrow up to 10 times its capital and surplus to obtain funds for its secondary market operations; in early 1957, this worked out at about $1.1 billion. The resolution increased FNMA's capital stock held by the Treasury by $50 million; under the 10-to-1 formula this resulted in an increase of $500 million in borrowing authority, raising the limit to $1.6 billion. While most of FNMA's borrowing takes the form of obligations sold to the general public, it also has authority, subject to the overall 10-to-1 limit, to borrow from the Treasury; an increase of $350 million—to $1,350 million—was made in this authority. In return for the stock it received in FNMA, Treasury canceled $50 million of FNMA notes it held. These amounts were raised again later in the session by the Housing Act of 1957, discussed below.

Section 305 (e) of the National Housing Act authorizes FNMA to purchase cooperative housing mortgages insured by FHA under section 213 of that act. Public Law 85–10 raised the maximum amount of these mortgages which FNMA may hold under section 203 (e) by $50 million—from $50 million to $100 million—and correspondingly increased the limit per State from $5 million to $10 million. These amounts were raised again later in the session by the Housing Act of 1957, discussed below.

Section 3 of Public Law 85–10 makes a technical change in the method of computing the maximum amounts for FHA-insured mortgages on multifamily housing projects in urban renewal areas under section 220 of the National Housing Act. Under section 220, FHA may increase the mortgage limit by $1,000 per room in high-cost areas; the technical amendment makes it clear that this increase is allowable for projects which average less than 4 rooms per family unit.

EXTENSION OF VOLUNTARY HOME MORTGAGE CREDIT PROGRAM

PUBLIC LAW 85–86—NO HOUSE REPORT

SENATE JOINT RESOLUTION 115

The general housing bill (H. R. 6659, discussed below) as reported by the committee contained a provision extending the life of the voluntary home mortgage credit program, which was due to expire June 30, 1957. This program facilitates the flow of private funds for housing credit into remote areas and small communities. Requests for home loans are referred by VHMCP personnel to those lenders considered most able and willing to approve such loans. When it became apparent that action on H. R. 6659 could not be completed by June 30, the Senate and House on June 27 passed Senate Joint Resolution 115, extending the program through August 15, 1957. The measure was signed by the President on June 29.

HOUSING ACT OF 1957

PUBLIC LAW 85–104—HOUSE REPORTS 313 AND 659

H. R. 6659

At the time it acted on the stopgap FNMA resolution, the committee requested its Subcommittee on Housing to begin hearings on longer range solutions to serious problems in the housing field. The committee foresaw that in the prevailing tight money market it would be increasingly difficult for prospective home buyers to obtain financing on terms they could afford. The veterans' home loan program, which financed about 30 percent of housing starts in 1956, was falling off sharply as lenders turned to other investments with yields higher than the 4½ percent limit fixed by statute on GI loans. To meet the needs of the sizable group of home buyers who can afford only modest downpayments, legislation was clearly needed.

After receiving the subcommittee's recommendations, the committee on April 8 reported to the House H. R. 6659, designed to restore a sound home-building industry and to achieve other important objectives in the field of housing. After undergoing considerable modification in the House and Senate and in conference, this bill was approved by the President on July 12, becoming the Housing Act of 1957.

As approved, the Housing Act of 1957 contains six titles modifying housing programs under existing law.

Title I of the new act deals with FHA insurance programs.

Title II relates to the operations of the Federal National Mortgage Association.

Title III concerns the slum clearance and urban renewal programs.

Title IV deals with the low-rent public housing program and provides for the disposition of several federally owned war housing projects.

Title V extends and amends the military housing program and also amends the purchase price formula used in the acquisition of Wherry projects through negotiation.

Title VI continues and expands the college housing program, continues the voluntary home mortgage credit program, establishes a new 2-year program of farm housing research, provides for the exchange of data with foreign nations relating to housing and urban planning and development, directs the FHA Commissioner and the Administrator of Veterans' Affairs to set reasonable ceilings on discounts permitted in connection with Government-insured or guaranteed loans, and expands the authority of the Housing and Home Finance Agency to make urban planning grants.

TITLE I. FHA INSURANCE PROGRAMS

The new act increases the permissible maximum loan-to-value ratios on mortgages insured by FHA under its regular sales housing program, thereby permitting lower downpayments for home buyers. As amended, the maximum amount of a mortgage which may be insured by FHA under section 203 may not exceed 97 percent of the first $10,000 of appraised value of property, plus 85 percent of the next $6,000 of appraised value, and 70 percent of such value in excess of $16,000. Existing dollar ceilings—for example, $20,000 in the case of a 1- or 2-family home—were unchanged.

Prior to this amendment the maximum loan-to-value ratios were 95 percent of the first $9,000 of value and 75 percent of the appraised value in excess of $9,000—except that the President could increase the figure of $9,000 to $10,000.

Where the mortgagor is not the occupant of section 203 housing—as in the case of a builder-mortgagor—the mortgage continues to be limited to a maximum of 85 percent of the mortgage amount available for owner-occupants.

The new act also lowers downpayments for section 203 (i), which is designed to encourage low-cost housing in suburban and outlying areas. The minimum downpayment is reduced from 5 to 3 percent.

The law also increases the permissible maximum mortgage under section 203 (i) from $6,650 to $8,000.

The law also lowers the downpayments for urban renewal sales housing under section 220, to conform to the minimum downpayments permitted under the section 203 program.

The section 222 servicemen's mortgage insurance program is also modified so as to permit downpayments lower than 5 percent wherever such lower downpayments would be permitted under the revised downpayment schedule for FHA's section 203 program.

The new law required the FHA Commissioner, before putting the lower downpayments into effect, to make a finding that such action is in the public interest, taking into consideration possible effects on the economy and also the availability or lack of credit for GI loans guaranteed by the Veterans' Administration. On August 6, 1957, the lower downpayments permitted by the new act for the various FHA programs were made effective by regulation.

Other provisions realting to the FHA insurance programs: The act amends the FHA title I home improvement loan program to make payments of loss to the lender incontestable after 2 years from the date the claim was certified for payment, in the absence of fraud or misrepresentation, unless the Government demands repayment within the 2-year period.

The section 207 mental housing program is amended to permit a high cost area allowance of $1,000 per room regardless of the number of rooms per unit.

The program for rental housing for elderly persons under section 207 is amended to permit a maximum mortgage of up to $8,400 per unit for elevator-type projects. The act also makes it clear that units in section 207 projects for the elderly can be designed for and occupied by single elderly persons.

The act also amends the National Housing Act to require that in cases where replacement cost instead of value is used as a basis for mortgage insurance, the FHA shall furnish the applicant with its estimate of replacement cost instead of the estimate of value which it furnishes to the buyer in other cases.

Title I also contains a number of technical provisions relating to debentures, insurance premiums, transfer of moneys among FHA insurance funds, and other phases of FHA operations. It also repeals two obsolete provisions.

TITLE II. FEDERAL NATIONAL MORTGAGE ASSOCIATION

SECONDARY MARKET OPERATIONS

The law amends the provision governing the amount of FNMA stock which a mortgage seller must purchase under FNMA's regular secondary market operations. Under prior law FNMA could increase without limit the amount of the required stock purchase, the only restriction being that it could not be less than 1 percent of the mortgage amount. The new act establishes the maximum stock purchase requirement at 2 percent and retains the minimum of 1 percent.

The new act provides additional funds for FNMA's regular secondary market operation. By increasing FNMA's capitalization by $65 million, FNMA's borrowing authority is increased by $650 million, since under the law FNMA may borrow up to 10 times its capital and surplus. The increased borrowing authority brings FNMA's total mortgage purchase authority to approximately $2.25 billion. A corresponding increase is made in the amount of FNMA obligations which may be purchased by the United States Treasury.

FNMA special assistance functions: Under its special assistance program FNMA provides financing support on favorable terms for especially deserving FHA programs such as military housing, urban renewal housing, and cooperative housing.

The new act requires that until August 8, 1958, FNMA purchases of mortgages under its special assistance functions must be at par. Under prior law FNMA was required to purchase at 99 or more.

With respect to the fees and charges which FNMA may make in connection with special assistance mortgages, the new act places a limit of 1½ percent of the unpaid principal amount. Not more than half of such fees and charges may be collected at the time of commitment. Previous law contained no limit on such fees and charges.

The new act increases the authorization for FNMA purchases of mortgages designated by the President for special assistance. The new authorization of $450 million for the purchase of whole mortgages supplants the previous authorizations of (1) $200 million for the purchase of whole mortgages, and (2) $100 million for the purchase of 20 percent immediate participations in mortgages. The President has designated as eligible for special assistance, mortgages covering disaster housing, housing in Guam and Alaska, Wherry military housing, housing for the elderly, and urban renewal housing.

Additional FNMA support for cooperative housing is provided by an increase from $100 million to $200 million in the authority of FNMA to purchase FHA section 213 cooperative housing mortgages under its special assistance functions. The former $10 million limitation on outstanding purchases per State is increased to $20 million. Under the amendment $50 million of the total authorization is reserved for cooperatives certified by the Federal Housing Commissioner to be consumer cooperatives. Of the commitments in any one State, not more than $15 million may be outstanding at any time for cooperatives which are not consumer cooperatives.

The authorization for FNMA purchases of FHA title VIII military housing mortgages is increased from $200 million to $450 million, of which 7.5 percent is reserved for purchases of mortgages insured under section 809. Section 809 mortgages finance sales housing for essential civilians at military research and development centers.

TITLE III. SLUM CLEARANCE AND URBAN RENEWAL

The authority of the Housing and Home Finance Agency to make capital grants under the title I program for slum clearance and urban renewal is increased by $350 million. Under this program the Federal Government makes grants to local communities up to two-thirds of the cost of slum clearance and urban renewal projects.

The new act also provides an alternative formula for calculating the Federal capital grants, the use of which is optional with the community. In place of

the two-thirds Federal to one-third local grant formula for a project, the local public agency can have, if it so elects, the benefit of a three-fourths Federal to one-fourth local grant formula, if the community bears all expenses of planning, surveys, legal services, and administrative costs. In effect, under the alternative formula, the Federal Government pays a higher percentage of a reduced project cost, and it is expected that the Federal share of the total costs will be approximately the same under either formula. The purpose of the alternative formula is to make it possible to eliminate review and discussion at the Federal level of survey and planning costs and project administrative costs.

The new act also increases from 10 percent to 12½ percent the proportion of the capital grant authorization available to any 1 State.

In order to relieve both the local public agencies and the Federal Government of a considerable burden of paper work, the new act authorizes the Housing and Home Finance Administrator to permit local public agencies to make relocation payments in fixed amounts (not exceeding the present $100 limit) to individuals and families without the necessity of investigating the actual costs incurred in each case.

The maximum allowance for paying the relocation expenses of individual businesses displaced by slum-clearance operations is raised from $2,000 to $2,500.

The definition of "urban renewal plan" is amended to permit a local community to indicate in a submission separate from the urban renewal plan, the relationship between the urban renewal plan and the overall local planning objectives. The previous definition required that this relationship be indicated in the urban renewal plan itself.

Another amendment extends to slum clearance projects under the 1949 act a provision—previously applicable only to urban renewal projects under the 1954 act—whereby the estimated costs of facilities offered as noncash grants-in-aid can be deemed actual costs for certain purposes. This avoids delay and resulting expense in winding up an urban renewal project where the facilities offered as noncash grants-in-aid are still under construction and the actual costs thereof cannot be known until completion.

The new act also provides that, where the local housing agency is also acting as the local public agency for the purposes of slum clearance and urban renewal, the local housing agency may include in its administration building sufficient facilities for the administration of its slum clearance and urban renewal functions. In such cases an economic rent shall be charged for such facilities as are used for urban renewal functions. The rent shall be paid from funds derived from sources other than low-rent public housing projects administered by the local housing agency.

TITLE IV. PUBLIC HOUSING

Low-rent housing: The new act permits certain exemptions from income for the purpose of determining eligibility for both initial and continued occupancy. The amendment permits families seeking admission to public housing an exemption from their annual income of $100 for each minor—other than the head of the family and his spouse—and each adult dependent member of the family with no income, and up to $600 of the income of each member of the family other than the principal wage earner. For continued occupancy exemptions are permitted of either $100 or all or part of the income of each minor in the family—other than the head of the family and his spouse—and $100 for each adult dependent member having no income, and up to $600 of the income of any other member of the family other than the principal wage earner. Exemptions under prior law were—for admission, $100 for each minor; and for continued occupancy, $100 for each minor or all or any part of the income of each minor.

The permissible cost limits of low-rent public housing are raised from $1,750 to $2,000 per room for regular units, and from $2,250 to $2,500 per room for units for elderly persons.

Another amendment requires that every contract for Federal assistance to low-rent public housing projects shall require that the plans, drawings, and specifications follow the principle of modular measure in every case deemed feasible by the local housing agency.

Disposition of war housing projects: The new act contains the following provisions affecting the disposition of war housing projects: First, it extends until December 1, 1957, the time in which war housing project Conn–6029 may be sold to the Housing Authority of Wethersfield, Conn., pursuant to the provisions of the Housing Act of 1954; second, it directs the Housing and Home Finance Administrator to dispose of housing project Nev–26021, to the Housing Authority of Las Vegas, Nev.; third, it directs the Housing and Home Finance Administrator to convey two Lanham war housing projects, LA–16011 and LA–16012, to the State of Louisiana; fourth, it directs the Administrator to sell to the city of Layton, Utah, a war housing project known as Verdeland Park—Utah–42015.

TITLE V. MILITARY HOUSING

The title VIII military housing program is extended by the new act for 1 additional year, through June 30, 1959.

The new act makes the statutory maximum average of $16,500 per family unit for housing under the title VIII program applicable to each project rather than each mortgage. Since financing for a large project generally requires separate mortgages for the various areas of the project, and the mortgages in some of these areas may range somewhat higher than the $16,500 family-unit average limitation—although the family-unit average of all project mortgages does not exceed that limit—this section permits greater flexibility in project planning and financing.

The new act changes the formula used in determining the purchase price of Wherry Act housing acquired by the military services through negotiation. It substitutes for the allowance for physical depreciation previously included in determining such price, an allowance representing the estimated cost of repairs and replacements necessary to restore the property to sound physical condition.

TITLE VI. MISCELLANEOUS

College housing loan program: The new act increases the college housing loan authorization by $175 million—from $750 million to $925 million.

Eligibility under the program is extended to include: First, any public or nonprofit hospital operating a school of nursing beyond the level of high school, or approved for internships by recognized authority; and second, any agency, public authority, or other instrumentality of any State established to provide or finance housing or other educational facilities for students or faculty of any nonprofit public educational institution offering at least a 2-year program acceptable for full credit toward a baccalaureate degree.

A $25-million ceiling is placed on the amount of loans which may be outstanding to hospitals for housing for nurses and interns.

Voluntary home mortgage credit program: The voluntary home mortgage credit program is extended by the new act until July 31, 1959. Under previous law the program would have expired on August 15, 1957.

Farm housing research: The act authorizes a new program of farm housing research designed to assist in the improvement of farm housing by developing data and information on, first, the adequacy of existing farm housing; second, farm housing needs; third, problems in purchasing, constructing, or improving farm housing; fourth, the interrelation of farm housing problems and problems of urban and suburban housing; and fifth, any other matters bearing upon adequate farm housing.

The research, study, and analysis must be conducted by land-grant colleges financed with grants made to them by the Housing and Home Finance Administrator.

The Administrator's authority to make grants to land-grant colleges expires June 30, 1959, and the total amount of such grants cannot exceed $300,000 during either of the fiscal years ending June 30, 1958, and June 30, 1959. Appropriations are authorized to be made to carry out the program.

Exchange of data: The Housing and Home Finance Administrator is directed to exchange data relating to housing and urban planning and development with other nations where the exchange is deemed by him to be beneficial to the programs of the Housing and Home Finance Agency.

Discount control: Under the new act the Federal Housing Commissioner and the Administrator of Veterans' Affairs are directed to fix reasonable limits on the charges, fees, and discounts imposed upon the builder, seller, or purchaser, in connection with the financing of the construction or sale of housing covered by an FHA or VA mortgage. Such limits may vary in accordance with

the terms of the mortgage, the geographical area of the housing, and such other pertinent factors as the Commissioner or Administrator deems advisable. No loan may be insured or guaranteed by the Federal Housing Commissioner or the Veterans' Administrator unless the lender certifies that no charge, fee, or discount has been imposed by it in excess of the limits prescribed by the agency concerned.

Urban planning grants: The new act extends eligibility for section 701 planning grants to, first, official governmental planning agencies for areas threatened with rapid urbanization as a result of the establishment of rapid and substantial expansion of a Federal installation, and, second, State planning agencies, to be used for the provision of planning assistance to such areas.

SALE OF HOUSING PROJECTS IN ALEXANDRIA, LA.

HOUSE REPORT 220

H. R. 5603

This bill, providing for the conveyance of two Lanham Act projects to the State of Louisiana, was reported by the committee on March 25, and passed the House on April 1. The Senate did not act on this bill, but it did include substantially the same provisions as an amendment to the general housing bill, and the proposal was enacted into law as section 402 (c) of the Housing Act of 1957, discused above.

SALE OF HOUSING PROJECTS IN DECATUR, ILL.

PUBLIC LAW 85-234—NO HOUSE REPORT

S. 2460

This act provides for the conveyance of 2 Lanham Act projects in Decatur, Ill., to the city of Decatur or its housing authority, for $260,000, on condition that the projects will be demolished within 5 years. The bill pased the Senate on August 21; passed the House August 23; and was approved by the President.

SMALL BUSINESS

SMALL BUSINESS LOAN AUTHORITY

PUBLIC LAW 85-4—HOUSE REPORT 8

S. 637

The first hearing of the committee during 1957 was held January 23, on legislation to increase the Small Busines Administration's authority to make loans to small businesses. At the close of 1956, SBA's outstanding business loans and commitments had reached $137 million, just $13 million short of the statutory limit of $150 million then in effect. Since applications for such loans were being approved at the rate of about $13 million a month, prompt action was required to prevent a sudden interruption in SBA's lending program. Accordingly, the committee on January 28 reported out H. R. 3109, which provided for an increase of $80 million in the business loan authorization; this was the amount estimated to be sufficient to permit operations through July 31, 1957, the expiration date then provided in the statute. On January 29, the Senate pased S. 637, providing for an increase of $65 million. On January 31, the House passed S. 637, with an amendment substituting the provisions of H. R. 3109. The Senate agreed to the House amendment the following day, and on February 11 the bill became Public Law 85-4. As enacted, it raised SBA's business loan authority by $80 million, from $150 million to $230 million.

REVISION OF SMALL BUSINESS ACT

HOUSE REPORT 555

H. R. 7963

Under the Small Business Act of 1953, as in effect at the beginning of the 85th Congress, the Small Business Administration was scheduled to expire on July 31, 1957. On May 14, 1957, the committee began hearings on legislation to extend this expiration date and revise the Small Business Act, as a result of which the committee on June 13 reported to the House a bill, H. R. 7963, which completely rewrites the Small Business Act, making various changes in the interest of promoting a more vigorous and efficient program of assistance to small business. The bill passed the House on June 25.

The principal changes embodied in H. R. 7963 are: First, to make the Small Business Administration a permanent agency; second, to increase the authorization for loans to small business; third, to provide for a more equitable share of Government procurement for small business by requiring a new definition of small business for procurement purposes; fourth, to reduce the interest rate on direct SBA business loans and on SBA's share of such loans made in participation with private lenders and to eliminate the ceiling on the interest rate on the private lender's share; and fifth, to replace the Loan Policy Board with a National Small Business Advisory Board.

At the close of the 1st session of the 85th Congress, H. R. 7963 was pending before the Committee on Banking and Currency of the Senate, where action is expected early in the second session.

EXTENSION OF SMALL BUSINESS ACT

PUBLIC LAW 85-120—NO HOUSE REPORT

S. 2504

When it became apparent that the Senate could not act on H. R. 7963, discussed above, in the first session, the Senate enacted S. 2504, a bill extending the Small Business Act for 1 year, through July 31, 1958, and increasing its authority to make loans to small business by $75 million, to $305 million. The House passed the bill on August 2, and it became law on August 3, effective retroactively, as of July 31.

FINANCE

EXTENSION OF EXPORT-IMPORT BANK ACT

PUBLIC LAW 85-55—HOUSE REPORT 221

H. R. 4136

Following a precedent established in 1945 and continued in 1951, the committee acted early in the 85th Congress to extend the life of the Export-Import Bank for 5 years, through June 30, 1963. This extension was provided for in H. R. 4136, reported by the committee on March 25. The bill passed the House on April 9 and the Senate on June 5, and became law on June 17.

The Export-Import Bank is an agency of the United States established in 1934 to assist in the financing of exports and imports between the United States and foreign countries. Most credits of the bank finance the export of United States manufactured or agricultural products, or services. To a limited extent imports into the United States are also financed but generally financing from commercial banks and other private sources is available for this purpose. A provision of the charter of the bank expresses the intent of Congress that the bank should encourage and not compete with private capital and throughout the years the relationship between the bank and private lenders has been most harmonious.

All of the $1 billion authorized in outstanding capital stock of the bank is owned by the United States Treasury. The bank is authorized to borrow funds from the Treasury up to a maximum amount of $4 billion outstanding at any 1 time.

Over the 23-year period ending December 31, 1956, the bank had financed sales of United States products and services in 68 countries of the world. Over this period loans disbursed totaled $5,277 million. Of these, $2,641 million had been repaid leaving outstanding $2,636 million of loans. In addition, the bank had undisbursed commitments of $1,553 million. Over this 23-year period gross earnings aggregated $777.5 million while interest and dividends paid to the United States Treasury totaled $328.9 million. After payment of all operating expenses and losses charged off, a reserve of $435.1 million has been accumulated by the bank. The Treasury as owner of all the capital stock of the bank is the beneficial owner of the accumulated undisbursed reserve.

The bank has an outstanding record of successful operation. Total losses charged off approximate only $500,000. As of December 31, 1956, installments of principal past due totaled approximately $9.3 million. These have not been declared in default or charged off against the bank's earned reserves of $435.1 million because of the expectation of eventual repayment. Even if past due principal amounts are added to losses actually charged off, the ratio to aggregate loan disbursements of $5,277 million is less than one-fifth of 1 percent.

Many of the development projects abroad for which the bank assists in the financing of export of American goods and services for these projects, require considerable time for completion. In order that the development of projects of this type may proceed on an even flow basis the committee has deemed it wise to act well in advance of the scheduled expiration date of the bank's lending authority. The 5-year extensions of the agency allow operations to proceed without interruption but at the same time automatically bring the agency up for review by the committee at periodic intervals.

REGULATION OF SAVINGS AND LOAN HOLDING COMPANIES

HOUSE REPORT 178

H. R. 4135

In 1955 the committee reported out a bill, H. R. 6627, designed to regulate holding companies in the field of commercial banking. It was subsequently enacted into law and became the Bank Holding Company Act of 1956. Shortly after the committee had reported that bill a new holding company was formed

in the savings and loan field. In view of the potential problems that could develop from a holding company movement in the savings and loan field the committee decided to take action before these problems assumed the complex status that had been encountered in dealing with the holding company problem in the commercial banking field. Accordingly, the committee on March 1, 1957, reported H. R. 4135, to protect against the encroachment of holding companies in the savings and loan field. The bill passed the House on March 21. Although the Senate did not act on this measure during the first session, title VI of the Senate-passed Financial Institutions Act of 1957 contains substantially similar provisions.

Savings and loan associations are community institutions devoted to encouraging thrift and home ownership. Typically they are managed by local people and are mutual institutions. At the end of 1956 there were over 6,000 savings and loan associations in the United States with combined assets of over $43 billion. These institutions held slightly over 34 percent of the mortgaged debt on the nonfarm homes of the country. Although most of the associations are mutual institutions, the laws of 14 States permit the organization of permanent stock associations. The stock associations account for approximately 6.6 percent of the number and 10.5 percent of the assets of all savings and loan associations operating in the United States.

While there are several ways a holding company might gain control of a savings and loan association, the simplest way is by buying a controlling interest in the permanent stock of a stock association. This has been the method used in all instances which have come to the committee's attention.

H. R. 4135 as reported by the committee and passed by the House prohibits any holding company from acquiring control of two or more savings and loan associations if the savings accounts in the associations are insured by the Federal Savings and Loan Insurance Corporation. The bill also denies FSLIC insurance to any uninsured savings and loan association if it is controlled by a holding company which also controls an insured savings and loan association. The bill prohibits any insured savings and loan association controlled by a holding company from making any loan to the holding company or any of its subsidiaries. The bill does not have any retroactive effect as it would not require an existing holding company—and there are only a few—to divest itself of an insured association it now controls. However, it does prohibit an existing holding company from acquiring control of any additional insured association after enactment of the act.

FINANCIAL INSTITUTIONS ACT

H. R. 7026 AND S. 1451

On July 15, the committee opened hearings on H. R. 7026 and S. 1451. These bills rewrite the Federal laws relating to banks, savings and loan associations, and credit unions. In addition to eliminating obsolete provisions of law and rearranging other provisions in more logical order, the bills embody numerous substantive changes in these laws. Hearings continued for 5 weeks, and were then suspended due to the impending adjournment of Congress. They are scheduled to reopen early in the second session.

Progress Against Status of Forces

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BOW. Mr. Speaker, as another session of Congress ends, we can report considerable progress in the fight against the status of forces treaties and important improvement in the situation of servicemen subjected to foreign courts.

The Pentagon was shaken by the extent of official and public indignation when we first brought the status of forces issue to light during debate on the Selective Service Act 2 years ago.

The Pentagon attitude of apathy and indifference has undergone remarkable change. Commanders in the field were alerted to their obligations to protect accused servicemen to the fullest possible extent. Studies of the criminal codes of the foreign nations were expediated so that for the first time the officials of the State and Defense Departments knew what kind of justice our men could expect to receive.

Prison conditions have improved greatly. In Japan, as the result of the publicity we have given the issue, all American prisoners have been transferred to a single prison which is more modern than others though still lacking in many facilities Americans consider essential.

Better interpreters have been employed since we began to fight these treaties, and the Congress has enacted legislation to pay attorney fees for GI's who fall into the hands of foreign courts. Men with legal training are now being assigned as observers, and their reports are being brought into Washington for review.

In some cases appeals are being urged. Some diplomatic interest has been evidenced.

In the Girard case, solely because of the public interest aroused, the assistant judge advocate general has been sent to aid the defense.

One of the American civilians, former national commander of the American Legion, Alvin Owsley, who is in Japan for the Girard case, has inspected Yokosuka prison and reports that conditions are reasonably satisfactory.

All of these developments, alleviating the conditions under which our men are held and helping them to secure better treatment in foreign courts, have come about directly as a result of our demands for modification of the Status-of-Forces treaty and related agreements. It is a tremendous change from the attitude of indifference we found 2 years ago.

More important, the public and Congress have been aroused. House Joint Resolution 16 has been reported by Foreign Affairs. The Armed Services Committee has also reported legislation. Though our indignation makes it difficult to be patient, we can count this as real progress toward eventual modification of the treaties themselves. No legislative battle is easy. This one, against such formidable opponents, has been particularly difficult. I think we have come a long way toward eventual success.

Editorial Refuting Attack Upon Senator Neuberger by Oregon Republican Committee

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a vigorous editorial from the Pendleton East Oregonian, of Pendleton, Oreg., of August 30, 1957.

This editorial, entitled "Birds of a Feather?" exposes a recent attack made upon me by the Republican State leadership in Oregon—an attack based upon Senate rollcalls in which I overwhelmingly supported the foreign policy position taken by President Eisenhower.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIRDS OF A FEATHER?

By launching an attack on the voting record of Senator NEUBERGER the leadership of the Republican Party in Oregon has, it seems to us, revealed that it sits with party conservatives who are openly opposing much of President Eisenhower's legislative program.

The chairman of the Republican Party in Oregon, James F. Short, used a Congressional Quarterly survey of the voting of Senators and decided that Senator NEUBERGER's voting record on so-called economy legislation was appalling.

The Congressional Quarterly's economy survey is based on 23 Senate rollcalls between January 3 and July 28. On those 23 rollcalls the recommendations of President Eisenhower were made clear 17 times and out of those 17 rollcalls Senator NEUBERGER voted with the President 13 times. No other Democrat supported the President on as many rollcalls.

Mr. Short's inclination to attack Senator NEUBERGER on the slightest provocation is understandable. The question in this case is whether Mr. Short realizes the punch he threw at Senator NEUBERGER knocked the President's hat off.

We suspect that Mr. Short knew exactly what he was doing. He must have known that Senator NEUBERGER had been supporting most of President Eisenhower's legislative program. We have called attention to the

fact that Senator NEUBERGER has voted differently from Oregon's senior Senator, WAYNE MORSE. Mr. Short is well aware, we're sure, that Senator MORSE has opposed all Eisenhower proposals.

Mr. Short saw the opportunity, we think, to get 2 birds with 1 stone. And by doing so, he left the clear impression that at Oregon Republican headquarters the boys who call the shots think the birds are of the same feather.

The Supreme Court's June 17 Opinions

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following articles written by Alan Barth and Harry Kalven, Jr. Mr. Barth is on the staff of the Washington Post and Mr. Kalven is professor of law at the University of Chicago. Their articles appeared in the July 1, 1957, issue of the New Republic:

THE SUPREME COURT'S JUNE 17 OPINIONS

(By Alan Barth)

Civil liberties have come back into fashion. In an extraordinary quartet of opinions handed down on Monday, June 17, the Supreme Court reaffirmed and revitalized its traditional role as the guardian of individual rights against arbitrary governmental authority. It imposed checks upon the investigating committees of Congress and a State legislature, upon the application of a Federal statute, and upon the personnel policies of the executive branch of the Government. Through all these decisions runs a common dominant theme: That national security is not to be achieved by overriding the freedoms guaranteed by the Bill of Rights.

The decision in the Watkins case is perhaps the most significant of the four because it arrests a power directly exercised by Congress itself—a point Professor Kalven elaborates in his comments which follow mine in this issue. The Court has said repeatedly, in half a dozen decisions since 1880, that the power to investigate is a limited power, subject to the same limitations which the Constitution imposes on the power to legislate, of which it is an adjunct. In reversing the conviction of John T. Watkins for contempt of Congress, however, the Court drew new and more meaningful boundaries for the application of this power.

"We have no doubt," the Chief Justice said for the Court, "that there is no congressional power to expose for the sake of exposure. The public is, of course, entitled to be informed concerning the workings of its Government. That cannot be inflated into a general power to expose where the predominant result can only be an invasion of the private rights of individuals."

But from its very inception 20 years ago, the House Committee on Un-American Activities regarded exposure of individuals—and punishment of them through pitiless publicity—as its principal purpose. It aimed, expressly, to punish by investigation what the Constitution forbade Congress to punish by legislation.

The committee has operated as a kind of itinerant auto-da-fe, intruding its inquisitorial nose into almost every aspect of American life, unrestrained by any jurisdictional limitations imposed upon it by the House and unconcerned about rights of privacy or immunities from governmental regulation. The failure of the House to define its function or to discipline it in any way left its jurisdiction so vague, the Court concluded, that witnesses called before it have no means of determining whether questions put to them have any relevancy to a legitimate legislative purpose. It was on this vice of vagueness that the Court rested its reversal of Watkins' conviction. But the whole tone and much of the content of Chief Justice Warren's opinion warned that "abuses of the investigative process may imperceptibly lead to abridgment of protected freedoms" and asserted "the responsibility placed by the Constitution upon the judiciary to insure that the Congress does not unjustifiably encroach upon an individual's right to privacy nor abridge his liberty to speech, press, religion, or assembly."

This emphasis on first amendment rights was fortified by the Court's decision on the same Monday, in the Sweezy case revolving around the refusal of a university professor to tell the New Hampshire Legislature about the nature of his past expressions and associations. The demand for such information, the Court declared, "unquestionably was an invasion of petitioner's liberties in the areas of academic freedom and political expression—areas in which Government should be extremely reticent to tread."

The decision in the Watkins case in no sense strips Congress of its power to investigate. It merely requires the House or Senate, when it delegates this power to a committee, to define the area of investigation; and it requires the committee to remain within that area. In addition, it makes clear that the object of investigation must be information desired by Congress, not the establishment of a public pillory. The Un-American Activities Committee, as presently conceived, cannot possibly operate under these strictures.

The Yates and Service decisions have a narrower impact. In the Yates case, the Court upset the convictions of some California Communist leaders under the Smith Act—but without repudiating its 1950 decision in the Dennis case which held the Smith Act to be constitutional. What Justice Harlan seemed to be trying to do was to restore to the clear-and-present-danger doctrine some of the original meaning given to it by Justices Holmes and Brandeis and almost completely drained from it by Chief Justice Vinson. He attempted to do this, without ever using the clear-and-present-danger phrase, by refining the definition of the kind of advocacy which the Smith Act makes punishable. Men may be punished for advocating overthrow of the Government by force and violence, the Court now emphasizes, only when those to whom the advocacy is addressed are urged, to do something, now or in the future, rather than merely to believe in something. This is, no doubt, a useful distinction. But, as Justice Black pointed out in a critical concurring opinion, defendants could still be convicted for agreeing to talk as distinguished from agreeing to act. Perhaps the chief significance of this decision lies in its indication that the Court is now profoundly concerned about peacetime sedition prosecutions and is disposed to scrutinize them with great care.

The significance of the Service decision—which comes 5½ years after John S. Service was discharged from the Foreign Service by Secretary of State Dean Acheson—may be limited to Mr. Service himself. By finding that his discharge was invalid, it affords him a measure of vindication and makes him eligible for back pay and reinstatement. But the McCarran rider under which he was discharged has been repealed; and the Truman loyalty-security program under the procedures of which he was cleared on six separate occasions, has been replaced by the Eisenhower program. There may be some utility in this decision, nevertheless, by reason of its plain warning to the administration that Federal employees may not be arbitrarily or wantonly dismissed and defamed.

In an important sense, all these decisions are tragically belated. The excesses they curb should have been curbed a decade ago. In the late 1940's, the Supreme Court rejected several petitions to review decisions by courts of appeals dealing with encroachments on first amendment rights by the House Un-American Activities Committee. In the Barsky case in 1948, for example, Judge Henry Edgerton of the Court of Appeals for the District of Columbia set forth in a dissenting opinion very much the same line of argument that was developed by Chief Justice Warren last week in the Watkins case. Judge Edgerton, joined by Judge David L. Bazelon, made this same argument in dissent when the Watkins case came before their court a year ago. Had the Supreme Court adopted their reasoning in 1948 instead of in 1957, congressional investigating practices might have been brought within proper limits then instead of now. Many injustices to individual witnesses and a number of convictions for contempt of Congress might have been avoided.

Had the Warren Court instead of the Vinson Court considered the Dennis case in 1950 in the light of the fervor for individual rights expressed in the Yates case in 1957, the Smith Act might have been held invalid. Had the Warren Court reviewed the Dorothy Bailey case in 1951, the result might have been—instead of the indecisive 4-to-4 division of the Vinson Court at that time—a clear pronouncement that Government employees could not be stamped with the stigma of disloyalty without the full protections of due process of law.

But, of course, no one can say with any certainty what the Warren Court would have done a decade ago; indeed, no one can say with certainty that the Winson Court, sitting today, would not have reached the very results that were reached on Monday, June 17. The differences between the two Courts cannot be ascribed to differences in personality and outlook alone. The climate of opinion in which they operated is a powerful factor, too—and perhaps the determining factor.

It is an attribute of judicial statesmanship to wait until time has ripened the readiness of society to accept new directions in the law. The panic atmosphere of a decade ago no longer prevails in anything like the same degree. Perhaps the real significance of the Court's June 17 opinion day lies in its reflection of a renascence among Americans of faith in their own institutions, of respect for the dignity of the individual, and of recognition that the only valid function of national security, after all, is to sustain those fundamental human rights which the founders of this Nation believed that free governments are instituted to secure.

(By Harry Kalven, Jr.)

A few weeks back in these pages I had occasion to review the then existing law on the powers of congressional investigating committees, with the facts of the Arthur Miller contempt trial as the special focus. I concluded by saying:

"The Supreme Court, after carefully avoiding these issues during the past decade, will soon decide the Watkins case. In so doing it will in all probability also cover the issues in the Miller case. I doubt if Mr. Miller will win. But I hope very much I am mistaken."

The Supreme Court has now decided the Watkins case favorably to Watkins—and, by implication, to Arthur Miller. My hope has been realized.

In the Watkins decision, the Court redirects our attention to the exact definition

in Federal statute of the crime of contempt: it is the refusal to answer any question pertinent to the question under inquiry. In Watkins, the Court is unable to discover from the record what the question under inquiry was, particularly as viewed by the witness at the time of the congressional hearing. The witness was therefore left, concludes the Court, with no adequate guide as to whether the question he refused to answer was pertinent or not; moreover, he was left with no adequate guide as to whether his conduct in refusing to answer would be a crime or not. Such vagueness in the application of criminal sanctions, so the Court argues, violates the due-process clause of the fifth amendment.

Now the Court recognizes that the balancing of the congressional need for information and the individual interest in privacy is an arduous and delicate task for any court, but the opinion repeatedly indicates that the Court, and not Congress, is the final arbiter of the matter. The Court begins with the basic authorization from Congress to the House Un-American Activities Committee, an authorization which has remained unchanged since 1938. "It would be difficult," says Justice Warren, "to imagine a less explicit authorization. Who can define the meaning of un-American? What is the single solitary principle of the form of government as guaranteed by our Constitution?" What is important here is that the Court takes that famous authorization for what it really is—a blank check from Congress to the committee. It concludes that the initial control of the House over the committee has been slight or nonexistent. The opinion is thus in part a judicial lecture to Congress on the responsibility of Congress for the guidance of its committees.

I think it is a fair reading that the Court will not permit Congress to set up committees free to investigate what, when, and whom they please. The opinion seems as much concerned with the dilemma of a court, when the committee authorization is so vague, as it is with the dilemma of the witness. The theory of the decision then, as I read it, comes to this: The Court is willing, and perhaps even eager, to defer to sober congressional judgment that certain given information is needed by Congress. But it will do so only if Congress will in fact exercise such a judgment. If Congress does, the pertinency requirement can then function as an important safeguard against the whims and arbitrariness of individual investigating committee members; it can function as a safeguard because the Court can subsequently tell whether the questions asked were pertinent or not. The Watkins case is thus a logical companion to the Rumely decision a few years back where the Court did make serious use of the pertinency yardstick.

Suppose now Congress were explicitly to authorize a committee to investigate communism in the labor movement. Would a witness then have to answer the questions about past associates which were put to Watkins? I am inclined to think the answer is "Yes." Does this then make the Watkins decision only a formal victory which Congress can quickly overturn? There are several reasons why this may not prove to be the case. First, such an inquiry might never be authorized by Congress for the Court decision has armed in an important way the Members of Congress who may wish to scrutinize the need for new investigations with greater care. Second, and more important, the Watkins case may have permanently changed the political structure of congressional investigating committees. It may require a decline of the standing committee, the patronage of which is inherited on strictly party seniority lines, and the rise of the ad hoc inquiry which cannot last forever.

This change from permanent investigating committees to temporary ones with more limited and explicit purposes would prevent a congressional committee from being owned in the sense that McCarthy, Jenner, Eastland, and Walter have tended to own committees in the past. And this might be a very great and salutory change. Finally, it is important to note that once more the committee—and not the witness—is losing the battle of publicity. The decision, if it does nothing more, should shatter in the minds of the public and the press the image of the omnipotent inquest.

It is the special flavor of the Watkins case, as it is of the Arthur Miller case, that the witness was candid about himself and refused only to tell about associates of many years past. The Court has little to say about this aspect and might equally have decided in Watkins' favor had he refused to talk about himself. There remains unsettled, therefore, the highly interesting issue of whether the Court would find such questions pertinent under an explicit and clear committee authorization, or whether it would find the information requested too stale.

Let us push our speculation one step further. Suppose Congress were in its authorization specifically to request a review of Communist activities over the past 20 years. The Court could no longer deny the questions were pertinent to the inquiry Congress requested, and it would be forced back to the constitutional issue of whether such information could serve a legitimate legislative purpose. This was the chief point Watkins had argued, coupling the staleness of the questions he was asked with considerable data on the real politik of the committee. The Court restates his argument, but then carefully observes: "But a solution to our problem is not to be found in testing the motives of committee members for this purpose. Such is not our function." The opinion, as anticipated, contains some useful reminders that it is not the function of congressional committees to try cases or to enforce laws; there is a condemnation of exposure for exposure's sake, and a surprisingly strong reference to investigations "conducted solely for the personal aggrandizement of the investigators." But the opinion is less clear than might have been hoped on whether informing the public is a legitimate and sufficient function of a committee. My guess is that the Court is loath to get into the question of whether an investigation has in fact no legislative purpose and hopes to obviate such questions by a stern reliance on the pertinency criterion.

Although Justice Clark in dissent appears to interpret the majority as in part resting its case on first amendment grounds, it is difficult to find that they do so. There is, however, an unexpected and powerful statement about the possible interferences with free speech and assembly:

"Abuses of the investigative process may imperceptibly lead to abridgment of protected freedoms. The mere summoning of a witness and compelling him to testify against his will about his beliefs, expressions, or associations is a measure of governmental interference. And when those forced revelations concern matters that are unorthodox, unpopular, or even hateful to the general public, the reaction in the life of the witness may be disastrous. This effect is even more harsh when it is past beliefs, expressions, or associations that are disclosed and judged by current standards rather than those contemporary with the matter exposed. Nor does the witness alone suffer the consequences. Those who are identified by witnesses and thereby placed in the same glare of publicity are equally subject to public stigma, scorn, and obloquy. Beyond that, there is the more subtle and immeasurable effect upon those who tend to adhere to the most orthodox and uncontroversial views and associations in order to avoid a similar fate at some future time. That this impact is partly the result of nongovernmental activity by private persons cannot relieve the investigators of their responsibility for initiating the reaction."

The recognition of the threat to the first amendment here serves chiefly to emphasize the basic issue of vagueness; yet the passage is a full acceptance of the thesis that an investigation itself can impair free speech—a thesis advanced by Judges Clark, Edgerton, and Prettyman almost 10 years ago and by Justices Black and Douglas in the Rumely case more recently.

Finally, in the Watkins case the Court not only looked to the authorization of the committee for clues as to the scope of congressional inquiry, but also carefully considered the authorization from the parent committee to the subcommittee, the statements of the chairman at the start of the hearing, the chairman's response to Watkins when he declined to answer, and the general course of the questioning. While it found all these equally ambiguous in this particular case, it conceded that other cases might differ significantly in these details, even though the basic committee authorization remained equally vague. However, the record at least in the Miller case seems highly similar to the Watkins record and this time I think it highly probable Miller will win. It might be noted that this part of the Court opinion leaves matters in a somewhat unsatisfactory state, since it is difficult to see how, for example, the chairman's clear statement of his purpose can be tested against the purposes of Congress, so long as the authorization from Congress to the committee remains as vague as it does here.

A Cut-Price Industry

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mrs. SMITH of Maine. Mr. President, responding to the request of the Council for Improved United States-Japanese Trade Relations, I inserted in the RECORD the letter of that organization making a protest against me.

In order to keep the RECORD balanced and fair, I now request that a rebuttal letter from the president and chairman of the board of the Bates Manufacturing Co. be placed in the RECORD.

I also request that an editorial by Mr. E. Howard Bennett in the August 22, 1957, issue of America's Textile Reporter be placed in the RECORD.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *September 3, 1957.*

Hon. MARGARET CHASE SMITH,
Senate Office Building,
Washington, D. C.

DEAR SENATOR SMITH: I have your letter of August 31 with the enclosure from the Council for Improved United States-Japanese Trade Relations.

As a rebuttal, I want to state that because of Japanese imports into the United States of over 1 million dozen flannel shirts, the Windsor Print Works, at North Adams, Mass., employing 600 people, was forced to close its doors under the avalanche of this unfair competition, after operating over 100 years. The plant closed permanently after spending millions of dollars on modernization. Most of the workers are still unemployed

after 18 months; the town has suffered, and my company has taken a loss running into millions.

The Luther Manufacturing Co., Fall River, Mass., closed its doors, after being in business for 60 years, because of the importation of Japanese combed goods which tore down the American price structure.

The Shelby Cotton Mill, Shelby, N. C., formerly making cotton print cloths which were exported, closed its doors 2 years ago because it could not compete with the Japanese in foreign markets.

The Martinsville Cotton Mill, Martinsville, Va., closed its doors last year because it, also, could not compete in foreign markets with the Japanese on cotton textiles.

The Lynchburg Cotton Mill, Lynchburg, Va., employing over 1,000 workers, is closing its doors this month because it cannot sell its production in world markets in competition with the Japanese.

The Kings Mountain Mill, owned by the Loomtex Corp., making print cloths for foreign markets, was also forced to close last year with heavy losses because it was unable to meet Japanese competition.

The York Mill, in Saco, Maine, closed its doors 2 months ago because of imports of Japanese combed goods which broke down the American price structure.

Our books are open to show how devastating the Japanese competition was to all these mills.

Many other mills in this country have closed their doors and are suffering because of low-wage competition from abroad. Only your bill can save the American textile industry, which equalizes through cotton legislation low foreign wages.

Sincerely yours,

LESTER MARTIN,
President and Chairman of the Board, Bates Manufacturing Co., Lewiston, Maine.

[From the American Textile Reporter of August 22, 1957]

A CUT-PRICE INDUSTRY

Thirty-five years ago most of the cotton manufacturing business was located in New England. And 1922 was approximately the year when that industry was suffering most from the effects of the aftermath of the first war. Remember that there were big units in New England in those days. Some of them were larger than any of the strictly cotton textile manufacturing plants in place at present in the Southeast. There was an oversupply of goods in the markets. The mills were curtailing in some instances while others ran with the excuse that it was cheaper to sell goods at a slight loss than to shut down. Chaos reigned. Now in those days we did not have the extremely elaborate accounting methods nor the production control systems which are prevalent today and, consequently, many mills ran for months before the treasurer knew or would admit that he was running deep into the red. In many instances, poorly informed or deceitful selling houses would keep assuring the mill that the market was due for a turn for the better and to warehouse goods to be cashed later at a profit.

But the cotton textile depression as far as New England was concerned continued, so that by the middle of the twenties, more than a few of the larger units were shutting down and liquidating and southern companies were taking over their market position. Then, too, devastating strikes hit those old New England companies in the early twenties and accelerated the flight of textile capital into the Southeast. But all through those trying times, we would keep hearing that if a certain mill could only get an eighth or a quarter of a cent if yard more, it would be in the black and mills continued to borrow money on this false hope.

Today we are hearing from the mills and from the markets similar wishful thoughts. And as we think back to those older days, we come to the conclusion that there is a very simple solution: don't sell goods at a loss.

We hasten to add that we can understand the arguments propounded that we must keep our labor force happy and together; that our overhead and carrying charges and other fixed costs go on and on and that by running we can alleviate some of this expense; that we will lose our contacts in the market, these being usurped by other companies who choose to run; as well as other, sometimes valid, reasonings for operating a company at a loss.

But it still all boils down to the matter of setting a profitable price and sticking to it, not just getting our seed back, but a reasonable profit percentage. But, except for a wartime boom and inflation, never has there been a time during the 70 years' life of this paper when there have not been price cuttings, failures, and liquidations.

Let's face it. Not everyone can make a profit every year. Some of us are smarter than others; some of us are more hard working and more ambidextrous than others; some of us are victims of bad fortune while others are enjoying good fortune. Yet, even if all of these different problems were resolved, human nature being what it is, there would always be some mill which would go into the market at a quarter of a cent cheaper, and it is this weakness and this one alone that causes the chaotic situations which the cotton textile industry periodically faces.

We have a great deal of admiration and respect for the abilities and thinkings of Leon Lowenstein. We were very much interested to read the other day the report of his speech to the executives of his Wamsutta Mills, where he stressed two very important factors which he considers to be the key to the future of cotton textiles. He said the first is proper production that parallels consumption. This is a very interesting statement. It isn't new. Other industries do it. Allegorically, there is a fellow sitting in an office high up in a building down in Newark who looks out the window occasionally to see what price the corner gas-station man is getting for his product, and if it doesn't look right for some reason or other, he advises his company to up the tank-wagon price a half a cent or a cent. Coincidentally, every other oil company in the United States arrives at the same pricing conclusion.

Then if the automobile owners, for some reason or other, do not see fit to buy quite as much gallonage, then, as an interesting coincidence, the refiners curtail a little—not one but all of them. And the order goes out to the pumping stations to slow down the pumps. Somehow or other, the earning statements of the oil companies seem to be pretty stable with a reasonable return percentagewise and we never hear any noises from either the consumer or the Department of Justice. It just all happens.

The few steel companies who control that production of the country with their round heels, fall down before the United Steel Workers and grant a substantial wage increase and then blandly announce an increase of $5 a ton, take it or leave it. And if we don't do the taking in the same quantitive amounts, then we note that the steel rate for the previous week was off a little. But the steel companies show profits and the stockholders get dividends. Every single, solitary industry in the United States except the textile industry is organized pricewise regardless of what the Department of Justice has to say about it and in spite of the injunctions in the Sherman Antitrust Act.

Letter after letter crosses this desk telling us that the market is more active but that the prices are unsatisfactory. Who makes the prices?

We are 100 percent in agreement with Mr. Lowenstein's insistence that production should parallel consumption, but he and everyone else in the industry wants a larger percentage of the total production and, at the same time, no one knows what consumption actually is in order to gear our production to it. At the same time, in our disorganized state, we try to make consumption bigger at, say, 72 cents a pound than it was at 80 cents a pound when everyone was getting a reasonable profit. What is the sense of a relatively large production if no one makes any money?

Is there any difference today in our marketing and merchandising habits than those of 35 years ago when if a mill needed an order to keep looms running, it would quote an eighth or a quarter of a cent less than the market? Immediately that lower price was the market and that wasn't done by the salesmen on the street, but more generally by one of the old commission house partners or even the mill president or treasurer himself. Many have been the times when we have seen a poor cotton-goods salesman fighting competition from his own mill.

But further to confound the pricing situation, let's turn to Mr. Lowenstein's second important factor which is proper protective tariffs and not a dependence on so-called voluntary quotas. He says, "We cannot be saved by quotas on imports. We can be rescued from this flood of cheap goods only by the proper protective tariffs."

We agree, but it must be apparent by now that the present administration has no intention of either providing suitable tariff protection for the textile industry nor any other. Just witness the recent experiences of the zinc and copper people.

Quoting Standard & Poor's Basic Analysis for Textiles and Apparel—"Imports into the United States have increased in recent years to around $1 billion annually. Imports of woolen and worsted fabrics reached a 33-year peak in 1956 of 34.7 million square yards, up from 19.5 million in 1954. Cotton cloth imports in 1956 rose to a peak of 188.2 million square yards, up from 36.3 million in 1952. At the same time, exports of cotton cloth continued to decline to 511.6 million square yards in 1956, from 802.4 million in 1951.

"Japan is estimated to have shipped about 1.3 billion yards of cotton goods in 1956, plus a billion yards of rayon goods. Shipments to the United States in 1955 approximated 150 million square yards of cotton, exclusive of another 78 million equivalent yards of goods made up in garments. Rayon staple sales to the United States of about 1.5 million pounds equaled the combined total for the 5 previous years.

"Rising imports have resulted from continued tariff concessions. Since inception of the reciprocal-trade agreements program in the 1930's, tariffs by early 1955 had been reduced an average of nearly 40 percent. On September 11, 1955, cuts ranging from 27 to 48 percent were put into effect under the General Agreement on Tariffs and Trade, negotiated at Geneva. Additional reductions were negotiated, effective September 10, 1956, for the benefit of Japan and other nations. In the case of unbleached cotton cloth valued at not over 70 cents a pound and with average yarn numbers not over 80, the duty formerly was 10 percent, plus 0.35 percent for each yarn number. It is now 7.5 percent plus 0.25 percent for each yarn number. Import duties on cotton sheets and pillow cases were cut from 20 to 12½ percent, and on other important items by 50 percent."

Getting back to the suggested control of production in relation to consumption, we are very much interested in the Census Bureau's report of cotton consumed in June 1957, as compared to the corresponding month in 1956. The Bureau says the daily rate of use in June of this year was 32,485 bales (30 working days) as compared to 32,-

393 bales in 1956 (25 working days). At the same time, it is interesting to note that active spindles reported in June 1957, numbered 19,740,000 as compared to 20,454,000 in 1956. How difficult it will be to control production if, year by year, fewer spindles can consume more cotton daily.

We agree with Standard and Poor's when they say "Excess capacity and highly competitive prices result in a high degree of instability of operations and limit worthwhile earnigs to relatively brief periods." That is what Mr. Lowenstein said.

Price concessions together with low figure imports have disorganized the market. The news that one mill has cut prices travels faster than the speed of sound. No other industry abuses itself so, pricewise.

Facts, figures, expert testimony—all indicate that it is a lack of industry self-discipline which upsets the market. But self-regulation, apparently, is abhorrent. Everyone knows it and it has been talked about for years. There will always be certain mills struggling to keep up, many of them falling by the wayside, because the well-equipped, well-managed, efficient, low-overhead fellows can stand the gaff of the cut price, but the industry as a whole cannot.

Distrust of Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BOW. Mr. Speaker, though the foreign-aid issue has been decided for this year, the comments of Editor John S. Knight published recently in the Akron Beacon-Journal express so well the feelings of many who are opposed to the program that I wish to call it to the attention of all concerned. Ohio State Senator Fred Danner forwarded the editorial to me with the hope that it could be circulated among all Members of Congress and throughout the executive department.

The editorial follows:

NO WONDER THERE'S DISTRUST OF FOREIGN-AID PROGRAM

(By John S. Knight)

President Eisenhower is disturbed by the cuts being made in his foreign-aid program.

He has indicated that unless Congress appropriates enough money to carry out the administration's aims, a special session will be called later in the year.

Without questioning the President's sincerity, I would disagree with him concerning the need.

Some weeks ago, President Eisenhower voluntarily suggested that he would accept $500 million less for the overseas assistance program than he had originally requested.

There must be a good deal of padding in the foreign-aid setup when the administration publicly admits that it can stand a half-billion-dollar slash.

We have been at the business of dispensing foreign aid since the Marshall plan was sprung on an unsuspecting public in 1947.

This would seem to be an opportune time to determine if substantial reductions can be made without, as the President says, "placing our interests in real jeopardy."

IT WAS SUPPOSED TO BE TEMPORARY—REMEMBER?

The controversy over foreign aid arises principally out of distrust.

At its inception, we were told that the money would be used for the rehabilitation of war-torn Europe. The assurance was given by the administration then in power that foreign aid was to be temporary and would be terminated when Europe's economic recovery has been assured.

As we all know, this didn't happend. Billions of American dollars continued to flow in a steady stream to nations showing every evidence of prosperity.

The next departure from the original concept of foreign assistance came when the State Department adopted foreign aid as a permanent arm of our foreign policy.

Less talk was heard about helping nations to help themselves as our Government began to use the so-called foreign-aid dollars in the dubious business of buying friends.

Immediately every neutral nation had communism for sale. If we didn't come through, they warned Russia would gobble them up.

The United States fell hard for this international con game and is still playing it to the limit permitted by Congress.

TWENTY-FIVE MILLION DOLLARS FOR SAUD BUT HE WONT TAKE IT

The third factor in creating public distrust of foreign aid is the sorry sequence of blunders by officials charged with its administration.

From Afghanistan to Yugoslavia, the record is one of extravagance and bad judgment. ECA, under Paul Hoffman, disbursed funds to unstable governments in Europe without seeking even a semblance of fiscal reform.

In the Middle East, weeds are growing over unfinished projects which had their origination in the fertile minds of impractical do-gooders.

As a gesture of good will, the United States offered oil-rich Saudi Arabia $25 million in foreign-aid funds. Our Ambassador is still pursuing King Saud, hoping to get rid of the money.

But the King, it appears, is busy with other matters.

Back in 1953, the Foreign Operations Administration built a bathhouse in Saudi Arabia for pilgrims on their way to Mecca. The project was abandoned when it was discovered there wasn't enough water to run the sterilizers.

BRITAIN AND ISRAEL USE MONEY PRUDENTLY

Now this is not to say that all foreign-aid programs have been wasteful or poorly conceived. Our intervention in Guatemala was a severe setback for the Communists.

Great Britain, unlike free-spending, undisciplined France, has used our assistance to the mutual advantage of both countries.

With American aid, the hard-working Israelis are taking great strides toward their cherished goals.

But these examples of accomplishment do not erase the public memory of profiteering in France, of graft in Korea, of supplying jet fighters to the crafty and unscrupulous Tito, who cuddles up to Moscow on the days we aren't looking.

The President can say as he did last Wednesday evening, that administrative malfunctioning and waste do exist in foreign aid, but that we "are human."

Still, there have been too many instances of extravagance and official bungling to inspire confidence that our money is being spent wisely and prudently.

As Senate Democratic leader LYNDON JOHNSON of Texas has said: "The foreign-aid program has lost considerable public support because of the way it has been handled."

With that statement, I heartily agree.

COMMITMENTS SUBJECT TO CONGRESS' APPROVAL

House Republican Leader JOSEPH MARTIN has announced that President Eisenhower won't stand for the new reductions in foreign aid.

"It's too deep a cut," said MARTIN. "This will not permit him to keep his commitments."

Unwittingly perhaps, Representative MARTIN has touched upon a basic flaw in the foreign-aid program.

Can the Chief Executive commit this country to foreign expenditures beyond what the Congress is willing to authorize?

Are there no limitations upon his authority? No protection against government by secrecy?

In essence, what Congress seems to be saying is that since it controls the purse strings, Presidential commitments will be honored at its pleasure.

By refusing to give the administration a blank check for foreign aid, the Congress is showing the President that we still have a government of checks and balances; that the legislative branch is no mere ratifier of executive actions.

It is likewise accurately reflecting the mood of the Nation.

Pearl Buck School for Retarded Children in Eugene, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, because I am sponsoring legislation in the Senate—S. 1092—to provide for Federal grants-in-aid for the training of teachers who specialize in the instruction of retarded children, I ask unanimous consent to include in the Appendix of the RECORD a report on the enlightened training program developed by the Pearl Buck School for Retarded Children in Eugene, Oreg. This program has been developed by Mrs. Elisabeth Waechter, of Eugene, who is the author of the brief report which I believe will be of interest to my colleagues in the Senate.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

PEARL BUCK SCHOOL'S MANUAL-TRAINING PROGRAM

(By Elisabeth Waechter)

Every educational program has to set goals according to which plans are made to prepare the participants as best as possible. In general the aims in a training program of mentally retarded children are the same as for their normal peers. We want to develop their abilities to the fullest and equip them to become useful and well-adjusted citizens of our society. Yet in dealing with the retarded, we have to face realistically the limitations due to their specific handicap. Even in cases of moderate retardation expectation of success in the academic field is extremely limited, the more severe the retardation the less can be expected academically. But the great majority of retarded children can succeed in the areas of practical work if trained properly. This training has to lead the children from learning to take care completely of their own personal needs to eventual economic usefulness. The children have to be taught simple basic skills, they have to be able to follow instructions and to do neat, accurate work. Good work habits are of utmost importance even in the simplest activities.

Many retarded children also have poor physical coordination and perfection in manual skills requires a great deal of prac-

tice. But unlike in the academic areas he can achieve as near equal quality as normals can.

Therefore, we plan to introduce a manual-training program for the teen-age boys and girls at Pearl Buck School, most of whom have been enrolled since a number of years. This program is of a prevocational nature and will introduce the students in the different skills and crafts. It will also help the teacher to evaluate the childrens' abilities in the different fields for future guidance and work placement.

The training will include all household skills as cooking, sewing, ironing, washing and cleaning as well as simple woodwork, pottery, bookbinding, weaving, and so forth. The children will work on simple projects, which will enable them to improve their skills. Though they do not work for the purpose to produce, but for the purpose to learn, the finished product is of importance. We want to instill in them the feeling of responsibility toward their own work, where only utmost effort will lead to good results. The manual-training program will be closely integrated with the academic program. Reading and arithmetic will become meaningful by studying the recipes or instructions for measuring ingredients and figuring the cost of the items. Their own activities will be related to community living with field trips to factories and plants, where similar products are mass produced as we make in our own shop.

We hope that this type of program will prepare our students better for a useful life than the average school program which is primarily oriented to teach academic skills.

The 1944 Communistic Rebellion in Slovakia

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the August issue of the Bulletin of the Slovak National Council Abroad entitled "The 1944 Communistic Rebellion in Slovakia":

THE 1944 COMMUNISTIC REBELLION IN SLOVAKIA

In late August 1944 a rebellion to overthrow the Government of the free Slovak Republic was set in motion by Communist partisan forces that were parachuted into the country by Moscow. Although the predominant element among the invaders was Czech, there were also Russians and Frenchmen among them. Conspicuous as one of the leaders promoting this putsch was Dr. Joseph Lettrich who is now an official of the Council of the Free Czechoslovakia and resides in the United States of America.

The objective of this offensive strategy was not only the ruthless subjugation of the Slovak Government but also the occupation of Slovakia and the integration of the crushed republic into the politically hybridized Czecho-Slovak Republic. With the help of Soviet troops this goal was achieved in the spring of 1945.

Some of the tactics and activities of these Red invaders are reliably described by Dr. Joseph Pauco in his latest book Slovácí a Komunizmus (The Slovaks and Communism; Middletown, Pa.; 1957). We quote here in part from the chapter Dielo pomsty (A Labor of Revenge)—Editor:

"The baseness of the partisans literally knew no bounds. They looted and plundered at will and murdered wantonly. Consequently the toll of the struggle was tragic even though the encounters did not last exceptionally long. Col. Otto Klement reports that 'official statistics released early in 1945 indicate that the so-called national uprising in 1944 cost the Slovak nation close to 80,000 lives sacrificed on Slovak territory.'

"The partisans and their henchmen terrorized Slovak villages. They categorically seized all citizens of note who had shown a lack of favor for communism. 'They robbed their apartments, homes, castles, factories, places of business, warehouses; they indulged in drunken orgies and began to annoy innocent victims and torture and kill them,' states Col. Otto Klement who was fully informed of all that happened.

"Thousands of Slovaks were subjected to unspeakable torture and inhuman torments. Among the first victims in this wave of terror was the Slovak labor leader and deputy to Parliament, Francis Slamen, who met his cruel fate in the town Brezno and Hronom. He was a typical Slovak laborer, one of thousands of diligent and honest Slovak workingmen, providing for his family by the toil of his hands. He was interested in the welfare of Slovak workers but his crime was that he based his interest on the principles of fundamental Christian equity. He organized a Christian-social worker association and as president of the group, he was shown a certain degree of deference by his coworkers who came to realize that the problems of the laboring class can be resolved without recourse to revolutionary methods, without violence, bloodshed, and confiscation of private property.

"When Francis Slamen noticed that there was a concentration of questionable elements in the neighborhood of Brezno, he decided to go to Bratislava in order to inform the state authorities. His plans were to leave in the evening of August 27, 1944, but an informer foiled his plans and a few hours before train time, he was forced into a partisan truck.

"The partisans then rounded up other influential loyal patriots in this town, driving them out of their homes at the point of leveled automatics. They packed them into the fore section of the truck while heavily armed guards took up the rear. At about 11 o'clock at night, the truck was started on its way but it halted every 50 meters or so in order to take on more unfortunate captives.

"Shortly before midnight, the truck loaded with captives left the heart of town. When the tragic company reached the town limits, two of the partisans who were stationed as guards in the truck opened fire on the victims. Several of them died on the spot; others lived a few hours longer.

"The sole survivor in this instance was the Judge Denk. His face and head were spattered with the brain fragments of Slamen and Dolnan and both his hands as well as his head and neck were torn with shot. But he did not lose presence of mind or consciousness and he was able to save himself. When the partisans came to carry away the corpses, Denk let himself be taken as a dead man with the dead. They left him in the cemetery for burial with the rest and it was there that he spoke to the gendarme who was left to take over, begging him to take him to a hospital from where his wife later smuggled him out to safety and survival.

"The heartless partisans who carried out this coldblooded task of political vengeance appropriated all the valuables on the persons of their victims right where they fell. They even stripped the dead of their shoes and before leaving the scene, they kicked the bodies about with violent brutality.

"Another notable victim of the partisans was the Catholic priest and Parliamentary Deputy Rev. Anthony Salát, who died in the first week of the rebellion. He was a man of noble character and his was the stature of an earnest Slovak patriot, a brilliant popular writer, a matchless public speaker and one of the most outspoken and determined opponents of communism.

"Through the years, dating back as far as 1929, he served as a parliamentary representative of the Slovak Populist Party. In public life he merited distinction not only as a gifted and objective speaker, a defender of Slovak rights in the forum of Prague's Hall of Parliament, but also as a journalist.

"Because of all this, the partisans marked as one of their earliest targets, a figure to be cut down mercilessly, this Father Anthony Salát, a distinguished national leader and an intrepid fighter for justice. They dragged him out of the quiet of his parish to the bridge that spans the Hron River. He begged to be allowed to make his confession but the rabble refused him this spiritual consolation. In answer to his request they sounded off rounds of satanic laughter and piercing ridicule which alternated with salvos from their automatics, felling the good priest to the cold paving of the bridge that he had built for the community.

"But even this did not satisfy the savage liberators. They beset the corpse of the murdered Father Salát and robbed it. Out of his vest pocket they removed his gold watch; out of his coat pocket they took his wallet. They even knocked out several of his teeth and claimed the gold caps from his dental work. Then they hurled the sadly abused and rifled body into the Hron.

"Father Anthony Salát was not the only Slovak Catholic priest done to cruel death by the partisans. Among others who perished under the violent hand of the oppressors were Fathers John Nemec, Martinka in Liptovsky sv. Michal and the seminarian Milan in Povazská Bystrica. A frightful death befell the pastor, Father Seda, in Liptovsky sv. Ján. In his report at a hearing of the United States congressional committee, the Catholic priest Dr. Stephen Náhalka, related the sufferings inflicted on Father Seda: 'They cut strips of skin and flesh from his back and in the end even amputated his genitals.'

"Father Nicholas Sprinc, a priest of the same diocese as Father Seda, reported the following: 'Father Seda was killed. The Reds first flayed him and then subjected him to tortures which it is not proper to describe for the press. His skin was stripped in thick layers. His tormentors then kept cutting off parts of his body and forcing them into his mouth to the accompaniment of blasphemous exclamations about "Holy Communion".'

"Another witness before the congressional committee was the Reverend Joseph Poess of Slovakia whom the partisans had severely wounded in the mass grave near Sklenné where he served as pastor. Ninety men perished in this mass grave but Father Poess saved himself in spite of the fact that he had been buried alive. He made his escape out of the grave and after untold sufferings and imprisonment, he made his way to freedom. The indictment which the partisans fabricated against him was that he had a secret sending station operating from the church steeple and that he cached weapons in the church sacristy and under the altar in his church.

"Col. Otto Klement had information on many individual instances of brutality wreaked upon helpless and innocent citizens by the partisans. In Turiec the sibling Mary R. fell into their hands. They struck her unconscious with a heavy milk can; they tor-

tured her by wedging pins under her nails and after she was completely spent, she had to kiss the feet of a common prostitute. Finally the partisan band bound her in chains and bore her off to their headquarters, Sklabina in Turiec. There they shot her and threw her body into a mass burial pit.

"Her father, John R., was an old man of 78. The partisans trussed him up and left him, barefoot and half naked, exposed outdoors all night. When he accepted a pair of shoes offered him by a lady, the gypsy who was guarding him beat him to bloodshed. Then the partisan horde took the old man into Sklabiná, aimed a shot at the nape of his neck just as they had dispatched his daughter, and threw him into the mass grave too.

"All these people had no connection whatever with political activities of any kind. Their offense was that they were, to some extent, propertied people.

"Singled out for sacrifice were also a number of intrepid officers who chose to accept no command in the uprising. For this service to their country, Colonels Kanák and Zverin as well as Lieutenant Colonel Kl'úcik and First Lieutenants Frecer and Sindler were shot to death. The distinguished General Turanec was put under house arrest in Banská Bystrica right at the outset of the putsch. Once they let loose the full strength of their partisan activities, they had General Turanec flown to Moscow where they tortured him for his uncompromising stand against communism.

"One of the major stigmas of the putsch is the concentration camp which the partisans arranged in the castle fortress Slovenská L'upca. Here they tormented and persecuted over a thousand victims—not only men but women and children, too. The superintendent of this concentration camp was the savage Communist Staudinger. One of the prisoners, R. Rudohorský, recalls some of the sufferings experienced in Slovenská L'upca:

" 'The housing of the prisoners was horrible. The overseer packed over 150 people into a single room. Other sections were crowded with as many persons as could possibly be forced into them. Household furnishings were removed. From the beginning, the prisoners were bedded on the bare floor; later the authorities allowed them to bring in some straw. Spies, informers and instigators of trouble were planted among the prisoners. Hygienic appointments in this concentration camp became a thing of the past. The place was a real hell.

" 'Inmates took sick as a result of the undernourishment, starvation, filth and foulness that prevailed. Instead of providing medical help or relief for them, the vindictive jailer turned on them with abuse and embittered their lives still further with inhuman treatment. Even when the doctor did come into the camp, he was allowed to examine a sick unfortunate only in the presence of the commandant of the guard of National Security. * * * The physician prescribed medication for which the prisoner paid but he never received the filled prescription. * * * Fare: potatoes and cabbage. Anything by way of shortening or grease that may have been allotted to the kitchen was either appropriated by a woman cook of ill repute or the superintendent of the institution and the commandant of National Security or it was sold. But conditions worsened to such an extent that not even potatoes or cabbage were to be had. There was actual starvation. Red partisans, armed to the teeth, visited the castle fortress daily to conduct investigations among the inmates. They heard the grievances of the prisoners and freely dealt them resounding slaps and blows; they beat them and tortured them unmercifully.

" 'Many of the wretches were taken away under cover of night and never returned again. Conditions became such that no prisoner felt that his life was safe. Everyone lived in dread expectation, wondering just when the partisans would come to claim this one or that one who would vanish forever to the abyss of death. * * * The barbaric superintendent, a former shoemaker, on visiting the confining quarters abused the miserable inmates by kicking them about like dogs while he cursed them fiendishly and threatened every single one of them with the gallows. If any of them happened to have a covering of any kind, he ripped it away and spewed insults upon them and epithets of nazistic and fascistic swine.

" 'Little children begged their mothers for bread or milk but what were the unhappy mothers to do when the perfidious scum that held them had no mercy or feeling in its heart to allow at least to the children some food of substantial quality. Wives were isolated from their husbands; they were permitted to have no contact whatever, not even a brief word exchanged from one to the other as they went for their daily rations. Husbands were the unwilling and helpless witnesses of the appalling sufferings of their wives and children.'

"Only prayers and hymns sustained the balance and some semblance of morale among the agonizing prisoners whose sufferings are unimaginable.

"An evil reputation came to be associated with Kunerad, one of the headquarters of the partisan band located near the city Zilina. V. Zingor testifies that the Czech Karel Bacilek was the political commissar in the fortress Kunerad. Brutal in the extreme was the punishment meted out to anti-communistic fighters and quick sentences were readily executed. It was much as in Sklabiná.

"To date it has not been ascertained precisely how many victims met maximum penalties in these two places. Colonel Klement reports that in Sklabiná over a thousand citizens were murdered from the region of Turiec alone.

"In the mass grave in Podsuchá, as the Reverend Stephen Náhalka testified, there were found 80 victims of partisan ferocity. Father Poess revealed that in the mass graves near Sklenné about 200 of his parishioners met their deaths.

"An American citizen, Mr. Smrekovsky, declared before the United States congressional committee that in the Slovak community where he had lived in the days of the Slovak Republic, the partisans on one occasion destroyed an entire family of 5 persons among whom were a 2-year-old child and a 4-year-old child. All were then consigned to a mass grave.

"Other mass graves were also found at Kovácová, in Pusty Hrad, in the Prievidza Valley, at Humenné, Lucivná, Bosany, L'ubietová, Nemecká L'upca, and Kremnicka.

"During this Communist putsch, material losses in Slovakia were extremely great. The state statistical and planning office in Bratislava published in its Statistical Handbook of Slovakia, 1947, an evaluation of damage inflicted on buildings, projects, and their equipment, art objects, communications, livestock, and other ravaged properties as in excess of 114,461,000,000 crowns or $2½ billion.

"The arrival of the Soviets into Slovakia in the bloody August putsch, 1944, was no uncertain forecast of what would befall the Slovak people in the event of the downfall of their independent state."

William Pitcher, Superintendent of Schools of St. Tammany Parish, La., Has Done a Remarkable and Outstanding Job for Schools in That Area

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MORRISON. Mr. Speaker, Mr. William Pitcher, who is one of the outstanding school superintendents in the entire Nation, has done a wonderful and a remarkable job for the schools of his parish in Louisana. He has called upon me on many occasions to assist him to secure surplus materials at very little, and sometimes at no cost, because they were to be used in school construction. As a result of using these surplus materials, St. Tammany Parish has perhaps one of the finest physical plants of school buildings in the entire Nation. I was exceedingly pleased to have an opportunity to assist in securing and expediting these various surplus items at the request of Superintendent Pitcher. Mr. Pitcher devoted a tremendous amount of time and effort on this project and traveled many thousands of miles. To illustrate more fully what it has meant to St. Tammany Parish, I include the following article which appeared in the August issue of the Nation's Schools and also the New Orleans Times-Picayune newspaper:

SCHOOLS OF ST. TAMMANY AIDED BY FEDERAL SURPLUS—SUPERINTENDENT PITCHER SAVES HALF MILLION

(By Virginia Turman)

Little pitchers are supposed to have big ears, but husky William Pitcher, superintendent of schools in St. Tammany parish, is better known for his sharp eyes.

In the last 10 years Pitcher's eye for a good buy has tagged him with the nickname "Bargain Basement Bill," a title he does not particularly care for but which applies to a point of perfection.

It all started May 30, 1947, when the problem of bringing St. Tammany schools up to date was wrapped in a black-edged aura of a limited building budget.

While attending a school business officials meeting in Chicago in 1945 he heard a speech that inspired him to gamble $157.70 into a saving of almost one-half of a million dollars.

The speech he heard concerned Federal surplus goods, a permanent program under the amended Federal Property and Administrative Services Act of 1949, whereby war surpluses and large quantities of excess property generated in normal Federal housekeeping processes is offered at an almost unbelievable savings to all United States school systems.

This was the end of World War II and enrollments in St. Tammany were going along with the national dilemma of steadily rising enrollments. New buildings were needed badly, repairs were becoming increasingly imperative and modernization could no longer be postponed.

As Pitcher said later, "Our solution didn't come in the form of a vision. Plain hard thinking, sweating-it-out brain grinding and looking about us in every possible direction finally supplied the magic-like answer: Federal surplus.

The parish school board agreed with Pitcher that anything could be tried once and they took their first experimental step. Seven barracks buildings that originally had cost the Government several hundred thousands of dollars were bought. The cost? Only $157.70.

This successful venture spurred the program and the "bargain basement" plan has boomed the parish building program into a beehive of activity.

So far, by utilizing new and surplus materials in combination, 13 schools have been rejuvenated with new classrooms, gymnasium facilities and lunchrooms. A conservative construction cost estimate would be $8 a square foot, or a value of $440,392. But the actual cost to St. Tammany was only about $220,000.

This saving has enabled Pitcher to begin a "plus program," of all-new, California-type buildings with new equipment. This summer, construction includes a grammar school at Covington, a grammar and junior high school at Madisonville, a senior and junior high at Mandeville, a grammar school at Slidell, a junior high at Slidell and an addition to St. Tammany high school for Negroes at Slidell.

During the 10 years of "bargain basement buying," each of St. Tammany's 23 schools has been modernized and repaired, with a minimum of spending. It all adds up to a savings of almost one-half million dollars.

"Statistics are dry," Pitcher says, "but our savings on the transfer of Federal surplus have been incredible. A six-drawer executive desk that we buy for from $4 to $6 is actually valued at from $80 to $100."

Pitcher's ingenious mind has thought up other ways of making dimes do the work of dollars. Manual training shops in the schools repair typewriters, desks, and other fixtures. Pitcher estimates that 1,300 items, including refrigerators, have been remodeled at a cost of $11,880. Purchased new, the cost would have been $32,876.

Thinking along the lines that the use of a cafeteria only a few hours a day is a waste, he converts libraries in some of his schools into cafeterias at lunchtime. Another double-duty feature is his self-named "cafetorium," a cafeteria that, with the use of folding doors, opens onto a gymnasium that doubles as an auditorium.

The building program has won the interest of everyone in the parish. Pupils, teachers, civic and business leaders are proud to participate in the rapid transition from old to new. The whole parish has been enriched by the switch from old eyesores with outdoor toilets to sturdy structures with adequate classroom space and modern plumbing.

"Take Folsom Rosenwald School for Negroes in Covington, for example," Pitcher says. "For 15 years, 600 students crowded daily into a wooden shack for their lunch. Last May, our surplus materials were used to build an ultramodern brick-and-glass lunchroom for only $5,854. It has now been insured at a replacement value of $26,500."

The construction work has been a summertime boon to pupils and teachers in another way, too, Pitcher adds. High-school youngsters work with the construction gangs or fix up secondhand property.

Two teachers with masters degrees—Roy Taylor, coach and social studies teacher at Madisonville Junior High and Joseph Howes, mathematics teacher at Covington High—are only two of the school system's teachers who are fattening up their lean summer salary by painting the interior of a 4-room addition at Lacombe Junior High School for Negroes.

Pitcher obtains his secondhand materials from a Federal surplus warehouse at Baton Rouge. At a usual bargain price of one-tenth of the goods' value, he then pays for the dismantlement of the building and the costs of transporting the materials to St. Tammany.

New Orleans Architect August Perez, Jr., then fits the materials to the needs of the building program. If the window frames measure 9 by 4 feet, he designs a plan whereby the frames, already complete with glass, can merely be placed into the building.

"The future for the program is indefinite," Pitcher says, pointing out that $50,000 in surplus materials have been utilized in the past year, with a resulting value of $125,000.

"Emphatically," he states, "I do not suggest the use of Federal Government surplus materials and equipment for the construction and modernization of schools in areas more fortunate financially than we in St. Tammany.

"On the other hand, it is better to have an adequate number of comfortable and practical, although nonglamorous, school buildings than a few 'dream schools,' if that is all that your budget can stand.

"We're satisfied," he says proudly.

New Vessel Essential to Pacific Trade

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BOW. Mr. Speaker, the members of the Appropriations Committee of this body devote perhaps the largest part of their attention during the congressional session to an effort to ascertain and insure the economic soundness of the programs of governmental expenditure which are brought to them for action and recommendation.

In the years in which I have been in Congress and the prior years with which I am familiar, going back to 1936, no area of appropriation requested of the Congress has produced a sounder investment of the public funds than the appropriations for merchant ship construction. These appropriations have enabled the Government to carry out the national policy of promoting our foreign and domestic commerce and providing indispensable military and naval auxiliaries in time of war. As part of a sound commercial private enterprise, the moneys appropriated for merchant ships which have been covered by ship mortgages have in every case been paid back by the ship operator in accordance with the repayment schedule of the mortgage.

Thus, when our Nation faces a need for replacement of our existing merchant fleet, members of the Appropriations Committee and Members of the House as a whole can take pride in a program which has brought a return of all of the money lent to the steamship operators.

As the Members of this body know, our merchant vessel fleet will be able to serve the twin purposes of foreign trade and national defense only if it is kept modern by regular replacements of units which grow old and out of date. Today we are facing an important replacement problem in a limited portion of our merchant fleet. I speak of the large passenger vessels which provide essential troop transports in time of national emergency. The American President Lines, which operates the passenger vessels used in the transpacific trade, is required under terms of its contract with the Government to build a replacement passenger ship next year. To be of maximum value for purposes of defense and commerce in the Pacific, it should be of about 26 knots and should carry 1,400 passengers. In order to facilitate this essential vessel construction, I have joined with Congressman SHELLEY in introducing a bill authorizing the United States to construct such a vessel and sell it to the American President Lines in strict accordance and compliance with the terms of the Merchant Marine Act of 1936.

Newsstand Filth: A National Disgrace

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. FLYNT. Mr. Speaker, our colleague, Hon. JOHN DOWDY, of the Seventh District of Texas, has introduced three bills, H. R. 2542, H. R. 3663, H. R. 4383, to further restrict the circulation of obscene literature, including magazines, comic books, and similar publications which put more emphasis on obscenity than they do on literature. These bills have received widespread support, and I for one hope that they may be considered and enacted during the 2d session of the 85th Congress.

A few days ago an article appeared in the current—September 1957—issue of Better Homes and Gardens, entitled "Newsstand Filth: A National Disgrace," by Jack Harrison Pollack. This article clearly states and sets out the dangers of such obscene and licentious literature. The article by Mr. Pollack appears in full below:

NEWSSTAND FILTH: A NATIONAL DISGRACE

(By Jack Harrison Pollack)

Today, all over America, obscene magazines are flooding the newsstands. These lewd periodicals were recently cited as a national disgrace and community menace.

FBI Director J. Edgar Hoover warns that "sex-mad magazines are creating criminals faster than jails can be built."

Few parents realize the extent of this open filth, which is sold freely on thousands of neighborhood newsstands, and in candy, drug, and grocery stores, supermarkets, and transportation terminals. The estimated combined circulation has jumped to 25 million a month.

The editorial formula of these lurid comeons masquerading as magazines is simple: The colored cover shows a sexy female. Inside, greater pictorial and printed titillation awaits the cash (usually 50 cents) customers.

These lascivious journals, which are often printed on slick paper, go far beyond the traditional cheesecake of girls in scanty or

revealing attire. Some racy man-about-town magazines even describe sexual intercourse in detail.

Obscene periodicals also are full of sex perversions which might seem normal to teen-agers who get their first sex education here. Homosexuality, nymphomania, Lesbianism, fetishism, and bestiality are common text subjects.

Many of the ads offer a further stream of filth in such things as action comic booklets, and movies for men only.

In business and in boldness, today's rash of smut sheets has reached a new low.

Who reads this trash? The biggest buyers are teen-agers. Many adolescents buy them in stationery stores adjoining their high schools, and even use their allowance and lunch money to do so.

What effect does this literary diet have on our children? Experts agree that it undoubtedly contributes to juvenile delinquency. Throughout the United States, law-enforcement officers told me that filthy magazines were a big factor in sex crimes.

J. Edgar Hoover says: "The circulation of periodicals containing salacious material plays an important part in the development of crime among the youth of our country. The increase in sex crimes is due partly to sex literature presented in certain magazines."

Senator KEFAUVER, whose investigating committee found a definite connection between pornography and juvenile delinquency last year, observes, "The impulses that spur young people to sex crimes are unquestionably intensified by reading obscene periodicals."

Former Detroit Police Inspector Herbert W. Case insists, "There hasn't been a sex murder in the history of our department in which the killer wasn't an avid reader of lewd magazines and books."

Juvenile court judges throughout the United States point out the direct relation between obscene magazines and teen-age crime. Judge Victor B. Wylegala, of the Erie County, N. Y., children's court, reveals that four 15-year-old boys who had attacked women on the street were found to have rooms filled with pornographic magazines. When questioned, these youngsters admitted that their lewd magazine reading had stimulated their crimes.

Dr. Benjamin Karpman, chief psychotherapist at St. Elizabeths Hospital in Washington, D. C., says: "A normal 12- or 13-year-old boy or girl exposed to pornographic literature could develop into a homosexual. You can take healthy boys or girls, and, by exposing them to abnormalities, virtually crystallize and settle their habits for the rest of their lives."

Explains Dr. George W. Henry, psychiatry professor at Cornell University, "The adolescent is most sexually excitable and has the least legitimate opportunity to find an outlet for that sexual excitability."

But haven't there always been sexy magazines on the newsstands? Not like today.

Here is how the University of Illinois' Prof. Theodore Peterson, America's leading historian of magazines, sums it up:

"Smutty magazines are nothing new. But two things make them of special concern today. One is the great increase in the number of retail outlets for magazines and the change in the type of outlets. Years ago, one almost had to seek out the smutty magazine—in the side-street store, say. But today, when supermarkets, candy stores, drugstores, transportation terminals, and the like handle magazines, smut has become ubiquitous.

"Far more important, though, is a striking change in the content of these low-type magazines. In the twenties and thirties, many of the magazines seemed to consist of uncomplicated sex and unsophisticated smut with no untoward psychological implications. But today a large share of the magazines look as if their editors had studied the textbooks and casebooks of abnormal psychology and learned their lessons well."

Who publishes these magazines? Obviously, fast-dollar operators. Many of them are fly-by-nights. Frequently, their hit-and-run smut sheets are only "volume one"; they may not even publish another issue. Unlike respectable magazines, there is no good will in their here-today-gone-tomorrow titles. When the "heat" is on, they disappear. But when the local situation cools off, they may return under a different title.

"Some objectionable magazines are pulled into a central warehouse after a complaint and then reissued with a new, different cover," explains a New York district attorney.

To avoid United States postal prosecution, some publishers ship their obscene magazines by truck. One scandal magazine claiming 4 million circulation did so not long ago, after the post office refused to handle it.

All of these resourceful hop-skip-and-jump publishers have shrewd lawyers who devise angles to keep their junk on the newsstands. Some lawyers set up dummy, fictitious corporations for each issue. "If a newsstand dealer is arrested our lawyer pays his fine and helps get him out of trouble," explains one publisher. These small fines barely dent smut profits.

How great are these profits? Recently a publisher told the Wall Street Journal that his racy magazine grossed $3,500,000 last year, with a quarter-of-a-million dollar clear profit.

Smuit publishers always try to defend themselves by shouting "freedom of the press." They would have you believe that only bluenose, puritanical killjoys object to their publications. But the framers of the Constitution never meant the first amendment to protect filth peddlers who poison minds.

The United States Supreme Court recently reaffirmed this public morality concept by ruling that obscenity was not protected by the first amendment. The decision was widely hailed as a move to protect our youth from pornographic literature.

Unfortunately, the solution isn't simple. Respectable magazine publishers have no control over merchants who do not belong to the Magazine Publishers Association. The MPA recently formed a committee under Publisher George J. Hecht to handle the problem.

More energetic cleanup efforts are now being made by alert distributors, wholesalers, and retailers of magazines.

Responsible distributors and wholesalers have begun taking steps to clean up the newsstands. In Chicago, the Council for Independent Distributors vows: "The more offensive magazines will be improved drastically or they will be dropped by responsible wholesalers." This organization says "Never in the history of our industry have so many suffered because of a few individuals who * * * have published, or distributed nationally, publications of questionable content."

In New York, Henry H. Oschay, chairman of the independent publishers' and distributors' censorship committee, recently told me that some distributors were now reading proof on questionable magazines that they distribute, and that some printed issues have been destroyed. In a letter to members, Oschay estimated that there are now about 50 objectionable magazines on the newsstands.

But many public-spirited distributors and wholesalers alibi: "We don't publish any more dirt than do some newspapers or movie ads." Many such wholesalers also engage in illegal tie-in sales, forcing local retailers to accept their smut magazines along with the respectable ones.

Druggist organizations have begun sparking voluntary cleanup campaigns. In Cleveland, during the past 16 months, the Academy of Pharmacy has urged its 500 druggist members to stop selling over 100 objectionable magazines.

In Seattle, the Washington State Pharmaceutical Association, in urging its members to stop displaying and selling magazines that offend decency, said: "Many contain immoral suggestive articles not fit to be read by adults and most certainly not by teen-agers."

In Minnesota and Maryland, druggists have likewise begun getting rid of pornographic magazines. In some communities, signs have been placed in store windows to call attention to dealers who cooperate in magazine cleanup drives.

Grocery chains, too, in California, Texas, and several Rocky Mountain States have been banning the "girlie" and scandal magazines. Some hotel chains have begun keeping obscene magazines off hotel newsstands.

Much of the recent cleanup activity among distributors, wholesalers, and retailers has stemmed from stricter State, local, and Federal moves against the smut magazines. But these moves must have intelligent citizen backing.

In at least a dozen States, pornographic publications are now under fire. Recently, new antiobscenity bills have been debated in the legislatures and committees of Michigan, Pennsylvania, North Carolina, New York, New Jersey, Florida, and Vermont. Minnesota is pushing a model obscenity law recently drafted by Robert C. McClure of the University of Minnesota law school. It provides for court adjudication of alleged obscenity by judges instead of local prosecuting officials, and puts the publication on trial instead of the retailer, wholesaler, or distributor. A copy of this law would be well worth study for application in other States—perhaps yours.

In over 250 communities, the "girlie" and scandal magazines are under attack. Today, throughout the United States there is a movement for stricter, tougher, clearer, more enforcible antiobscenity laws. Heavier penalties, such as Georgia's $5,000 fine and 5-year jail term, are being demanded against the purveyors of filth.

Pornography has often been a matter of geography. But the new United States Supreme Court decision against obscenity may help change this. In some areas, courts have thrown out cases against degenerate magazines that courts elsewhere have found guilty. Before the Supreme Court decision, a United States postal official told me, "If we try a case in Los Angeles or New York, we often lose, because the judges there tend to be lenient, but when we go into other communities, we usually win."

Today smut magazine publishers are largely exempt from postal prosecution if they have applied for second-class mail permits or have had their magazines copyrighted. But several strict bills recently introduced in the United States House of Representatives by Texas Congressman JOHN DOWDY would close these loopholes. One bill—H. R. 4383—would enable the post office to hold lewd material instead of mailing it, and then to take a year to prosecute the magazine. Another bill—H. R. 2542—would make it possible to prosecute an offender where the mail is received instead of merely where it is mailed. "After all, the actual damage is done in the community where the pornography is distributed," Congressman DOWDY recently explained to me. Still another DOWDY bill—H. R. 3663—would increase the punishment for a first offense to either a $5,000 fine or 5 years in jail.

Recently the Coral Gables, Fla., Woman's Club did an extraordinary job in licking the problem, and other communities could well emulate them. A Decent Literature Council,

composed of leading business, legal, religious, civic, educational, newspaper, and women's club representatives, was formed. The council's aim was not to censor adult literature, but to get voluntary cooperation in protecting children from obscenity. A letter was sent to the city commission requesting that something be done about it. Next, a standards committee was set up to evaluate the doubtful magazines objectively. The city fathers acted quickly. An ordinance was passed requiring dealers to get 16 magazines off the stands immediately or face $500 a day fine and 6 months in jail for each extra day they remained on sale. The smut quickly disappeared.

Heartened by their success, the Coral Gables women began to work on the problem statewide, and in June 1957 they helped push an antiobscenity bill through the State legislature in record speed.

The clergy has also helped enormously in cleaning up pornographic magazines. Although various denominations might differ about censorship, they all close ranks in opposing obscene reading matter for children. Your priest, minister, or rabbi has access to national lists of questionable magazines, and a word to him at your local place of worship will bring him to your aid.

The important thing is to ask him now—to organize, and to act. Check the heading titled "What you can do about it," and then do it.

WHAT YOU CAN DO ABOUT IT

1. Tell your friends not to buy or read any girlie or scandal magazines—even out of curiosity. Nothing will stop this filth faster than unsold magazines.

2. Check what is being sold on your neighborhood newsstands. If you see any salacious magazines, frankly say so to your dealer. He often will agree with you and remove them from display—especially if other customers object.

3. If your retailer or wholesaler is uncooperative, make your protest felt through your club, PTA, church group, fraternal, business, or professional organization.

4. If none of this is successful, write or visit your appropriate local law-enforcement officer and bring all the facts to his attention. Many existing laws ban obscenity.

5. If you receive any obscene publication through the mail, show it to your local postmaster. He will forward it to Washington for appropriate action.

6. Work to strengthen your local and State antiobscenity laws. Also write a letter to your Senator or Representative in Washington, urging him to support Congressman DOWDY's bills (H. R. 4383, H. R. 2542, and H. R. 3663).

7. Learn what your teen-age children are reading—at home and away from home. If you are watchful, you may prevent needless tragedy.

Budget Reform

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. LIPSCOMB. Mr. Speaker, it is becoming increasingly clear that there exist serious deficiencies in the congressional review of the budget and in the methods and procedures of making appropriations in support of the Federal Government. These problems are by no means new. Budget and fiscal processes and procedures of Government have been the subject of continual and controversial discussion during the past decade. However, the increasing high cost of Government, amply demonstrated in the fiscal 1958 budget, has magnified the seriousness of the problems to alarming proportions and has emphasized the pressing need for immediate reform in this area of Government.

The Constitution grants to Congress exclusive power over the public purse. It does this by providing that no money may be drawn from the Treasury except in consequence of appropriations made by law. However, the control over the public purse thus vested by the Constitution has become eroded over the years, until today in many areas only an empty shell still remains in Congress. The power to enact the annual appropriations measures amounts to, in many ways, but an empty remain of the constitutional grant.

The planning of Federal expenditures and the adoption of a Federal budget is highly technical business. Members of Congress can attest to this, for they have the disconcerting experience of receiving the telephone-book size budget document each year, containing technical budgetary and fiscal terms and hundreds of pages of figures, which successfully challenges practically everyone to become educated as to its meaning and full significance. I believe it is a near-unanimous experience among Members of Congress, in the last analysis, to accept as personally understandable only the barest highlights of the budget, for lack of the means and the time to delve into it any further.

There is much evidence that the procedures and methods employed by Congress to review and authorize the Federal budget in the past are simply not adequate to meet the demands imposed by today's Government. While the executive branch has increased manyfold in size and complexity, Congress has grimly tried to keep pace with the limited means at its disposal.

For example, while the Federal budget is in preparation, revision, and rerevision over a period of 18 months or so, Congress must act on it after having had a chance to study it over a period of only several months. And, at that, in checking money requests, we must rely almost totally on the testimony, data, and so forth, presented by those who made up the budget in the first place. And, needless to say, the size of the machinery Congress possesses to perform its fiscal chores is small indeed when compared with that of the executive branch.

The result is that only a once-over-lightly treatment can be given to such items as overall fiscal planning, program evaluation, budget surplus and deficits, Federal spending levels, the problem of carryover balances of appropriations, the need for improvements in agency accounting systems, and a host of related problems. It means that over the years congressional control over the public purse has been precariously diminished.

I wish to make clear at this point that my remarks are not intended to be critical in any way of the Appropriations Committee, for I believe it does excellent work. The situation in which we find ourselves is in spite of the efforts of the Appropriations Committee.

Various possible solutions to solve our fiscal problems have been tried in the past. Principal among these were the use of the legislative budget as provided for in the Legislative Reorganization Act of 1946, and the omnibus appropriation bill. The purpose of the legislative budget was to place a legislative ceiling on expenditures as a framework in which to consider the various appropriation bills. This procedure never really got off the ground, and no attempt to use it has been made in the last several Congresses. The omnibus appropriations bill method has also been used. Under that method, the Congress considers the whole Federal spending program at one time and in one bill.

An indication of the mounting alarm and the belief that improvements in our fiscal procedures and policies must be forthcoming is the fact that many bills proposing reforms of one kind or another are before Congress for consideration. I am setting forth a list of various types of proposals that have been made. It is quite evident from a study of these diverse proposals that there are many ideas as to how best to approach the problem. However, they all have one thing in common, and that is that they have been born of the realization that improvements of some sort must be made. Included in bills before Congress are the following types of legislative proposals:

(a) To require that appropriations be determined on an annual accrued expenditure basis.

(b) To amend the Constitution to require Congress to stay in session each year until it has produced a balanced budget.

(c) Proposes that the budget shall include each year a special analysis of certain long-term construction and development projects.

(d) To amend the Constitution to provide that the Federal expenditures shall not exeed Federal revenues, except in time of war or grave national emergency.

(e) To enact a Public Debt Reduction Act to lower gradually and systematically the ceiling of the national debt.

(f) To direct the Comptroller General to make investigations with respect to all agencies in the executive branch and to report the results to the respective congressional appropriation committees to enable the latter to give adequate consideration to the items relating to such agencies contained in the budget. Upon request, the Comptroller General would be authorized to make a special expenditure analysis of particular agencies.

(g) To provide that in any year a budget surplus occurs, one-half shall be applied as tax credits against individual income taxes.

(h) To create in the legislative branch an office of the United States budget; to prepare for Congress at the beginning of each session the budget, a budget report, summary data, and supporting details.

(i) To provide penalties for violations of the requirement of apportionment of

certain appropriations to avoid the necessity for deficiency or supplemental appropriations.

(j) To provide that all appropriations for each fiscal year would be consolidated in one general appropriation bill, and would require that such act contain provisions limiting expenditures.

(k) To direct the President to include in the budget a sum not less than $2 billion to be applied toward reduction of the national debt.

(l) To create a Commission on Budget and Tax Policy authorized to make a thorough and comprehensive study of proposals before Congress, and otherwise the purpose of which is to limit the power of Congress to tax or appropriate or the power of the President to expend moneys or to contract indebtedness.

(m) To amend the Constitution to provide for balancing of the budget when presented to Congress, except in time of war.

(n) To require that bills and resolutions authorizing appropriations reported by committees of Congress be accompanied by an estimate of the probable cost of the legislation.

In addition, the House early in the session saw fit to pass a resolution requesting the President to inform it how cuts in the budget could best be made.

It is not only the Congress that is calling for reforms in our budgeting and appropriations procedures. The President and the heads of our fiscal departments have repeatedly made suggestions for improvements in this area. The Hoover Commission has called for reforms. Newspapers and magazines have shown active interest and concern, as have taxpayers throughout the country.

To alleviate the situation, 32 other Members and myself on July 18 introduced identical House resolutions, House Resolutions 325 through 357, proposing the creation of a select committee to study the whole field of fiscal organization and procedures in Congress. Subsequently two additional identical resolutions, House Resolutions 381 and 396, were introduced. It is the purpose of the resolution to provide a means for the House to conduct a penetrating self-analysis with a view toward arriving at a comprehensive, well-designed program to enable Congress to perform its constitutional responsibilities more effectively.

The resolution would create in the House of Representatives a 10-member Select Committee on Fiscal Organization and Procedures of the Congress who would be appointed by the Speaker. Since the committee is to be strictly a nonpartisan body, the resolution provides for equal representation from both the majority and minority parties, by specifying that no more than five committee members shall be members of the majority party. One of the committee members would be selected by the Speaker to serve as chairman. Because of the nature of the study to be undertaken, it was deemed both advisable and necessary that the chairman and ranking minority member of the Committee on Appropriations be included as committee members, and the bill so provides.

The task of the committee would be to conduct a full and complete study of the fiscal and budgetary organization and operations of Congress with a view toward recommending improvements for the purpose of strengthening congressional control over the public purse. The resolution does not specifically limit the scope of the study, but directs the committee to give particular attention to the following: First, the existing fiscal machinery and appropriations procedures of Congress; second, present methods of controlling public expenditures; third, alleged defects of present budgetary practices; and, fourth, proposed reforms in budgetary procedures.

The committee would be authorized to sit and act within the United States while Congress is in session, during recesses, and during periods of adjournment. It would have power to hold hearings, would possess subpena power to require the attendance of witnesses and the production of records, papers, and other materials. The committee would be empowered to employ experts, consultants, technicians, clerks, and stenographic help, and also would have authority to recruit on a loan basis, experts, consultants, and technicians from the executive branch of the Government.

The committee would submit to the House a report of its findings and recommendations as soon as practicable during the 85th Congress. No definite date is specified because until the study is actually underway it is difficult to determine the magnitude of the undertaking with sufficient accuracy so as to make it possible to set a realistic reporting date. Then too, what would be a proper reporting time would depend in part on the nature of the recommendations made as a result of the study. I am confident however that the study could be expedited sufficiently so that the Congress would have the benefit of the information and recommendations during the 2d session of the 85th Congress.

Unfortunately, hearings have not been held on the resolution in the Rules Committee, and inasmuch as the 1st session of the 85th Congress will soon come to an end, it is apparent that this most important measure will not be enacted this session.

Mr. Speaker, I believe it is through a basic, all-inclusive approach as proposed in this resolution where all the ills and possible remedies may be explored that effective and worthwhile improvements may be brought about. For that reason, I strongly urge favorable action in the Rules Committee and in the House on this resolution as a first order of business when we reconvene next January so that this important work may be started without delay.

Report on the 1st Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. TELLER. Mr. Speaker, a substantial record of achievement was made by the 1st session of the 85th Congress, but much unfinished business remains for action during the 2d session which will convene January 7, 1958. Here are some of the main issues we faced in the session just concluded, and how we dealt with them:

CIVIL RIGHTS; PROTECTING THE INDIVIDUAL'S CONSTITUTIONAL RIGHTS

Our 1957 session of Congress will forever be remembered for its accomplishment in enacting a civil-rights law protecting the right to vote of all persons regardless of race, color, or creed—the first such national law to be enacted since Civil War reconstruction days. Though aimed primarily at the South, its protection is nationwide. It establishes a Federal commission with subpena power to investigate facts as a basis for additional protective legislation; it creates a new civil-rights division in the Office of the Attorney General, and authorizes injunction proceedings to restrain violations of voting rights. I am proud to have voted for this law. Denial of the right to vote cannot be countenanced—and should be punished—if the Bill of Rights in our national Constitution is to be given full meaning.

For the South, civil rights is a passionate issue. The Republican Party embraced it with unaccustomed enthusiasm, believing that the Negro vote would go Republican—a belief which is not shared by most experts in race relations who are aware of the solid economic basis underlying the Negro's affection for the Democratic Party. This politically inspired motive on the part of the Republicans should be borne in mind, for while we are thankful for the votes of the Republicans, we have a right to question their sincerity on a national basis in view of their long-standing opposition to the Democratic Party's program for a national FEPC to outlaw racial and religious discrimination in employment.

The Supreme Court of the United States has played a curiously changing role in the history of our country. In the early days of our Nation that Court cemented the Federal Union and established the Court's right to protect individuals against arbitrary and unconstitutional actions by the executive and legislative branches of Government. The Supreme Court had some bad days, particularly for some time prior to and

during the early 1930's, when it declared unconstitutional a good deal of desirable social legislation, such as laws which prescribed minimum wages or maximum hours of employment.

Now, again, the Supreme Court has become the guardian of individual liberties. In the recently decided Watkins case the Court enlarged the rights of individuals when their conduct is inquired into by a roving congressional investigating body. In the Jencks case, a defendant in a criminal case was guaranteed the right to examine inconsistent statements previously made to the Government by prosecution witnesses. In the Mallory case the Court held that a person charged with a crime has a right to speedy arraignment—he may not be unreasonably detained solely to obtain a confession. These are decisions which underscore the reasons for our national greatness, for they are sinews of protection for individual rights which our Constitution guarantees.

The Eisenhower administration sought during the past session to override these decisions by congressional enactments, but in the main failed to accomplish its unwise objective. A law to protect FBI files was passed, but it modified—it did not overrule—the right of a defendant to examine relevant Government files for inconsistency.

INFLATION

Combating inflation is a top-drawer congressional responsibility. Little was done in the Congress during the 1957 session to meet this responsibility. Juggling interest rates and making credit harder to get are not enough, and may be wrong approaches because they hurt small and medium-sized business enterprise. An overall program is necessary, dealing with such things as monopoly price policies, the possibilities of union-management cooperation in wage-setting practices, installment selling, and a searching investigation of banking procedures. The coming 1958 session of Congress should give specific attention to the effects of inflationary forces. The wellsprings of these forces are complicated, to be sure, but their ruinous effects are plain for everyone to see and feel.

PROTECTING SMALL AND MEDIUM-SIZED BUSINESS

We are in the midst of a vast wave of business mergers which, if allowed to go unchecked, will continue to undermine the existence of an independent middle class in this country.

Nothing was done so far in the 85th Congress to stop this merger movement, or even to slow it down. Nor was anything done to limit the size of corporate giants which are normally monopolistic and at all events prevent small and medium-sized business concerns from entering the particular industry.

Protecting and encouraging the small-business concern requires action on many additional fronts. The Small Business Administration was extended for 1 year during the session just concluded. In the 1958 session it is my hope that this Government body will be made a permanent agency, that its powers will be enlarged, and that the delaying red-tape which now hamstrings it will be materially reduced.

It is plain, moreover, that our corporate income tax structure needs overhauling so as to reduce the tax rate for the smaller corporations. And in the field of military procurement, where today big business has a virtual monopoly of Government contracts, a program is needed to increase the small-business man's share. All these things are unfinished business of the 1957 session which requires action in the forthcoming 1958 session of Congress.

INTERNATIONAL RELATIONS

In pro-Soviet Syria we are now harveting the fruit of the Eisenhower-Dulles so-called Arab policy in the Mideast. By welching on a promise to provide millions of dollars for Egypt to build its Aswan Dam, a promise which Dulles should never have made, Dulles provided Nasser with a pretext for seizing the strategic Suez Canal. Then Dulles humiliated our great allies Great Britain and France when they sought to right Nasser's illegal seizure, and at all events failed to grasp the opportunity at that time to work out an overall settlement of the resulting crisis, including a peace treaty between the Arabs and our only dependable ally in the Middle East—Israel.

No wonder, then, that the Democrats in Congress viewed with suspicion the Eisenhower-Dulles foreign-aid program—a program which has failed to halt the advance of the international gangster conspiracy known as communism.

I have seen, and heard in action on the floor of the House of Representatives, the spokesmen for isolationist Republicanism from Midwestern United States. This—together with the Eisenhower-Dulles unwillingness to take the Democrats into their confidence—is a drag on our national ability to work out an effective bipartisan policy for our international affairs.

The need for such a policy is urgent. International communism is stronger, not weaker, than it was when Mr. Eisenhower took over the Executive reins of Government In far-off Indonesia and Afghanistan the Communist cause has recently been gaining additional adherents. Free Europe openly expresses its distrust of Dulles. We need to stand united and respected before the world if our alliances with fredom-loving countries are to have the effect which our dedication and our foreign-aid outlay fully justify.

FEDERAL AID FOR LOCAL SCHOOL CONSTRUCTION

A major shortcoming of the session was the defeat of the Kelley bill, a temporary program for Federal aid to local school construction. The sum of $1.5 billion, or $300 million annually for 5 years, would be provided to aid school construction by the States. Three main things contributed to the defeat of the bill: First, the failure of Mr. Eisenhower to give it more than lukewarm support, of a kind which almost was a signal that he had no objection to its defeat; second, the opposition of Republican stalwarts in Congress, witness the fact that among those who voted against it were HALLECK, of Indiana, assistant Republican leader; ARENDS, of Illinois, Republican whip; ALLEN, of Illinois, ranking Republican on the Rules Committee; third, failure of leaders in the field of education to explain the need for the bill and the provisions of the bill, and to marshal public opinion in support of it. I received only 4 communications on the subject, 2 of them favoring and 2 opposed to it.

The program of Federal aid for local school construction is not one of largesse or Federal charity or random spending. It is a temporary program aimed largely at those States which have no State education agencies and leave school construction to local communities. Its purpose is to compel these States to follow the example of New York, and provide State programs for school construction in those poorer communities which have insufficient real estate to float school bonds. The Northern States have to bear a disproportionate share in providing boys for military service because so many of the boys from Southern States are rejected for illiteracy, and the Armed Forces spend about $30 million in an effort to educate the illiterate. Persons who are justifiably concerned about the mounting Federal budget ought to give consideration to these facts. Education is a national problem, a national responsibility.

But more facts need to be known and publicized regarding the extent of the local school shortage, and more effort needs to be exerted to explain these facts to the public and the need for the Federal program. As a member of the House Committee on Education and Labor, I spent long hours during the 1957 session in helping to work out the bill which was favorably reported by our committee to the Congress. I shall do all I can in the 1958 session, believing as I do that the program is urgent, to help in enactment of a Federal program of aid for local school construction.

OUR UNFAIR IMMIGRATION LAWS

The McCarran-Walter immigration law should be repealed. Its quota system is unfair to southern Europeans and refugees from other areas, because the law is based on a 1924 immigration ratio which has long outlived its usefulness. Its infamous national origins feature chains a person to the country where he or she was born, whatever his or her citizenship or circumstances may be at the time immigration to our country is sought. It contains arbitrary provisions which discriminate between native born and naturalized citizens.

My bill to repeal this evil law, similar to bills introduced by other Democratic Congressmen, died in committee. I must frankly state that a number of otherwise liberal Democrats in Congress are half-hearted in their professed desire to repeal this law.

All we could hope to do under the circumstances was to help as many people as we could by amending the law. I cannot say that even this was adequately done. Why, for example, should not Christian and Jewish refugees from the

Middle East and elsewhere be given the same hospitable reception as was accorded the escapees from Hungary? We did, however, amend the law somewhat so as to admit about 60,000 additional persons, particularly for the purpose of reuniting families. Further liberalization of the McCarran-Walter immigration law should be made a priority item for the 1958 session of Congress.

THE BUDGET; GOVERNMENT ECONOMY; TAX REDUCTION

The Democratic-controlled Congress shaved billions of dollars from the budget requests of the Eisenhower administration. Economy was a watchword of the 1st session of the 85th Congress. But economy is a relative thing, and is defined in different ways depending upon one's views regarding the responsibilities of the Federal Government and the items which come under the head of savings. By voting to abolish fast tax writeoffs for industry groups represented by high-powered lobbyists, for example, I helped to save billions of dollars for the Government. Therefore, I believe that my vote favoring long-delayed salary increases for postal employees and other Federal employees, particularly since such increases help efficiency by reducing employment turnover, is not an antieconomy vote.

The time has come, however, to think seriously about our huge and ever-mounting budget, and the burdensome taxes which it imposes upon all people. Part of the budget increase is, of course, due to the mounting population. Most of it is due to defense and foreign aid. These items of the budget must be faced up to if we are to remain strong and free, and help in maintaining peace in the world.

There remains, nevertheless, room for substantial economizing. The Cordiner report on the armed services, for example, shows that several billion dollars can be saved by a recasting of pay scales designed to keep skilled personnel in the Armed Forces, where now they leave for private industry and thereby require the Government to go to the expense of training their replacements. Many of the carefully prepared Hoover Commission reports ought to be adopted, because they show that billions of dollars can be saved by more efficient Government budget and purchasing and operational practices. A study is now being made by the House Committee on Interstate and Foreign Commerce, designed to prove that the States can take over many of the activities now engaged in by the Federal Government.

These are huge possibilities for economizing, thereby saving money which can provide a basis for a tax cut and at the same time leave funds for protecting and improving the health, welfare, and education of our people.

Statement by Senator Wiley on His Activities During 1st Session of 85th Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on my activities during the 1st session of the 85th Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

"In what fields was our senior Senator, ALEXANDER WILEY, active during the 1st session of the 85th Congress?"

"What legislation did he introduce?"

"What happened to this legislation?"

"On what other general matters has he been striving for the interests of Wisconsin and the Nation?"

These are some questions which the people of our State have a right to ask.

And they are questions which I am more than pleased to answer.

DOZENS OF BILLS OFFERED BY SENATOR WILEY

During the 1st session, which began in January and which concluded on August 30, I was pleased to introduce dozens of bills affecting our State and Nation.

Some of these bills, I introduced solely as an individual Senator. Others, I cosponsored with other Senators.

I am glad to say that some of these bills were successfully enacted into public law. Others are still pending in Senate committees.

SENATE RECEIVES THOUSANDS OF BILLS

This is what usually happens considering the mass of congressional legislation.

All told, some 3,000 bills were introduced in 1957 by the 96 Senators. Naturally, only a fraction of the 3,000 bills were actually acted upon in the first session, and for that matter, will be acted upon even in the second session.

When the Senate reconvenes next year, I will, however, be active in advancing as many as possible of the delayed bills which are still pending in committees.

MANY OTHER ACTIVITIES OF SENATOR WILEY

Of course, a Senator's activities are by no means confined merely to introducing bills.

As my readers know, it is my privilege to serve as senior Republican member on the Senate Foreign Relations and Senate Judiciary Committees.

On those committees, I work on a vast amount of legislation in domestic and foreign affairs.

TWO HUNDRED TO THREE HUNDRED LETTERS PER DAY FROM HOME

In addition, in each day's mail from Wisconsin, comes an average of from 200 to 300 letters, postal cards, and telegrams.

These cover matters affecting individual constituents throughout our State, as well as individual communities.

I am always happy to act upon this correspondence and to fulfill individual and public needs.

It would not be possible to list all of the many subjects about which folks write. But I might say that my Wisconsin correspondence includes everything from the problems of Wisconsin men in the Armed Forces to the pension needs of elderly citizens, veterans' claims, National Guard and reservists' problems, river and habor projects, passports for Wisconsin travelers overseas, loan applications by Wisconsin small companies to the Small Business Administration, problems of State agencies in Madison in connection with Federal agencies, city, and county problems, and a vast variety of other issues.

SENATOR WILEY'S TWOFOLD AIMS

My aim always is twofold:

(a) To seek justice and equity for the individual.

(b) To seek fulfillment of community needs.

Consider item (b). What does serving our States, communities, and areas really mean? Well, take the field of transportation. Serving Badger transportation needs means securing still better roads for Wisconsin, more modern airports and frequent airplane service, adequate railroad service, expanded port development.

HOW ELSE WISCONSIN IS SERVED

Serving Wisconsin, too, means promoting Wisconsin's tourist industry (which brings in $400 million in income per year), advancing the cause of conservation (fish and wildlife), helping to attract new industries to Wisconsin so as to help increase employment and payrolls.

Serving Wisconsin, too, means helping to boost consumption of dairy products—the eating and drinking of 17 billion pounds of milk produced by our State's dairy farmers each year.

YOUR SENATOR FIGHTS BAD BILLS

"Serving our State" means fighting for good legislation and opposing bad legislation.

Thus, during 1957, I battled successfully against such evil bills as:

(a) The natural gas rate increase bill—which would raise the cost of fuel used in your home and office (400,000 Wisconsinites depend on natural gas).

(b) The Chicago water steal bill which would lower Great Lakes shipping capacity.

Both of these dangerous bills still face us. Both must be continually combated.

So, too, I fought to help bring in Canadian natural gas to our State, so as to lower fuel costs and increase fuel supply. I battled against those who are trying to sabotage the import of much-needed Canadian gas.

THE WILEY-SPONSORED BILLS

But, now, let's turn to the Wiley bills as such, bills which I personally sponsored or cosponsored.

ST. LAWRENCE SEAWAY

I'm delighted to say that H. R. 5728 was successfully enacted as Public Law 85-108, so as to permit completion of the Great Lakes-St. Lawrence seaway.

I had personally cosponsored the companion bill, S. 1174. This legislation eased sea-

way financial burdens by broadening the borrowing authority of the Seaway Development Corporation and authorizing the deferment of interest payments on borrowing. This particular bill was a natural followup on the Wiley seaway law itself, Public Law 358, 83d Congress, which achieved victory for the seaway after Wisconsin's 30-year battle.

CIVIL RIGHTS

One of the great landmark actions of the 85th Congress, 1st session, was the enactment of a civil-rights bill for the first time in 82 years. Naturally, I was pleased to vote for the final version of this bill, H. R. 6127, even though amendments had unfortunately weakened it.

Early in the session, I had been pleased to cosponsor one version of this bill in the form of S. 83, as offered principally by Senator DIRKSEN.

ADVANCING WORLD PEACE

World peace—that is our greatest single goal.

I was happy to concentrate, therefore, on this foremost of all goals in this session, just as I have done in previous sessions.

And so, I cosponsored the famous Eisenhower doctrine resolution. It has helped assure peace for the troubled Middle East.

With Senator GREEN, chairman of the Foreign Relations Committee, I specifically cosponsored Senate Joint Resolution 19. It authorized the President to undertake economic and military cooperation with nations in the Middle East in order to assist in the strengthening and defense of their independence against Communist aggression.

Our resolution was overwhelmingly approved by both Houses.

Another crucial bill which I cosponsored with Senator GREEN, our committee chairman, was S. 2130, the 1958 mutual security bill.

This bill, too, was successfully enacted into public law, thereby continuing worldwide cooperation against the Communist menace.

PROTECTING FBI FILES

Another landmark of the 1st session was enactment of the bill to protect the integrity of FBI files against Communist fishing expeditions.

This bill prevents Red snooping for material, while at the same time assuring defendants the right to necessary relevant information.

With Senator O'MAHONEY as sponsor, I had cosponsored an earlier version of this bill, S. 2377. It amended chapter 223, title 18, United States Code, to provide for the production of relevant statements and reports of witnesses.

BYRD ANTARCTIC COMMISSION BILL

One of the bills of which I am deeply proud is the Byrd Antarctic Commission bill, S. 2189. I had introduced this bill, with 22 cosponsors.

I believe that if this bill is enacted, it will become one of the great milestones of the 85th Congress. Its purpose is to help America protect its national interest in that vast region of the globe. Thus far only about 1 percent of the Antarctic has been explored.

It was a pleasure for me recently to be present at a hearing held before the House of Representatives Interior Committee on a companion version to the Wiley bill.

I earnestly hope that this Byrd Antarctic Commission, to be named for the late, great Rear Adm. Richard E. Byrd, will be successfully established next year.

TAX REFORM

One of the most important bills which I introduced was S. 769. Its purpose is to establish a Hoover-style Federal Tax Commission. Such a Commission would make a top-to-bottom review of the whole tax structure of the United States—income taxes, nuisance excise taxes, corporate taxes, etc. Fourteen Senators joined with me in cosponsoring this bill. Only through a comprehensive survey such a Commission could make will be ever get lasting and thorough reform of our hodge-podge tax system.

IMMIGRATION REFORM

At long last, the bottleneck in reform of our immigration laws has begun to be remedied. President Eisenhower's suggestions for changes have been followed—but only in small part so far. Nevertheless a beginning was made.

Earlier this year I was happy to cosponsor with Senator DIRKSEN the Eisenhower bill for amendment of the McCarran-Walter law, in the form of S. 1006.

MISCELLANEOUS BILLS

For purposes of brevity, let us now just look down an outline list of additional legislation which I sponsored or cosponsored.

FARM BILLS COSPONSORED

S. 2408, milk consumption (Senator THYE sponsor), to authorize a special milk program for veterans and the Armed Forces, and an accelerated brucellosis eradication program.

S. 1680, cranberries (Senator SALTONSTALL sponsor), to amend the Agricultural Marketing Agreement Act of 1937, as amended, to include cranberries for canning or freezing.

S. 2306, research (Senator CURTIS sponsor), to provide for the increased use of agricultural products for industrial purposes.

S. 1699, dairy studies, to provide for the establishment of a dairy research laboratory. (This bill, like the three preceding bills, went to the Agriculture Committee.)

This particular Wiley bill is one for which I have been striving for many years, as my readers may recall.

SCHOOL AND TEACHER AID BILLS COSPONSORED

S. 1298, area vocational aid (Senator HILL sponsor), to assist States in providing needed area vocational education programs. (Labor and Public Welfare Committee.)

S. 889, school building (Senator SMITH of New Jersey sponsor), to authorize a 4-year emergency program of Federal assistance to States and communities to enable them to increase public elementary and secondary school construction. (Labor and Public Welfare Committee.)

The House, unfortunately, defeated the companion version to this bill.

S. 1640, teachers' tax deductions, to amend the Internal Revenue Code of 1954 so as to allow a teacher to deduct from gross income up to $600 a year of necessary expenses incurred by him to further his or her education. (Finance Committee.)

SMALL BUSINESS

S. 11, equality of opportunity (Senator KEFAUVER sponsor), to amend the vital Robinson-Patman Act by protecting small business against a current loophole in the antimonopoly laws.

We succeeded in reporting this important bill favorably from the Senate Judiciary Subcommittee, but it became bottled up in the full committee, unfortunately.

S. 150, small business tax relief (Senator FULBRIGHT sponsor), to amend the Internal Revenue Code of 1954 so as to adjust corporate normal tax and surtax rates, thereby giving a much needed break for small business (Finance Committee).

CONSERVATION

S. 555, Hells Canyon (Senator MORSE sponsor), to advance conservation and electricity production by authorizing the construction, operation, and maintenance of the Federal Hells Canyon Dam on the Snake River between Idaho and Oregon.

The Senate passed this bill, which I cosponsored, but the House unfortunately killed it.

S. 1176, wilderness system (Senator HUMPHREY sponsor), to establish a wilderness preservation system so as to protect our outdoor heritage (Interior and Insular Affairs Committee).

AID TO MUNICIPALITIES

S. 967, payments in lieu (Senator HUMPHREY sponsor), to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property (Government Operations Committee).

ANTIJUVENILE DELINQUENCY

S. 1455, juvenile delinquency grants to strengthen and improve State and local programs to combat and control juvenile delinquency. (Labor and Public Welfare Committee).

As a member of the Senate Juvenile Delinquency Subcommittee I am naturally especially interested in cutting down the staggering toll of crime among young people. More than 1 million youngsters are getting in trouble with the law each year, unfortunately.

ELECTION PARTICIPATION

S. 1406, political contribution deductions to encourage mass participation in election financing by allowing individuals to deduct for Federal income-tax purposes $50 of political contributions made each year to candidates for elective Federal offices (Finance Committee).

GREAT LAKES REGION

S. 1416, Lake States compact (Senator MCNAMARA), granting Congress' consent to a Great Lakes Basin compact.

MENOMINEE INDIANS

S. 2131 (Senator WATKINS cosponsor), to delay for 2 necessary years the date for submission of plan for future control of property and transfer of the trust property of the Menominee Tribe (Interior and Insular Affairs Committee).

Unfortunately, this bill failed of passage because of a parliamentary tieup in the last hours of the Senate session.

BOOST FOR OLDSTERS

S. 1688, fair break on pensions, to amend section 203 of the Social Security Act to increase the amount of earnings (from $1,200 to $1,800) which elderly individuals are permitted to earn without suffering deductions from their benefits. (Finance Committee.)

MISCELLANEOUS BILLS

Were space to permit, I could list literally dozens of other bills which I have offered.

These include bills to strengthen our patent system, budgetary reform, tariff legislation, foreign policy, and many others.

Before introducing each of these bills, I test them by this standard: "Does the bill serve the public interest?"

Serving you, the people, is always my goal. Some bills may involve only a relative handful of people. Other bills involve all 170 million American people. But always, legislation must definitely serve some worthwhile need or goal on behalf of America.

YOUR REACTIONS INVITED

I hope that my readers have found this report rewarding.

I cordially invite any questions which you may have in mind, after reading through this report.

It is not intended as a complete statement of what I have sought to achieve during the months of January through August 1957. But it does perhaps give you an inkling as to some of my varied activities.

In order to make it complete, I would have had, for example, to list the literally hundreds of issues which I voted upon on the Senate floor. I would have had to list the innumerable official phone calls to Federal agencies and to folks back home on their problems, the many talks with visiting constituents, and with correspondents of press, radio, and television, the committee hearings participated in, as well as other endeavors.

But I think that this report, however limited, does give you an idea of what your senior Senator has been striving for in the direction of prosperity and justice in America and a just and lasting peace in the world.

The ROTC and the Defense Department

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a thoughtful guest editorial entitled "The ROTC and the Pentagon" which was written by Dr. A. L. Strand, president of Oregon State College, for the August 29, 1957, issue of the Corvallis Gazette-Times, of Corvallis, Oreg.

In this editorial Dr. Strand, who is one of the outstanding editors of our Nation, takes issue effectively with the position of the Defense Department when that Department opposed grants-in-aid for the erection of Reserve Officers Training Corps facilities on college campuses.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ROTC AND THE PENTAGON

(By Dr. A. L. Strand, president, Oregon State College)

Within the past month a long chapter in the history of the Reserve Officers' Training Corps was closed in Washington. It was closed by a surprising, if not incredible, letter the Department of Defense wrote to Congressman CARL VINSON, chairman of the House Armed Services Committee, saying that the Department was opposed to legislation that would provide grants-in-aid for the construction of ROTC facilities at educational institutions. This is of more than passing interest to Oregon State College for we have all three branches of the ROTC—Army, Navy, and Air Force. Although they are fairly well housed now, there's no doubt about the necessity of expanding some of their facilities before very long. But that isn't the sole point. It's the attitude of the Department of Defense toward its main source of young officers about which we are mostly concerned.

It's easy for the public to take for granted a lot of things that aren't so. This is very true of the operations of the ROTC on college campuses and of course you couldn't expect the public to know anything about the "finagling" that has been going on for 10 years in the Department of Defense over ROTC facilities unless someone tells the story. The invitation of the vacationing editor to write something for his column provides a good opportunity to tell it. In a way it really begins on our campus anyway.

On a warm day in late July 1945, Congressman James Mott, of Oregon, and Capt. Arthur S. Adams, United States Navy, sat in my office discussing various matters pertaining to the Armed Forces. Mott was the ranking Republican on the House Naval Affairs Committee, and Adams was the top man in the Navy V–12 and ROTC programs. They were well acquainted because of past associations in Washington. Captain Adams was here as head of a board of naval officers which had come to convert our temporary V–12 unit into a permanent Navy ROTC.

Congressman Mott was happy that Oregon State had been selected for a Navy ROTC and perhaps had something to do with it. I was happy about it too, but was concerned about finding space to house the organization. But both Mott and Adams stated emphatically that there would be no problem about space. The Naval Affairs Committee had a bill ready to introduce in the Congress which would provide excellent facilities. Mott would introduce it himself and in a very few weeks it would become operative. Any temporary rooms on the campus would suffice until a naval science building could be erected with the Federal Government bearing at least half of the cost. The Navy even had plans ready and copies would be sent us. It wasn't long until the plans arrived and we picked out a site for the building.

But the bill was never introduced. Congressman Mott died suddenly within a few weeks of the time he was here. As we know now the Navy facilities bill died with him, but nobody knew it then. Some institutions went ahead and constructed naval science buildings on the strength of assurances from Washington. They were left holding the sack.

By 1947 the unified Department of Defense was established and soon the new United States Air Force got its own ROTC. When the Land-Grant College Association inquired about the Navy facilities bill, it was informed by the Department that a new bill, which would take care of facilities for all the ROTC's, Army, Navy, and Air Force, had been written and assigned to the Navy to get through the Congress. It would be but a short time until things were underway. The institutions believed thoroughly that the Department of Defense meant what it said. It was logical to suppose that the Federal Government had an obligation to meet in helping to furnish facilities for the training of officers for the Armed Forces.

But nothing ever happened. No bill with the backing of the Department of Defense was ever introduced. All the institutions got from the Department was assurance that it was ready, or about ready, to press the matter. There was no lack of support in Congress and out. The Advisory Board on Reserve Components heartily backed the proposition and, of course, the land-grant and State university associations, including the institutions where about 80 percent of the ROTC output of officers takes place, were strong for it and had their Representatives in Congress well advised.

Years went by and finally on July 31, 1957, the Department of Defense informed the House Armed Services Committee that it is against any legislation to provide grants-in-aid for the construction of ROTC facilities. The Department's letter also stated that it had been advised by the Bureau of the Budget "that enactment of this legislation would not be in accord with the program of the President in view of the current budgetary situation and because they believe that the educational institutions having ROTC's should continue to furnish facilities without cost to the Federal Government."

The letter is in direct contradiction to statements made within the past 2 years by official spokesmen for the Department of Defense, and of the Army, Navy, and Air Force separately. Except for one incident I shall record later, the letter is in contradiction to a full 10 years of direct promises and continued assurances. The Department may not take it that way, but the letter is a slap in the face of the old prewar group of colleges and universities, which furnished over 77,000 young officers in World War II, without which this same Department of Defense has said many times that the crucial and rapid mobilization of our Armed Forces in 1940–41 could not have been accomplished. The letter ends 10 years of procrastinating deception and must be embarrassing to all the honest Army, Navy, and Air Force inspectors and advisers who have visited the Nation's ROTC's since 1947. The Department of Defense, which a few years back was anxious to spend billions on universal military training, which most people know could not have lasted much longer than from one session of the Congress to the next, opposes very modest expenditure of funds for the most permanent source of trained manpower our country has.

Above are the facts of the case. What follows are my own opinions.

In the first place, we think the Eisenhower administration cannot be directly blamed for what has happened and the about-face of the Department of Defense. Some might claim that it is another case of divine aloofness, but we believe the real seat of the trouble lies in the Pentagon and has been there since long before the present administration took office. The Pentagon empire is a very large place. The turnover in the personnel who occupy it, big brass and little brass, is rapid. It is unlikely that there is a single officer, or high-ranking civilian official, in it today who was there 5 years ago. It's very strange, therefore, how an unbroken resistance to the ROTC can persist, but that seems to be the case. One might almost conclude that it descends on the higher category of officers from the walls of their offices when they move in. In spite of all the sweet words of praise and expressions of great satisfaction over the character and general qualifications of the young officers educated in the ROTC institutions, and in spite of the fact that all three services confess they must depend more on the ROTC's for officer replacement than on their own Academies, there is a persistent and continuing faction in the Pentagon with whom the ROTC doesn't rate and never has. This contention isn't based solely on the facilities matter. That would be unwarranted. It's one instance after another of foot dragging that goes back many years, certainly as far back as the Roosevelt administration. The apparent about-face action of the Department of Defense isn't an about-face at all.

Where is the resistance to the ROTC? It's hard to believe it might be in the Air Force which has been almost completely dependent on the college output of young officers for its replacements. And it's probably not the Navy. The Navy initiated the idea of helping the institutions obtain proper facilities, and, with its Holloway plan of providing generous scholarships under a careful procurement program, has always shown enthusiasm for the ROTC from its Washington headquarters. That leaves just the Army, and I hesitate to make that inference for the college has enjoyed the best relations with the Sixth Army Headquarters at the Presidio, with Fort Lewis and the other Army establishments where our men go for summer campus, with our military district, and with all the excellent officers who have served as commandants of our Army ROTC. Nevertheless, in May 1955, Assistant Secretary Hugh Milton II, Department of Army, got pinned down before the House Armed Services Committee in sort of an embarrassing way. Said Milton: "Our position in the Department of the Army has been that since a good many institutions have already assumed the obligation of providing these facilities, and felt that they were obliged to do so under the Land Grant Act of 1862, that we at the Federal Government level should not engage in a construction program." For all that had gone on before, this statement was quite a surprise to the committee and it might even have been a surprise to the former general that he had said it. He was under some duress, as it were, and backtracked by adding that the Department had the matter under study. His statement was absolutely contrary to the position held by

the institutions founded under the act of 1862 and he must have known it. The executive committee of the land-grant association promptly protested to the Secretary of the Army and the incident was smoothed out. But the cat was out of the bag.

The final knifing of the grants-in-aid for ROTC facilities by the Department of Defense, coming just at the time the institutions are attempting to prepare for much greater enrollments, and what's also important, just at the time the Department and the institutions are trying to work out some better curricular integration between the military and civilian studies, will have some repercussions. The institutions realize now that they were taken on a snipe hunt, a snipe hunt that lasted 10 years, and were left in the woods. They are not likely to forget it.

Meeting the Crisis in Agriculture

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the agricultural situation and its effect on the American farmer.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

MEETING THE CRISIS IN AGRICULTURE

Today, the American farmer is facing a critical income problem.

Our farm folks, by and large, are finding it increasingly difficult to make a fair living for themselves and their families. Too many farmers—especially the small-family type—are finding it necessary to sell out. Why? Because they don't find it worthwhile to work long, hard days for a minimum of return.

In Wisconsin, the picture is similar to the situation across the Nation. Our current total of around 170,000 farms is unfortunately diminishing at a rate of about 3,500 annually. The number of small farmers—who often find that they can hardly survive at today's low prices for his products—is diminishing. The large farmer is getting larger.

YOUNGSTERS LEAVING FARMS

A great number of fine young folks, too, find it necessary to seek off-the-farm jobs—part time or full time. The prospect of making family-size farming a really successful career is growing dimmer and dimmer. For example, consider the present average rate of cash income of only 30 to 50 cents per hour received by Wisconsin dairy operators. That is not much to look forward to, especially for aspiring young Americans.

DAIRY PLANTS CLOSING

We must face the fact, too, that not only farms, but many other businesses closely related to farming and dairying are being forced to the wall. For instance, a regrettable number of creameries have "Out of business" signs in their windows. Far too many of our cheese factories—many of them family operated for years—are closing their doors. In addition, in villages and towns, hardwaremen, lumbermen, implement dealers—and others dependent upon the buying power of these farmers—are finding themselves squeezed along with the farmer.

FARMERS ARE "HARD HIT" BY INFLATION AND HIGH INTEREST RATES

Rising costs due to inflation have hit the farmer tremendously hard. To pay rising costs, he has to produce more milk, vegetables for canning, beef, and other products. As a result, a glut on the market all too often forces prices—now too low—to an even lower level.

The "upping" of interest rates, too, hits the farmer in his "thin" pocketbook. Since almost all farmers are creditors, for short-term production loans, high interest rates cut particularly deep into their incomes. At the same time, they are provided no relief from high costs of labor and of manufactured products and supplies. Thus, the farmer now finds himself caught in a kind of "double squeeze."

NO SIMPLE ANSWER

This is definitely a bad situation.

What are we going to do about it? We have got to roll up our sleeves and resolve these problems. The job is tough. There is no "pat" answer. We recognize that because agriculture is so complex, any solution will not be simple. However, we must find a solution—both in the interests of agriculture, and of our whole economy.

PROGRAMS TO ASSIST FARMERS

Currently, a number of farm-related programs have been designed and put into effect to assist individual farmers. While these programs do not make up for loss of income, they do help in a great many ways. For example, the following programs are in action:

The surplus disposal program has made reserves of surplus farm products—including milk, cheese, peas, and other items produced in Wisconsin—available for school lunches, disaster relief, and other noncommercial market uses.

The program attacking brucellosis to cut cattle losses is meeting with success. Happily, my own Badger State has now been certified free of brucellosis.

The Rural Electrification Administration has helped rural electric and telephone systems to meet growing demands for their services by our farm folks.

The expanded extension service program in the Nation—and especially in Wisconsin—is doing a fine job of assisting education programs, farm and marketing adjustment, and just plain know-how and advice.

The rural redevelopment program is expanding in a great many States, including Wisconsin, which has two pilot counties—Sawyer and Price.

An expanded Soil Conservation Service is providing soil and watershed conservation assistance.

These, and a number of other assistance programs, are working to help the farmer.

THE SOIL BANK

According to estimates, American farmers will receive more than $732 million in soil-bank payments this year. This will serve to bolster our farm income, as well as to carry out soil-bank objectives of reducing surpluses and protecting the soil. The 85th Congress clamped a $3,000 cut on the amount a producer could receive in any year. This stops the unfortunate practice of providing the large corporation farmer with hundreds of thousands of Federal dollars. As we know, the smaller, family-type farmer is the one who needs greatest assistance.

In Wisconsin, participation is increasing under the soil bank. According to estimates, payments to Badger farmers will amount to over $10 million this year.

NEED TO MODERNIZE PARITY

There still remains a great deal of controversy over the best level of parity—the fairest price—support levels for farm commodities.

As we know, attempts have been made to change and modernize the parity formula. To my way of thinking, the very definition of "parity" is obsolete and unfair to the dairyman.

But, regardless of the formula, the farmer is basically concerned with the amount of goods that he himself can buy with income from the products he sells. Currently, prices he receives are too low to offset costs and get a reasonable profit—or, in some cases, any profit at all.

For example, in terms of buying power, the present level of parity, as now defined, is $3.25 per hundredweight (a very modest price-support level—for manufacturing milk). This means only about 7 cents per quart. That is much too low. At this price, the farmer simply cannot pay the high costs of operation, equipment, and labor.

For many months, I have pointed this out to the Secretary of Agriculture, and urged that the price-support level be raised at least 20 cents—to $3.45. Permissible under the present law, such an administrative increase would help give milk prices to the farmer a much-needed boost. But even such a parity level is a long way away from an adequate profit for the farmer. A changed definition of parity in the light of modern conditions is also essential.

FARMER-CONSUMER RELATIONSHIP

In planning for a healthy agriculture, of course, the farmer-consumer relationship is important. The farmer must get a good price for products; at the same time, we can't afford to price these products out of reach of the consumer's pocketbook.

Regrettably, the price spread between what the farmer gets for his commodity, and what it sells in the city for, is often too great. This does not necessarily mean that our so-called middleman is making unfair profits. However, it does point out that the farmer is at a disadvantage in bargaining—that is, he must buy his machinery and equipment at a high retail price. At the same time, he must sell his milk, beef, corn, pork, eggs, and other products at low wholesale prices. Then they go through a long chain of distribution, while the price to the ultimate consumer is being raised.

If the farmer is to survive, this farm-to-market spread must be reduced, or at least shared, to a greater degree, by the farmer.

FINE WORK OF CO-OPS

Meanwhile, fortunately, our cooperatives are making a tremendous contribution toward helping the farmer get a larger share of the market price of his products.

These cooperatives carry on work in the important fields including production, marketing, purchasing, financing, insurance, and public service. The cooperatives have been, and continue to be, of invaluable service to our farmers. Wherever possible, co-op programs should be strengthened and expanded.

WILEY DAIRY BILL NEEDED TO STIMULATE RESEARCH

Today, one of the greatest needs of agriculture is more research. That is why, for example, I introduced specific research legislation in the interests of dairying. The enactment of the Wiley bill providing for a dairy research center at Madison would be a tremendous help to our dairy farmers. This would aid to—

Achieve more efficient methods of dairy farm operation;

Promote sales and distribution of dairy products;

Step up consumption;

Explore the possibility of the greater industrial and other uses of milk byproducts; and

Fulfill other needs of this vital industry.

INCREASED CONSUMPTION OF DAIRY PRODUCTS

To best help the Wisconsin dairy farmer, we must, of course, attempt to increase consumption of our healthful dairy products. If we can get millions of folks to drink another glass of milk, eat another slice of cheese, and consume a little more butter and other products—this would get rid of our price-depressing surplus, and result in a better market for the farmer.

Our teen-agers drink too little milk, and so do our old folks. Consumption must be boosted, among these and other groups.

SALES AND PROMOTION

To get increased consumption, of course, we must step up and expand our sales and promotion programs. Since 85 percent of Wisconsin milk is sold outside the State, we must more effectively spread the news of the healthful qualities of dairy foods across the Nation.

SOCIAL SECURITY NECESSARY

In these times when the farmer is suffering from an economic squeeze, the opportunity to retire under social security is, indeed, important. All of our farm folks—whether a tenant, owner, or laborer—are now eligible.

As a matter of fact, thousands of farmers across the country—many of whom would normally continue to operate their farms—are retiring. Why? Because of the tragic fact that retirement benefits—though very modest—often exceed the income now received from farm operation. This is sometimes true in Wisconsin, as in almost every other State in the Nation. It is another bit of evidence of the great need for a better program for agriculture.

Liberalized social security for elderly farmers past 65 and for their widows or wives past 62 is nevertheless essential.

CHALLENGES IN OTHER FIELDS

There are, of course, challenges in a number of other fields. For example, we need improved programs:

To fulfill our labor needs at harvest seasons;

To protect our home industry against unfair competition from imports—especially of commodities in surplus such as butter oil, cheese, and other products; and

To ease Federal tax burdens to the extent that the Nation's budget will permit.

CONCLUSION

Finally, let me point out that Uncle Sam alone cannot do all these things.

As we recognoize, it is impossible to legislate prosperity. However, the Government can, and should, continue to help wherever possible, to speed the economic recovery of the farmer.

The job, of course, is to provide our farm folks with a sound and proportionate share of the national income. By so doing, it will benefit, not only the farmer, but strengthen the whole economy.

Maintaining Employment Levels at Boston Naval Shipyard

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Resolution 54 adopted by the 71st annual convention of the Massachusetts Federation of Labor, Boston, Mass., on August 9, 1957:

RESOLUTION 54

MAINTAINING EMPLOYMENT LEVELS AT BOSTON NAVAL SHIPYARD

Whereas the Boston naval shipyard draws its employees from every part of the Commonwealth more particularly within a radius of 60 miles from the city of Boston; and

Whereas each city and town therein is greatly affected by the financial stability of these employees; and

Whereas any proposed layoff which will affect every trade and occupation and result in many professional and technical men and skilled mechanics seeking work in other States; and

Whereas the Navy has announced an economy cut of several fighting ships from the active fleet that could mean diverting Boston repair work to other shipyards; and

Whereas any reduction in the appropriation for the Boston naval shipyard and any further cutback in work would increase unemployment in this area to an untenable degree: Therefore be it

Resolved, That the Massachusetts State Federation of Labor delegates in convention urge the Congress of the United States to take action as may be necessary to compel the Department of Defense to maintain the present standard of employment and work at the Boston naval shipyard; and be it further

Resolved, That copies of these resolutions be transmitted to the President of the United States, to each Member of the Massachusetts congressional delegation, to Secretary of Defense, to Secretary of Navy.

Urges Stronger GOP Leadership in 1958

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, may I call attention to the leadership on the other side of the aisle that the 2d session of the 85th Congress be prepared to meet the issues facing the Nation and to act promptly on legislation that concerns the general welfare.

I very humbly suggest to the gentleman from Massachusetts [Mr. MARTIN] and his able lieutenants that they have it in their power to enable us to do our job next year and to adjourn by the statutory date.

One of the reasons why it has been necessary for this Congress to remain in session has been, in my opinion, the vacillation on important issues in the White House beginning with the budget and ending with the civil-rights bill. We have seen a series of statements and pleas on the part of the President and his spokesmen that force us to revise the old "off again—on again, Finnegan" metaphor as obsolete and ineffective. Normally here in the Congress we can meet and resolve the great issues on a basis of Democratic and Republican position as the springboard. Normally we look to the President as setting the position for his party.

That has been true for as long as I can remember. There was never any doubt in the minds of any that when Presidents Roosevelt and Truman spoke that was the Democratic position. When President Eisenhower speaks, about all we can conclude is that what he says is the position of the individual who last had his ear before he spoke.

It has gotten so that we may remain confident that if we do not like the Eisenhower position we can just wait 5 minutes, and, like the weather, it will change.

So, my suggestion to the gentleman from Massachusetts and his able lieutenants is that they come here in January prepared in a series of special orders to give us the Republican position on these major problems and that the membership of the Congress consider these as the real Republican position so that we may proceed to the important business of legislation, and debate these matters from that standpoint.

Mr. Speaker, I want to make it perfectly clear that I am not suggesting to my good friends that they seize the leadership of the Republican Party; I am merely suggesting that they step in and fill a void. The President has abdicated this leadership, and since the Republican Party is in charge of the administration, it is to the best interest of the country to have someone within that party fill this void. We shall then know where we are and we will not have to stand by and see our friends across the aisle embarrassed when the White House, in one of its sudden about-faces, pulls the rug from under them. I think they should weave the rug upon which they shall stand.

Statement by Hon. John W. McCormack, of Massachusetts

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my own remarks in the RECORD, I include a statement recently made by me to the press and the radio.

I make the further observation that if President Eisenhower and the present administration become firm and remain consistent in the foreign policy which the President and the administration establish, it will receive stronger support from the Congress and the American people.

The statement follows:

STATEMENT BY CONGRESSMAN JOHN W. MCCORMACK, DEMOCRAT, MASSACHUSETTS, MAJORITY LEADER OF THE HOUSE OF REPRESENTATIVES

I consider it highly inadvisable as the price for letting American newspapermen into Red China that we allow Red Chinese spies, under the guise of being newspapermen, to enter the United States. The situation is

embarrassing enough for us without capitulating to the Red Chinese this form of tribute.

As a matter of fact, there are many who felt it unwise to permit American correspondents to enter into Red China. Such action gives them a superior status and a privilege that no other American possesses. As citizens they are not superior to others. But, more important, we remember that not so many years ago, when some American correspondents went into the then Communist part of China, they told the American people that Mao and his kind were not Communists, but were progressives seeking agrarian reforms through democratic means.

At that time, those correspondents certainly "brainwashed" the American people. I shall assume that they did not intend to do so, but they helped the Chinese Reds immeasurably many times more effectively than the Red Chinese could have helped themselves.

For President Eisenhower and the State Department to make this kind of a deal and let a group of Chinese newspapermen, who, we know, are nothing but spies, come into our country is indefensible. It would be a crime against our national interest.

Everyone knows that such Chinese Reds would be spies. They would operate with clever threats and other means upon the loyal American Chinese. They would also have an adverse effect upon anti-Communist Chinese in other lands.

Instead of weak and vacillating actions, President Eisenhower and the present administration had better get firm, and instead of wavering, be consistent.

Our Government should definitely state, and stand by it, that spies from Red China under the guise of newspapermen will not be admitted into the United States.

Presidential Disability

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Gerald W. Johnson, and which appeared in the April 29, 1957, issue of the New Republic:

PRESIDENTIAL DISABILITY
(By Gerald W. Johnson)

The removal of the President of the United States is so grave a matter that it has never been affected except by death, and only once attempted by other means; yet of 33 individuals who have held the office 8, almost exactly 25 percent, have been permanently or temporarily disabled while in office. The framers of the Constitution, foreseeing the contingency, established the office of Vice President, and decreed (art. II, sec. 5) that "Congress may by law provide for the case of removal, death, resignation or disability, both of the President and Vice President."

One hundred and sixty-eight years have passed and Congress has not yet by law provided for such cases, nor, according to Congressman FRELINGHUYSEN in last week's New Republic, is it about to now. For he says "there is no consensus in Congress as to what is the best solution, be it by constitutional amendment, simple resolution or joint resolution." When a President is accused of high crimes and misdemeanors, the Constitution itself (art. I, secs. 2 and 3) provides that he may be impeached by the House and tried by the Senate, but the Chief Justice, not the Vice President, shall preside, thus bringing all three branches into the procedings. It is hardly credible that this involvement of all was accidental.

Congress has never yet by law provided against the death of a President, although seven have died in office. The question was indeed decided as long ago as 1841, but not by Congress. When the first President to die in office succumbed, the Vice President assumed the office of President, not Acting President, and nobody in Congress, not even Webster, Clay, or Calhoun, was man enough to stop him. So if seven Vice Presidents have taken over the Presidency without incident, we owe that orderly succession, not to the wisdom of Congress, but to the bold resolution of John Tyler.

Three times Congress' refusal to do its duty has left the Nation without an efficient official head for many weeks at a time. If no disaster followed, the credit is largely due to three individuals, James G. Blaine, Mrs. Woodrow Wilson, and Sherman Adams, each of whom, without the authority of law, stepped in to save the country from the results of congressional laziness and indifference to the safety of the Nation.

That laziness and indifference persist to an almost incredible degree. The incumbent of the Presidency has already twice been disabled for weeks at a time, and his physical condition is known to be such that a third collapse may come at any time without warning. The President himself, realizing the danger, has asked Congress to act, but to no effect.

Yet to a superficial observer it would seem a simple matter for Congress to provide by law that when serious suspicion of Presidential disability arises, Congress may by joint resolution call on the Supreme Court, not to examine the man, which is beyond the Court's competence, but to weigh the evidence, which is the Court's business. If the Court certified to Congress that the weight of expert, scientific testimony showed disability, Congress could, again by joint resolution, call upon the Vice President to assume the duties of the office until the disability should be removed. Upon the President's recovery, the process could be reversed.

This would involve action by the executive branch, but not on its own initiative. The legislative would have made the first move and the judiciary would have examined its grounds for action and found them tenable. Thus all three branches would have admitted that the authority of the man in the Presidency was legitimate and there would be no chance for mischiefmakers to mislead public opinion with cries of usurpation and tyranny.

At the same time it would repudiate the silly and bitterly unfair theory that a sick man should be responsible for diagnosing his own case. A sick man almost always thinks he is better than he is. Doctors, family, and friends all conspire to make him think so, for the sound reason that keeping up his morale does assist his recovery.

In private life this is admirable, but in public life it is dangerous. Once that very thing came near wrecking this Government. In 1823 William H. Crawford was a strong candidate for the Presidency until, like Wilson, he suffered a stroke that partially paralyzed him. But he began to improve and his friends encouraged him to believe that he was going to be all right, so instead of withdrawing he stayed in the race. By so doing he threw the election into the House of Representatives, ruined the hopes of Henry Clay, and put upon Adams' title to the Presidency the cloud of bargain and corruption that poisoned the political atmosphere for the next 20 years—all because a sick man could not be brought to face the brutal truth about his condition.

With this record before it, if Congress refuses to take action, the blame lies upon Congress, not upon the wise and bold men who framed the Constitution.

Pilots Tell Perils of Drunks Aloft

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. REES of Kansas. Mr. Speaker, under permission heretofore granted by the House, I am including a statement by J. W. Anderson, staff reporter for the Washington Post and Times Herald, wherein he quotes from reports given by representatives of the Air Line Pilots Association.

A great deal is being said these days with respect to the improvement of safety and safety devices for airline passengers. Here is one place where improvement can be made rather promptly if the airline management would give it the consideration to which it is entitled.

The statement follows:

The airliner's pilot reported:

"We had an intoxicated passenger on board who was obnoxious to the hostess on several occasions.

"In a mistaken attempt to get a drink of water, he mistook the main cabin door of the DC-3 for a water tap and had grasped the handle of the door before he could be stopped by the hostess.

"Had he been successful in moving the handle, we would have lost him and the hostess."

The report was 1 of 30 given by the Air Line Pilots Association to a Senate Aviation Subcommittee considering two bills to ban drinking on interstate flights.

The Civil Aeronautics Board has told the Senators that it investigates all complaints, but has found no reason to ban liquor.

But the Pilots Association claims that airborne drunks are becoming a major hazard to air safety. When C. N. Sayen, association president, made the charge at a hearing earlier this month, the subcommittee asked for particulars.

The pilots replied with stories of incidents ranging from nuisances to near disasters.

"The practice of serving intoxicating beverages on domestic airlines is relatively new and still confined to a limited number of flights on eight airlines," Sayen wrote in a letter to A. S. MIKE MONRONEY, Democrat, of Oklahoma, chairman of the subcommittee.

"However, the practice is spreading, and competitive pressures are being created on carriers still refusing to adopt the practice."

EXAMPLES CITED

As examples of hazards, he cited this report:

"On our flight into Washington there was a group of passengers in the front compartment buying drinks and drinking from their own bottles.

"One of this group of jolly boys threw a partially filled bottle—a fifth, not a miniature—to, or at, one of his companions, and the bottle hit another passenger.

"This could have been the start of a real brawl. Or the bottle—which is a consider-

able missile—could have hit one of the windows."

Another pilot was bringing his plane into Dallas:

"A short, well-inebriated man wandered into the cockpit and began to berate me for being 'angry with him and just what did I have against him anyhow?'

"A circle of the field was necessary while a hammerlock was applied to convince him that the captain was not mad at him and that he should return to his seat."

STEWARDESS' STORY

And to demonstrate the heights to which gracious living can rise with liquor aboard, a stewardess told this story:

"A male passenger became extremely uncooperative as a result of overindulging. He refused to fasten his seat belt and observe the 'no smoking' sign when approaching for a landing.

"I told him several times to extinguish his cigarette which he did, except that he relit another one as soon as I turned my back. Upon telling him to extinguish cigarettes for the third time, he did so by putting it out in the palm of my hand."

NO DANGER, CAB SAYS

CAB, in a letter to Senator MONRONEY on Friday, asserted that its investigation "did not disclose any incident in which the serving of alcoholic beverages might have jeopardized flight safety.

"Some incidents involving unpleasant and objectionable conduct on the part of passengers were disclosed," wrote Vice Chairman Chan Gurney of CAB.

"However, most, if not all, appeared to have resulted from passengers drinking liquor prior to flight, or liquor which had been carried privately aboard the airplane."

The Pilots Association said that the serving of liquor by the airlines makes it difficult to prevent drunken passengers from boarding planes, and makes it impossible to prevent them from bringing their own bottles with them.

The two bills before MONRONEY's subcommittee would ban all consumption of liquor in flight.

Maintaining Watertown and Springfield Arsenals

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Resolution 16 adopted by the 71st annual convention of the Massachusetts Federation of Labor on August 7, 1957:

RESOLUTION 16

MAINTAINING WATERTOWN AND SPRINGFIELD ARSENALS

Whereas the Watertown Arsenal and the Springfield Armory are Federal field establishments that have greatly contributed to the defense needs of the Nation and the prosperity of the Commonwealth over the past century; and

Whereas both these traditional defense activities have been subjected to a series of adverse administrative actions which have curtailed their scope of operation; and

Whereas such curtailment of operations has unduly hurt the economic well-being of the Commonwealth and the defense readiness of the Nation: Therefore be it

Resolved, That the Massachusetts State Federation of Labor, in convention, go on record and urge the Congress of the United States of America to provide and insure the continued operation of the Watertown Arsenal and the Springfield Armory at a higher plane and wider scope of operations as an aid to bolster the economy of the Commonwealth of Massachusetts and improve the defense preparedness of the Nation.

Senator Kerr Emerges as Chief Critic of Administration's Money Policies

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Wall Street Journal by Lester Tanzer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR KERR EMERGES AS CHIEF CRITIC OF ADMINISTRATION'S MONEY POLICIES

(By Lester Tanzer)

WASHINGTON.—Out of a yearlong attack on the administration's restrictive credit policies has emerged a new economic spokesman for issue-hunting Democrats in Congress: ROBERT SAMUEL KERR, the big, bluff, tart-tongued Senator from Oklahoma.

From the day Congress first assembled in January, Democrats have been assailing high interest rates and inflation and blaming the administration for both. Next year according to present plans, Democrats aim to make an even bigger issue out of so-called tight money, especially if its dampening effects spread to more segments of the economy.

Though the Democratic assault on tight money continued all session long, one notable shift did occur. In the early days of the year it was Representative WRIGHT PATMAN, the easy money apostle from Texas, who led the Democrats. But as the session wore on, Senator KERR became his party's undisputed economic champion. And he's likely to carry the Democrats' banner on financial issues in 1958, too.

GRUDGING ADMIRATION

Foes say Mr. KERR is arrogant. Even his friends admit he's got a sharp tongue. But friend and foe alike agree the Oklahoma lawmaker is the Democrats' most effective critic of high interest rates. "He's awfully clever," says one of President Eisenhower's top advisers with grudging admiration for the now famous Kerr technique.

Mr. KERR's frontier-tinged origins probably account for his built-in distrust for Wall Street and eastern bankers, common among folks reared in rural regions. His rags-to-riches life story, replete with log cabins and covered wagons, would probably make most aspirants for President of the United States, as Senator KERR once envisioned himself, somewhat envious.

Mr. KERR was born in 1896 in a log cabin near Ada, Okla., at that time Indian Territory. He was the second of seven children. When his older sister was 6 weeks old, his parents had driven there in a covered wagon from Texas to Indian Territory.

Before he went into politics, Senator KERR taught school, sold magazines, served as a field artillery lieutenant during World War I, ran a produce business, and practiced law, and built Kerr-McGee Oil Industries, Inc., of which he is president.

In 1940 he was selected Democratic national committeeman for Oklahoma. Two years later he became governor, the first native of the State to hold that office. He delivered the keynote speech at the Democratic National Convention in 1944, and, in 1948, was elected to the Senate. Besides his Senate Finance Committee assignment, Mr. KERR is a ranking member of the Public Works Committee, where he holds forth as a public-power advocate.

HIS PRESIDENTIAL HOPE

The Sooner State Senator had ambitions in 1952 of running for President against Dwight Eisenhower, but his campaign for the nomination sputtered out. Political reporters remember the irony of a huge replica of the humble log cabin in which Mr. KERR was born, set up in the lobby of Chicago's Conrad Hilton Hotel, mirroring the large sums reputedly spent on the Senator's campaign.

In his questioning at the Finance Committee's probe, in his Senate speeches, and in personal chats, Mr. KERR has painted a broad picture of his monetary philosophy. It shapes up something like this:

Inflation can be caused just as well by too little credit as too much. Right now, says Mr. KERR, the United States is going through the first time in its history when supplies of goods exceed demand, only to find inflation threatening the economy. Credit, he contends, is the only commodity in short supply now and high interest rates are behind the inflation.

More expensive credit, according to Mr. KERR, doesn't discourage much borrowing; instead, big corporations just pass on the higher rates to consumers, thus sending up prices. "High interest rates," he argues, "drive smaller, marginal operators out of business and it's these people who provide the effective element of competition that restrains the price level."

That technique combines with some unorthodox economic theories a quick, folksy wit, and the ability to make statistics sit up and do tricks. As do all good prosecuting attorneys, Mr. KERR sees things in blacks and whites and holds little patience for those who disagree with him.

In Mr. KERR's view, high interest rates are the principal cause of inflation; most economists—and the administration—figure restrictive credit policies will dampen the demand for credit and stem the inflation-spurring capital goods boom. BOB KERR's answer to inflation is to ease up on the credit brakes, a move orthodox economists reckon would only further fuel inflation.

Mr. KERR balks at any effort to label him an easy-money man, however. He claims he's for neither a drought or a flood of credit, just enough to assure a steady, healthy expansion of the economy. He reckons he's about half way between the administration and WRIGHT PATMAN in his economic thinking.

Thus far, Mr. KERR's principal forum has been the Senate Finance Committee's probe into the Nation's financial health. He's made some speeches on the Senate floor, too, including one in which he claimed President Eisenhower had no fiscal brains. That remark is probably as good an example as any of Senator KERR's blunt manner and willingness to tackle any antagonist, big or small.

Mr. KERR has struck his most telling blows, Democrats figure, as second-ranking member, right behind Chairman HARRY BYRD, Democrat, of Virginia, of the Finance Committee. The lawmakers have so far heard former Treasury Secretary George Hum-

phrey and outgoing Under Secretary Randolph Burgess. The committee broke off hearings until the fall, at the earliest, in the midst of questioning Federal Reserve Board Chairman William McChesney Martin before Mr. KERR had a crack at him.

A CHANCE NEXT SESSION

The Oklahoma Democrat will get his chance at Mr. Martin once hearings resume. Other Government economists and officials, as well as a parade of private citizens, are still slated to testify at hearings that could extend well into the next session of Congress.

Mr. BYRD's committee abounds with Democratic critics of administration and Federal Reserve monetary and fiscal policies—including scholarly PAUL DOUGLAS, of Illinois, courteous ALBERT GORE, of Tennessee, and RUSSELL LONG, of Louisiana. But none have yet displayed Mr. KERR's flash and ability to make oft-bored reporters sit up and take notice.

The 61-year-old legislator allows he has held the same economic views as long as he can remember, or, as he puts it, ever since his father "taught him the difference between a Republican and a Democrat. A Republican puts a premium on the value of the dollar, a Democrat on the value of labor and the thing produced," says the Senator.

The Federal Reserve Board won't be carrying out its responsibilities, he believes, unless it supplies enough credit to keep the economy growing, rather than tighten up credit to force an economic slowdown. "It's a lot easier to start a recession than stop one," he reckons.

SEEKING MIDDLE GROUND

What Senator KERR says he'd like to see is a middle ground. "I'm as much opposed to cheap money as tight money," he avers. If it were up to him, he'd make the Federal Reserve peg long-term Government bonds at about 3 percent, compared with the 2½ percent at which such securities were pegged before the Federal Reserve Board ended its interest-fixing activities in 1951. But he would peg them by Federal fiat, abandoning the free market under which they have risen to effective rates of close to 4 percent.

Democrats who count on Mr. KERR as their major weapon in the fight against administration monetary policies, however, regard Mr. KERR more highly as a tactician than as an economic philosopher. In that field he can make full use of his mastery of the fine art of jumping to conclusions, usually based on carefully selected, but always accurate statistics.

For example, Mr. KERR got George Humphrey to agree there were practically no shortages in consumer goods—such as autos, food, appliances, or housing—then concluded, therefore, the shortage of credit must be causing inflation. When he got a word in edgewise, Mr. Humphrey pointed out the present inflation has been spurred primarily by excessive demand for capital, not consumer goods, and the resulting higher prices for such capital goods has been passed along in consumer items.

To the observer of Mr. KERR in action, perhaps his most striking attribute is his self-assurance. People are often irked by the Senator's everpresent conviction his views are the only right ones. But most respect his willingness to express his views, no matter how unpopular they may be.

This penchant for bluntness and combat has endeared Senator KERR to his Democratic colleagues. They are banking on the sharp-tongued Senator from Oklahoma to use just those qualities as the spearpoint of their attack in future months on the administration's monetary moves.

Statement of A. R. Jones

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. CASE of South Dakota. Mr. President, under leave granted to Members of the Senate to extend their remarks in the Appendix of the RECORD, I offer a statement prepared by Mr. A. R. Jones, nominee by the President to fill a vacancy on the Board of Directors for the Tennessee Valley Authority.

Mr. Jones would have been accorded the opportunity to make this statement at a concluding meeting of the Senate Committee on Public Works, originally scheduled for Friday, August 30, 1957, had that meeting not been canceled.

The statement presents information bearing on certain questions asked and testimony offered during the hearings on Mr. Jones' nomination.

For the information of Senators interested and as a matter of public interest for all concerned with the operations of the Tennessee Valley Authority, and in justice to Mr. Jones himself, I believe that the statement merits this presentation.

I might add that it is my personal belief that Mr. Jones is exceptionally well qualified for any position in Government that calls for honesty, experience, and training in the field of fiscal analysis and governmental policy. I understand that he has consented to accept an interim appointment for the vacancy on the Board of Directors for the Tennessee Valley Authority. I trust that his associates in the TVA and the people of the valley will accord him the cooperation necessary for anyone to successfully discharge the responsibilities of such a position.

Mr. Jones' statement follows:

Since the hearing set for 10 o'clock this morning on my nomination as a Director of the Tennessee Valley Authority was canceled without an opportunity for me to state my side of the case, I respectfully request an opportunity to make this statement a part of the official record of the hearings.

First, as to my personal background and qualifications. I grew up on a small farm in Kansas, walked to a country school, and rode horseback to high school. Without marshaling the difficulties of farm life in the early part of this century, I emphatically assert that I understand the needs, desires, and aspirations of rural people.

I was graduated with a degree in business administration from the University of Kansas in 1927, and engaged in governmental and public accounting work until the fall of 1928, when I started teaching accounting at Kansas State College. I have done graduate work in economics, personnel, business and management in 4 graduate schools since 1927, most recently in 1953.

For 5 years I taught college-level courses in accounting, economics, insurance, investments, and similar business subjects at Kansas State College.

In 1933 I was appointed assistant budget director (actually the active director) and State accountant of the State of Kansas and, within days after I took office, conducted an audit of the State treasury which resulted in the collection, without protest from the bonding companies, of $500,000 on the State treasurer's bond.

During the 4 years that I held the position of assistant budget director and State accountant, I was responsible for implementing the uniform accounting and auditing laws of Kansas, affecting all of the counties, cities, school districts, townships, and other municipalities of the State. In fact, the financial affairs of Kansas were conducted in such a manner that the then Governor received national recognition and was nominated for the Presidency of the United States in 1936.

During 1937, in addition to my public accounting practice, I was treasurer of Washburn College of Topeka, Kans., having been asked to rehabilitate the financial affairs of that institution, which I successfully did.

In 1939 I was appointed a member of the Kansas Corporation Commission with the unanimous approval of the Kansas Senate. I was reappointed in 1941 for a 4-year term, and again was unanimously confirmed by the Kansas Senate. I resigned on August 17, 1942, to volunteer my services in the Army of the United States.

The Kansas Corporation Commission was responsible for the regulation of electric, gas, and telephone utilities, railroads, motor carriers, securities, and proration oil and gas production.

I submit that I am familiar with the economics, accounting, and ratemaking activities of public utilities.

Following 38 months in the Army, I accepted responsibility as the chief business officer of Kansas State College and remained in that position for approximately 11 years. The responsibilities of that office, which worked directly with the president of the institution, were to be in charge of the physical plant, including power generation; to be in charge of dormitories for men and women and housing for married students; preparation of the college's budget, including the internal administration of the budget and relations with the legislature; and, in general, being responsible for the business and housekeeping affairs of the institution. Kansas State College is 1 of the 100 largest educational institutions in the United States.

During my tenure as chief business officer of Kansas State College, the appropriations were increased by 362.2 percent, these increases being particularly manifest in the agricultural research and farm extension areas.

I had an unusually successful experience in the issuance of student union revenue bonds at a favorable interest rate while at Kansas State College.

For the period 1929 to August 17, 1942, I maintained an office and engaged in public accounting, having obtained my certificate as a certified public accountant in 1931. Obviously, it was only between calls to public service that I was able to devote my full time to public accounting. Nevertheless, I am a qualified certified public accountant and a long-time member of the American Institute of Certified Public Accountants.

During the period 1949 to 1952, I served as one of the more active members of the Kansas Little Hoover Commission and wrote the Kansas Reorganization Act of 1953. I

was responsible for and successful in presenting that act to the Kansas Legislature.

On April 23, 1956, I became Deputy Director of the Federal Bureau of the Budget. I was asked to take this position. I did not seek it.

There has been considerable intimation in the record that I might be a captive of the philosophy of the Bureau of the Budget if I became a Director of TVA. Frankly, gentlemen, I do not agree with that conclusion. If I have established anything during my 30 years of experience in Government and business, it has been that I follow the dictates of my own conscience, and I certainly have no intention of changing that attitude regardless of where I may be working.

This statement is supported by the following paragraphs from a letter from Dr. James A. McCain, president of Kansas State College, to the chairman of this committee. Dr. McCain is now in Europe, and first offered to fly back to testify before this committee in my behalf, but at my suggestion, wrote a letter, the quotation from which follows:

"At least by innuendo, the (Caldwell) articles questioned Mr. Jones' integrity. I have been intimately associated with him for 7 years and can assure you that he is scrupulously honest, almost to a fault, in both his personal and his professional life. One of his great assets to the college in appearances before regents, legislative committees, and State officers, was his reputation for preparing meticulously honest, accurate, and complete financial reports. It was universally assumed that budgets and budget requests prepared in his office would contain no padding or devious accounting.

"Questions were also raised about Mr. Jones' attitude toward TVA. It happens that I myself greatly admire the Tennessee Valley Authority and its contributions to the economic and cultural developments of its area. I feel sure that Mr. Jones would have been unwilling to accept appointment to the Commission unless he was prepared to give unstinted support to TVA. One of his most marked characteristics is an almost fanatical loyalty to persons and organizations for which he works."

Further, in order that there may be no misunderstanding as to the representations I have made to this committee, I would like to repeat the summary of my attitude toward TVA which I read to this committee last Monday morning:

"As I have previously testified, I profess a belief in the feasibility and wisdom of the TVA Act. If confirmed by the United States Senate, I will subscribe to the oath including that statement and will do so without reservations.

"Having taken the oath of office, I will vigorously and with determination devote my efforts to TVA and will hold my responsibilities to TVA above all other responsibilities, except, of course, those overriding personal responsibilities to my family.

"As one of the three directors of TVA I will administer the TVA Act to the best of my ability and understanding in accordance with the intent of Congress as expressed in the TVA Act and amendments thereto.

"I will join the other directors or will individually support forward-looking plans and recommendations for the development of TVA, to the Congress and to the President. I will give due consideration to suggestions made by anyone who I believe to be appropriately concerned with the affairs of TVA, including groups and individuals who wish to make suggestions for the further development of TVA. In all cases, however, I will act according to the dictates of my own conscience, convictions, and judgment as to what is good for TVA, and I will follow to the best of my ability such legal course as may be necessary to execute my conclusions.

"Further, if any President of the United States should ask the TVA directors either to follow a general course of action or to take some specific action, I would, of course, give such request every consideration.

"If I determined that the request was not in accord with the intent of the TVA Act or in my opinion not in the best interest of TVA I would not favor doing it and I would then follow such legal course as I considered to be in the best interest of TVA."

An unusual portion of the 7 days of hearings was devoted to a discussion of semantics, with particular emphasis upon whether or not I could appropriately take the TVA oath because I had stated that I was not highly enthusiastic about the spirit of TVA. The testimony will show that in testifying on this subject, I indicated only that my attitude was not doctrinaire. Webster's unabridged dictionary, in explaining the synonyms of the word "enthusiast" states: "The term sometimes implies a subordination of judgment to enthusiasm."

I submit that, if TVA is to obtain favorable acceptance in the money market and thus a fair rate of interest on its revenue bonds in order to hold down power rates, judgment and stability are far more important than the management that would result from one who is inspired or possessed—the dictionary definition of an enthusiast.

If I may be permitted a bit of self-appraisal, I have never cried from the housetops as to what I was going to do, but I am proud of the praise I have received for the work I have done during my 30 years of public service. I have approached each new task with great hope and expectation, but advance bugle blowing does not fit my personality.

During my 30 years of public service, I have taken many oaths, each of them with seriousness and determination to live up to them, and each without reservation.

I have worked with a large number of responsible people, and I have yet to experience a willingness on the part of any of my superiors and associates (incidentally, of both political parties), to willingly permit me to terminate my services.

I am disappointed that the committee has not seen fit to complete its hearings and vote on my nomination. If, under any circumstances, I should become a Director of TVA, I will live up to my oath, which I will take without reservation, and to the statement of my attitude which I have made to the committee repeatedly. I will approach my responsibilities with zeal, vigor, and determination, but not as a zealot.

The progress of TVA has been at a standstill entirely too long. I am convinced that reasonable men can find a mutually acceptable plan for breaking this deadlock. I sincerely believe that such a plan can be developed and enacted at an early session of the Congress.

I sincerely hope that the outcome of the efforts of all of us in relation to TVA will ultimately contribute to its progress and continued service in its many areas of activity to the Tennessee Valley and to the Nation as a whole.

Thank you very much.

The United States Sets Example

EXTENSION OF REMARKS

OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BURNS of Hawaii. Mr. Speaker, at various times during the first session of the Congress I have placed in the RECORD, for the information of the Members of Congress and readers of the RECORD, editorials from all parts of the Nation favoring statehood for Alaska and Hawaii. These editorials are unsolicited expressions of the opinions of the American people. I have noted that I did not necessarily agree with the reasons advanced by the editorial writers for the failure of statehood legislation to pass the Congress.

I include for printing in the RECORD an editorial from the Carlinville, Ill., Enquirer, which should be of interest. I agree with the writer that Alaska and Hawaii should be States. The opinions of the editorial writer are his own, though it would seem likely that he speaks the mind of many others, not necessarily mine.

The editorial follows:

THE UNITED STATES SETS EXAMPLE

There is quite a bit of trouble over the world in regard to colonies, both the French and British having special difficulties in recent months.

They should learn some from the United States and the neat way in which it manages its colonies, referring particularly to Hawaii and Alaska. Every 4 years the 2 political parties solemnly promise those colonies that they will become States. It is written in the party platforms; the candidates make their determination to provide statehood clear; legislation is introduced to that effect.

Of course, something happens and Alaska and Hawaii remain colonies, although, of course, we call them Territories, but they always have something to look forward to, the promise of statehood that they will receive every 4 years.

Tribute by Philip W. Amram to Supreme Court and Chief Justice Earl Warren

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, an able Washington attorney, Philip W. Amram, has written an eloquent tribute to the vigorous liberalism of a majority of the membership of the United States Supreme Court. This tribute to our highest judicial body appeared in the current issue of Western World.

As a Senator from a western State, I am particularly pleased that Mr. Amram has hailed the leadership on the Supreme Court of Chief Justice Earl Warren. I always regarded Earl Warren as a great Governor of California, even though he and I are not of the same political party. In my opinion, the appointment of Earl Warren as Chief Justice has been one of President Eisenhower's major attainments and acts in the White House.

When he served in the State Capitol at Sacramento, Earl Warren was distinguished for his nonpartisanship and liberalism in such fields as conservation, education, civil liberties, and government administration. These same char-

acteristics typify his position on the Supreme Court.

Now that the Jencks case has recently been the subject of extended debate in the Senate, in connection with legislation dealing with this particular issue, I believe that Mr. Amram's article from Western World, an article entitled "The Bill of Rights Stays Supreme," might be of some valuable interest to many of my colleagues.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BILL OF RIGHTS STAYS SUPREME

(By Philip W. Amram)

Oyez. Oyez. Oyez. All manner of persons having claims that the investigating committees of the Congress have impaired their civil rights may presently appear and they shall be heard by the Supreme Court of the United States—and shall receive protection.

These are not the exact words with which the clerk opens each session of the Supreme Court, but they tell the story behind the historical opinions of June 17, 1957.

In formulating these decisions, the Court has cast itself in the role of champion of the individual citizen in his encounters with the executive and legislative branches of Government.

The outstanding features of the constitutional form of government in the United States are the division of powers between the three branches of the Federal Government (the executive, the legislature, and the judiciary); the system of checks and balances between them; the division of powers between the Federal Government and the States; and the independence of the Federal judiciary to control unconstitutional action by either the executive or the Legislature of the Federal Government or the States. This power of the Court was dramatically illustrated in a series of cases.

In a single day, the Court:

1. Set aside a conviction for contempt of a committee of the United States House of Representatives and laid down ground rules for the conduct of congressional investigations.

2. Set aside a similar conviction for contempt of a committee of the Legislature of the State of New Hampshire.

3. Set aside the action of the Secretary of State discharging a Foreign Service officer on loyalty charges.

In these and other decisions handed down the same day, the Court emphasized a further point—that it, and not the legislature or executive, is the ultimate protector of the civil liberties of the individual citizen and the guarantor of his rights under the Bill of Rights of the United States Constitution.

These decisions were all the more dramatic because all of them, in one way or another, faced the dilemma which has troubled the American conscience since the end of World War II—how can the Government of the United States control the Communist conspiracy, dedicated to the complete destruction of every one of these civil liberties, without itself impairing those liberties? The Court made its position crystal clear. The freedoms of the individual must outweigh the need for total exposure, total control, and total punishment of the Communist conspiracy. The conspiracy must be exposed, controlled, and punished without impairing these freedoms.

The individual cases all dealt with specific technical issues. The exact point decided in each of them is far less interesting than the statements of broad principle and broad policy which the Court included in its opinions.

The case of John T. Watkins perhaps has excited the most comment. It dealt with the Un-American Activities Committee of the House of Representatives, a committee which has been in existence since 1938, and has now reached the dignity of a standing committee of the House. The committee was ostensibly investigating Communist infiltration into the labor movement. Watkins, a prominent figure in the Farm Equipment Workers' Union, testified in detail about his own activities, and his associations with the Communist Party in the forties. He agreed freely to discuss any persons who were, in his opinion, still members of the party. But he refused to name or discuss persons who had left the party. As Watkins put it:

"I will not, however, answer any questions with respect to others with whom I associated in the past. I do not believe that any law in this country requires me to testify about persons who in the past have been Communist Party members or otherwise engaged in Communist Party activity but who to my best knowledge and belief have long since removed themselves from the Communist movement.

"I do not believe that such questions are relevant to the work of this committee nor do I believe that this committee has the right to undertake the public exposure of persons because of their past activities."

For his refusal, Watkins was indicted, tried, and convicted. The Supreme Court set the conviction aside.

At the outset the Court, speaking through the Chief Justice, Earl Warren, recognized that it was called upon to restrain the investigative power of the legislature, a power which the courts of England did not possess. It approached "the questions presented with conscious awareness of the farreaching ramifications that can follow from a decision of this nature."

The Court recognized and confirmed the power of the legislature to conduct investigations.

"The power of the Congress to conduct investigations is inherent in the legislative process. That power is broad. It encompasses inquiries concerning the administration of existing laws as well as proposed or possibly needed statutes. It includes surveys of defects in our social, economic, or political system for the purpose of enabling the Congress to remedy them. It comprehends probes into departments of the Federal Government to expose corruption, inefficiency, or waste."

The Court recognized and confirmed the duty of the citizen to cooperate in such investigations.

"It is unquestionably the duty of all citizens to cooperate with the Congress in its efforts to obtain the facts needed for intelligent legislative action. It is their unremitting obligation to respond to subpenas, to respect the dignity of the Congress and its committees and to testify fully with respect to matters within the province of proper investigation."

On the basic limitation of the power to investigate, the Court used this language:

"But broad as is this power of inquiry, it is not unlimited. There is no general authority to expose the private affairs of individuals without justification in terms of the functions of the Congress. This was freely conceded by the Solicitor General in his argument of this case. Nor is the Congress a law enforcement or trial agency. These are functions of the executive and judicial departments of government. No inquiry is an end in itself; it must be related to and in furtherance of a legitimate task of the Congress. Investigations conducted solely for the personal aggrandizement of the investigators or to punish those investigated are indefensible. * * *

"We have no doubt that there is no congressional power to expose for the sake of exposure. The public is, of course, entitled to be informed concerning the workings of its Government. That cannot be inflated into a general power to expose where the predominant result can only be an invasion of the private rights of individuals."

PRIVATE RIGHTS

The Court then elaborated on these private rights of individuals.

"This, of course, assumes that the constitutional rights of witnesses will be respected by the Congress as they are in a court of justice. The Bill of Rights is applicable to investigations as to all forms of governmental action. Witnesses cannot be compelled to give evidence against themselves. They cannot be subjected to unreasonable search and seizure. Nor can the first amendment freedoms of speech, press, religion, or political belief and association be abridged."

This brought the Court directly to the problem of "accommodating the interest of the Government with the rights and privileges of individuals.

"Abuses of the investigative process may imperceptibly lead to abridgement of protected freedoms. The mere summoning of a witness and compelling him to testify, against his will, about his beliefs, expressions, or associations is a measure of governmental interference. And when those forced revelations concern matters that are unorthodox, unpopular, or even hateful to the general public, the reaction on the life of the witnesses may be disastrous. This effect is even more harsh when it is past beliefs, expressions, or associations that are disclosed and judged by current standards rather than those contemporary with the matters exposed. Nor does the witness alone suffer the consequences. Those who are identified by witnesses and thereby placed in the same glare of publicity are equally subject to public stigma, scorn, and obloquy. Beyond that, there is the more subtle and immeasurable effect upon those who tend to adhere to the most orthodox and uncontroversial views and associations in order to avoid a similar fate at some future time."

Where, then, shall the lines be drawn for the accommodating of the congressional need for information and the individual's interest in his privacy?

"We do not underestimate the difficulties that attend such an undertaking. * * * The critical element is the existence of, and the weight to be ascribed to, the interest of the Congress in demanding disclosures from an unwilling witness. We cannot simply assume, however, that every congressional investigation is justified by a public need that overbalances any private rights affected. To do so would be to abdicate the responsibility placed by the Constitution upon the judiciary to insure that the Congress does not unjustifiably encroach upon an individual's right to privacy nor abridge his liberty of speech, press, religion, or assembly."

The Court then turned to the key questions in the case—what was the purpose of the investigation and what was the relevancy of the particular questions?

First, the Court found that the charter of the investigating committee was too vague to be valid of itself.

"Broadly drafted and loosely worded, however, such resolutions can leave tremendous latitude to the discretion of the investigators. The more vague the committee's charter is, the greater becomes the possibility that the committee's specific actions are not in conformity with the will of the parent House of Congress.

"The authorizing resolution of the Un-American Activities Committee was adopted in 1938. * * * It defines the committee's authority as follows:

"The Committee on Un-American Activities, as a whole or by subcommittee, is authorized to make from time to time investigations of (I) the extent, character, and objects of un-American propaganda activities in the United States, (II) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution, and (III) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.'

"It would be difficult to imagine a less explicit authorizing resolution. Who can define the meaning of 'un-American'? What is the single, solitary 'principle of the form of government as guaranteed by our Constitution'? * * *

"The members of the committee have clearly demonstrated that they did not feel themselves restricted in any way to propaganda in the narrow sense of the word. Unquestionably the committee conceived of its task in the grand view of its name. Un-American activities were its target, no matter how or where manifested. * * *

"Combining the language of the resolution with the construction it has been given, it is evident that the preliminary control of the committee exercised by the House of Representatives is slight or nonexistent. No one could reasonably deduce from the charter the kind of investigation that the committee was directed to make.

"The committee is allowed, in essence, to define its own authority, to choose the direction and focus of its activities. In deciding what to do with the power that has been conferred upon them, members of the committee may act pursuant to motives that seem to them to be the highest. Their decisions, nevertheless, can lead to ruthless exposure of private lives in order to gather data that is neither desired by the Congress nor useful to it. Yet it is impossible in this circumstance, with constitutional freedoms in jeopardy, to declare that the committee has ranged beyond the area committed to it by its parent assembly because the boundaries are so nebulous."

PROCEDURAL REQUIREMENTS

This point might have been enough for the decision of the Court. Yet the Court went further. It designated certain minimum procedural requirements to be followed in such legislative investigations.

"Protected freedoms should not be placed in danger in the absence of a clear determination by the House or the Senate that a particular inquiry is justified by a specific legislative need.

"It is, of course, not the function of this Court to prescribe rigid rules for the Congress to follow in drafting resolutions establishing investigating committees. That is a matter peculiarly within the realms of the legislature, and its decisions will be accepted by the courts up to the point where their own duty to enforce the constitutionally protected rights of individuals is affected. An excessively broad charter, like that of the House Un-American Activities Committee, places the courts in an untenable position if they are to strike a balance between the public need for a particular interrogation and the right of citizens to carry on their affairs free from unnecessary governmental interference. It is impossible in such a situation to ascertain whether any legislative purpose justifies the disclosures sought and, if so, the importance of that information to the Congress in furtherance of its legislative function. The reason no court can make this critical judgment is that the House of Representatives itself has never made it. Only the legislative assembly initiating an investigation can assay the relative necessity of specific disclosures. * * *

"There are several sources that can outline the question under inquiry in such a way that the rules against vagueness are satisfied. The authorizing resolution, the remarks of the chairman or members of the committee, or even the nature of the proceedings themselves might sometimes make the topic clear.

"Unless the subject matter has been made to appear with undisputable clarity, it is the duty of the investigative body, upon objection of the witness on grounds of pertinency, to state for the record the subject under inquiry at that time and the manner in which the propounded questions are pertinent thereto. To be meaningful, the explanation must describe what the topic under inquiry is and the connective reasoning whereby the precise questions asked relate to it."

The opinion emphasized again and again that it is the Court which stands as the protector both of the citizen and of the rights of investigation; that it is the Court that will make the accommodation when their interests are conflicting; and that it is the Court which will restrain the investigating committees which go beyond their proper scope of questioning.

And to set at ease those who may think that the legitimate power of investigation is being curtailed, the Court ends its opinion with these words:

"We are mindful of the complexities of modern government and the ample scope that must be left to the Congress as the sole constitutional depository of legislative power. Equally mindful are we of the indispensable function, in the exercise of that power, of congressional investigations. The conclusions we have reached in this case will not prevent the Congress, through its committees, from obtaining any information it needs for the proper fulfillment of its role in our scheme of government. The Legislature is free to determine the kinds of data that should be collected. It is only those investigations that are conducted by use of compulsory process that give rise to a need to protect the rights of individuals against illegal encroachment. That protection can be readily achieved through procedures which prevent the separation of power from responsibility and which provide the constitutional requisite of fairness for witnesses. A measure of added care on the part of the House and the Senate in authorizing the use of compulsory process and by their committees in exercising that power would suffice. That is a small price to pay if it serves to uphold the principles of limited, constitutional government without obstructing the power of the Congress to inform itself."

The opinion has resulted in widespread comment, some of it almost hysterical in tone, as though the Justices of the Supreme Court had become part of the Communist conspiratorial apparatus. But a careful reading of the opinion discloses only the firm insistence of the Court on the basic protection of the rights of the individual citizen, and an equal insistence on the power of proper and legitimate congressional investigation.

Increased Benefits for Federal Employees in Hazardous Occupations

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Resolution 15 adopted by the Massachusetts State Federation of Labor at its recent convention:

RESOLUTION 15

INCREASED BENEFITS FOR FEDERAL EMPLOYEES IN HAZARDOUS OCCUPATIONS

Whereas employees of United States naval and Veterans' Administration hospitals and United States penal and mental institutions are engaged in hazardous work; and

Whereas these Federal employees are engaged in hazardous occupations such as all types of employment involving the custody, care, and/or treatment of fellow humans and the protection of public properties are not receiving adequate compensation or retirement benefits; and

Whereas determination by Federal administrative officials is overly restrictive in allowing recognition of hazardous type employment: Therefore be it

Resolved, That the Massachusetts State Federation of Labor urge the Congress of the United States of America to increase the compensation and retirement benefits of these Federal employees and provide for a more liberal interpretation of hazardous type occupations.

The Economic Assistance Program and the Cause of Poland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Joseph Lipski, former Polish Ambassador, and a letter from Karol Popiel and Dr. Jzydor Modelski, of the Polish Christian Labor Party in exile.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *August 26, 1957.*

The Honorable JOHN F. KENNEDY,
United States Senate,
Washington, D. C.

DEAR SENATOR KENNEDY: I read with great interest your remarkable speech on United States policy toward Poland, delivered on the floor of the Senate on August 21, 1957.

May I convey to you the expression of my sincere appreciation for having so convincingly pleaded the cause of Poland, taking into account its precarious position vis-a-vis Soviet Russia, but on the other hand the determined attitude of the Polish people who—to use your own words—are not satellite people, although Poland may still have a satellite government.

I warmly welcome the fact that in your statement the Polish problem has been approached from a wider European angle. The vision of a peaceful Europe in which an independent Poland would find its proper place should, in my opinion, always guide our political thinking and our efforts striving to attain lasting security arrangements. No real peace and stability would be achieved were Germany reunited and central-eastern Europe left under Soviet domination. Artificial lines of demarcation bear germs of inevitable conflicts.

After the Poznan rising of June 1956 and the October events when the question of eventual United States economic support for Poland was being discussed, the Polish Council of National Unity representing the

Free Poles in the Western World, spoke definitely in favor of such help.

Your economic assistance program has been received by Free Poles with keen interest and satisfaction. Under existing international conditions it seems to be the only way to give practical support and encouragement to the people of Poland, proving United States interest in their aims to obtain full freedom and better living conditions.

I remain, dear Senator KENNEDY,

Yours sincerely,

JOSEPH LIPSKI,
Former Polish Ambassador, Representing the Executive Committee Polish Council of National Unity.

POLISH CHRISTIAN LABOR PARTY,
Washington, D. C., August 26, 1957.

The Honorable JOHN F. KENNEDY,
United States Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR KENNEDY: The Polish Christian Labor Party of Poland compelled by the Communist regime to desist from its activities at home watches attentively, through its representatives in exile, all motions and political moves of the free world aimed at alleviating the fate of the nations subjugated by communism and thus accelerating the moment of their liberation.

In such a capacity we wish, after having been acquainted with the contents of your address to the United States Senate on August 21, 1957, to express our heartfelt thanks for a full presentation and wise evaluation of the situation in Poland and the proper conclusions drawn as to what policy should be adopted in order to accelerate the evolution of relations in our country in the direction desirable for its true interests.

We are convinced that Poles at home to whom news on your initiative arrives—will appreciate in it both a sign of political wisdom of an American statesman and an evidence of your sincere friendship toward our nation.

Kindly accept the assurance of our highest regards and true respect.

We remain,

KAROL POPIEL,
President of the Polish Christian Labor Party in Exile.

Dr. IZYDOR MODELSKI,
Chairman of the Council of the Polish Christian Labor Party in Exile.

Status of Soil-Conservation and Flood-Prevention Projects

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. POAGE. Mr. Speaker, the 1st session of the 85th Congress has come to an end with some eight flood-prevention watershed projects which have been approved by the Department of Agriculture and still undelivered to the Speaker. The law places primary responsibility for the consideration of these flood-prevention projects on the Secretary of Agriculture but the delay in handling these projects is not the fault of the Department of Agriculture nor the Secretary. These are projects that have been approved by the Department of Agriculture. They are projects every one of which filed its original application more than 2 years ago. They are projects which should have been submitted to the Congress at the session which is now adjourned.

The law provides that after the Secretory of Agriculture and the interested local organization have agreed on a plan for works of improvement—that is, after the Secretary has approved a work plan—that it shall be transferred for interagency review. In other words, it shall be reviewed by the other agencies of government which may be concerned, depending on its cost, and so forth. Most of these projects are reviewed by the Corps of Army Engineers, many by the Bureau of Reclamation, and so forth. The law does not authorize these related agencies to either approve or disapprove projects but only to review and comment. They are then sent to the Bureau of the Budget which again has only reviewing authority and which is charged with transmitting the projects to the Congress. The law says:

> The views and recommendations of the Secretary of the Interior, and the Secretary of the Army, if received by the Secretary of Agriculture prior to the expiration of the above 30-day period, shall accompany the plan transmitted by the Secretary of Agriculture to the Congress through the President.

This review is merely that there may be an orderly record of all such projects. Surely, it is not necessary for one arm of the executive branch—the Bureau of the Budget—to exercise a veto power over another arm of the same executive—the Department of Agriculture. Under the law, these projects may not be held for review more than 30 days but some of them were referred for such interagency review nearly 6 months ago. A list of the projects and the dates on which they were received and transmitted is included herewith:

Watershed	Application received in Washington	Planning assistance authorized	Work plan received in Washington	Transmitted for interagency review	Transmitted to Bureau of the Budget	Transmitted to Congress
Abbotts Creek, N. C.	Jan. 4, 1955	Mar. 18, 1955	Feb. 20, 1957	Mar. 25, 1957	June 5, 1957	----------
Big Sandy, Colo	Dec. 27, 1954	Aug. 25, 1955	May 31, 1957	June 6, 1957	Aug. 2, 1957	----------
Deep Creek, N. C	June 9, 1955	July 18, 1955	May 21, 1957	May 27, 1957	July 31, 1957	----------
Elm River, N. Dak	Feb. 7, 1955	Apr. 15, 1595	Feb. 25, 1957	Mar. 14, 1957	May 28, 1957	----------
High Pine Creek, Ala	Apr. 11, 1955	----do----	Apr. 22, 1957	Apr. 26, 1957	July 3, 1957	----------
Knob Creek, Tex	Aug. 16, 1955	May 14, 1956	May 28, 1957	May 31, 1957	July 22, 1957	----------
Swan Buffalo Creek, N. Dak	Feb. 7, 1955	Apr. 15, 1955	Mar. 8, 1957	Apr. 3, 1957	May 28, 1957	----------
York Creek, Tex	Aug. 16, 1955	Oct. 1, 1956	June 10, 1957	June 14, 1957	Aug. 2, 1957	----------

I do not know why all of these projects have been held in express violation of the intent of Congress. The Agriculture Committee made a formal request of the Bureau of the Budget to give us the detailed reasons for the delay of each of these projects. We have been unable to secure the desired information. The Bureau of the Budget has seen fit to simply tell us that they were retained for further study. We had requested that the projects be transmitted before the adjournment of Congress in order that congressional approval which is required by the law might be forthcoming. Our requests have been ignored.

Since it has been impossible to get a specific statement we have naturally resorted to speculation and to rumor. The reports that reach our committee are to the effect that at least some of these projects are being held up because the Bureau of the Budget feels that there should be substantial local contribution on the cost of the construction of the necessary works of improvement. The law was specifically changed by Congress just last year to eliminate the necessity of farmer contribution to the cost to the needed water detention structures. The Bureau of the Budget may not feel that this congressional action was wise, but it is the law, and I must confess that I am somewhat astonished that it should be thus ignored.

In an effort to justify some assessment of the farmers, it has been suggested that at least some of these projects, including Knob Creek in Texas, are actually drainage projects and that the problem is one of drainage for which there should be local payments. To suggest that it is necessary to drain an area which never has any excess water except immediately after a flood, seems to me to be straining a point beyond reason. I can see absolutely nothing to this whole procedure except a clear-cut determination to write a new set of rules for flood prevention projects. The law confines the rulemaking power of the Executive to rules needed "to carry out the purposes of this act and to assure coordination of the work authorized by the act." I think Congress, not the Bureau of the Budget, has the right to establish the rules of eligibility and of referral. Congress has established these rules, and among such rules it seems to me that Congress established was one which was at least intended to require the Bureau of the Budget to transmit the proposed work plan to the Congress within a period of 30 days. This, in most cases, the Bureau has not done. It is true that there are probably 2 of the projects which were only held 29 days prior to adjournment of Congress.

I realize that this program is new. I realize that the law is not absolutely clear. I realize that the Bureau of the Budget is confronted with many difficult problems. I do not want to be unfair to anyone but I do want the people who are so vitally interested in the development of these projects to understand just why they are being held up. I want them to know that the Agriculture Committee has passed upon every project that has been submitted to it and has done so without delay. I hope that the Bureau of the Budget will see fit to forward these projects to the Congress on the first day of the next session. I know

that if it does that the Agriculture Committee will act promptly. If it does not, I know of no course for us to pursue except to attempt new legislation which will remove the existing roadblocks which have been thrown up in the path of the development of these projects.

The Legal Basis for the State of Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article written by Sol M. Linowitz, a member of the New York bar—Rochester. Mr. Linowitz' article appeared in the June 1957 issue of the American Bar Association Journal:

THE LEGAL BASIS FOR THE STATE OF ISRAEL

(By Sol M. Linowitz, of the New York bar, Rochester)

Countless barrels of blood and many buckets of ink have been poured over the Arab-Israel problems of the Middle East. The vital nature of the issues involved has increasingly led to mingling of political, sociological, moral, and emotional considerations in apparently objective efforts to analyze the situation.

Today the State of Israel, born in conflict 9 years ago, still lies in the midst of a powder keg. Her 1,700,000 inhabitants live in a country the size of New Jersey and face apparently implacable opposition from their Arab neighbors who continue to assert that the land of Israel is historically and legally theirs. Both in and out of the United Nations, there is again and again heard the argument that the State of Israel was a political creature foisted upon the Arab countries without legal or moral sanction; and that the effect of the new state was to deprive the Arabs of lands to which they were rightfully entitled, ultimately driving into the desert hundreds of thousands of Arab refugees made homeless by an illegal expropriation.

Never was it more important than it is today to understand clearly the respective rights of Arab and Israeli in this matter. And never was there greater need to reexamine with objectivity the legal basis for the State of Israel and the validity of its birth certificate.

This is an effort to explore that question, and that question alone. Political aspects—which have loomed so large in the tragic Arab-Israel story—will be ignored. Sociological and economic considerations will be dealt with only to the extent necessary to permit an objective and informed decision with respect to legal rights involved in the creation of the State of Israel by the United Nations.

The point of departure for a legal analysis of the respective rights and obligations is the Balfour declaration issued by Lord Balfour on November 2, 1917. The entire text of the Balfour declaration was as follows:

FOREIGN OFFICE,
November 2, 1917.

DEAR LORD ROTHSCHILD: I have much pleasure in conveying to you, on behalf of His Majestys Government, the following declaration of sympathy with Jewish Zionist aspirations which have been submitted to, and approved by, the Cabinet.

His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.

I should be grateful if you would bring this declaration to the knowledge of the Zionist federation.

Yours sincerely,

ARTHUR JAMES BALFOUR.

For over 39 years, English, Arabs, and Jews alike have indulged in partisan research and interpretation of this document and its genesis. The most significant and incontrovertible fact is, however, that by itself the Declaration was legally impotent. For Great Britain had no sovereign rights over Palestine; it had no proprietary interest; it had no authority to dispose of the land. The declaration was merely a statement of British intentions and no more. It said that (1) England viewed with favor the establishment in Palestine of a home for the Jewish people; (2) Britain would use its best endeavors to facilitate the achievement of this object; and (3) nothing should be done to prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in other countries.

THE PALESTINE MANDATE—A JEWISH NATIONAL HOME

The true importance of the declaration lay in the fact that the preamble to the Palestine mandate issued by the Allied Powers in 1922 specifically recited that Great Britain as mandatory was to be responsible for putting the declaration into effect. Significantly, it stated that recognition had thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country. The mandate was accordingly set up to effectuate these purposes, and Great Britain as mandatory assumed the obligation of exercising the mandate in accordance with the precise terms of the Balfour Declaration.

The mandate device used by the Allied Powers in the Covenant of the League of Nations was an innovation in international law. While President Wilson and General Smuts had conceived of the mandate as a trust arrangement, the other powers had accepted their mandatory roles as a convenient manner of obtaining desired territories.[1] It was, therefore, hardly surprising that the administration of the various mandates was inevitably molded to the political aims of the mandatories. The British action in assigning mandatory functions to the Colonial Office was as frank an indication of this attitude as was their use of the mandated territory of Haifa as a naval base. In short, the British conception and administration of the Palestine mandate must be recognized as part and parcel of a uniform policy.

Article 2 of the Palestine mandate obligated the mandatory to accomplish certain objectives: (1) To place the country under such political, administrative, and economic conditions as would secure the establishment of a Jewish national home as laid down in the preamble; (2) to develop self-governing institutions; and (3) to safeguard civil and religious rights of all inhabitants of Palestine. Article 5 made the mandatory responsible for seeing that no Palestine territory was ceded or leased to, or placed under the control of the government of any foreign power. The administration of Palestine was charged by article 6, with the obligation of facilitating Jewish immigration into Palestine under suitable conditions. Article 27 required the consent of the League of Nations to any modification of the terms of the mandate.

The touchstone for an analysis of what was sought to be achieved and the method for its attainment lay in the words "Jewish national home".[2] Borrowed from the original Zionist platform at Basel, the words "national home" were novel in the field of international law. The unfamiliarity of the term spawned variegated interpretations of its meaning. By the application of established principles of legal construction, however, its intended meaning could be readily ascertained: The establishment of Palestine as a place to which Jews could emigrate with the understanding that if such immigration should prove to be large enough, a predominantly Jewish state or commonwealth would come into existence. Lloyd George, President Wilson, and various others so understood the term, and their testimony offers an irrefutable "legislative history" of statutory meaning.

Thus, the Report of Palestine Royal Commission of 1937 stated: "It would depend mainly on the zeal and the enterprise of the Jews whether the home would grow big enough to become a state. Mr. Lloyd George, who was Prime Minister at the time, informed us in evidence that if the Jews had meanwhile responded to the opportunity afforded them by the idea of a national home and had become a definite majority of the inhabitants, then Palestine would thus become a Jewish commonwealth."[3]

Everything in the language of the mandate itself precisely conformed to this interpretation. The mandatory was, for example, directed to take such steps as would secure the establishment of the Jewish national home (art. 2). The administration of Palestine was to facilitate Jewish immigration (art. 6). The administration was to facilitate the acquisition of Palestinian citizenship by Jews (art. 7). The Jewish agency, which was to advise with the Palestine administration, could itself undertake construction or operation of public works, services, and utilities subject to arrangement with the administration (art. 11).

Of equal importance in this connection was the specific provision in the declaration and mandate for safeguarding the civil and religious rights of existing non-Jewish communities in Palestine. Read in the light of the contemporaneous preoccupation of the Allied Powers with the minorities in other lands, this provision signified the contemplated reduction of the non-Jewish communities to a minority in Palestine and the concern with the preservation of their rights as minority groups.

Over the years, however, both the British mandatory and the Arabs urged other interpretations designed to indicate a contrary policy. The British position was to a large extent based on an interpretation of the particle "in" contained in the term "establishment in Palestine of a national home." From the Churchill white paper of 1922 until the report of the Royal Commission in 1937, it was maintained that the use of the word "in" signified an intention to establish a national home in a part rather than the whole of Palestine. This argument was advanced again and again despite the fact that clothing a naked particle with such drastic significance seemed to run counter to the whole mandatory scheme. In article 25 of the mandate, Great Britain was authorized, with the consent of the Council, to postpone or withhold application of the mandate provisions to Transjordan. By clear implication, therefore, the mandatory would not be in a position to withhold application of the man-

Footnotes at end of speech.

Footnotes at end of speech.

date in the rest of Palestine or apply it only to a portion of western Palestine.

The obvious fact is that a time arrived when political considerations became paramount in the English view. This was apparent from the statement of the Shaw Commission in 1940 that in its opinion the primary duty which was laid upon the Palestine Government was one of holding the balance between the two allies of the validity of the Jewish parties in that country. There was no clear direction, the Commission found, to assist either party in the fulfillment of its aspirations.

(This must be compared, of course, with the letter accompanying the Balfour declaration by Mr. Balfour to Lord Rothschild as a declaration of sympathy with the Zionist aspirations.)

LIMITED IMMIGRATION—A FESTERING PROBLEM

Even more meaningful, in this regard, however, was the white paper of 1939, which provided for total future Jewish immigration to Palestine of 75,000; rigorous restrictions on land purchase by Jews, and ultimate establishment of a Palestinian state with Jews as one-third minority. The Permanent Mandates Commission of the League unanimously held this white paper to be inconsistent with the constant interpretation, therefore placed on the mandate; and a majority went so far as to hold that it was directly contrary to the mandate. Yet the limitation of immigration continued to be a festering problem.

The argument most extensively advanced by Great Britain to support those various curtailments of Jewish migration was based on a reading of article 6 of the mandate. The administration of Palestine was directed by that article, while insuring that the rights and positions of other sections of the population were not prejudiced, to facilitate Jewish immigration under suitable conditions. This provision had been quite properly construed by the mandatory to authorize the limitation of immigration in accordance with the economic absorptive capacity of the country. The difficulty was, however, that questionable estimates of absorptive capacity were again and again relied upon to justify the restraints imposed.

Cultivable areas were, for example, estimated in the report of the Palestine Royal Commission on the basis of work methods of the average Arab peasant, not the advanced methods being used by Jewish farmers in Palestine. In taking this position, Great Britain also overlooked the fact that a significant number of objectives studies clearly indicated that with proper development of the Transjordan Valley and other natural resources Palestine could settle several million additional persons.

For example, Dr. Walter C. Lowdermilk, Assistant Chief of United States Soil Conservation Service, had estimated that if there were full utilization of the Jordan Valley depression for reclamation and power, at least another 4 million persons could be absorbed in addition to the 1,800,000 already in Palestine and Transjordan. (The fact that there are today 1,700,000 people in the portion of Palestine called Israel certainly tends to support the validity of Dr. Lowdermilk's estimates.) Yet Great Britain chose to reject or ignore such studies; and Jewish refugees from Europe, denied the right to enter legally, entered illegally and under the cover of darkness.

The Arab view of the declaration and mandate was and is based largely on two contentions: (1) Palestine belongs to the Arabs and cannot therefore become either the Jewish national home or a Jewish state, and (2) the McMahon-Hussein correspondence of 1915 precluded the establishment of a Jewish national home in Palestine.

Without detailed restatement of the arguments as to relative original sovereign rights of Jews and Arabs in Palestine, it is indisputable that the Jews were at one time sovereigns of the land, were deprived of it by force, and never renounced their right. Of more importance, however, the Palestine mandate—issued after the Allies had conquered the Turks and Palestine, and after the Arabs had fought with the Turks—specifically recited in paragraph 3 that "recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country." Implicit in this recognition was necessarily the acknowledgment by the Allies of the validity of the Jewish claim to sovereignty. The quarrel of the Arabs on this score, therefore, has been with the victorious Allies, who in solemn proclamation recognized the prior Jewish rights to Palestine.

The second facet of the Arab argument has been that England had, prior to the Balfour declaration, already committed itself to the Arabs in the McMahon-Hussein letters in favor of the establishment of an independent Arab state in Palestine. The salient facts regarding this correspondence are these: On October 24, 1915, Sir Henry McMahon, High Commissioner for Egypt, seeking to secure Arab assistance against the Turks, wrote a letter to Sherif Hussein of Hedjaz. The letter stated that, insofar as England was free to act, she was prepared to recognize and support the independence of the Arabs within certain areas proposed by the Sherif of Mecca. The districts of Mersina and Alexandretta and portions lying to the west of the districts of Damascus, Hama, Homes, and Aleppa were expressly excluded. The tortuous ambiguous language of the letter has been studied with painstaking care. It is sufficient to observe that Sir Henry McMahon himself, Winston Churchill, and two other Colonial Secretaries, all agreed that the letter was not intended to refer to Palestine. Even King Hussein's son, Emir Feisal, accepted this view 4 years after the letter was written. On January 3, 1919, Emir Feisal and Dr. Chaim Weizmann (later the first President of Israel but then representing the Zionist organization) signed a treaty which dealt with the establishment of an Arab state, exclusive of Palestine.

Generally overlooked in the refined search for intentions, however, is the paramount and all-important fact that at the time in question England had absolutely no right of disposition and no legal or proprietary interest in Palestine, which was then a Turkish province. Regardless of what commitment England might have made, she was neither sovereign over Palestine herself nor was her action ratified either by Turkey (the then sovereign) or the League of Nations (the later sovereign). In the Treaty of Sevres in 1920, Turkey renounced her rights to Palestine in favor of the Allies. This treaty did not become operative, however, and in the Treaty of Lausanne in 1923 (after the Palestine mandate) Turkey renounced all right and title to territories outside of the boundaries laid down in that treaty, "the future of these territories * * * being settled or to be settled by the parties concerned."

This alinement of the respective legal position of the parties to the Palestine dispute led the United Nations in 1947 to the following conclusions: (1) Jewish claims to Palestine were predicated on a formal international document of unquestionable legal validity and supported by the terms and legislative history of the mandate; and (2) the Arab position rested on a claim of prior sovereign rights rejected by the Allied Powers after World War I and on an interpretation of a legally ineffective letter from Sir Henry McMahon.

Accordingly, the United Nations by solemn resolution on November 29, 1947, divided the formal British mandate of Palestine into an Israeli State and an Arab State with Jerusalem as an international city under United Nations supervision. Pursuant to the resolution, the British mandate of Palestine came to an end on May 14, 1948, and the State of Israel was born.

From that day to this there has been no peace in the Holy Land. Aroused and impassioned by fear and suspicion Israel and the Arab States alike have for 8 years known only bloodshed and hostility. During that time, Israel, Egypt, Syria, and Jordan have all engaged in attack, skirmish, and counterattack. Tonight, as for hundreds of nights before, Arab guards are poised in their watchtowers; armed Israeli men and women crouch over their machineguns; and on each side of the border soldiers wait tense and ready, challenging every sound and shadow.

It would, of course, be illusion to assume that peace in the Middle East can be achieved through legal analysis such as has been here attempted or by judicial dicta, regardless how persuasive. For peace between Arab and Israeli will come only when there is a real will for peace; it will come only when the United States, England, and the other countries of the world recognize that what is at stake in the Middle East is crucial to the survival of peace everywhere; it will come only when humility and understanding replace passion and bloodshed on the part of Arab and Israeli alike; it will come only when all concerned truly understand that for world peace to have a firm and solid foundation in our time it must have strong and deep roots in that part of the world where civilization was first born and where the call for universal brotherhood was first heard loud and clear by mankind.

Lending Policy of the Rural Electrification Administration

EXTENSION OF REMARKS

OF

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. ALLOTT. Mr. President, there has been considerable discussion lately regarding the lending policy of the Rural Electrification Administration. I am sure that a great many of my constituents will be interested in the letter which the Secretary of Agriculture wrote recently to the junior Senator from Minnesota [Mr. HUMPHREY], in his capacity as chairman of the Subcommittee on Reorganization of the Committee on Government Operations.

I ask unanimous consent that the letter and a summary thereof be printed in the Appendix of the RECORD.

There being no objection, the letter and summary were ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C., August 30, 1957.

Hon. HUBERT H. HUMPHREY,
Chairman, Subcommittee on Reorganization, Committee on Government Operations, United States Senate.

DEAR SENATOR HUMPHREY: I have carefully considered your further letter of August 22, 1957, about the questions you have raised concerning the rumored changes in the lending policy of the Rural Electrification Administration.

These questions were also discussed in Mr. MORSE's letter to you of August 9 and my letter of August 20. Substantially the same questions were raised during my press conference of August 20. A transcript of that portion of the press conference which includes my answers regarding REA was inserted in the CONGRESSIONAL RECORD of August 21 by Senator MORTON.

In both the letters and the press conference I have pointed out that there has been no reorganization of REA. The request to Mr. Hamil that he consult or discuss with the Director of Agricultural Credit Services applications for loans over $500,000 has not curtailed his authority for final approval on those loans. This action was taken in view of the record volume of applications for REA loans and the many complex problems which have arisen in the administration of that program due to population shifts, increased costs of equipment, machinery and labor, and an increasing demand for more electric current for both farm and nonfarm use.

The changing character of the Nation's countryside is having a marked effect on the territory and electric service requirements of many REA borrowers. City people are moving to the country and building homes. Industry is locating in suburban and rural areas. The REA service territories are losing a good bit of their rural traits. About half of their revenue comes from farm service and the remaining half from nonfarm residences, commercial, and miscellaneous services.

The increasing demand for electric power throughout the country is reflected in constantly increasing demands for REA loans to provide needed facilities. REA loan approvals are keeping pace with this trend as shown by the following table:

Loans approved during year

Fiscal year:	
1952	$165, 758, 731
1953	164, 972, 662
1954	167, 104, 100
1955	167, 530, 430
1956	189, 804, 800
1957	300, 461, 514

The request of Mr. Scott to Mr. Hamil that he be given a chance to review the applications for the loans in question was completely compatible with my testimony on Reorganization Plan No. 2. It is in line with the legal authority which exists in the basic law, in the reorganization plan, and in the public notices with respect to that plan which were published in the Federal Register in 1953 and 1954.

In my colloquy with you in the hearings on the reorganization plan held on May 18, 1953, 83d Congress, 1st session, at page 169, you asked whether it was my intention "to have the REA pretty much as an autonomous organization."

I replied as follows:

"Certainly I do not have in mind weakening the service which REA is rendering. I think it is very essential, and I do feel that we have selected a good man to help it, and he will be given a pretty free hand, I am sure. But if we have in mind any major changes, certainly we would want to consult with the Congress before we took such steps, because I know there is a very wide interest in that agency, probably as much as in almost any other agency in the Department."

The requirement that these applications be reviewed by the Director of Agricultural Credit Services does not weaken the service which the agency was created by Congress to render. It was not a "major" change either in policy or in organization. It was not a transfer or an abolition of a function. The authority of the Secretary of Agriculture to make that request of an agency head under his supervision and direction, including REA, existed even before the reorganization plan of 1953 was approved.

REA was created as an independent agency of the Government by the Rural Electrification Act of 1936 (7 U. S. C. 901, 914). Section 1 of the act provided that all of the administration's powers would be exercised by an Administrator. However, that section was substantially modified by section 5 of President Roosevelt's Reorganization Plan No. 11 of 1939 (5 U. S. C., p. 125), which transferred REA and its functions and activities to the Department of Agriculture and provided that such functions and activities "shall be administered in that Department by the Administrator of the Rural Electrification Administration under the general direction and supervision of the Secretary of Agriculture."

It appears that in 1944 a question arose about the making of allotments as required by the act. The Department took the position, with the full legal approval of its solicitor, that the Secretary's duty to supervise and direct the activities of REA not only permitted him to approve the allotments but made it his duty to do so if desirable for the proper operation of the program.

This conclusion was based on decisions of the courts, notably *Knight* v. *United States Land Association* (142 U. S. 161), and the decision of the Comptroller General, volume 19, Comptroller General Decisions, page 400. In the Knight case the Supreme Court concluded that the words "direction and supervision" are synonymous with the word "control" and impart broad powers including the power to initiate, guide, superintend, manage, rule, review, notify, and overrule.

In that case the Court was construing words directing the Commissioner of the General Land Office to perform certain functions "under the direction of the Secretary of the Interior." The Court said that the words under discussion are an expression of the power of the Secretary to supervise and control the extensive operations of the land department and then quoted with approval the statement of the Secretary of the Interior as follows:

"The statute in placing the whole business of the Department under the supervision of the Secretary invest him with authority to review, reverse, amend, annul, or affirm all proceedings in the Department."

See also *Orchard* v. *Alexander* (157 U. S. 372 (1895)); *Cameron* v. *United States* (252 U. S. 450, 460 (1920)); and *West* v. *Standard Oil Company* (278 U. S. 200, 220 (1929)).

State court decisions also follow this rule. They have held that the term connote a power to superintend generally together with the incidental authority to regulate and control. *Vantongeren* v. *Heffernan et al.* (5 Dak. 180, 38 N. W. 52 (1888)); *State ex rel. Board of Transportation* v. *Fremont, E. & M. V. R. Co.* (22 Neb. 313, 35 N. W. 118 (1887)).

The courts apparently do not distinguish between phrases using the word "general" with "direction and supervision" from those where the word "general" is not used. See *Great Northern Railway Company* v. *Snohomish County* (93 Pac. 924 (Wash. 1908)).

This conclusion with respect to the Secretary's authority over the Rural Electrification Administration Administrator followed the policy determination of the Department reached in early 1940 in connection with the transfer of the Farm Credit Administration to this Department to be "administered in such Department under the general direction and supervision of the Secretary of Agriculture." The Comptroller General in 19 Comptroller General 400 said:

"Consequently the Farm Credit Administration must be regarded as no longer an independent agency but as an agency within the Department of Agriculture and under the general direction and supervision of the Secretary of Agriculture * * * there would appear to be no authority under existing law for the effecting of such a transfer of authority and responsibility as would amount to a restoration of the Farm Credit Administration to its former status 'an autonomous Federal agency.'"

It seems clear therefore that the request that the Rural Electrification Administrator review certain loans with the Director of Agricultural Credit Services is not the exercise of new authority vested in me by Reorganization Plan No. 2 of 1953. Moreover, it is a step which is well within the information given to the Congress and the public at the time Reorganization Plan No. 2 of 1953 was presented, approved, and made effective.

The Administrator of the Farmers Home Administration is not only requested to discuss major loan problems with the Director of Agricultural Credit Services, but the law requires that all special livestock loans over $50,000 must be approved by the Secretary of Agriculture because of the major problems involved.

Soon after I became Secretary of Agriculture, I alined the agencies of the Department into major groups, each group to report to me through designated officials of the Department. During the Senate hearings on Reorganization Plan No. 2, I furnished and there was included in the hearings two charts showing the organization of the Department effective January 21, 1953, and as amended March 10, 1953. The January 21 chart shows the Farm Credit Administration, the Farmers Home Administration, and the Rural Electrification Administration grouped under "Agricultural credit" and that these agencies are to report through the head of that group. The March 10 chart shows substantially the same arrangement (pp. 142 and 144, hearings before the Subcommittee on Reorganization of the Committee on Government Operations, United States Senate, on Reorganization Plan No. 2 of 1953 and S. Res. 100 disapproving Reorganization Plan No. 2, 1953, May 12, 13, and 18, 1953 (other references to hearings contained in this letter are to hearings before this subcommittee)).

By Secretary's memorandum 1320, dated January 21, 1953, all employees of the Department were advised that "agency and office heads within each group will report to their respective group head. * * * The Secretary and the Under Secretary meeting jointly with the major group heads and the Solicitor will consider matters of policy determination and long-range planning. * * * This organizational arrangement will make possible closer coordination of related activities and will centralize responsibility for consideration and determination of operating problems and other matters requiring departmental attention within each group." A copy of this memorandum was furnished the subcommittee and appears in the hearings at pages 140–141.

As you are aware, Reorganization Plan No. 2 of 1953 transferred to the Secretary of Agriculture all of the functions of the heads of the agencies with which it dealt, includ-

ing REA. However, on August 28, 1953, I issued, and there was published in the Federal Register of that date (18 F. R. 5155), a delegation to each Assistant Secretary and to the Director of Agricultural Credit Services the authority to exercise general direction and supervision over the agencies of the department designated in such delegation. The delegation also provides that nothing therein shall "preclude the Secretary of Agriculture from exercising any of the powers and functions or from performing any of the duties herein conferred."

This was implemented by Secretary's memorandum 1320, supplement 2, dated September 18, 1953, which directed the agencies of the Department to report to designated Assistant Secretaries or, in the case of the agencies grouped under Agriculture Credit Services to report to the director. This was in line with my delegation of August 28, 1953.

On October 13, 1953, my office issued a press release outlining a proposed reorganization of the Department to which was attached an announcement of intention to reorganize and a chart showing the Rural Electrification Administration grouped with other agencies under Agricultural Credit, under an Assistant to the Secretary, under the Secretary. (The Office of Assistant to the Secretary in Charge of Agricultural Credit is now known as the "Director of Agricultural Credit Service.")

The assignment of functions to the agencies under the reorganization plan was published in the Federal Register for January 6, 1954 (19 F. R. 74). Among other things this assignment provides:

"No delegation or authorization prescribed in this document shall preclude the Secretary from exercising any of the powers or functions or from performing any of the duties conferred herein and any such delegation or authorization is subject at all times to withdrawal or amendment by the Secretary. No delegation or authorization prescribed in this document shall preclude the exercise of any delegation or authorization otherwise provided to the Under Secretary, Assistant Secretaries, Administrative Assistant Secretary, or assistant to the Secretary for Agricultural Credit, or to the staff agencies as provided in section 112 hereof. * * * The head of each agency (1) will maintain close working relationships with the officer to whom he reports, (2) will keep him advised with respect to major problems and developments, and (3) will discuss with him proposed action involving major policy questions or other important considerations or questions, including matters involving relationships with other agencies of this Department, other Federal agencies, or other governmental or private organizations or groups."

I hope these comments answer the questions you have raised regarding any reported recent reorganization or major policy change in REA.

In your letter of August 22 you assign as one reason for the proposed hearing the necessity of this Department providing the Congress with its official position on any proposed changes in the policy of the agency which are contrary to the intent of the Congress. We, of course, would not initiate any changes which are contrary to the intent of Congress and we would be the first to suggest, as required by the reorganization plan, that we discuss with the Congress any major changes proposed to take effect in the future.

In these circumstances, there would be no information we could give in the proposed hearing which has not heretofore been given in previous letters, the press conference of which you have a transcript, or in this reply.

I know you will give careful consideration to the additional information about the working arrangements we have with regard to REA and the legal and administrative justification for them that I have pointed out in this letter.

After you have had a chance to study this communication it would be most helpful if you would let me know if there are any procedures or policies being followed by the Department in the REA loan program with which you do not agree.

Sincerely yours,

E. T. BENSON,
Secretary.

SUMMARY OF ATTACHED LETTER

1. Senator HUMPHREY'S questions have been discussed in previous letters of the Secretary and the Under Secretary, and in the Secretary's press conference of August 20. (See excerpts from press conference at pp. 1406-1407, CONGRESSIONAL RECORD of August 21.)

2. The request of the Director of Agricultural Credit Services to review loan applications of over $500,000 has not changed the REA Administrator's authority to decide whether the loan will be made.

3. The request for review was made because of the growing complexities of the REA program and the record volume of loans.

4. The request was not a "major" change in organization, policy, or functions.

(NOTE.—Major changes in organization or functions require "appropriate advance public notice." See 5 U. S. C., supp. IV, 511; sec. 4 (b) of plan No. 2 of 1953.)

5. The request is not contrary to the Secretary's testimony on plan No. 2.

6. President Roosevelt's Reorganization Plan No. 2 of 1939 gave the Secretary "general direction and supervision" of REA and the courts have held that these words are synonymous with "control." See also volume 19, Comptroller General Decisions, page 400.

7. In 1944 the Secretary of Agriculture exercised the authority given by the 1939 plan to approve certain allotments under the REA Act.

8. The FHA Administrator discusses major problems with the Director of Agricultural Credit Services; certain loans must by law be approved by the Secretary.

9. Reorganization Plan No. 2 of 1953 transferred all of the authority of the REA Administrator to the Secretary.

10. The notices or reorganization under plan No. 2 published in the Federal Register, and the delegations and redelegations of authority made under it stated that the Administrator of REA would function subject to the "general direction and supervision of the Secretary."

11. The Secretary will give advance notice of any major changes proposed to be made under plan No. 2 required by the plan.

12. The Senator is asked to inform the Secretary of any REA loan policies or procedures with which he disagrees.

National Television Week

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of Keenotes:

KEENOTES

(By Representative ELIZABETH KEE)

A letter from Mr. Thad H. Brown, vice president for television, National Association of Radio and Television Broadcasters, invites me to join with the rest of the country in a salute to the American system of television broadcasting as part of National Television Week, which is being observed September 8 through 14, this year.

I am very happy to do so and herewith add my own thanks to the many men and women who daily contribute so much to our enjoyment of the entertainment, and our profit from the wealth of information, which this modern miracle of American engineering and scientific skills has brought into our homes.

A fact sheet thoughtfully provided by the national association gives some truly impressive statistics about the television industry which—it is hard to believe—is only a little more than 10 years old. In this brief span, 40 million families have invested the substantial sum of $17 billion in TV receivers. About 90 percent of the public has been brought within range of at least 1 of TV's 479 existing stations and some 75 percent have a choice of 4 or more channels from which to select programs of education, information, and entertainment.

Each year, we are told, an estimated $200 million worth of free time is allocated to public-service programs; and broadcasters, last year, supported more than 115 major national public-service campaigns. Brief mentions on sponsored programs of worthy public-service causes have become a common practice. Through the service of local television stations—which is frequently contributed—effective support has been raised to meet many community needs, such as the construction of a new hospital or library, for example; while other free services warn of bad road conditions, traffic congestion, and other local emergencies.

To this list of noteworthy accomplishments, the national association might well have added another solid achievement of the TV industry in the national interest. Although still in its infancy, this fast-growing industry has created new employment—both direct and indirect—for hundreds of thousands of men and women throughout the country. Directly, there are the jobs connected with the manufacture, sales, and service of TV sets—the planning, production, and televising of TV programs. And then there are all the jobs created by the demand for those byproducts of TV viewing which include everything from TV packaged suppers to snack tables and revolving chairs.

Somewhat disconcerting, however, if not downright alarming, is another statistic furnished by the National Association of Radio and Television Broadcasters. American families, it is declared, "have come to spend more than 5 hours a day viewing the average set—more time than is spent in any other single activity except working and sleeping." At this rate, the potential of this new medium of mass communication to influence the lives and thoughts of the American people is unbounded. In the wrong hands, it could be used as a terrible weapon of propaganda to wreak immeasurable havoc upon the social, political, and economic life of the Nation.

Indeed, one cannot remain entirely unaware of the faint odor of oil and other special interests in some of the programs sponsored by big business which attempt to show the vast benefits which the American people derive from the importation of foreign products—say, crude and residual fuel oil, for instance—in exchange for our own exports. This is true, of course, only to the extent that our domestic industries do not suffer

in such instances, the public should be able to hear both sides of the story and I have long felt that West Virginia's coal, chemicals, glass, and pottery industries could do with a little television promoting on their own account.

Actually, I have been a little amused that the National Association of Radio and Television Broadcasters is not above a little propagandizing on its own part. In the fact sheet, which presumably went to all Members of Congress, it is stated: "Television has grown and thrived under the free American system. With a minimum of Government regulation, it has shown itself to be responsive and responsible to the American people." Even a Member of Congress can take a hint, you know.

On the whole, however, those who control and direct the television networks—from major network to local station—have, I feel, proved themselves fully alert to their great responsibility as a major source of information for the American public. In the televising of such important events the Kefauver committee's investigation of organized crime in 1951, the Army-McCarthy hearings in 1954, the Republican and Democratic National Conventions in 1956, and the present Senate racketeering investigation, the industry has rendered a great public service.

So despite singing commercials—with sincere thanks to our many fine commentators, too numerous to mention here, who accurately report events upon the national and international scenes—and in grateful acknowledgement of the many pleasant hours (but, by no means, five per day) which I have spent before my television set—I am more than pleased to join with the rest of the country in this salute to our American system of television broadcasting and those who make it work, during this National Television Week.

A Grave Problem Requiring Serious Thinking

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a most timely and thought provoking article, concerning our calculations for war, entitled "Are We Prepared?" appearing in the editorial column of the August 10, 1957, issue of America.

The article follows:

ARE WE PREPARED?

Don't be surprised if, as time moves on, you hear more and more serious talk about United States readiness for the contingency of limited war. The massive tensions of the past decade have pulled us into a painful posture in which we stand, fists up, ready for the monster struggle we hope will never come—the one we would have to fight against all-out aggression by the Soviet Union. Our minds and energies have so focused on this one dire possibility that we have thought too little about more likely eventualities. Our growing nuclear strength is somehow connected in the public mind with the sole emergency of total war, made necessary by the final, overweening ambition of the men in the Kremlin. Psychologically speaking, we are almost prepared for such a war. But are we ready to face the grim, small-scale demands of limited war for such precious but restricted areas as Oman, Indonesia, or Guatemala? This is what we must now begin to ask ourselves.

Some say our experience in World War II is responsible for current mistaken thinking about future wars. There we had a war that fitted our American conception of what war should be: overt aggression against us and our allies; obvious superiority of United States resources; finally, a terrible retribution inflicted on the enemy by our triumphant forces. Simplicists as always, we tend to think of future wars in this same pattern—the enemy's big aggressive blitz, our retaliatory bombardment of his bases and home cities, then the last inevitable stage when we close in for his unconditional surrender.

PIECEMEAL WAR

As the brilliant young analyst Henry A. Kissinger writes in Nuclear Weapons and Foreign Policy (Harper, 1957):

"The lesson of the two World Wars had convinced us that we would have to resist a military onslaught against Western Europe. * * * Beyond this, our consideration of the strategic shifts which we would resist by force was inhibited by a doctrine which left no room for intermediate positions between total peace and total war."

As our calculations have frozen harder and harder in this mold, we have tended, in proportion to the growing destructive power of the weapons evolved by our technology, to define in more and more drastic terms, writes Dr. Kissinger, the Soviet provocation which would ultimately drive us into war.

But what about Korea? Surely that was a limited war, one which we held within rigidly limited bounds. Yes, writes Dr. Kissinger, we did keep Korea limited. But this happened, not because we understood the meaning of limited war, but rather because we were reluctant to engage in all-out war over the issues at stake there. "In short, we thought we could not afford to win in Korea, despite our strategic superiority, because Russia could not afford to lose." Our ultimate frustration over Korea stemmed, it now appears, from our failure to grasp the strategic opportunities presented by this kind of war.

These considerations point unerringly to the wisdom of what Thomas E. Murray, former Atomic Energy Commissioner, has advocated—a more realistic and more rational nuclear policy regarding limited engagements with the enemy. We should begin to explore this vital question. If we fail to develop such a policy, we shall lose our struggle with the Reds, who are shrewd enough so to calculate their moves that no one stage in their conquering advance will ever seem to us to be worth fighting about. The big war, for which we are readying ourselves, would never come; the ultimate provocation would never be given. But one day we should wake to find ourselves defeated.

What United States Officials Really Knew About Surprise Attack on Egypt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. MULTER. Mr. Speaker, the following article, which appeared in the December 7, 1956, issue of U. S. News & World Report, makes most interesting reading:

WHAT UNITED STATES OFFICIALS REALLY KNEW ABOUT SURPRISE ATTACK ON EGYPT

The whole question of the ability of the United States to protect itself against any sudden outbreak of war has been reopened now by events in the Middle East.

Complaints are heard the American intelligence services fell down on the job when Israel, Britain, and France decided to go to war in Egypt. Some Congressmen are recalling the surprise attack on Pearl Harbor 15 years ago this week and the surprise offensive in Korea in 1950—and are wondering whether the same thing can still happen at a time when the United States is spending millions to keep itself informed through an elaborate intelligence system.

If Washington cannot keep posted on the plans of its closest friends, they ask, how can it hope to know what plots its enemies are hatching?

That leads to the question: What really did happen before the October 29 attack on Egypt, and what did the United States know about it? The full answer to that question now can be given for the first time.

Actually, 24 hours before Israel invaded Egypt and 48 hours before Britain and France intervened, a top secret report from the Central Intelligence Agency was delivered in writing to the White House. It said that:

Israel would not attack Jordan.

Israel would attack Egypt.

Britain and France would attack in the Suez Canal area.

This document climaxed a whole series of warnings from Central Intelligence, all pointing in the same direction. It did not specify exact dates, nor did it forecast the French-British ultimatum of October 30 to Egypt and Israel.

The report predicting actual attack was what is known as ultimate distillation of intelligence—in other words, top priority. President Eisenhower himself decides what officials get reports in this category. Such documents are not widely circulated. It is probable that only four men—the President and the heads of the State Department, the Armed Forces, and Central Intelligence—knew the exact contents of this particular paper.

It was on the strength of advice from its own intelligence services that the United States quickly sent two cautionary warnings to Israel, and advised American citizens to leave the Middle East.

Both military and diplomatic officials of the United States Government had been concerned about the situation in the Middle East for weeks. As early as September 6, Prime Minister Sir Anthony Eden of Great Britain told President Eisenhower that the British would use force rather than lose that area either to the Russians or to Egyptian President Gamal Abdel Nasser.

As the outbreak of war approached, however, United States diplomats found themselves cut off from official information. In London and Paris—where facts usually are freely given—the Americans were told practically nothing of what went on at top-level meetings between the British and French.

To get a clear picture of how the situation built up to war, you have to go step by step through the chronology of develoments.

On October 16—a full 2 weeks before fighting started—Prime Minister Eden made a flying trip to Paris.

There the British Prime Minister and his Foreign Secretary, Selwyn Lloyd, went into session with French Premier Guy Mollet and his Foreign Minister, Christian Pineau. The four had dinner together, and then talked until 1 a. m.

Afterward, they issued a statement saying that negotiations with Egypt must be on the basis of international operation of the Suez Canal. That was all that Americans were told officially of the meeting. Some United

States diplomats now believe, however, that in the Paris meeting the French won British agreement to use force in Egypt.

After the Paris meeting, Mr. Lloyd sent United States Secretary of State John Foster Dulles a message suggesting that they get together to discuss once again a peaceful solution of Suez. No exact date was fixed but the meeting was proposed for some time in November.

On October 23, Mr. Pineau flew from Paris to London and held a night conference with Sir Anthony and Mr. Lloyd. Once again, United States officials were told nothing beyond the formal announcement that the question of reopening negotiations on the Suez Canal had been discussed. Some Americans now believe that the exact date for the Israeli attack on Egypt was discussed at the meeting and that its chief purpose was to coordinate British-French plans.

Four days after this session, the Moscow newspaper Pravda published a dispatch that said: "An agreement was reached between French Foreign Minister Pineau and British Foreign Secretary Lloyd concerning the launching, in the nearest future, of military intervention in Egypt."

On October 27, United States intelligence reported to President Eisenhower that Israel had started complete mobilization—a development that the Israeli Government had not announced.

On the strength of the intelligence report, the President sent a quick message to Israel's Prime Minister David Ben-Gurion, warning against forceful initiative which would endanger the peace.

Next day Israel formally announced that it was calling up its reserves. The President sent a second cable to Mr. Ben-Gurion. He also sent messages to other governments in the Middle East, expressing United States concern over the situation. He ordered United States officials to initiate immediate consultations with the British and French.

At that point, Secretary Dulles conferred with British and French diplomats. They expressed a far less serious view of the danger of war than he did.

It was now October 28 and United States officials were genuinely concerned about the imminence of war—even though they had received only the scantiest official information from Israel and from the British and French.

Late that day the State Department announced that all Americans in the trouble area who were not performing essential functions would be asked to leave as a matter of prudence.

At about the same time Secretary Dulles instructed United States Ambassador to Great Britain Winthrop Aldrich to talk things over with the British Foreign Minister. The two men met that night. Mr. Aldrich's cabled report—received in Washington the next day—was not alarming. Mr. Lloyd had assured him that Britain was determined to reach a solution on Suez without using force.

On October 29, the war started. Israeli troops crossed into Egypt and knifed across the Sinai Peninsula, apparently headed for the Suez Canal.

Before the actual attack, Israeli Ambassador to the United States Abba Eban had assured Secretary Dulles that his country mobilized because "we have reason to fear an attack on us by neighboring states."

It was nightfall in the Middle East—noon in Washington—when the Israeli Army moved. This was 24 hours after United States intelligence had predicted such an attack, and had predicted correctly that Israel would strike into Egypt instead of eastward into Jordan.

President Eisenhower quickly conferred with seven of his top advisers. The decision was made to place the Israeli-Egyptian war before the United Nations.

Secretary Dulles sounded out high British and French diplomats on the idea of U. N. action to stop the war quickly. Both said they would have to consult their governments. Another meeting was scheduled for the next day.

On October 30, before Secretary Dulles could hold his second meeting with the allied diplomats, the British and French issued their surprise ultimatum to Egypt and Israel—an announcement that they would intervene in force unless both sides withdrew from the Suez Canal area. That day was one of fast-moving developments. This is the way it proceeded around the clock from morning to late afternoon:

9:30 a. m.: Ambassador Aldrich called on Foreign Secretary Lloyd in London. He knew that the British and French were to hold a high-level meeting later in the day, and was told he would be informed of the results.

10 a. m.–noon: The British Cabinet was in session.

Noon: French Foreign Minister Pineau, just in from Paris, met with Mr. Lloyd at the British Foreign Office, then crossed the street to join Prime Minister Eden at No. 10 Downing Street.

1:45 p. m.: The three men were joined by French Premier Mollet, who flew in from Paris. It was at this session, which lasted until after 4 p. m., that the top men of the two governments worked out complete details of the ultimatum that was to precede their intervention in Egypt. Their decision was a closely kept secret. Probably not more than a dozen men in both governments knew the full details.

4:15 p. m.: Sir Ivone Kirkpatrick, Permanent Under Secretary in the British Foreign Office, handed the ultimatum to the Egyptian Ambassador. Mr. Pineau was present to represent the French.

4:25 p. m.: Sir Ivone repeated the ceremony with the Israel chargé d'affaires. Again Mr. Pineau was present.

4:30 p. m.: Prime Minister Eden announced the ultimatum in the House of Commons. He said: "My right honorable and learned friend, the Foreign Secretary, discussed the situation with the United States Ambassador this morning." He did not say that the United States had been officially informed of the ultimatum.

As soon as Sir Anthony began speaking, copies of his statement were cabled by the British to Washington and were sent by messenger to the United States Embassy in London. The American Minister in London, Walworth Barbour, telephoned the news to the State Department in Washington.

After receiving this official notification, President Eisenhower telephoned the British Prime minister. It was Mr. Eisenhower's first call to 10 Downing Street after receiving the intelligence report that Israel was about to attack and that Britain and France would intervene. He had avoided telephoning earlier because it is almost certain that Soviet intelligence is able to tap such calls.

It is true that neither Britain nor France supplied the United States with official information of their plans in advance of the ultimatum. But, actually, the United States Government knew all the essential facts about the attack except for one detail—the political device of issuing an ultimatum to Israel and Egypt.

ALWAYS ON GUARD

How was United States intelligence able to deliver the goods in advance? You get a part of the answer from a recent speech by Allen W. Dulles, Director of Central Intelligence. He said:

"As coordinator of foreign intelligence, we have set up machinery in Government today which greatly reduces the danger of being caught unprepared, as we were at Pearl Harbor. There the essential facts, to a large extent, were available. But at that time there was no central machinery to pull them together and bring the conclusions to the attention of those who had the responsibility for action.

"Today there is a 24-hour watch machinery established to bring important factors to the attention of competent officers as soon as they are received.

"Of course, after each crisis you will find allegations in the press that our intelligence has failed and that we have been caught flat-footed in situations such as in the Middle East, Poland, Hungary, and the like. Such criticisms have to be left unanswered—not because they are justified, but because the information available to us cannot be advertised before the event.

"Sometimes it cannot be mentioned even after the event without risking disclosure of intelligence sources and methods which, under the law constituting the Central Intelligence Agency, are not to be divulged."

The Central Intelligence Agency is a far-flung organization that keeps a detailed check on happenings all around the globe. It also has access to all information of other American intelligence organizations. Operating on a 24-hour basis, the CIA acts as an evaluation center for the mass of information constantly pouring into its headquarters.

It is clear now that the vast network of the American intelligence system was able to alert this Government to the approach of war over Egypt at the very time that United States diplomats were being shut off from official details of what Britain, France, and Israel were up to. The actual outbreak of war came as no surprise to the United States.

Freight Forwarders

SPEECH
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1383) amending section 410 of the Interstate Commerce Act to change the requirements for obtaining a freight forwarder permit.

Mr. GROSS. Mr. Chairman, I am still troubled by the language on page 6 of the report. The letter from the Commission is dated as late as July 24, 1957, and it carries this language:

We are of the view that section 410 (d) should be eliminated in its entirety.

Now, I would like to ask the chairman of the committee why does the Interstate Commerce Commission say that this section 410 (d), which is the bill before the House, should be eliminated?

Mr. HARRIS. Mr. Chairman, if the gentleman would read the entire letter he would understand. I will ask the gentleman to start on page 5, where the Commission, in their statement of justification, repeats what they told us last year when this bill was presented to us. I introduced the bill referred to, H. R. 4391. It will tell you there precisely what they wanted.

Mr. GROSS. Let me ask the gentleman this question: If section 410 (d), or the language in this bill remains then will we be doing what the Interstate Commerce Commission and the signers to this letter say we would be doing, that is, giving preferential treatment to controlled forwarders?

Mr. HARRIS. Yes, that is true, so far as that statement is concerned and is justified in the report, if the gentleman will refer to it, on page 2.

Mr. GROSS. Then the answer is that we will be giving preferential treatment to railroad forwarders?

Mr. HARRIS. Well, in that they will continue.

Mr. GROSS. They will continue?

Mr. HARRIS. Yes. They developed the program themselves and that is the purpose of it.

Mr. GROSS. And they will get the licenses that are granted in the future on a preferential basis over anybody else?

Mr. HARRIS. Of course, there would be no further need for the railroads in the future. They already have theirs.

Blinded Veterans Association, Inc., Resolution

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include the resolution unanimously adopted by the Blinded Veterans Association, Inc., at their 12th annual convention in Hartford, Conn., on August 24, 1957.

The resolution follows:

RESOLUTION 9

Whereas the Blinded Veterans Association, Inc., is a national membership organization composed entirely of blind individuals; and

Whereas this association has, since its inception in 1945, recognized its constitutional right to organize nationally and locally without restriction by any Federal or local laws; and

Whereas the association does, in fact, work closely with Federal, State, and local governmental and voluntary agencies serving blind persons, and has, in turn, been consulted by these agencies; and

Whereas the association, in its efforts to promote higher standards of service for all blind people in the United States, recognizes the value of a constructive approach to achieve this objective; and

Whereas S. 2411 and H. R. 8609, which have been introduced in the 85th Congress, appear redundant in the light of the above and would seem to serve no practical purpose, and, in fact, may be detrimental to the best interests of all blind persons: Now, therefore, be it

Resolved, That the members of the Blinded Veterans Association in national convention assembled in the city of Hartford in the State of Connecticut on August 24, 1957, do hereby reaffirm their faith and trust in the basic rights guaranteed all citizens by the Constitution and Bill of Rights of the United States and believe no further legislation is needed to guarantee these rights to blind persons; and be it further

Resolved, That the members of the Blinded Veterans Association do hereby offer the full cooperation of the association and its members to Members of Congress interested in raising standards of services to blind persons; and be it further

Resolved, That copies of this resolution be sent to all Members of the Senate and House of Representatives of the United States; to the executive directors of the American Association of Workers for the Blind, the American Association of Instructors of the Blind, the American Foundation for the Blind, the National Federation of the Blind, and the Council of State Agencies for the Blind; and to the officials of Government and voluntary agencies serving blind persons in the United States.

Local Communities Spent $11.1 Billion on Education in 1956

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, local communities spent a billion dollars more in 1956 than they did a year before, and the local taxpayers spent $2.7 billion for schoolhouse construction.

This is evidence of the financial strength of the local communities. It also points out the absurdity of the Federal Government pretending to be able to take the money from the local communities described below and redistribute it around better than the local communities and the State can distribute their own money for the education of their own children.

I should, at this point, like to quote from the Washington Report for August 30, 1957, as follows:

Spending by local governments on education in the United States went up $1 billion in 1956. School districts, cities, towns, and counties disbursed $11.1 billion. These were dollars collected through taxes levied upon your business and your property. The total included $3.5 billion in aid grants by the States to local governments.

The figures, contained in a Bureau of the Census report, are another compelling reason for you as a businessman, taxpayer, and community-conscious citizen to give increasing attention to the needs of your schools and how the money is being spent to attain them.

WHERE IT WAS SPENT

Almost all of the $11.1 billion went for elementary and secondary schools. Only a small portion was devoted to higher educational institutions maintained by local governments.

Increased local spending strengthens arguments against proposals for Federal intervention in education through use of Government funds to build schools.

A substantial portion of the $11.1 billion spent last year—$2.7 billion—went for school construction and other capital outlays. This display of local effort in 1 year far overshadows the proposal, recently defeated in Congress, to allocate to all the States the sum of $300 million a year over a period of 5 years.

DISPLAY OF STRENGTH

Local financial strength and willingness to support education are evident in the indications which point to 1957 as another record-breaking school construction year.

The Investment Bankers Associaiton of America reported this week that 2,456 school bond issues, with an aggregate value exceeding $1,831,000,000, have been sold in the past 10 months, ending July 31.

Past school construction records indicate that 30 percent of school construction is financed on a pay-as-you-go basis, or from revenues other than bond sales.

EIGHTY-SEVEN THOUSAND TWO HUNDRED AND TEN CLASSROOMS

When the 10-month bond sales total is increased by approximately 30 percent, it means that more than $2,600,000,000 is to be provided for building classrooms, or enough for 87,210 units—assuming the average classroom cost to be $30,000.

Under the same calculation and assuming that the volume of bond sales continues at the same level through September 30, financing will have been provided for more than 110,000 classrooms in a 12-month period beginning last October 1. The United States Office of Education put the alltime record at 69,200, built in 1956.

INTEREST RATES NO BAR

The steady rate of bond sales discounts contentions from some quarters that interest rates were too high and that local governments would be unable to market their school issues.

This is what was found when every State and municipal bond issue sold during July was analyzed and weighted to determine if there was wide variance in the price of school bonds as compared with other local bond issues:

Average interest rates for health and welfare bonds (hospitals, and so forth) were 4.5 percent; utilities other than water and sewer, 4.26 percent; water and sewer, 3.9 percent.

School bonds, 3.89 percent, were only two-tenths of 1 percent above the national average of 3.69 percent for all municipal and State bonds.

Local and State school bonds sold, Oct. 1, 1956, to July 31, 1957

State	Number of bond issues	Total value of bond issues
Alabama	14	$10,912,000
Arizona	54	20,226,000
Arkansas	3	1,735,000
California	360	246,317,000
Colorado	11	16,543,000
Connecticut	40	35,373,000
Delaware	9	10,618,000
Florida	25	40,101,000
Georgia	9	14,175,000
Idaho	7	4,238,000
Illinois	132	80,180,000
Indiana	76	24,569,000
Iowa	39	17,751,000
Kansas	36	20,030,000
Kentucky	45	20,672,000
Louisiana	42	47,712,000
Maine	3	949,000
Maryland	12	58,969,000
Massachusetts	90	47,906,000
Michigan	144	110,021,000
Minnesota	110	57,652,000
Mississippi	19	7,963,000
Missouri	52	35,948,000
Montana	25	6,389,000
Nebraska	11	1,098,000
Nevada	5	4,550,000
New Hampshire	13	3,962,000
New Jersey	93	89,944,000
New Mexico	5	3,683,000
New York	139	231,484,000
North Carolina	22	20,349,000
North Dakota	10	668,000
Ohio	165	98,966,000
Oklahoma	77	16,433,000
Oregon	43	13,301,000
Pennsylvania	93	104,846,000
Rhode Island	12	8,289,000
South Carolina	12	26,675,000
South Dakota	27	7,755,000
Tennessee	26	23,370,000

Local and State school bonds sold, Oct. 1, 1956, to July 31, 1957—Continued

State	Number of bond issues	Total value of bond issues
Texas	180	$112,200,000
Utah	2	3,218,000
Vermont	12	5,615,000
Virginia	12	19,466,000
Washington	63	52,824,000
West Virginia	1	766,000
Wisconsin	65	40,614,000
Wyoming	11	4,403,000
Total	2,456	1,831,428,000

Income Tax Deduction for Parents of College Students

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SCHWENGEL. Mr. Speaker, near the close of this session of the 85th Congress, I introduced H. R. 9414 to provide fair and equitable income tax deduction for the parents who bear the expense of sending students to college.

The introduction of this bill is based upon a thorough study of the costs of sending students to college and the incomes of the parents who pay these costs. A legislative research team at the State University of Iowa, composed of William O'Connell, Arthur Kudart, and Rodney Miller, conducted a survey and did other research for me which bears out the need for such legislation.

The findings of this group have been summarized in a report which should have the attention and study of all Members who have an interest in making it possible to maintain a high standard of college-trained citizens to direct the destiny of this Nation.

Under leave to extend my remarks, I ask consent to have printed in the RECORD this report. The report follows:

In the recent months discussion of the crisis in higher education has been heard all over America. Publications of all complexions and persuasions have carried stories outlining their views, analyses and solutions of the problems facing the Nation in this vital field.

Regardless of the paper one reads it is universally recognized that America today and in the foreseeable future faces an acute shortage of persons qualified for the natural sciences, engineering, home economics, dentistry, medicine, nursing, school teaching, and college teaching.

Many reasons are given for this shortage. One, however, appears on every list. This reason is simply that a great percentage of our qualified young people are not embarking on a program to earn a college degree. Impossible as this may seem when one views the crowded campuses across the Nation it still remains a fact that only 51 percent of the students in the upper two-fifths of high school senior classes enroll—not graduate, but enroll—in college.

The reasons assigned for the failure of half the qualified high school graduates not enrolling in college are many and varied. One reason is listed by nearly every observer. This reason is that the majority of those students who do not enter college are, in one way or another, held back by lack of funds to pay the cost of tuition, books, and living costs.

While college costs may be minimized through frugal living and compensated for with part-time jobs there still faces the average college student a gap between income and expense which has traditionally been difficult to bridge. Conditions today aggravate this time-worn fact.

College costs have followed the lead of other items in the cost-of-living index and have soared upward. Just how far these costs have risen is well illustrated by a statement of Robert W. Murphy, general counsel of Borg-Warner Corp., "If one heeds the voice of experience, he should consult the father of a boy or girl in college. Multiply even $1,500 by 4 years and $5,000 by 4 children (or select any number from 1 to 12), and it is obvious that a sizable minimum is required. This amount must be set aside after taxes."
